PREFERENTIAL DEALING.—'Preferential dealing' has been defined (e.g., in the Christian Social Union paper on *Preferential Dealing*) as 'the practice of purchasing goods only from tradesmen who observe the standard regulations for each trade'; and 'standard regulations' are taken to mean 'the best that can be secured at a given time in a particular locality,' whether the result of an agreement between capital and labour or of an award by an arbitrator. In this sense of the term preferential dealing was first applied by the C.S.U. in 1896.

An attempt had been previously made in England to organize a movement on similar lines under the title of a 'Consumers' League,' but no definite results seem to have been obtained by this method. It should be noted, however, that in America the 'National Consumers' League' has established a permanent position, with a wider scope of action, including the promotion of legislation by the various States in regard to the early closing of shops, the limitation of the hours of work for women and children in factories, etc. At an earlier date the principle of preferential dealing had been publicly recognized in England by the 'Fair Wages Resolution' passed by the House of Commons in 1891, requiring the payment of 'standard' or 'current' wages under all Government contracts.

As initiated by the C.S.U., this practice was described at first as 'exclusive dealing,' but this negative term was soon replaced by the positive term, 'preferential dealing.' It was found that the mere suggestion of an organized attempt to exclude tradesmen from public custom, for any

reason however just and valid, was liable to legal action as being in restraint of trade, whereas it was quite legitimate to offer preferential custom to those who were willing to adopt the standard regulations for their respective trades.

To give practical effect to this purpose, lists of tradesmen who observe the standard regulations (commonly called 'white lists') have been circulated, to be used by ordinary consumers at their discretion. Such a list may be published (a) by a Trade Union, dealing with a single trade as organized throughout the country—e.g., the Typographical Association; (b) by a Trades and Labour Council, including many trades in a particular locality—e.g., at Leeds; (c) by a society like the C.S.U., primarily for its own members—e.g., a joint list of tailors in London, Oxford, Cambridge, Liverpool, Exeter, Eton, and Rugby; or (d) by a C.S.U. branch, giving a list of local trades—e.g., at Oxford. It should be noted that, so far as the C.S.U. is concerned, it assumes no responsibility either for the code of rules or for their observance. The code is taken to be a mutual agreement between capital and labour, and it is assumed that it is the duty both of the Masters' Associations and of the Trade Unions to see that the standard regulations are faithfully obeyed. All that the C.S.U. supplies in this respect is an educated conscience ready to act on information given.

The ethical basis of preferential dealing was enunciated by the bishops of the Anglican Communion at the Lambeth Conference in 1897, when it was declared that Christian opinion ought to 'press upon retail purchasers the obligation to consider not only the cheapness of the goods supplied to them, but also the probable conditions of their production.' It has also received support from modern economists; e.g., W. Smart of Glasgow University wrote:

'The producing man is, essentially, the servant of the consuming man, and the final direction of industry lies with the consumers. There are two distinct responsibilities which must not be confused: one is responsibility for the conditions under which goods are made, the other is responsibility for their being made at all. A slight awakening of the public conscience has induced some to ask, if it is not possible to demand some guarantee that the goods we buy are made by workers paid decent wages and working under healthy conditions' (*Studies in Economics*, pp. 265, 268).

PREGNANCY.—1. Ignorance of the cause of conception.—Among the Arunta and other tribes of Central Australia conception is regarded as the result of the entrance of an ancestral spirit individual into the woman.

'They have no idea of procreation as being directly associated with sexual intercourse, and firmly believe that children can be born without this taking place.'¹

Similar ideas are found among other Australian tribes,² and the belief that conception can take place apart from sexual intercourse is found sporadically elsewhere, though perhaps not always with the same ignorance of the real cause of it. Examples of this have been found in New Guinea, in Melanesia, formerly among the Baganda, and in the Niger and Senegal regions.³ Folklore and mythology show that conception might take place

¹ Spencer-Gillen, p. 330; cf. p. 150 ff.; Spencer-Gillen, p. 128 f.; W. B. Spencer, *Introd. to the Study of certain Native Tribes of the Northern Territory*, Melbourne, 1912, p. 6.

³ R. Neuhaus, *Deutsch Neu-Guinea*, Berlin, 1911, iii. 26; W. H. R. Rivers, *JRAI* xxxix. [1909] 173 f.; J. Roscoe, *The Baganda*, London, 1911, p. 46 f.; M. Delafosse, *Haut-Sénégal-Niger*, Paris, 1912, iii. 171.

by more or less magical means, but in many instances this is in addition to actual cohabitation.¹ Some writers have maintained that ignorance of the cause of conception must once have been widely spread, and possibly at one time in the history of early man was general. The reasons alleged for this ignorance are several: conception is found not to result from the wide-spread practice of cohabitation before puberty; why then should it follow it after puberty? Premature intercourse tends to impair fertility. There is again a disproportion of births to acts of sexual union. And even where the cause is known, it is not regarded as invariable and indispensable.²

In spite of all this, it may be doubted whether the belief in virgin-birth has ever been wide-spread. In most cases where conception is due to a god or spirit these are envisaged in very material and human aspects.

Among the Sinaugolo (British New Guinea) pregnancy is thought to result from frequent cohabitation. Conception begins in the breasts (from signs of pregnancy seen in them). Later the child drops to the abdomen. There is no idea of an intra-abdominal organ.³ Among the Yakuts the woman is thought to have a greater share in procreation than the man, who therefore takes no responsibility for monstrosities.⁴

2. Averting barrenness and securing male children.—As the possession of some children at least is regarded as a necessity with savage peoples as well as at higher levels, many devices are made use of to avert barrenness.

The Eskimo woman of Behring Straits goes to a shaman, who gives her a kind of doll over which rites have been performed. She sleeps with this under her pillow.⁵ This is a piece of numismatic magic, and may be compared with a Japanese method in which the woman is put through a form of delivery with a doll at the phallic festival.⁶ Various practices with a doll-like image occur elsewhere—among the Battas, in Torres Straits islands, among the Maoris, the Huichol Indians, the Basutos and other African tribes, etc.⁷ Among the Bahima women are thought to be barren or fruitful at the will of the clan deity. The husband who wishes a child prays to him and commits his wife to the god's care during her pregnancy.⁸ In the Congo region barrenness is supposed to be cured by entering the *ndembo* secret society, when the entrant gets a new body.⁹ Among the Awemba barren women wear two tiny horns in hope of bearing children, the reproach of barrenness being the worst insult.¹⁰ In E. Central Africa the woman provides a black hen, which is tied to her back, and there fed as if it were a child.¹¹ In Egypt barren women pass seven times under the stone on which the bodies of decapitated criminals have been washed, and then lave their faces in the polluted water. Others step over the body of a decapitated man.¹² Bathing in or drinking the waters of a sacred well or spring is often resorted to for the cure of barrenness in various regions, and some legends tell of girls becoming mothers after doing so.¹³ In modern Muhammadan districts favourite places of resort are the tombs of saints, where prayers and an offering are made—a practice found also in Christian countries. Contact with fixed rocks or boulders or megalithic monuments is often believed to be effectual for the removal of barrenness—the spirit of the stone or of the dead buried there perhaps being supposed to assist the rite or even to be reborn of the woman.

Sometimes special ceremonies occur to ensure that the expected child will be a boy.

In Sabai, Torres Straits, the expectant mother nurses the image of a male child made by her husband's sister. Or, to obtain a male child, the woman presses to her abdomen a fruit like the male organ in shape and then gives it to another woman who has only male offspring.¹⁴ In Japan the expectant mother puts on part of her husband's dress, and, having gone round a well three times, looks at her face in the water. Without looking behind, she repeats, 'Woman is unlucky, man is lucky.' Then for three days she leaves the cover on the well, which is a

domestic god.¹ In India a low-class mother of daughters only has been known to kill a neighbour's girl as a sacrifice in order to procure a son.²

3. **Tabus during pregnancy.**—The expectant mother and sometimes also the father are the subjects of various tabus, for the mother usually connected with food, for the father with that also, but more usually with his actions or pursuits. The woman in pregnancy is generally herself in a tabu state, since her condition is associated with those sexual crises which are so mysterious to and so much feared by savage man. Some of the tabus imposed on her or her husband may arise out of direct observation of ill-effects following the eating of some particular food; others are the result of mal-observation or superstition; others are purely arbitrary. Only a few typical examples need be given here.

Among the Australian tribes food restrictions are general for the woman, less so for the man, for fear of hurting the child or causing its death.³ In Murray Island birthmarks are attributed to the mother's eating a certain fish, the juices of which touched the child.⁴ With the Sinaugolo of British New Guinea, lest the child should be deformed, certain species of yam and fish are forbidden to the mother, who often tabus her own food.⁵ Among the western tribes of Torres Straits no woman may eat of a certain pigeon till past child-bearing.⁶ In Halmahera the woman is not allowed to eat the remains of her husband's food, for that would cause difficult labour.⁷ In Assam one of the *gennas*, or tabus, is that the woman must not eat many specified articles of food for fear of harm to the child.⁸ With the Wawanga (E. Africa) the woman must not eat meat called *ivechit*, if it has been placed in her hut over night uncooked. If she does, her child will be sickly, and, when it begins to crawl, its hair will fall out, and sores will come on its scalp.⁹ Among the Bageshu, while there are no special tabus, precautions are taken against eating foods which might do the child harm. The husband must not take violent exercise or climb trees, rocks, or the house-roof, lest a miscarriage occur.¹⁰ The father is prohibited from eating certain foods among the Bangala, and may not hunt or fish unless the wife has certain ceremonies performed over her by the *nganga* (medicine-man). The husband is said to be in a state of *ibot*. Tabu is also placed on certain foods for the woman by the *nganga*, but not the same for all.¹¹ With the Baganda sickly or delicate children are kept away from the woman, who is forbidden to eat several kinds of food, lest the child be still-born or delicate.¹² Among S. African tribes there are several restrictions prescribed by custom, but no evil consequences are thought to follow departure from these.¹³ In ancient Persia the woman was forbidden to eat dead matter under pain of death, and she could not be purified from this pollution.¹⁴ A final instance may be taken from the Indians of the Issa-Japura district, S. America: foods are much restricted—e.g., paca flesh, lest the child's skin be spotted, capybara, lest it have teeth like that animal's, etc.¹⁵

A further tabu is seen in the very general avoidance of sexual connexion between husband and wife either during the whole period of pregnancy or during part of it, especially towards the end. Sometimes a definite reason is given for this—e.g., lest the child be deformed (Sinaugolo, British New Guinea),¹⁶ or lest the hunting and fishing of the father should be bad and the child sicken or die (Bangala).¹⁷ Such avoidances are the result of the belief that any time of sexual crisis is dangerous. Examples are found in many parts of the world.¹⁸

¹⁸ Kagoro (A. J. N. Tremearne, *JAI* xlii. [1912] 172); Wagiyama (W. E. H. Barrett, *ib.* xli. [1911] 22); tribes of British C. Africa (H. S. Stannus, *ib.* xl. 810); Ba-Yaka (E. Torday and T. A. Joyce, *JAI* xxxvi. 51); Lower Congo tribes (Weeks, *JAI* xl. 387; the mother would have no milk and the child would die); Maoris (E. Tregear, *JAI* xix. 108); Coroados, Coropos, Puri (J. B. von Spix and O. F. P. von Martius, *Travels in Brazil*, Eng. tr., London, 1824, p. 247).

In British Central Africa a man will not commit adultery during the pregnancy of his wife because he would be accused of it if she died.¹

In connexion with this subject of tabus certain Hindu rules are worthy of notice. The pregnant woman must be given food before the householder and even before guests,² way must be made for her;³ no toll is taken from her at a ferry;⁴ she is not fined for committing a nuisance;⁵ a Brāhmin must not eat in her house;⁶ the crime of killing her is equal to that of killing a Brāhmin.⁷

Other tabus are of a precautionary nature, though the link between them and the unborn child or the process of birth is of a magical kind.

One of these is that no knots may be tied during pregnancy by the woman or sometimes also by her husband. The reason of this was that delivery would be difficult—the woman being thus herself apt to be tied up, or the child constricted.⁸ This is akin to the custom of unlocking all locks in the house at child-birth, lest the womb should be locked up, or to the German superstition that a pregnant woman should not creep through a hedge.⁹ So, too, Amu men should not spin or twist ropes when their wives are pregnant, lest the child's intestines should be entangled, and Roman women praying to Lucina were to loosen their hair, so that she might loosen their wombs.¹⁰ For similar reasons a pregnant woman should not sit with legs crossed, nor should her husband do so, nor any one sitting near her; nor should they sit with clasped hands. Lucina sat by the house with legs crossed and hands clasped at the birth of Hercules; hence his mother travailed with him seven days.¹¹ In Sumatra the woman must not stand at the door or on the top rung of the house-ladder, lest she have difficult labour; and among the Torajas standing or loitering on the ladder is forbidden to every one for the same reason.¹² In India an eclipse is thought to have its dangers for the expectant mother. No work must be done—e.g., locking or unlocking a door—lest the child be deformed, nor any sewing or cutting, lest it have holes in its flesh or a hare-lip.¹³ An ancient Parsi regulation was that no toothpick should have the bark left on it. This was dead matter, and, if a woman stepped on it, her child would come to harm.¹⁴ In India no one should step over a fallen broom, lest he cause suffering to a pregnant woman.¹⁵ The woman herself in the W. Indies should not step over a rod or small branch, and in Fife folklore stepping over a hare's form causes the child to suffer from hare-lip.¹⁶

In some instances charms are worn to prevent any mischief which might happen to the woman or the child, or to give an easy delivery.

Among the Bangalas in the later weeks of pregnancy pigments are painted by a medicine-man on the woman's breast, abdomen, shoulders, etc., and she wears charms to cause easy delivery.¹⁷ After her marriage a Nandi woman collects pieces of their dress from unmarried girls in the neighbourhood and wears them as a charm to ensure pregnancy taking its normal course. After birth they are returned and a feast takes place.¹⁸ With the Awenba the woman wears necklaces of little wooden balls with fetish-medicine inside to avert dangers of pregnancy and cause easy delivery. They are made by the medicine-man.¹⁹ Muhammadan women in the Panjāb wear charms or a cowry on the navel. They are procured from a priest, who blows upon them.²⁰ See also CHARMS AND AMULETS, and for other instances A. E. Crawley, *The Mystic Rose*, London, 1905, p. 9.

Pregnant women being in a state which renders them liable to the attacks of evil spirits, various precautions are taken against these. The charms so often worn probably form one of such precautions.

Among the Sinhalese the woman is protected from devils by *mantras* for charming each day's first food and drink.¹ Among the people of Nias spirits of murdered infants cause miscarriage. The woman is protected at night by an idol, which is connected with a second by a chain of palm-leaves, while before the latter a small banana-tree is placed. The spirits, seeing the first idol, run along the chain in fear and then leap on the tree, mistaking it for the woman.² With the ancient Persians fire was maintained in the woman's house, the reason being that such a fire protected Zoroaster's mother when attacked by demons.³ Among the Nagas, pregnant women being exposed to attack from evil spirits, the river spirit and also the Python are worshipped to cause easy delivery.⁴ Protection of the woman against *jinn* is effected in Tlemsen by keeping a black fowl in the house from the seventh month onwards. After delivery it is let loose in the Jews' quarter, carrying the *jinn* with it.⁵ Among some of the Veddas the aid of the *yakus* (spirits) is invoked, and a religious dance performed as soon as pregnancy is diagnosed.⁶ Prayer is also made by the woman's father for her safety. For a Bavenda goddess of pregnant women cf. *ERE* n. 364b.

Sometimes the pregnancy rites are of a more elaborate nature than those which have just been described.

In Java in the seventh month husband and wife go to a river or well. Banana-leaves are fastened round the upper part of the woman's body. Through an opening in front of these the husband drops a weaver's shuttle, which an old woman catches, pretending that it is a child. An egg, emblem of the afterbirth, is then passed through, and a cut is made at the opening in the leaves in imitation of cutting the navel-string. The purpose of this ceremony is to facilitate delivery.⁷

Most elaborate of all are the rites followed in India, of which, as practised by Hindus and Muhammadans, a detailed description has been given by H. A. Rose.⁸

These rites vary from tribe to tribe, and consist of ceremonies in the 3rd, 6th, or 7th month or in all three, or in the 8th or 9th month. There is an interchange of presents between the woman and her mother. Offerings are made to the spirits. The woman is bathed and dressed in new clothes—not worn before the performance of the rites. The kinsfolk assemble, and gifts of food or fruit are placed in her lap. She and her husband adore the gods. The Muhammadan rites are analogous to these, but without the worship of the gods.

The Khatrias, a Panjāb tribe, perform funeral rites for the father in the 6th month, while the parents are remarried after the birth.⁹ This goes back to the belief found in the *Laws of Manu* that, after conception by the woman, her husband becomes an embryo and is reborn from her.¹⁰ He dies when his son is quickened, hence the funeral rites.

4. Power of the pregnant woman.—The condition of the pregnant woman is often thought to have magical power, especially for fruitfulness.

Corn ground by her is used to fertilize the growing crops among the Zulus.¹¹ She eats of the food at the feast held among the Minang of Sumatra when a rice-barn is built, in order to increase the fruitfulness of the rice.¹² In the Nicobar Islands gardens are made more fertile by her presence in them or by her planting fruit there.¹³ Similar ideas are wide-spread among savages and survive in European folklore. Probably for similar reasons pregnant cows were sacrificed at the Roman *Fordicivivia* to the earth 'pregnant with the seed,' the unborn calves burned, and their ashes used at the *Parilia*.¹⁴

It may be noted here that in Lancashire gypsy belief a pregnant woman protects a man from hurt by mortal hands.¹⁵

On the other hand, pregnant women being more or less in a tabu state,¹⁶ their influence on the crops may be dangerous, as examples from New Guinea and elsewhere show.¹⁷

In British Guiana, again, if a pregnant woman eats of game caught by hunting dogs, it is thought that they will never

hunt again.¹ In the Panjāb it is held that a snake becomes blind if the shadow of a pregnant woman falls on it.² Parsi texts say that, if a dead pregnant woman is carried by two men, both must be cleansed by the *bareshnum* rite.³

5. Determination of sex, etc.—Many methods are adopted to discover whether a woman is with child, its sex, and the like.

If a Kagoro woman is in doubt as to her condition, she goes to a medicine-man, who, after washing his eyes with a magic drug, looks into a calabash of water and tells what is to happen.⁴ In Banks' Island divination consists in pinching a leaf cup full of water. If the water squirts out, a boy will be born; if not, a girl.⁵ Sex is determined among the Veddas by the position of strips of bast as they fall on the woman's head in the dance already referred to. If they fall over the face, a girl will be born; if on the occiput, a boy.⁶ In Japan, if some one calls a pregnant woman who is walking southwards and she looks back from the left, the child is a boy; if from the right, a girl. Another method of determining sex is to add together the years of the father's and mother's ages and divide by nine; if the remainder is odd, a girl will be born.⁷ Among Muhammadans in the Panjāb it is thought that, if the woman's milk before birth is thin, she will have a boy; if, when it is put in a shell and fire is applied, it dries up, she will have a girl.⁸ According to the *Saddharma Puṇḍarīka* (xviii. 34 f. (*SBE* xxi. (1884) 844)), a preacher of the law (Buddhist) can discern if a woman is pregnant of a dead child or if she will have a healthy child. He discerns by the odour whether the child will be a boy or a girl.

J. A. MACCULLOCH.

PREMONITION.—See PRESENTIMENT.

PRESBYTER.—See MINISTRY.

PRESBYTERIANISM.—The name 'Presbyterianism' may be applied in a general sense to that theory of the Church which aims at realizing its visible unity through government by presbyters, clerical and lay, such presbyters being set apart by their peers with popular consent, being all of equal status, and being organized for purposes of ecclesiastical administration into Church courts, which rise one above another in an ascending scale, from the congregational to the national. In a sense more particular 'Presbyterianism' is used to denote the concrete effort after the realization of that idea which, originating in the work of John Calvin, was elaborated by those who followed him into a definite form of Church organization, with a distinctive type of doctrine, morals, and ritual, and which in one form or another counts perhaps 100,000,000 adherents to-day. Presbyterianism seeks to avoid, on the one hand, the absolute subjection of individual congregations to government from without and above, and, on the other, their absolute independence of all restraint. Of the three great types of Church government it is therefore the middle one, between Congregationalism and Episcopacy.

I. EMERGENCE OF THE CALVINIST PRESBYTERIAN SYSTEM.—1. The NT basis.—Serious Presbyterian scholarship is long past the stage of the crude 'jure divino' defence of Presbyterianism, as if it were the only form of Church government expressly sanctioned by the Word of God and the institution of Christ. During the first phase of the famous controversy between Puritans and Anglicans the Puritans claimed divine sanction for their ecclesiastical system, or, at least, divine disapproval of that of their opponents, as against the Anglican argument from the expediency of the episcopate; but in the later stages of the conflict the two sides reversed their rôles. The controversy died down about A.D. 1700 after the battle over the Ignatian Epistles; and the whole question as to the primitive form of Church government only revived under the stimulus of modern histori-

cal scholarship, with new methods, and under a new form. It is now realized by impartial critics that no one form of Church government is to be definitely discerned in Holy Writ more than another. While Calvin, therefore, and others of his day believed themselves the restorers of primitive Christianity, freed from the errors and corruptions of Romanism, modern scholarship cannot absolutely subscribe this opinion. Even if the Reformers had possessed the necessary critical insight to construct a clear picture of the NT Church, they must have found it impossible to reproduce with perfect faithfulness a primitive creed and polity which later had been in successive contact with the Græco-Roman and barbarian worlds; conversely, such a reproduction of primitive institutions would be a poor guarantee for their success in modern times. A living organism is necessarily subject to change, and the attempt to ignore a millennium of ecclesiastical history could not but fail. So far, then, as the advocate of Presbyterianism makes use of the NT to-day, he must claim to reproduce the spirit and intention of the primitive Church, and not its mechanism; he will draw his main arguments rather from considerations of expediency. He will show how Presbyterianism has proved itself particularly suited to the genius of its adherents; how it has played a prominent part in the political development of those peoples who have worked out systems of representative government; how it has produced a unique and admittedly worthy type of character; and, if these and other possible contentions savour to some extent of pragmatism, he may reply to this criticism that Church government can be, as an actual fact, traced in all ages—the NT age included—to motives of expediency, and that one of the fatal errors which have helped to rend the Church has been the injudicious elevation of government into the region of dogmatics.

Although the conditions prevalent in the early Church are inconsistent with the possible existence of either Presbyterianism or Episcopacy as we understand them, we find both presbyters and bishops mentioned in the NT; and the problem of their relationship, which has given rise to endless controversy, cannot be passed over. Whether we argue with Jerome that bishop and presbyter were originally identical, and hold with Lightfoot that the episcopate was developed from the presbyterate by elevation; whether we contend, with Harnack, that the offices were distinct from the beginning; or whether, with Lindsay and Loofs, we hold that *πρεσβύτερος* was the official name, while *ἐπίσκοπος* described the function, the problem remains the same, viz. How did the bishop come to overshadow the presbyter, and finally reduce him to a definitely inferior position? The most feasible explanation yet suggested seems to be that which is founded upon the bishop's connexion with the Eucharist, a connexion indicated by practically all the sub-apostolic literature.

2. Sub-apostolic development.—While the *δύναμις* still existed, the official in charge of the celebration would enjoy a distinctive place, not only in the Church itself, but in the eyes of outsiders. As the *δύναμις* fell into disuse, and the sacramental aspect of the Eucharist gained prominence, the bishop's pre-eminence would develop with it. The crux of the entire episcopal development seems to lie here; and, once the bishop had definitely asserted his special position among the officials of the Church, circumstances favoured his steady elevation. Roman imperialism and Jewish nationalism were in deadly conflict about the close of the 1st cent.; Jewish Christianity was rapidly disappearing; and all the conditions were in favour of the Gentile *ἐπίσκοπος* and his function being

recognized as against the Jewish *πρεσβύτερος* and his function. The *Didache* is the most valuable document for this transition period; and in Ignatius we first find the threefold ministry, with the supremacy of the bishop, clearly set forth as the divinely-appointed form of Church government.¹ It is difficult, at this time of day, to accept Ignatius's own view that he received this theory by divine revelation; and the brief interval of time between him and Clement of Rome shows that his theory cannot have been extensively in practice when he wrote; but his martyrdom 'barbed and fledged' his teaching, and gave undue weight to his ecclesiastical expedient. Moreover, the Church was faced in times immediately following by heresy within and hostility without, and the concentration of power in as few hands as possible proved of great value. The forming of a creed, and of a collection of Holy Scriptures upon which to base it, was logically followed by the need of an authoritative interpretation for both. The bishop, already prominent, naturally if not logically became the authoritative mouthpiece of the Church in matters of the faith; and apostolic succession followed in due course. Irenæus, e.g., definitely connects the theory of the apostolic succession of the episcopate with the necessity of maintaining sound doctrine; and the bishop thus emerges from the comparative obscurity of earlier times with a status in matters of the faith equal to that which he had previously enjoyed in matters of administration. Cyprian's position introduces a new factor. By his time creed and canon had attained a position of greater certainty, and the sacerdotalism of the Church under OT and also pagan influences had been intensified, so that apostolic succession is now a guarantee not so much of sound doctrine as of the validity of the priesthood. The evolution of territorial from congregational episcopacy was completed by the gradual assimilation of the ecclesiastical system to the imperial. The fall of the Empire, the transference of barbarian respect from it to the Church, the conversion and absorption into the Church of the northern peoples, all assisted in the process of closer organization; and so by degrees grew up the great mediæval hierarchy—the feudal system being theoretically crowned by the twin summits of a papacy supreme in spiritual affairs and an empire supreme in temporal.

3. Mediævalism.—Superficially considered, the whole history and tendency of mediævalism might seem designed to bury ever deeper the very idea of any but monarchical Church government; and the Reformation systems might seem so sudden and complete a contrast to previous developments as to justify Calvin's theory of a reversion to primitive Christianity by the ignoring of mediævalism. But nothing ever makes its appearance in history without preparation; and, while we cannot eliminate the genius of Calvin and the rest by explaining their systems out of any or all of their antecedents, we may discern certain mediæval tendencies which led up to their work. Presbyterians may find the beginnings of their history either in the NT or in the book of Exodus, if they will; but the mediæval continuation of it has been too much neglected. Although the practical needs and problems of mediævalism served to exalt the ecclesiastical society at the expense of the individual, and to sacrifice the intellectual and homiletic interests of the Church to the organizing and sacerdotal tendencies, yet the homiletic, intellectual, and individual element never completely perished. Practical exigencies might favour the creation and maintenance of a rigid monarchical system, which deprived the individual of all political or intel-

¹ This episcopacy was congregational, not diocesan.

tual scope; but the mastery of the system was never wholly undisputed, and the essential Christian truth of the worth of the individual before God never fell completely out of sight. Throughout the growth of ecclesiasticism we can discern a continuous process of revolt against it, which, manifesting itself primarily in the form of Montanism (*q.v.*), was suppressed, but, in its essence, defied extinction. Athanasius was faced by Arius, Augustine by Pelagius, Bernard by Abelard, Aquinas by Scotus; the slavery of intellect was always incomplete. But it is in monasticism (*q.v.*) that we can see most clearly the opposition of individualism to the tyranny of the institution. The impulse which, in the successive forms of Montanism, Novatianism, and Donatism (*qq.v.*), succumbed to the need for closer organization persisted in the form of monasticism, and established an unbreakable hold upon Western Christendom. From the beginning of monastic history the conversion, the education, and the civilization of N.W. Europe were almost entirely the work of monks; and, while the episcopate succeeded in forcing the monks into the priesthood, monasticism conquered by forcing celibacy on the Western clergy and emancipating the orders from episcopal control. The opposition between the secular clergy and the monks runs throughout mediævalism; and the monastic side of the opposition represents the preparation for the Reformed Churches. Whereas the secular clergy obeyed a monarchic bishop, the monks obeyed a presbyter-abbot. Their vow of poverty gave expression to the truth that a man is of value apart from his property, their vow of celibacy destroyed the feudal fetish of family prestige, their vow of obedience was that of free-will obedience to a superior in whose election they had a voice, and in making this vow a man left a society in which he was a mere irresponsible cog accidentally placed in a machine for one into which he entered voluntarily. Thus, while, as A. V. G. Allen puts it, 'every direct specific purpose of the monk seemed in the long run to have been reversed, or to have proved a failure,'¹ yet there was 'a deeper purpose which could not be defeated,—the accomplishment of individual personality.'² It is in this presbyterial, as we might call it, conception of Christian organization that we discern the germ of the Reformation. Moreover, whereas the secular clergy and the episcopate had all along represented sacramentarianism in worship and rigid solidarity in government, the monastic system, on the whole, had stood for the homiletic aspect of worship and a form of organization at once more elastic and more representative of the popular voice. Of course, each side reacted upon the other. The monks were often the stoutest champions of orthodoxy, and their services were often most highly ritualistic; on the other hand, the Church was democratic enough to make it as possible for the most obscure Churchman to ascend to the papal throne as it is for any citizen of the United States to become President; and the semblance, at least, of representative government was retained in the election of bishops by the cathedral chapters and the choice of the pope by the conclave. But, in essence, the difference which afterwards became open in the Reformation between Catholic and Protestant subsists throughout the Middle Ages between the episcopate and monasticism; and it only required favourable circumstances to set on foot the process of disruption.

4. Decline of papacy and the Reformation.—The decisive factor in the final separation of the 16th cent. was the weakening of the papacy, which

was the only power capable of holding together the opposed sides of ecclesiastical life. The fate of Boniface VIII. marked an era in the decline of the papal monarchy, which had ruined the Empire, only to find a new and more vigorous opponent in the growth of European nationalities; the Babylonish captivity of the Avignonese popes weakened the papal grip upon England and Germany. Early in the 14th cent. William of Occam and Marsiglio of Padua outfaced the pope in the interest of Louis of Bavaria. Marsiglio's fully-developed democratic idea of Church and State is a sign of the times; the fact that the Fraticelli were deeply involved in the anti-papal revolt is another; and the whole incident has been well named the Miniature Reformation. The work of Wyclif in England is a manifestation of the same spirit, which, passing from England to Bohemia and John Hus, remained active there far into the 15th century. These various movements combined projects both of political and of ecclesiastical reform—they attacked the dogma as well as the organization and morals of the Church. To the growing distrust of the papal monarchy and the whole system with which it was bound up the Great Schism contributed in no small measure; and the conciliar movement, while it represents in essence the struggle between the aristocratic episcopal form of Church government and the autocratic papal form, helped to pave the way for democracy by asserting the responsibility of rulers to those whom they affected to rule. With the close of the Council of Basel in 1447 the papacy secured an illusory victory over its foes, but not even the splendour of the Renaissance period could blind the eyes of serious men to the moral and financial corruption of the Curia. The rise of European nationalities, the inventions of printing and of gunpowder, revolutionary discoveries both geographical and scientific, contributed to the general ferment. Moderate men might desire a reform of the Church on the existing basis, but others were driven by the monstrous indifference of the Curia towards its own corruption to consider the evil as inherent in the system itself, and to desire a more radical reformation. In particular, the New Learning, by exposing the hollowness of many ecclesiastical pretensions, by weakening the belief in transubstantiation and sacramentarianism generally, and by reviving the interest of Europe in the teaching and homiletic side of Church activity, helped to relax the hold of the papacy upon the Church, and to set free the monastic side of its life from the long alliance with the episcopal. Finally, in the hands of Luther, Zwingli, and Calvin, the crisis came—divergence matured into division—and monasticism achieved its independence in the Reformation. It is no accident, but the result of a profound historical necessity, that the lands which remained in the Roman obedience were precisely those which had been fully Christianized in pre-monastic days, whereas the lands in which monkish missionaries, especially of the Iro-Scottish type, had laboured went over to the Reformation side.

From one point of view, the Reformation represents revolt and the rending of Christendom in pieces; but the pieces into which the Church fell correspond, with some definiteness, each to some previous tendency within mediævalism; and, from another standpoint, the Reformation is the substitution of spiritual unity under the headship of Christ for external, mechanical unity under the papal monarchy. The democratic constitution proposed for the churches of Hesse, *e.g.*, was the work of Lambert, a Franciscan monk, and recalls the Benedictine organization. Lutheranism reminds us forcibly of the Augustinian order; and

¹ *Christian Institutions*, Edinburgh, 1898, p. 178.

² *Ib.* p. 176.

the Presbyterian type of constitution under Calvin and his followers calls to memory the organization of the great monastic orders of later mediævalism, wherein many houses were affiliated into one great society. Point for point, this parallel between mediæval tendencies and Reformation facts could be worked out in much detail. It will suffice, however, to note that Presbyterianism, like other ecclesiastical systems, was no new phenomenon suddenly entering about 1550 on a career totally unprepared for, but was the emergence into freedom of a tendency many centuries old. Substitute Christ for the pope as the head of the Church, and spiritual for corporeal unity, and you have at once the explanation of our Protestant divisions, and the antidote to much of the alarm which they cause in unreflecting minds.

5. The question of government.—When we consider the great importance which by and by came to be attached to the question of Church government—so that the form of organization adopted by Presbyterianism became, in time, its chief differentia from the rest of Protestantism, and 'jure Divino' arguments went hand in hand with armed force to resist any encroachment upon its rights—it is curious to reflect that, in the early days of Protestantism, the question of government was a secondary consideration. The Reformers, following the monastic lead, were more concerned with teaching than with administration; and, provided they got rid of the papal headship and could secure the safety of great truths like that of justification by faith, they kept a reasonably open mind on the question of organization. The salvation of the individual through the direct mediation of Christ was the vital point; other matters were subsidiary. Being in revolt against over-organization and all the loss of individual Christian liberty which that implied, Luther, Calvin, and the rest could scarcely make a virtue of ecclesiasticism.

Ecclesiastical organization was perhaps the least important activity of Martin Luther and the Lutheran Church. In common with the Calvinists, this Church recognized the priesthood of all believers and the parity of ministers, but, unlike the Calvinists, did not harden this into a fixed principle of organization. In the Scandinavian countries, where kings and bishops co-operated in the work of reformation, the episcopate was retained, though in a modified form; in the German principalities the *jus episcopale* was delegated to the civil power, which in turn delegated it to Consistories, and the persistence of civil government and patronage in the Church prevented Lutheranism from ever attaining to the firm representative organization which has become a feature of Presbyterianism. The attitude of Melancthon, who would have recognized either bishops or a pope if they could have been shown to be of real use, has remained typical; the small crop of Lutheran Free Churches has resulted mainly from doctrinal objections to the union of Lutheran and Reformed a century ago in Prussia and allied states, and at least one such body seceded on the question of whether government was an essential feature of the Church at all.

The Calvinist bodies were prevented by circumstances from any such indifference to the form of Church government; for, whether by accident or by necessity, they found themselves situated either in republics or in principalities and kingdoms where the absence of a sympathetic ruler rendered the Lutheran plan impossible, and where the opposition of the bishops sooner or later demanded the repudiation of episcopacy. As has now been shown, the retention of episcopacy in some Reformation lands and its rejection in others was no accident, but a logical consequence of the attitude

assumed by the bishops and the civil authorities towards the Reformation.

II. *SUBSEQUENT DEVELOPMENT.*—i. DOCTRINE.—In the dogmatic sphere two great doctrines mark off the Calvinist system from all others.

(a) The first of these is the doctrine of the *absolute sovereignty of God*, which is the keynote of all the other Calvinist developments. This carried with it the doctrines of election and predestination (*q.q.v.*), which, in their rigid Supralapsarian form, denied man any participation whatever in the work of saving himself, and, in their milder Infralapsarian form, left him only a very minor part to play in it. This dogma, harsh as it may seem to the more lenient spirits of to-day, is not to be dismissed off-hand as if it were a mere negation of man's free will. The 'mere good pleasure' aspect of the doctrine is not the vital part of it. In the days when Calvin promulgated it the agony of a dying age and the birth-pangs of a new might well seem to renew the circumstances under which Augustine had set it forth, and to force upon men anew the conviction that God was all and man was nothing; to depend absolutely on the sovereign will of God for salvation was better than to depend upon the arbitrary will of a corrupt decaying papacy and an ignorant, evil-living priesthood; the folly of too much freedom was demonstrated by the excesses of Anabaptists and other irresponsible sectaries, and Lutheranism hesitated between universalism and the predestined release of certain elected men from the consequences of a totally depraved and enslaved human will. Calvin's doctrine of election was not so much a gloomy and pessimistic denial of human freedom as the joyous proclamation that man lived in an ordered universe where the sovereignty of God removed from the region of doubt the salvation of the true believer. It is an attempt to recognize necessity and order in the world of God's creation—to see temporal things, in Spinoza's immortal phrase, 'sub specie eternitatis.' This teaching runs throughout the Calvinist Confessions; and, though the settling down of modern civilization has induced in many quarters a revival of the softer Semi-Pelagian ideas, it still remains the official belief of Presbyterian Christendom.

(b) The other doctrinal differentia of Calvinism is found in connexion with the *sacraments*. It differs from Lutheranism in regard to baptismal regeneration and the ordinary necessity of baptism; but the chief difference is in regard to the Lord's Supper. The Roman Catholic doctrine of transubstantiation fell into disfavour as vitally connected with the ideas of priesthood and organization against which Protestantism was an avowed revolt; and the Lutheran idea of consubstantiation, with its insistence upon the corporeal presence of Christ in the sacrament, seemed to more radical Reformers to differ so little from the Catholic notion as to be an insufficient guarantee against the reintroduction of a tyrannical priesthood using unscrupulously a magical key by which they could open or close heaven to the rest of mankind. On the other hand, Zwingli and his following, by denying any real presence at all and reducing the sacrament to a mere memorial, seemed to many to go too far in the other direction. In actual fact the difference between Luther and Zwingli seriously divided the Reformers. Calvin's theory of the sacrament occupies a position between these extremes: it substitutes for the corporeal presence of Christ a spiritual, though quite real, presence; for the magical *opus operatum* of Roman Catholicism it substitutes an operation of the Holy Spirit whereby the believing communicant really feeds upon Christ; it professes to find in the real presence a mystery too profound to be explained by

the simple mechanical theory of Catholics and Lutherans or to be explained away by the equally simple denial of Zwingli; and, while the mediating position of the Calvinist theory has brought it under the suspicion of being an *επιφύκτωρ* cunningly devised in the interest of ecclesiastical and political union among the Reformers—the work of a Presbyterian politician rather than a philosophic theologian—so far as is known, no scrap of evidence exists to show that Calvin had any such deliberate purpose. It fits in quite articulately with the rest of his theology, and is the natural result of an effort on the part of one who was not an extremist to devise a theory of the sacrament which would retain the real presence of Christ without degrading it into the mechanical production of a priest with a formula. If it has served to hold together a great mass of Protestant opinion upon a subject so vital, that is not so much the result of any definite political design as a tribute to its innate reasonableness and moderation. It remains yet a feature of confessional Presbyterianism.

ii. POLITY.—The most characteristic aspect of Presbyterianism, however, is its evolution as an ecclesiastical polity. It is a natural inference from the doctrines of justification by faith and of the sole sovereignty of God that all men are equal before their maker, and the status of the clergy as a special caste wielding the powers of spiritual life and death was thereby destroyed. The ecclesiastical organization was looked at no longer from above but from below: the call of the people and the approval of his peers replaced episcopal consecration in the making of a minister; the laity received a share in the government of the Church, and the responsibility of officials to the general body became a recognized feature of ecclesiastical organization. Thus, behind all the formal shapes assumed by Reformed Church constitutions, an essentially democratic spirit is discerned. All was, at first, experimental; definite and rigid systems were evolved only by degrees. A 'jure humano' episcopacy did not frighten Calvin; and Knox, the founder of national Scottish Presbyterianism, approved, before his death, the reintroduction of bishops for certain specified purposes and on a basis of responsibility. But the fundamental ideas of the Reformed Churchmen had sealed the doom of the old type of episcopate, and, before long, the dangers involved in the preservation of even its outward form rendered a definitely Presbyterian theory and system inevitable. Circumstances forced upon Melville and others a greater rigidity of view and practice than had been found necessary by Calvin and Knox; and the conception of ministerial parity as an essential feature of the true Church was forced upon the Calvinist communions by ecclesiastical and political strife. The effusion of blood, as well as ink, in its defence caused the Presbyterians to set a great, perhaps an exaggerated, value upon their theories of Church government, for which they have suffered and fought, as other men for their faith.

The starting-point of any inquiry into the nature and history of Presbyterian Church government is necessarily found in Calvin's *Institutes* and especially in bk. iv., which deals with the doctrine of the Church. According to Calvin, a Church and ministers are necessary as external helps to the true believer, for whose edification the ministers at public worship expound God's Word. A careful distinction is drawn between the invisible Church—known only to God—and the visible Church which is discerned 'wherever we see the Word of God sincerely preached and heard, wherever we see the sacraments administered according to the institution of Christ' (bk. iv. ch. i. § 9). This very simple idea of the marks of the true Church renders the

independence of many various bodies consistent with the essential requisite of true spiritual unity; taken in connexion with the idea of an invisible Church known only to God, it renders secession, except for the weightiest reasons, wicked and frivolous. Calvin will not even go so far as to unchurch Rome, though he contends that the insignificance of the remnants of a true Church contained in it abundantly justifies men in repudiating the Roman communion. 'We behoved to withdraw from them in order to draw near to Christ' (bk. iv. ch. ii. § 6).¹

In the Church God uses men for the useful and honourable office of the ministry, and in Holy Scripture, the touchstone of all his ideas, Calvin finds only two permanent orders of ministry—the pastor and the teacher—though temporary offices, such as those of apostle, prophet, and evangelist, existed in NT times for special purposes, and might profitably be temporarily renewed on sufficient occasion. Of the permanent officers the pastor roughly resembles the apostle, whose function he localizes. 'What the apostles did for the whole world, every pastor should do for the flock over which he is appointed' (bk. iv. ch. iii. § 6). His office entitles him to preach, to administer the sacraments, to exercise discipline, to admonish, and to exhort; and, while this is ordinarily to be done for a special church to which he should be restricted, Congregationalism is avoided by the qualification that the pastor should move by public permission or be moved by public authority when the public good demands it. The idea of ministerial parity, which later became a rigidly defined principle of the Presbyterian system, comes out in the contention that, in Scripture, bishop, presbyter, pastor, and minister are interchangeable terms for the same ecclesiastical office. Calvin's later correspondence serves to show that he had no objection to episcopacy in so far as bishops might be useful and expedient; but his doctrine of the Church leaves them no essential place in it. Historically he regards the ancient bishop as a mere chairman of presbyters; and, with him, Jerome's famous dictum as to the original equality of bishop and presbyter, which raised no controversy in Jerome's day, and yet was never forgotten, became at length the basis of a Church polity.

The teacher, who corresponds roughly to the prophet and evangelist, is restricted to a purely educational function. Among the offices mentioned in Ro 12 and 1 Co 12, two are recognized as permanent—government and the care of the poor; and the secondary position of government, in Calvin's eyes, is shown by the admission of the laity to a share in these. Elders assist in the government of the Church, and deacons are divided into two classes according as they care for the poor and sick or deal with almsgiving. The permanent officials of the Church therefore are: pastors, teachers, elders, and deacons. The essentials for the making of a minister are: the call of God, examination as to life and doctrine, the call of the people, and a solemn setting apart to his office. Calvin almost goes out of his way to defend the people's right of electing their minister, but recommends that, in the interest of peace and common sense, other ministers should preside over the election. In the above conception of the Church we have in essence many of the features of present-day Presbyterianism—*e.g.*, the equality

¹ It is not surprising that, in time, Catholicism came to regard Calvinism as the arch-enemy. The Calvinists, *e.g.*, were excluded from the Peace of Augsburg (1555), and were only recognized in the Peace of Westphalia as late as 1648. How far the feeling had become mutual may be gathered from the fact that, as late as 1647, the stately and balanced Westminster Confession cannot refrain from abuse of the pope (xxv. 8).

of ministers, their election by the people, the share of the laity in Church government, and so on. But so far nothing unique is present, except perhaps the unusually vigorous defence of popular rights. The determinative feature of Calvin's system, however, appears on consideration of his theory concerning the relations between the civil and ecclesiastical powers. The Church, according to him, has a threefold power: (1) she can declare and interpret dogma, though she has no right to invent new dogmas not found in Scripture; (2) she can legislate for the Church, but she has no right to force purely human expedients and ceremonies upon her members to the prejudice of their consciences; thus he frees men from the Roman type of bondage to tradition and custom, and reduces the spirit of Church government to the observance of mutual charity and edification; (3)—and here the most distinctive feature of Calvinism is reached—he insists upon retaining for the Church a certain sphere of jurisdiction. Unlike Luther and Zwingli, who freely surrendered the administrative and disciplinary power of the Church to the civil authorities, whether princely or republican, Calvin attempted to mark off for the Church a sphere of spiritual jurisdiction distinct from the civil; and on the determination of his followers to define and preserve this sphere, irrespective of all difficulties, hangs much of the trouble that fell to the lot of Presbyterianism in later years. Spiritual government, in his view, was as necessary to the Church as civil government to the State; and the two jurisdictions, though mutually helpful rather than antagonistic, were quite distinct. The Church could not surrender, voluntarily or compulsorily, the power of the keys; she claimed no right to inflict civil punishment, but only to admonish and, if necessary, to excommunicate, for the purpose of producing repentance in offenders—a purpose in which the civil procedure frequently failed. This useful power of ecclesiastical discipline for spiritual evil-doers was to be in the hands of a Consistory 'of elders which is in the Church what a council is in a city'; and the basis of its judgments upon individuals was of course to be Christian doctrine. The error of the Roman Church lay not in the claiming of this power, but in the abuse of it for unworthy and worldly ends through the agency of corrupt and irresponsible individuals. Calvin does not seek to interfere with or to minimize in any way the scope of the civil power. He calls the magistrates 'ambassadors of God,' 'vicegerents of God,' and says that God considers their office an honourable one; and, while he indicates his personal preference for aristocratic government tempered by democratic consent, he holds that it is the duty of all Christian men to obey whatever lawful rulers have dominion over them. The only circumstances under which resistance, active or passive, is justifiable arise when the commands of rulers clash with the commands of God. Conversely, it is the duty of rulers to preserve public peace and happiness, and their first care must be for religion and morals. Their co-operation is due to the Church in this regard,

'provided this is done to preserve, not to disturb, the order of the Church, to establish, not to destroy, discipline. For, seeing the Church has not, and ought not to wish to have, the power of compulsion (I speak of civil coercion), it is the part of pious kings and princes to maintain religion by laws, edicts, and sentences' (bk. iv. ch. xi. § 16).

While thus fully recognizing the civil jurisdiction, Calvin holds that it should not interfere with the ecclesiastical, unless by direct invitation or necessity; and in this effort to define the respective limits of Church and civil power, to secure civil co-operation while keeping spiritual jurisdiction and liberty inviolate, he stands alone among the

Reformers. The forms of procedure set forth in bk. iv. ch. x. are of only secondary importance. The point of his system which is distinctively characteristic of Presbyterianism consists in his determination to keep ecclesiastical discipline in ecclesiastical hands.

Such, in brief, are Calvin's ideas of Church government; but he lacked a field in which to test them, until, overwhelmed by the 'formidable obtestation' of Guillaume Farel, he consented to settle in Geneva. In that city there had long been an unstable equilibrium of three forces—the vice-dominus of the house of Savoy, the bishop, who was often a member of the same house, and the people; and, when Calvin arrived in the city in 1536, the people had just won their freedom, after a contest in which independence and the new faith had played an equal part. But a state of confusion had supervened; and Farel the Reformer knew that no one in the city was capable of reducing the chaos to order. Accordingly, he persuaded Calvin to relinquish his project of further study for the work of organization. The system of Church government introduced was naturally Presbyterian: not only did Calvin's own ideas run in that direction, but the attempt to continue episcopacy would have had scant hope of success in a city which had just shaken off the tyranny of a bishop. Nevertheless the people hated the bishop less as a Roman Catholic, or a corrupt Churchman, or an official without NT warrant than as an interferer with their liberty, just as they afterwards hated Calvin and the rest for the same reason. Trouble began almost at once. In a memorandum of 15th Jan. 1537 Calvin asked the Council for a body of incorruptible men to exercise Church discipline up to and including excommunication. But the civil authorities did not like Calvin's request that the Church might have a disciplinary authority which neither Luther nor Zwingli had asked for it, and many citizens feared for their personal freedom. In 1538 a majority of the new Council consisted of Calvin's opponents. Strife began, and grew so keen that the ministers were forbidden to preach politics. Disgusted by this, and angered by the attempt to force upon them the observance of the Bernese usages, the ministers finally revolted openly at the Council's command to exclude no one from communion, and on 21st April they brought matters to a crisis by refusing to dispense the sacrament. They were banished, and all mediation was rejected by the Council. This refusal to accept dictation from the civil power on a matter vital to the welfare and liberty of the Church, and the choice of banishment before surrender, are a new departure in Protestant history, and are determinative of Presbyterianism.

Calvin's first experience of Geneva, however, did not deter him from returning, though reluctantly, three years later; for no city in France was safe, and no city in Germany politically free, and in Geneva alone could he hope to find a sphere of operations. Within twenty-four hours of his return he was at work; and the *Ordonnances* were the final outcome of his labours. He wished to embody the distinction between civil and spiritual jurisdiction, to secure the independence of the Church within her own sphere, to obtain the acceptance of a creed based on Holy Scripture alone, and to tune up Genevan morals to a NT pitch. The difficulty was that he must gain the consent of the civil powers to his solution of a problem which had hitherto been solved very differently, and must induce them to relinquish a great part of their authority. At the same time the enforcement of a NT standard of morals was distasteful to many citizens. Accordingly the *Ordonnances*,

while Calvin's sole work, do not represent his ideal. Four classes of official are recognized in the Church—pastor, teacher, elder, and deacon. The ministers were chosen by those already ordained after an examination as to life and doctrine. The civil power then approved of them; finally the people heard them, and they were ordained without laying on of hands. The democratic idea of this became aristocratic in practice; for, in actual fact, the people accepted, rather than elected, their ministers. The ministers were to meet once a week in conference and once in three months for mutual criticism; in this 'venerable company,' which did not, except by censure and moral weight, interfere in civil affairs, we discern a germ of the Presbytery. The teachers were purely for educational purposes. The ruling elders were in the Church what the magistrates were in the city. Their function was purely spiritual, confined to the judging of spiritual offences and the infliction of spiritual penalties, the aim being to secure the repentance of the offender. But, though Calvin, in accordance with his general principles, attempted to mark off this eldership, with its ecclesiastical sphere of action, quite distinctly from the magistracy, with its civil functions, he could not quite secure what he wanted, and had even the worse of the compromise which followed. He was unable to secure the election of the elders by the Church alone, or on the pure ground of spiritual and moral fitness. The Council, besides fixing the number of elders at twelve, decreed that two must be chosen from the Little Council, four from the Sixty, and six from the Two Hundred. The twelve, in the first instance, were really civil functionaries, and a committee of the Council; only secondarily and nominally did they form part of a Church court. Calvin may have had a paramount influence in that court, but his influence was a purely moral one, and he never presided. Indeed, in spite of the presence of these twelve councillors in the Consistory, along with the ministers, Calvin had much ado to secure for it the right of excommunication. It was agreed that, if no repentance resulted from judgments up to and including excommunication, the persistent offender should be handed over to the civil power. As this applied to doctrinal as well as moral cases, it really amounted to a declaration of the right of persecution; here at least Calvin is not in advance of his age, and his readiness to admit the interference of civil power, so long as it is not opposed to him, weakens his position as against hostile interference. The deacons discharged the functions already indicated in the *Institutio*, but were not organized, as recommended therein, into two classes. Calvin's machinery for the doctrinal and moral regeneration of Geneva, therefore, consisted of a verbally inspired Word of God, ministers to expound the same, a Consistory to enforce it, and the Council to deal with recalcitrants. A great deal of petty and almost ridiculous business came before the Consistory, but it accomplished its main purpose of raising the undoubtedly low standard of Genevan morals. Even to hold what he had got cost Calvin a long and bitter struggle. He was opposed by many old Genevans who had taken a prominent part in the liberation of their city and resented foreign intrusion, however salutary; and by that section of the citizens who resented the strictness of his moral control. His gains were not secure for over a decade; and not till he received the citizenship of Geneva in 1559 did he attempt to define more clearly the distinction between Church and State, in a series of demands which were practically all granted by the Council. Before his death in 1564 he had vastly bettered Genevan morals, given the city a splendid educational system, and made it a refuge

for the oppressed of Europe, and he had the satisfaction of knowing that in France, in Scotland, and elsewhere his ideas of Church government and of the relation of Church and State were being extensively put into practice. The Presbyterian Church as a distinct and definite ecclesiastical body had entered upon its honourable career.

iii. HISTORY IN EUROPE.—1. Scotland.—Presbyterianism, in its national form as an established Church, is best exemplified in the case of Scotland, where, after an eventful history of three centuries and a half, it still retains a powerful grip upon the people. The Scottish Reformation, in the Lutheran form, was already so far advanced in 1525 as to call for stringent government interference; but, when it became strong enough to dominate the nation forty years later, it had assumed the Calvinist form, and it was the Calvinist type of theology and polity that received official recognition in 1560. The great protagonist of the movement was John Knox, who was called to the ministry at St. Andrews by popular acclamation during the period of excitement which followed the murder of Cardinal Beaton (1546). Knox was made prisoner when the French fleet captured St. Andrews castle in 1547, and spent two years as a galley-slave. After his release he remained in exile till 1559. Part of this period was spent in England, where he more than once refused preferment, part in Frankfort, where he and others vainly attempted to set the Church upon a Puritan basis, and part in Geneva, where he was enabled to see at work opinions and ideas which he had independently drawn from Scripture. His views were moulded and confirmed rather than created by his Genevan experience. Returning finally to Scotland in 1559, he became at once the head and front of the Reformation movement; and, if any confirmation of his Presbyterian convictions was necessary, he found it in the opposition of regent and bishops. By the middle of 1560 the Treaty of Edinburgh marked the triumph of Protestantism and English influence over Catholicism and the French interest, and the religious influence of Knox held the field in Scotland. The Confession of 1560 is thoroughly Calvinist, and is conspicuous for a wise moderation, which is unfortunately less apparent in the conflicts of later times. The first Book of Discipline embodies an essentially Presbyterian conception of the ministry. The differences from the Genevan organization are exactly what we might expect from the differing ecclesiastical needs of a nation and a city-state; the differences from the modern Scottish organization may be explained from the different circumstances of the age. Knox and his coadjutors were faced by the difficult problem of an abundant harvest and a lack of labourers; they had to find 100 ministers where Calvin had to find one. The first General Assembly, *e.g.*, contained only six ministers; accordingly, the ministerial office was supplemented in two directions. The reader's office was added to fill the gaps in the ranks of the regular ministry, the temporary nature of the expedient, however, being fully recognized. Readers were expected and encouraged to justify by their work eventual promotion to the regular ministry; persistent incapacity to do so was followed by exclusion from office. The scarcity of ministers also implied the necessity of making the best possible use of those available, and the country was therefore divided into ten dioceses, each in charge of a superintendent, who had to see that kirks were planted at the proper strategic points, to help the ministers in their work, and generally to exercise supervision. Some of these were laymen. The contention that these superintendents were virtually bishops cannot be upheld

—still less the almost fantastic contention that they were intended in time to be superseded by fully-qualified bishops. In this connexion we may note a curious and instructive parallel to the Scottish system of 1560 in the Canadian organization of to-day. There, similar needs have called forth similar expedients. The difficult problem of Church extension in the rapidly-filling West has called into being the office of superintendent without any afterthought of episcopacy. Divinity students in full standing and lay missionaries who look forward to ordination after a special course correspond to the readers of 1560. Knox's doctor is represented by the professor, the lay elder by his kind, and the deacon by the manager. The parallel is strikingly complete.

In the Church of 1560 the germ of the later Presbytery is discerned in the weekly meeting of local ministers in the towns, the Synod is foreshadowed by the superintendent's Council, and the General Assembly, irregularly constituted as yet and with uncertain powers, met at frequent intervals. The fully articulated system of later times grew only by degrees. Knox and his fellow-workers took substantially the same view as Calvin regarding the relation of the civil and ecclesiastical powers; indeed, though his own views on the point were independently matured, Knox had consulted Bullinger and Calvin on it during his exile; and the struggle of Geneva was repeated on a national scale in Scotland. The return of Mary Queen of Scots from France in 1561 ushered in a period of strife. The Reformers mistrusted Mary's good intentions towards the new Church, and resented the withholding of recognition from certain of their standards; she, on her side, was piqued by ministerial interference in her private concerns, and saw in the Church a formidable obstacle to her scheme of Roman Catholic reaction. Politics and the greed of the nobles went hand in hand with ecclesiastical strife to make difficult the way of the new Church; and civil war at length broke out, as a result of which the unhappy queen was driven from Scotland (1568) and the Roman Catholic power in the country was finally broken. But the defeat of the Roman Catholic party and the establishment of the Protestant succession in the person of the infant James VI. did not bring peace to the Church. The ministers found it nearly impossible to secure their stipends in terms of the agreement come to with the civil authorities; and, after some discussion, bishops were re-introduced into the Church by the Concordat of Leith (1572). To this expedient Knox consented before his death, recommending, however, that such bishops should be responsible to the General Assembly. The experiment proved a disastrous failure. Not only did the new episcopate escape ecclesiastical control, but they also rendered the clergy poorer than ever, by becoming the cat's-paws of the nobles in their seizure of ecclesiastical revenues, instead of the pay-masters of the unhappy clergy. The contemptuous name of 'tulchans' applied to the bishops of 1572 shows the estimation in which they were generally held, and the contemptible part which they played in the history of the time was a severe blow to the cause of Episcopacy in Scotland. In 1574 Andrew Melville returned to Scotland from Geneva, and proceeded to uphold the view that the office of bishop was unscriptural and by no means to be tolerated in a pure Church. Circumstances assured his success. By 1580 the 'tulchans' had disappeared; and in 1578 the second Book of Discipline was prepared, to be endorsed by the General Assembly in 1581. The first Book had grown out of the circumstances of the time, and found its best sanction in con-

temporary needs; the second Book, on the other hand, aimed at the deduction of general principles from the NT. *E.g.*, the offices of superintendent and reader were excised as episcopal and unscriptural; and, whereas the first Book had set up no Church courts, the second supplied the omission, but, strangely enough, left out the most characteristic court of all—the Presbytery. Presbyteries, however, were coming rapidly into existence; and the Assembly which adopted the Book erected several in 1581. Of the offices mentioned in the Book, the doctor and the deacon have practically disappeared; minister and elder alone remain with their original functions. The second Book of Discipline, with its determined attempt at a closer organization than that of 1560, never secured, in its entirety, the sanction of the civil power.

From the time of Melville's return to Scotland a determined struggle raged in the country for a century. On the one side we have Melville and those who followed him, holding the most rigid views concerning the parity of all ministers and the divine necessity of Presbyterian Church government; on the other, the determined Episcopalianism of the Stuart kings. Parallel to this divergence of view, and vitally connected with it, ran the question of the relation between Church and State, which became acute in every state where the Reformed Church had trouble with the authorities. Melville, on his side, believed in the double jurisdiction of Christ and the temporal king, and strenuously resisted any interference with the Church within her own inviolate sphere; James VI., on the other side, believing in the Divine Right of kings, saw in the Church's claim to spiritual independence as great a menace to the royal power as the papal jurisdiction had been. Moreover, as his succession to the English throne became more and more assured, the king was moved by a sense of the risks attendant upon the maintenance of two differing ecclesiastical polities within his dominions, and his consistent aim was to conform Scotland to Anglicanism. By means of episcopacy he could best hope to maintain control over the Church. Throughout the long struggle absolutism by Divine Right, episcopacy in the Church, and royal supremacy over all causes were banded together against limited monarchy, Presbyterian Church government, and ecclesiastical supremacy in spiritual affairs.

The details of the struggle need not be closely followed. The king, on his part, aimed at the complete subordination of Church and people to his views; the Church, on her part, resisted royal interference in spiritual matters. But the Church founded all her activities, beliefs, and claims ostensibly on the Word of God; and, as the ministers alone had the right to interpret that, no practical limit could be set to the claims of the Church, except by effective intervention on the part of the civil power. The king, as it turned out, would concede nothing, and the ministers claimed too much; and there is some truth in the thesis that Scotland had to choose between the tyranny of a king and the tyranny of a ministry self-constituted as the interpreters of an infallible Bible. But, on the whole, the Church represented the popular will, and served the popular cause. The ministers were chosen by popular election, they educated the people to the best of their ability, and sought to win their confidence; and there is no doubt that during the 17th cent. the General Assembly was a more representative body than the subservient Scottish parliament. Presbyterianism won a victory in 1592, when it secured from king and parliament what has been called its *Magna Charta*; but Episcopacy was re-introduced

in 1610, and the next opportunity of the Presbyterians came in 1633, when the injudicious and obstinate interference of Charles I. and Laud with the liturgy caused a wave of feeling to inundate Scotland that made the National Covenant possible. The Glasgow Assembly of that year swept away Episcopacy; and the king, whose hands were tied by difficulties in England, was powerless to save the bishops. Four years later civil war broke out in England between king and parliament. Now at length the long opposition culminated in an appeal to arms, and by the Solemn League and Covenant the Scottish Church and the English parliament were united in the cause of representative government and religious freedom.

2. England.—It will be convenient at this point to refer to the history of English Presbyterianism, which in 1643 found itself allied with its Scottish neighbour. The growing rigidity of ecclesiastical arrangements during Elizabeth's reign stimulated nonconformity into life both within and without the State Church. Of the nonconformists within the Church one party agreed on the whole with the Anglican establishment, but wished to see certain Romanist survivals purged away; another party, taking up the Presbyterian attitude, disagreed entirely with existing arrangements. Of the fortunes of the former party little need be said—they varied with the degree of persecuting zeal exercised by the authorities. But both parties have their essential connexion with Scotland from the beginning; for the troubles of the English congregation at Frankfort, in which John Knox was involved, were in fact a struggle between Anglicanism and Puritanism, and the first really Puritan congregation was John Knox's in Geneva. To that city, therefore, may be traced, not only the genesis of Scottish Presbyterianism, but also the beginnings of Presbyterianism and Puritanism in England. English nonconformity was largely the result of what the Marian exiles had seen and done abroad.

The movement of repression was well under way in 1561, by which time Acts of Supremacy and Uniformity and other measures were in operation against nonconformity. A second Act of Uniformity followed in 1563. About 1565 Parker declared that Presbyterianism was the Church's most threatening foe—and certainly it was the most definite and concrete form of opposition to existing ecclesiastical arrangements. About 1570 Cartwright, a Cambridge Divinity professor (later deprived for his anti-ecclesiastical views), brought Presbyterianism into prominence by his activity; and in 1572 the propaganda evolved into the 'Admonition to Parliament.' The 'Admonition' consisted of two manifestoes which never reached the stage of presentation to parliament. It is fanatically Presbyterian in tone, and aims at the substitution of presbytery for episcopacy in English Church government. In the same year the first English Presbytery was erected at Wandsworth. Cartwright was forced to flee the country, but maintained from his exile a vigorous literary defence of Presbyterianism against Whitgift. Other writings in defence of presbytery, such as that of Travers in 1574, continued to appear; and in 1583 enough Presbyterians existed in England to make possible the issue of a *Directory of Church Government*; but after that date the Presbyterian movement, having flourished for a decade, began to decline. Whitgift, though he did not, like Bancroft, insist on the divine right of episcopacy, was sternly set against nonconformity; and, by means of an ecclesiastical commission, forced from all ministers the admission that episcopacy was at least not contrary to Scripture. In 1584 the Presbyterians failed to introduce into parliament a bill

in favour of their discipline; the Marprelate Tracts of 1588-89 roused Whitgift to a fresh access of persecuting zeal; the incident of the Armada in 1588 helped to confound in men's minds the ideas of nonconformity and political disaffection. Thus, though about 1590 there were some 500 Presbyterian ministers in England, the Act of 1593 ended meanwhile all effective opposition to the State Church. Presbyterianism found itself in especial difficulties when subjected to persecution, because, unlike Independency, it could not realize its ideal except by means of an elaborate organization, and so could not retire into hiding till the storm blew over, without relinquishing essential principles. Driven by the Act of 1593 to exile, or silence, or the assumption of the cloak of Puritanism, Presbyterianism languished for a time; and the hopes raised by the Hampton Court Conference (1604) proved illusory. But, as time went on, the ideas of James I. and Charles I. concerning Divine Right gradually drove into alliance the causes of civil and religious liberty, and the consistent harshness of Laud towards nonconformity helped to precipitate the great crisis of the Civil War. About the time when the Long Parliament met (1629) Presbyterianism had begun to raise its head. London was strongly Presbyterian, and Presbyterianism was widely diffused throughout England. In 1630 appeared Alexander Leighton's *Son's Plea against the Prelacie*, for which the author was severely punished. Other incidents of the same nature occurred; and, while the Long Parliament, to begin with, merely desired to abate the overweening pretensions of the bishops, there were many who desired more, and their ideas gradually prevailed. Scottish commissioners were in London, preaching frequently, writing, holding conferences. In 1641 appeared *Smectymnus*, a plea for Presbyterianism which recalled the days of Cartwright. The Root and Branch petition of Dec. 1640 and the ministers' petition of Jan. 1641 were on the same lines. Parliamentary defeats in the early part of the Civil War rendered the Presbyterian alliance necessary, and the Solemn League and Covenant of 1643 ushered in the period of Presbyterian ascendancy, which lasted till 1648. Charles I. had now combined against himself all the elements of ecclesiastical and political revolt in the British Isles; and Presbyterianism was meanwhile the dominating religious factor in the combination. The decision of battle went against the royalists, who were decisively beaten at Naseby in 1645; and Presbyterianism enjoyed its triumph. The terms of the Solemn League and Covenant show how far short Presbyterianism yet was of learning from its own sufferings the lesson of toleration. One of the avowed aims of the treaty was to force all the British Isles into Presbyterian conformity; and, though the English Presbyterians were less narrow and fanatical than their covenanted Scottish brethren, and though the Independents, a growing body, were still more set on liberty of conscience, the Scots had their way. The Westminster Assembly was overwhelmingly Presbyterian in sentiment and policy, and adorned the few years of the Presbyterian ascendancy with those classics of English-speaking Presbyterianism which almost make us forget the narrow spirit of the time and are the fine flower of Calvinist dogmatics.

The Westminster Confession of 1647, still the official Confession of English-speaking Presbyterians, is a noble monument to its authors and to the age which gave it birth; in its stately and balanced style, in the completeness with which it sets forth the Calvinist theology, in its pointed avoidance of what is merely controversial, it is the model of a Confession for a great body of Christian believers who are conscious enough of

their own worth in the world to refrain from speaking evil of others. The same Assembly of divines sent forth the *Form of Church Government*, the *Directory for Public Worship*, and the Longer and Shorter Catechisms; and of them all, whether we judge by its intrinsic excellence or its long and widely-diffused influence, the Shorter Catechism is undoubtedly the best. A new version of the Psalms also appeared in due course; and the sacrifices made to the cause of union by the Scottish Church consisted in the repudiation of Knox's Psalms for the new version, in the adoption of the King James Bible in place of the Geneva, in the dropping of Knox's liturgy, the Book of Common Order, and the Confession of 1560.

3. *Wane in England and Scotland.*—But, even while the Presbyterians rejoiced in the creation of an imperial Presbyterianism and in the consent of parliament thereto, their power was on the wane. Independency was growing in the army, and men like Cromwell and Milton were already on the Independent side. Independency was gradually preparing to play the chief part in the religious situation; and 1646 may be taken as the high-water mark of Presbyterianism. After that date, except in London and Lancashire, a thoroughly Presbyterian organization ceased to exist in England; and, when Charles I. escaped to Carisbrooke, and made promises which turned the Presbyterians royalist, Presbyterianism fell with the falling cause. The Scots made a desperate effort to save the situation. Parliament, in defiance of the General Assembly, who thought Charles's concessions insufficient, entered into the 'Engagement,' and the 'Engagers' invaded England, to suffer a crushing defeat at Preston (1648). Cromwell was now master of the situation, and Pride's Purge and the execution of Charles I. rapidly followed. But the Scots were not yet crushed. After the disastrous failure of the 'Engagers' the Covenanters seized the reins of government, excluded all non-Covenanters from official positions by the Act of Classes, and offered Charles II. the crown only on the most rigid and humiliating terms. Nevertheless they did offer him the crown, and prepared to fight for him, but stultified their efforts by first purging the army of 80 uncovenanted officers and several thousand uncovenanted men. The defeat of Dunbar in 1650 brought them to their senses; but even then the excluded soldiers were re-admitted to the army only under humiliating conditions, and the repeal of the Act of Classes rent Scotland with the strife of 'resolutioners' and 'protesters.' Cromwell's final victory at Worcester (1651) involved both in a common disaster; yet, though the General Assembly was dismissed in July 1653 after the manner of the English parliament, the minor Church courts continued to exist and the antagonism of resolutioner and protester rent Scotland during the rule of Monk.

In England also the régime of Cromwell was tolerant. The Rump Parliament having failed to touch the religious question, Cromwell had finally to take it up himself; and, as the Presbyterians outnumbered their colleagues in the ministry, Presbyterianism still existed in a shadowy way. The minimum of ecclesiastical machinery that continued to exist was Presbyterian; but what was left was the ministry rather than the system. In 1660 Monk set up Presbyterianism once more, but not for long; it was the calm before the storm let loose under Charles II.

(a) *England.*—To take England first; Charles would doubtless have tolerated Presbyterianism, if he could have secured for Roman Catholicism a share in the toleration; but the anti-Catholic and anti-Presbyterian sentiment of Commons and

country was bound to prove too much for the easy-going king whose chief desire was to avoid further exile. The reluctance of the parties themselves foiled his efforts to secure a working agreement between presbytery and episcopacy. Bills introduced into parliament were of no avail; the Commons concluded a series of proceedings hostile to nonconformity generally by passing the Act of Uniformity, which became law on 19th May 1662, and signified the defeat of English Presbyterianism. About that time the rise of a latitudinarian school in the English Church which included such men as Benjamin Whichcote, John Moore, John Tillotson, and Edward Stillingfleet, and which based episcopacy on no higher ground than that of expediency, might have held out hopes for Presbyterianism; and Charles himself made various attempts to gain for the Presbyterians by the use of his royal prerogative what parliament refused to grant. But parliament pursued its course by passing the First Conventicle Act (1664), the Five Mile Act (1665), and the Second Conventicle Act (1670), and when Charles, on his own initiative, declared an Indulgence in 1672, parliament forced him to withdraw it within a year. The Test Act supervened in 1673. Neither the use of the prerogative nor occasional personal generosity on the part of the king arrested the fall of Presbyterianism; and the efforts of James VII. and II. produced no better result. The Presbyterians distrusted indulgences which showed Roman Catholicism an equal kindness with themselves. On the accession of William III. they could not secure ascendancy nor even a working compromise with Episcopacy, but only toleration. Between 1660 and 1690 Presbyterianism and Congregationalism had drawn together in the wilderness of persecution—a movement apparent in local working agreements and in a lowering of Presbyterian Calvinism. Socinianism became rife; and in 1727 the ministers of the 'Three Denominations' (Presbyterian, Congregationalist, and Baptist) formed an organization. The Presbyterians who remained steadfast were few except in the north. During the time of nonconformist revival about the middle of the century the Presbyterians were of more intellectual than spiritual account, and they played a conspicuous part in the struggle for religious liberty about 1780. Before 1843 there were in England Presbyterians connected with the Established and with other Churches of Scotland—the first of these bodies retains its affiliation up to the present, while the others in 1876 united into the Presbyterian Church of England, which has 12 Presbyteries and nearly 400 congregations with missions in China.

(b) *Scotland.*—Turning now to Scotland, we find that the theocracy which had existed in 1638—a narrow theocracy with presbytery and the covenant in place of Christianity, hating alike prelacy and prelate, false faith and false believer, episcopacy and independency—had received a rude shaking at the hands of Cromwell. Worse was to follow under Charles II. The Restoration fell heavily upon Scottish Presbyterianism, as upon English. In 1661 the servile Scottish parliament enacted the royal supremacy in all causes, and in 1662 passed the Act Rescissory, which, by undoing the legislation of the previous twenty-seven years, destroyed at a blow all the work of the Covenanting period. The Presbyterians discovered all too soon how easily Charles II. could sacrifice his promises to his inclination or interest. Episcopacy was re-established in 1662; ministers were ousted and replaced by curates, whose characters, in many cases, as ill fitted them as their scholarship to take the places of those who had been deprived. The ousted ministers and their flocks took to holding conventicles; the system of dragooning them into

compliance began, and, as feeling on both sides was exasperated, the situation in Scotland grew steadily worse. Previous experience made the Presbyterians chary of attempted compromise, and such Acts of Indulgence as were passed did little to mollify the growing bitterness. On the one hand, we have Test Acts and the like, abuses of justice, persecution of the most odious kind, the doings of a Claverhouse in the field and a Mackenzie in the forum, torture, imprisonment, proscription, death. It is little wonder if we find, on the other, wild fanaticism and rebellion mingling with a singleness of purpose and an endurance that sometimes rise to the sublime. After the unsuccessful rebellion of 1679, when the victory of Drumclog was eclipsed by the defeat of Bothwell Brig, dissensions broke out among the persecuted Covenanters, and the fanatical societies came into existence with their Apologetic Declarations, their fondness for the OT as a guide to the treatment of enemies, and their desperate anticipation of what the English Revolution achieved ten years later. In the last few years of Charles's reign the persecution grew so fierce that the name of 'Killing Times' has been applied to the period; but the triumph of the Presbyterians came not long after, when James VII. and II. was deposed in favour of William III. Even then the issue hung in the balance for some time; but the sensitiveness of William III. to public opinion, coupled with the influence of Carstares, decided the establishment of Presbyterianism in Scotland. Since 1690 no Scottish Presbyterian has ever been called upon to suffer for the name. It would be easy to exaggerate the sufferings of the period from 1662 to 1690. Much of the country remained quiet: Kirk-Sessions, Presbyteries, and Synods continued to function under the bishops; the old Creed and worship were little interfered with; the bishops did not err on the side of worldly pomp; and a large proportion of the people had no objection to some features of Episcopacy. But where real antagonism existed, as in Galloway and in Fife, persecution steadily rendered it worse; incidents like the murder of Archbishop Sharp and the punishments which followed it could not be forgotten; the Covenanting and anti-Erastian element was too severely antagonized ever to be reconciled; and the sufferings under Charles II. have scored their mark deep upon the religious history of Scotland. To this day the suspicion with which the old Scottish Presbyterian looks upon anything that savours in the least of Episcopalianism remains a heritage from Covenanting times.

After the establishment of Presbyterianism the question of jurisdiction as between Church and State continued to be a source of strife, but the political sense of William III. rendered easier the smoothing over of difficulties. The last martyr to die the victim of opposed religious convictions was Aikenhead in 1697; the same year saw in force for the first time the educational ideas of the Scottish Reformers—the educational fruits of Episcopal enterprise under an Act of Parliament of 1633 having fallen into decay under Charles II. Presbyterianism by degrees justified its establishment in Scotland, its victory being largely helped by the contrast of its loyalty in the 'Fifteen' and the 'Forty-five,' with the undoubted Stuart sympathies of its Episcopalian and Roman Catholic rivals. Moreover, a better feeling grew up between the opposing bodies, so that Archbishop Denison of Canterbury, in a debate in the English House of Lords on the Act securing Scottish Presbyterianism, could say that

'he had no scruple against ratifying, approving, and confirming it within the bounds of Scotland; he thought the narrow notions of all Churches had been their ruin, and he believed

the Church of Scotland to be as true a Protestant Church as the Church of England though he could not say it was so perfect' (W. Carstares, *State-papers*, Edinburgh, 1774, 769, 760).

The Toleration Act of 1712 lent the sanction of law to the new spirit of peacefulness; but the successful issue of the struggle with Episcopacy did not, any more than the victory over Roman Catholicism, end the troubles of the Scottish Church, for, in the same year, the Patronage Act introduced a new cause of discord which rent the Church in pieces. The first Book of Discipline had advocated the popular election of ministers; patronage, with the General Assembly as the final court of appeal in disputed cases, was decreed by parliament in 1567. Patronage was abolished in 1649, restored in 1660, abolished in 1690, and now restored in 1712—from which time onwards this ancient cause of strife assumes the position of chief disturber of the peace of the Church of Scotland. From time to time also the old question of civil and spiritual jurisdiction is raised. The result is to make the Church history of Scotland for the past two centuries a perfect kaleidoscope of separating and re-uniting sects. During all that period the Church remained singularly free from doctrinal troubles of any sort; the 'Marrow' case about 1720, the Simson case of 1729, and the Leechman case of 1744 represent all the heresy troubles of the Church until very recent times; but already in 1733 secession was at work. Troubles arose over the working of the Patronage Act—troubles encouraged by the indefinite practice of a perfectly definite law—and the strife between patron and people tended always to be fought out on the higher ground of spiritual *versus* civil jurisdiction. The Erskines, after taking the definite step of constituting the 'Associate Presbytery,' refused the concessions made to them by the General Assembly of 1734, and would not re-enter the Church which thus sought to make amends for their ejection; their final ejection by the General Assembly of 1740 confirmed their secession. Previous to this their 'Judicial Testimony' of 1736 had recalled all the old Covenanting bitterness; and, after the Cambruslang 'Wark' and the visits of Whitefield in 1741 and 1742, they produced 'The Declaration, Protestation and Testimony of the Suffering Remnant of the anti-Popish, anti-Lutheran, anti-Prelatic, anti-Whitefieldian, anti-Erastian, anti-sectarian, true Presbyterian Church of Scotland,' etc.—a document whose character is sufficiently indicated by its title. In 1746, when the 'Forty-five' had definitely failed, the Associate Synod itself split in two over the question of taking the Burgess Oath, and burgher and anti-burgher excommunicated each the other in 1747.

Meanwhile the question of patronage continued to agitate the Church of Scotland, which divided into the 'moderate' and 'evangelical' parties. Both objected to patronage; but the moderates believed in the enforcement of the existing law, while the evangelical party attached greater importance to the popular call. Disputed settlements resulted, often attended by painful scenes, and, as a consequence of one such disputed election, Thomas Gillespie, who had been deposed for refusing to assist at the ordination of an unpopular presentee to Inverkeithing, formed with Thomas Boston and Thomas Collier in 1761 the 'Presbytery of Relief.' Another sect was thus launched upon its career, but the kindly attitude of Gillespie towards the Establishment and his desire to get back to it contrast most favourably with the determined hostility of the Erskines. The moderates had the best of the battle within the Church; but their ascendancy was purchased at the cost of increased dissent; for, in 1764, there were 120 meeting-houses in Scotland, served by ministers

for whom the people had forsaken unpopular presentees and parish churches, and the rigid enforcement of the patronage law seemed of set purpose to aggravate the popular opposition. The moderates certainly pacified the Church, and put an end to the painful scenes only too common at unpopular settlements; by 1770 the people had learned either to submit quietly or to secede quietly, but secession was more frequent than submission. William Robertson, who led the moderate party to victory, was one of a group of brilliant men who adorned the Church of Scotland at that time; among others may be named John Home, the author of the tragedy of *Douglas*, George Campbell, who answered Hume, and Thomas Reid, who answered Locke. One result of the labours of the moderates was an improvement in the literary quality of Scottish pulpit work.

Towards the end of the century the burghers split into two—the Old Lights and the New Lights—over the question of the Covenant and the powers of the civil magistrate; the anti-burghers also divided into two Synods over the question of the civil magistrate; and, as the Cameronians, in their new Macmillanite form, contrary to expectation, remained aloof from the secession, forming the 'Reformed Presbytery' in 1743 and renewing the Covenants for the last time in 1745, the Church in Scotland was torn in pieces by the end of the 18th century.

The end of that century witnessed important changes—the slackening of the anti-popish spirit, the beginning of debates concerning creed-subscription, the shifting of population with the resultant need for new churches, the rise of a missionary spirit and of a sentiment of greater catholicity. Roman Catholic emancipation in 1829 and the Reform Bill of 1832 were symptoms of a wave of liberalism, which had its effect on the Church of Scotland. The Church's sore was still patronage, and from 1832 onwards overtures began to pour in from Presbyteries, asking for the restoration of the Call to its old place. The General Assembly of 1833 threw out the Veto Act, which conferred upon the majority of heads of families in any church the power to veto the appointment of any presentee on reasonable grounds—and thus in spite of the powerful support of Thomas Chalmers. But this was the last victory of the moderates, who could not prevent the passing of the Veto Act and the Chapels Act the following year. Ten years of strife supervened. A number of *causes célèbres* brought the Assembly and the Court of Session into violent conflict, and the question was raised as to the competence of the Assembly to pass such Acts. The Claim of Right of 1842 took very high ground in regard to spiritual independence, and nothing less than total abolition of patronage, with complete independence of the civil power, became the claim of the extreme 'non-intrusionist' party. The quarrel over patronage had developed into the old quarrel over jurisdiction, and in 1843 occurred the great secession known as the Disruption. Out of 1203 ministers, 451 left the Church. In 1874 patronage was abolished; but the Churches in Scotland still continue their separate existence, though the signs of the times point to better things. Indeed, the tendency of nearly a century past has been, on the whole, towards the re-union of the broken fragments of the Scottish Church. To take the more important examples, in 1820 the two bodies of Old and New Lights coalesced into the United Secession Church; and, by the union of that body with the Relief Synod in 1847, the United Presbyterian Church was brought into existence. Thus the Secession Church became the pioneer of union; and in 1900 was consummated the wider union of United

Presbyterian Church and Free Church into the United Free Church of Scotland. A remnant refused to enter the new Church, and was declared after an appeal to the House of Lords to be the legal Free Church. The latest statistics show that the Church of Scotland has 16 Synods, 84 Presbyteries, 1442 parish churches, 53 chapels with ordained ministers, 201 mission or preaching stations, 718,719 communicants, 2149 Sunday Schools with 19,662 teachers and 218,702 scholars, adult classes numbering 59,091 scholars, and a Christian liberality of £555,116, 16s. 10d. per annum. The United Free Church has 12 Synods, 64 Presbyteries, 1565 congregations, and 18 congregational missions with ordained ministers; communicants number 512,003, Sunday Schools 2224 with 24,055 teachers and 223,559 scholars, adult classes 2018 with 77,666 pupils; and the annual income is £1,046,049, 8s. 4d. In addition the Church of Scotland has a Synod in England, a Presbytery in British Guiana, and missions in Africa, India, and China, while the United Free Church has Presbyteries in the Italian and Iberian peninsulas and missions in India, Manchuria, Africa, and the W. Indies. The Free Church of Scotland has 4 Synods, 13 Presbyteries, and about 160 congregations (many of them vacant) with a mission in Africa. Of the smaller bodies, the Reformed Presbyterian Church, which is in full communion with the Reformed Presbyterian Churches of America and Ireland, has 11 congregations, and the Synod of United Original Seceders has 4 Presbyteries, 26 congregations, and a mission in India.

4. Ireland.—Presbyterianism in Ireland took its rise among the colonists who were settled in Ulster after the abortive rebellion of the early 17th century. These settlers were mainly of Scottish birth; and, as Episcopacy was just then enjoying one of its brief triumphs in Scotland, Ireland received her fair share of exiled Scottish ministers. Thus the spread of Presbyterianism was rapid. The Anglican Churchmen, poorly supported from England, could not in any case have made effective opposition; as it was, following the lead of Archbishop Ussher, they welcomed the Scottish ministers, and for a time Presbyterian and Anglican worked amicably together. Under the new conditions the original evil repute of the Ulster colonists was gradually lived down; but the growing success of Presbyterianism at length aroused the antagonism of the bishops, who, forsaking the spirit of Ussher for that of Laud, secured, for the time being, the suppression of Irish Presbyterianism. The process was complete by 1636. Five years later Scottish troops were sent into the country to aid in the suppression of a rebellion; and, as the completion of their task demanded a prolonged stay in Ireland, the chaplains of the force were able to re-introduce Presbyterianism. A Presbytery was formed at Carrickfergus on 10th June 1642, and within twenty years the Church numbered 5 Presbyteries, 80 congregations, and 70 ministers. This brief period of rapid expansion was followed by a century of persecution, which was interrupted by a short space of toleration and the institution of the Regium Donum under William III., only to be resumed under Queen Anne by the Test Act of 1704. The results were made apparent in a steady stream of American emigration, which drained Ireland of vast numbers of her best citizens; but not till near 1800 was the obnoxious Act of 1704 cancelled; and even since then Irish Presbyterianism has enjoyed freedom rather than privileges.

Two controversies have agitated the Church. The first of these gathered round the New Light movement, which, beginning in 1709 as a revolt against creed-subscription, resulted in a wide-spread

laxity of doctrine. The movement was not decisively checked till about 1750, when the arrival from Scotland of a sufficient number of rigidly orthodox seceders turned the tide. The Arian controversy broke out in the early half of the 19th cent., and, after a ten years' battle, Henry Cooke, a prominent figure on the orthodox side, forced matters to a decision in 1829. The secession of only 17 ministers was a sufficient proof of the triumph of orthodoxy. There followed in 1840 a union between the Secession Synod and the Synod of Ulster, and gradually the scattered congregations of the south and east came in, till, in 1854, there was only one Presbyterian Church in Ireland. From that time onwards progress has been rapid in every department of Church work. The *Regium Donum* was discontinued in 1869; but the loss has been more than balanced by the addition of a Sustentation Fund to the interest on the commutation of life-interests. The Irish Church has been of great influence, especially in Ulster, where powerful opposition has had to be faced, but also wherever Ulstermen have congregated abroad. It numbers at present 36 Presbyteries, 562 congregations, 653 ministers, and over 100,000 communicants.

5. *Wales.*—Alone among the Presbyterian Churches of the British Empire, the Welsh Church owes nothing to Scotland. Its formation resulted from an evangelical movement within the Anglican Church, which was begun by Howell Harris in 1735. As the movement grew and spread, societies were formed, and the treatment meted out to those societies by the Established Church at length drove them to separatist courses. The unwillingness of the episcopate finally forced the societies to seek ordination for their pastors elsewhere; and, after they had adopted the practice of ordination by presbyters (1811), the society organization speedily developed into a strong Presbyterian Church which has nearly 200,000 members to-day. There is also a Welsh Presbyterian Church in the United States of America with over 13,000 communicants.

6. *France.*—Early in the 16th cent. a movement of reform had begun in France under the impulse of the New Learning. Francis I., an enthusiastic patron of the Renaissance, was keenly interested, and the movement was fostered by men of weight and learning like Jacques Lefèvre, Bricconnet, and Guillaume Farel, and by women of position like Margaret of Navarre. The prospects of reform were bright enough, until the outbreak of Martin Luther alarmed the Church in France as elsewhere. Francis passed over to the side of the enemies of reform, and from 1535 Protestantism was proscribed. Yet, during the persecutions under Francis I. and Henry II., Protestantism continued to make headway in France; and, as this was due mainly to the influence of the exiled Calvin, who, from Geneva, poured into his fatherland a steady stream of letters and messengers, it was the Calvinist form of Protestantism that gradually diffused itself throughout the country. In 1555 La Ferrière, a noble Frenchman, who desired baptism for his child, but could not visit Geneva for the purpose, succeeded with difficulty in persuading his immediate circle of friends to elect La Rivière, one of their number, as pastor, and thus form a congregation. So rapidly was this example copied that, in the three years following, 2000 congregations were formed throughout France. Church and king had hitherto seen in Protestantism no more than religious nonconformity; they now began to discern in it a political menace as well, and persecution was redoubled. On the other hand, as the result of a discussion at Poitiers, the Reformed Church in Paris summoned delegates from all over France to a meeting in the capital; and 150 delegates, assembling in due course in a

private house in the Faubourg St. Germain, constituted themselves the First National Synod of the Reformed Church in France (26th May 1559). They adopted a Calvinist Creed (the *Confessio Gallica*), and, with such changes as the different conditions rendered necessary, reproduced in their constitution the polity of Geneva. Each congregation had a pastor, elders, and deacons; but the Genevan practice was departed from by regarding the diaconate as a spiritual office, and admitting the deacons to a seat in the Consistory which directed congregational affairs. The first set of these officials in each church was chosen by popular election, but subsequently such gaps as might occur were filled by the Consistory; and this 'aristocratic' method of election was long maintained in the face of popular opposition. To bind the congregations together, provision was made for a gradation of Church courts. Provincial Synods, composed of all the pastors within the bounds, with one elder or deacon from each congregation, were to meet twice a year, in order to decide upon appeals from congregations, to arrange and effect the translation of pastors, and generally to administer all competent affairs. General Synods, representing the whole Church, and composed of delegates from all the Consistories, were to be held as need arose. As time revealed defects in the system, means were devised to remedy these. A Colloque—the analogue of the Presbytery—was inserted between the congregational Consistory and the Provincial Synod; and, by the additional arrangement that delegates to the National Synod should be commissioned by the Provincial Synod instead of the Consistory, the Church was provided with a compact conciliar organization, which fitted it to play a part in the political sphere.

The Church had now a definite constitution; its members came to be known by the name 'Huguenots' ([*q.v.*] probably *Eidgenossen*, 'oath-companions'), and it found itself definitely linked with the party whose chiefs were Anthony, King of Navarre, Louis, Duke of Condé, and Admiral Coligny, as against their political and religious opponents, headed by the Guises, Duke and Cardinal. Henry II. died in 1559, the year of the first National Synod; and Francis II., the husband of Mary Queen of Scots and the tool of the Guise faction, did not live long enough to do serious mischief. During the minority of his successor, Charles IX., the regency was in the hands of Catherine de Medici, who pursued the policy of playing off the two parties in the realm one against the other. The Colloque of Poissy (1561), at which Beza pleaded the cause of Protestantism with an eloquence that drew a reluctant tribute from his opponents, was a consequence of this policy; and the result of the conference was the tolerant Edict of St. Germain (1562). But in March of that year a massacre of Protestants, inaugurated at Vassy by the Duke of Guise, transferred the issue from the council-chamber to the camp, and in the course of the next thirty years France was torn by no fewer than eight civil wars. The Roman Catholic party enjoyed almost invariably the military superiority, but the Huguenots were always formidable enough to extract good terms even from defeat and to renew the contest as need or opportunity arose. Sometimes, indeed, the Crown seemed about to lend them definite support, as, *e.g.*, in 1571-72, when Coligny was all-powerful at court, and the English marriage project and the union actually arranged between Henry of Navarre and the king's sister were devised to cement the alliance between Protestantism and the Crown. But the regent feared undue Protestant influence no less than the undue preponderance of the Guises; and the reaction from this brief period of friendli-

ness took the shape of the massacre of St. Bartholomew (24th Aug. 1572). Except in Rome and in Madrid this horrid butchery excited universal disgust; and, as a result of it and of the renewed civil war which followed, a large moderate party began to form in France. Toleration, however, had the same effect upon the extreme Roman Catholics as persecution upon the Protestants, viz. an increase of zeal; and war, conducted by leagues on the one side and on the other, each affiliated with sympathetic foreign powers, continued to distract the unhappy country. At length, in 1588, Henry III., seeing in the Guises the chief disturbers of the peace and the chief menace to the royal power, took the desperate step of having the duke and the cardinal assassinated; and the support of the Crown might, as a consequence, have passed speedily and definitely to the Protestant side, but for the assassination of the king in his turn by a fanatical Jesuit emissary (1589). Henry of Navarre, leader of the Huguenots since the death of Coligny in the great massacre, was now king; but, while he could and did win victories in the field, he could not, so long as he remained Protestant, conquer so definitely as to pacify France. Accordingly, he turned Roman Catholic (20th July 1593) and, after the peace of Vervins had ended a war with Spain which united all France for a common object, the Edict of Nantes (1598) was issued. The Protestants were given the right of public worship, except in Paris and a few other places; they still had to recognize the establishment of Roman Catholicism, but their own members had full civil and political rights; and they were given, besides an annual grant, full control of such towns and fortresses as had been in their possession the year before the Edict. In many ways the Reformed Church had suffered during the civil wars: the absence of many members in the field had woefully reduced the livings of the clergy, the number of congregations had shrunk from 2150 to 763, the influence of Henry of Navarre as leader was in sad and unspiritual contrast to that of Coligny. But the constitutional framework of the Church had been well looked to, and altogether 15 National Synods had been held during the wars. At one of these, held in La Rochelle (1571) under the moderatorship of Beza, the Creed and constitution of 1559 had been revised and renewed, and Presbyterian government formally adopted during the brief sunshine of royal favour. Thus, though the growth of the Reformed Church was checked, owing to many of the Huguenot nobility and gentlemen following the king's lead and turning Roman Catholic, a strong body remained staunch, and the growth of the Church's wealth was some compensation for its slower increase in numbers. The grant of 43,000 crowns per annum was devoted to the foundation and upkeep of theological colleges at Montauban and Saumur, and the independence of the French Church was rendered complete. After Henry's death in 1610 his work as a statesman was taken up by Richelieu, but Richelieu's fear of the Huguenots as a possible menace to the royal power gave his religious policy a reactionary character. An expedition was sent against Béarn, which had been a Protestant stronghold for sixty years, and a massacre of Protestants resulted in the re-establishment of Catholicism. In 1623 it was decreed that a royal commissioner must be present at all meetings of the National Synod to ensure that none but strictly ecclesiastical matters should be discussed. The policy culminated in a demand for the surrender of La Rochelle, which was refused; but the city was forced to capitulate after a year's resistance (1628), and, with the capture of the sadly-reduced stronghold, the politi-

cal power of the Huguenots disappeared. Thereafter the Provincial Synods were suppressed; and the consequent removal of all organization told heavily upon the individual congregations. The Huguenot nobles were tempted with offices and political preferment, the pastors were tempted with higher stipends; and many yielded to these temptations. Under Louis XIV. and Mazarin the process was carried on: Colloques were suppressed in 1657, and in 1659 the Synod of Loudun was informed by the royal commissioner that Synods would be held in future only if the king considered it expedient — which of course the king never afterwards did. Yet, up to the death of Mazarin in 1661, the Huguenots continued to be numerous; for their commercial honesty enjoyed no less repute than their commercial skill, and, realizing their economic value to the nation, Mazarin did not push them to extremity. But he had deprived them of their last shred of organization, and, after his death, the king fell under the influence of Roman Catholic bigots, who used the opportunity to destroy the Huguenots. Bribery again did its work, backed now by the exclusion from office of all Huguenots; converts to Protestantism were banished, while converts to Catholicism were held in honour, and their former pastors forbidden even to speak to them. Protestant children were kidnapped in great numbers by Catholic priests, to be reared in the Catholic faith, and their parents had no redress. About 1681 the practice began of converting Huguenots by quartering upon them troops of dragoons, whose iniquities and licence were connived at. The desperate Protestants at length took to emigration as a relief from their troubles; but, after about 50,000 had got away, a royal edict stopped even that loophole of escape. Finally on 22nd Oct. 1685 the Edict of Nantes was formally revoked. All Protestant ministers were to leave France within fourteen days, all Protestant churches and schools were to be closed, and the children, after baptism by Roman Catholic priests, to be brought up in the Catholic faith. If any of the unhappy people were caught in the attempt to flee the country, the men were sent to the galleys and the women to prison, for life; seven months later the penalty was altered to death. Nevertheless, some 250,000 made good their escape to Holland, England, Germany, and America, and by forcing them to flee France committed economic suicide. In Toulouse, *e.g.*, only one-tenth of the skilled silk-workers remained, and, from first to last, 4,000,000 to 5,000,000 of France's best citizens were lost to her by senseless persecution. A small remnant held out in the Cévennes, where, as in the case of the Scottish Covenanters, the hard, uncertain life and the lack of educated pastors gave rise to wild fanaticism. Like all fanatics, these Camisards (*q.v.*) endured and fought well; with a total strength of 10,000 desperate men they held out during a three years' war against all the troops that France sent against them, and not till 1715 did the royal power feel justified in saying that persecution had done its work. But persecuted heresy dies hard, and in the same year began the work of Huguenot reorganization under Antoine Court. He was finally forced to flee the country when his growing success attracted attention; but from Lausanne he continued to send trained pastors and to direct operations. Persecution hindered the work, but could not stop it; the Huguenots increased in numbers, and spread their organization far beyond the Cévennes. Finally, when Voltaire had made religious indifference the fashion, the Protestants received their civil rights in 1787, and the Revolution shortly afterwards restored their religious rights as well; but very soon the orgy of secularism

which supervened drove Catholic and Protestant alike into the wilderness. Robespierre's death, however, brought saner counsels, and Protestantism received in 1795 the full measure of liberty which she has since enjoyed. Napoleon, from the absolutist standpoint, greatly modified the Presbyterian constitution of the Church in his enactment of 8th April 1802. Congregational Consistories and National Synods were abolished. Congregations were grouped into consistorial churches, each consisting of 6000 souls, and the Consistory for each was composed of all the pastors in the group, together with 6 to 12 elders, who were chosen from among the principal tax-payers. Five such consistorial churches were grouped into a Synod circle, and these Synods were made up of one pastor and one elder from each congregation; they required State permission to meet, and a State functionary had to be present at their meetings. Indeed, so many were the restrictions that, during Napoleon's reign, none of those Synods met; and no Church court intervened between the consistorial church and the minister of culture. The Reformed Church, thus hampered, fulfilled government expectations by giving no trouble, but she suffered from lack of organization.

Yet Protestantism grew in the country, and amid the excitement of 1848 a great national gathering, with representatives present from 89 out of the 92 consistorial bodies, ventured to meet and make an effort at re-organization. They set up the old Presbyterian system once more with the complete machinery of Church Consistories, General Consistories, Provincial Synods, and General Synods, and would, no doubt, have secured State sanction for their proposals, had not a secession occurred among them. During the long period of disorganization differences had grown up unchecked; and friction immediately resulted from the effort at closer organization, becoming acute over the question of theological belief. The representatives of the old theology, under Monod of Montauban, seceded, sacrificing State connexion and State grant, and setting up on a voluntary basis the Union of Evangelical Churches. Their organization is a mixture of Congregationalism and Presbyterianism; and, though their numbers remain small as compared with the parent body, they have increased to some extent and are notable for their evangelical zeal. The parent body obtained, within three years, all that they asked for except the National Synod; even that they obtained in 1872. But the concession was followed almost immediately by a dispute over the framing of a new Confession; and the government took away from the General Synod all legislative power. Nevertheless, the body continues to meet once every three years, and, if it does no more, it at least represents the unity of the Reformed Church, and crowns its organization. All along the Protestant Church in France has wielded an influence out of proportion to its numbers; and its divorce, in common with all the other Churches, from State connexion should not impair its future usefulness. It has always, like other Reformed Churches, been on the side of civil as well as religious liberty, and it would be interesting to investigate how much suppressed Huguenot aspiration found vent in the French Revolution. Huguenot refugees have been the best of citizens in every land of their adoption, and the martyr Church of France is entitled to occupy a place of pride among its Reformed neighbours. Between them, the two Evangelical Churches of France count about 80,000 members, of whom about 95 per cent are in the parent body.

7. The Netherlands. — The situation of the Netherlands on the borders of both Germany and

France, together with the comparatively advanced state of education and independence of character among the Netherlands, favoured the spread of the Reformation in that country. As early as 1st July 1523 the martyrdom of Henry Voes and John Esch at Brussels testified to the progress of the movement, which, Lutheran at first, but later markedly Calvinist, found from the outset a determined opponent in Charles V. The excesses committed by the Anabaptists during a rising in 1534 gave the authorities an excuse to intensify the persecution; the Inquisition was introduced into the land, and in 1550 the anti-Protestant movement culminated in a barbarous Edict against the possession of Protestant books, the reading or discussion of Scripture, and all connivance at such offences. If a man convicted of such offences repented of them, he met death by the sword; a woman in similar case was buried alive; any one persisting in error was burned. In spite of this climax to the measures of persecuting zeal, and the death in all of 30,000 victims during the reign of Charles V., Protestantism grew to such an extent that the need of a Creed and constitution began to be seriously felt, especially in the south. In 1559 Guido de Brès, who had been trained in Geneva and England, drew up a Creed modelled on the French Confession of the same year. This Creed, revised by Francis Junius, developed into the *Confessio Belgica*; in 1563 a Synod at Antwerp adopted a Presbyterian constitution, and later, when the southern provinces had relapsed into Romanism, this Creed and Confession were accepted in the northern provinces. Meanwhile Charles V. had abdicated (1555); but the accession of Philip II. brought no relief to the Protestants. Philip increased the number of Roman Catholic bishoprics in the Netherlands from 4 to 14, made merciless use of the Inquisition, drafted troops into the country, and began to interfere with the civil liberties and privileges of the people. These aggravations of the 1550 Edict gradually identified in the popular consciousness the causes of civil and religious liberty, and Protestantism developed from a party into a national movement. A goodly number of the younger nobles formed a league, and approached the regent—the Duchess of Parma—with the request that the Inquisition and the Edicts might be withdrawn. Pending the arrival of a rescript from Spain, the regent relaxed the severity of the laws; and a great wave of Protestant enthusiasm forthwith swept the land. Huge crowds, thousands in number, assembled to hear the Protestant ministers, and the resultant enthusiasm found vent in an outbreak of iconoclast fanaticism, which was responsible for the wrecking of some hundreds of churches, but fortunately avoided the reproach of bloodshed. Philip retaliated by sending the Duke of Alva into the country with 10,000 fresh troops, and he employed the most barbarous means to end the revolt. His Council of Disturbances, by the severity of its sentences, soon earned for itself the name of the Council of Blood. In three months nearly 2000 executions took place, and the incipient organization of the Protestant Church was broken up by the death or exile of the pastors. At this stage William of Orange, hitherto a Roman Catholic and a loyal supporter of Philip, was moved to change his religion and his allegiance together, and then began in earnest that struggle for independence which issued in one of the most obstinate and bloody wars known to history—a war which lasted, with brief intermissions, till 1609. In the course of the struggle the southern provinces were won over to Catholicism; but in 1579 the seven northern provinces, by the Treaty of Utrecht, banded themselves together, declared their inde-

pendence, and launched the Dutch Republic upon its career, electing William of Orange their first Stadtholder. The organization of the Protestants had been shattered at Alva's first onset, but a number of the exiled pastors had met at Emden in 1571 and framed a set of Calvinist articles against the day of their return. They took up *inter alia* the question of the relation of Church and State, which they solved after the usual Calvinist fashion. But, when the improved situation in Holland soon after permitted their return, and they renewed their Emden Articles at the Synod of Dordrecht (1574), the Stadtholder and Council refused to recognize these. Lutheran and Zwinglian elements had played their part in the moulding of the Dutch Reformation; and, while the Calvinist theology was generally accepted, there were many, William of Orange among them, who were not prepared to concede to the Church the measure of independence demanded by Calvinism. William had set before himself the ideal of toleration, and he believed that this could best be secured if the State were supreme. Accordingly, he submitted to the Church in 1576 a set of proposals which combined a Presbyterian constitution with State control. But the Church rejected his proposals in their turn, and counter-proposals from the Synods of Dordrecht (1578) and Middelburg (1581) also failed to secure agreement. The situation was further complicated by the ecclesiastical independence of the seven provinces and the consequent diversity of views. Finally, the problem was solved by the omission of a National Synod from among the courts of the Church, which was organized under seven independent Provincial Synods. These Synods were made up of representatives from all the 'Classes,' the 'Classis' being a body which had the characteristics partly of a Kirk-Session, partly of a Presbytery. The civil power was dominant over all.

Although war went on till 1609, this settlement of the Dutch Church was followed by a marvellous outburst of intellectual activity. Between 1575 and 1650 five universities were founded—at Leyden, Franeker, Groningen, Utrecht, and Harderwyk—and the Netherlands speedily became the chief theological school of the Reformed Church. This intellectual activity disclosed itself in two great controversies—the Arminian and the Cocceian. Arminius combated the Calvinism of his day, as Pelagius 1200 years before had attacked the Augustinian theology. In 1603 he set forth the thesis that Christ died, not for the elect only, but for all, and that grace was not irresistible. This protest against the harsh doctrine of unconditional election was vigorously counter-attacked by Gomarus from the Calvinist standpoint, and interest in the controversy rapidly spread to all ranks of society. Nor was the battle merely doctrinal, for the Calvinists still held out for spiritual independence, while the Arminians were ready to accept a large measure of State control. The political situation added a third element to the complication. While the majority of the States favoured Arminianism, Maurice of Orange, who was suspected of aspiring to the supreme power, took the opposite side. Even after the death of Arminius in 1609 the trouble continued. In 1610 the Arminians, chief among whom were Grotius the theologian and Barneveldt the statesman, issued the Remonstrance; disquieting incidents occurred in various quarters, and finally, in 1618, the Synod of Dort was assembled to settle the matter. At this Synod were present 28 foreign delegates—from Germany, England, Scotland, etc. Early in the discussions the Arminians were ruled out of the house because they would not submit to the rules of debate; thereafter their positions were con-

demned under five chief heads. A persecution followed. Many of their pastors were exiled; Grotius was seized, but escaped; and Barneveldt, who was less fortunate, was executed. After the death of Maurice of Orange the exiles were permitted to return, and were given complete liberty of speech and action. They founded the dissenting Remonstrant Church, which, though it has produced some eminent theologians, has remained so weak in numbers as to confer a pragmatist sanction upon its Calvinist opponents. Even to-day it has not more than 5000 members.

The second great controversy—the Cocceian—was so named from its originator Cocceius, a professor at Franeker, who sought to save the Calvinist theology from traditionalism and scholasticism. He contended for a Biblical theology, and held that Scripture should be its own interpreter. Working along these lines, he arrived at the Federal Theology, with its doctrine of the O.T. covenant of works, which had been superseded by the N.T. covenant of grace. This Covenant Theology (*q.v.*) was vigorously opposed by Voetius and others; but the spirit of the age was on the side of Cocceius, whose type of doctrine was accepted by the English Puritans, embodied in the Westminster Confession, and speedily became dominant in the Calvinist churches.

During the whole of the 17th cent. Holland was a refuge for oppressed Presbyterians from other lands, notably from Scotland. Many Scottish ministers were trained in Dutch universities; Scottish congregations flourished in many Dutch towns; and the influence of Dutch theology spread thus to Scotland, and to all the colonial Churches that own the Church of Scotland for their mother. This was also the century of Dutch colonial expansion, and Presbyterianism flourished in all the Dutch colonies.

Up to about 1800 the only interference with the old Presbyterian system was in the direction of more efficient ministerial supervision—an object secured by the appointment of a visiting committee in each Classis. But about 1800 the Netherlands was attacked by the prevalent disease of constitution-mongering, and the Church shared in the general disorganization for about two decades. The return of the House of Orange to power in 1813 brought the trouble to an end; and the Church constitution, as renewed in 1816, was thoroughly Presbyterian, the organization, moreover, being completed by the addition of a National Synod. The State supremacy, however, remained, and it was further strengthened by a decree of 1827 authorizing a permanent committee of the National Synod. This committee was composed of 7 members, chosen by the Crown, out of 14 nominated by the Synod. In 1852 the State adopted the policy of the concurrent endowment of all churches, and, except for the endowments, all connexion between Church and State has since been at an end. For the last century rationalism has been a marked feature in the Dutch Church. In 1816 the Synod sanctioned a change in creed-subscription whereby the subscriber accepted any doctrine, not *quia*, but *quatenus* it was contained in Holy Writ. The result was soon evident in a wide-spread relaxation of Calvinist rigidity; and the fear of this laxity on the part of the more orthodox Presbyterians has given rise to two important secessions (1837 and 1886). These have seriously weakened the parent Church in point of numbers, so that in times comparatively recent many of her pulpits were vacant; but a return to greater orthodoxy, coupled with a gratifying increase in the number of Divinity students, holds out a brighter hope for the future. The Reformed Protestant religion is professed by the Dutch

royal family and by about three-fourths of the Protestant population, and at the end of 1912 the Dutch Reformed, Walloon, English Presbyterian, and Scottish Churches had between them 1 Synod, 10 provincial districts, 44 Classes, 1362 parishes, and at least 700,000 communicants. Branches of the Reformed Church also exist in the E. and W. Indies.

8. Other Continental Churches.—By their sanguinary initial struggle for existence, and their widespread influence, the Churches in France and Holland have earned their title to pre-eminence among the Presbyterian Churches of the Continent. But other Presbyterian or partly Presbyterian Churches exist in Europe, which, by reason of persecution, politics, or geographical situation, have remained isolated until the recent creation of a General Presbyterian Alliance. Indeed, some are isolated still. The National Evangelical Church of Germany combines Lutheran and Presbyterian elements. The Decree of Augsburg (1555), by its adoption of the principle '*Cuius regio, ejus religio*,' introduced into Germany a fruitful cause of religious hardship and ecclesiastical discord. In 1559 Frederick III., an enthusiastic Calvinist, succeeded to the sceptre of the Rhine Palatinate, and, in terms of the treaty, began the endeavour to make Calvinism the religion of his dominions. His methods, which were not above suspicion, failed in the Upper Palatinate, but were successful in the Lower; and, where they did succeed, he prevented the introduction of Presbyterianism in its entirety by keeping in his own hands a large measure of ecclesiastical control. The Presbyterianism of the Palatinate has made for itself an enduring monument in the Heidelberg Catechism, the work of Olevianus and Ursinus, which, intended originally for local use, speedily won ecumenical significance as a Calvinist standard. The Catechism softens the rigidity of Calvinism with regard to predestination and some other points, and is remarkable for its general moderation of tone. Among the duchies of the Lower Rhine Presbyterianism was planted by refugees from Holland, France, and Britain; Alva's persecution drove Dutchmen over the border in thousands, and the influx gradually changed the prevailing type of Protestantism from Lutheranism to Calvinism. Presbyterian Church government replaced the consistorial system, and the Presbyterianism of the district allied itself with that of the Palatinate. Synods were held, notably that of Emden (1571), when the Calvinist and Presbyterian Emden Articles were adopted. But the civil authorities have prevented Presbyterianism from ever fully realizing itself. When the map of Europe was readjusted after the fall of Napoleon in 1815, these Presbyterian provinces fell to Prussia; and 1817, the tercentenary of the Reformation, appealed to Frederick William II. as a favourable occasion for uniting the two Protestant Churches in his dominions. The united Church was called the National Evangelical Church of Prussia, and the Prussian lead was followed by most of the other German States. Each of the two uniting Churches retained its own standards and its own system of government, but modifications introduced from time to time have rendered it necessary for the stricter adherents of both Churches to secede. The Lutheran theology and ritual have made serious inroads on the Reformed Church, but the Presbyterian form of Church government has been equally successful in the invasion of the Lutheran body. The civil power, however, maintains its firm hold upon the Church organization as a whole.

In Bohemia a modified type of Presbyterianism existed long before John Calvin ruled in Geneva. The intestine wars of the Hussites (*q.v.*) about the

middle of the 15th cent. led to the forming of the *Unitas Fratrum*, who, abhorring the idea of strife, repudiated both the warring sects, and contented themselves with a life of simple piety, seeking guidance from the Bible alone. A constitution essentially Presbyterian, embodying the eldership and the diaconate, was adopted in 1496, and testified to the presence in the Church of a strong lay element. But a distinctive feature was introduced into the government of the Church by placing the presidency of each Synod in the hands of a bishop elected by the pastors. In 1557 the Church was strong enough to assemble no fewer than 200 pastors in one of its Synods. It had indeed achieved the status of a national Church, and in Reformation times the most cordial relations were inaugurated and maintained between the Bohemian Church and John Calvin. At the beginning of the Thirty Years' War the abortive rebellion of the Protestant nobles and the crowning of Frederick V. the Elector Palatine by the rebels gave to the persecuting zeal of Ferdinand II. an excuse for increased severity, and his victory was followed by the ruthless suppression of Protestantism in Bohemia. Joseph II.'s Edict of Toleration (1781) gave the persecuted Church the first opportunity of renewing its activity, and, even after a century and a half of repression, the submerged Protestantism of the country soon blossomed forth into vigorous life and development only to be crushed again by the measures of a reactionary successor. A better constitution was granted in 1861; but the State, by means of its ecclesiastical Council, still keeps a firm hold upon the organization of the Church, and rules over its Synods and superintendents to the detriment of a complete Presbyterianism. The Church in Bohemia and Moravia continues small in numbers;¹ but its heroic past and its present zeal for Home Mission work and education hold out the hope that a more liberal policy on the part of the State may usher in a more prosperous time.

In Hungary, as in many other lands, Calvinism superseded in time the original Lutheran form of the Reformation, and, whereas a Synod at Erdő in 1545 adopted the Augsburg Confession, the Synod of Debreczen (1567) made the Heidelberg Catechism and the Second Helvetic Confession the standards of the Church, which has since faithfully adhered to them. When Hungary fell into two separate political entities about the middle of the 16th cent., Transylvania came under the rule of Reformed or tolerant princes, and the Church grew unchecked till 1602, when Rudolf of Hungary conquered the principality, and began to persecute the Protestants. But the Treaty of Vienna (1606) restored Transylvanian independence and ushered in a period of seventy years' peace. The Church prospered till 1677, when Leopold I. of Hungary again subdued Transylvania, and persecution, marked by the imprisonment, exile, enslavement, and even death of Protestant pastors, plunged Protestantism into misery once more. The century of humiliation which followed ended only with the Toleration Edict of Joseph II. (1787), which conferred upon the Protestants a new lease of life. The Protestant Church has become strongly identified with the political aspirations of Hungary, and has been greatly benefited by the comparative independence which Hungary enjoys within the Dual Monarchy. Congregations to the number of 2000 and a membership of over 500,000 testify to the strength and prosperity of the Church. Up to 1881 the old territorial division of the Church was retained, but in that year the organization under five independent provinces was unified by the Synod of Debreczen. In her isolation this Church

¹ About 67,000 in 1912.

has developed distinctive features in her government. Each Tractus, or Church county, the body corresponding to our Presbytery, is presided over by a senior elected by the pastors, and a coadjutor curator elected by the elders. Similarly, each province has a clerical superintendent and a lay curator. This arrangement combines the benefits of Episcopal supervision with those of Presbyterian parity. The Church has been chiefly remarkable for its educational work; and its organization of parish schools, high schools, and colleges vividly recalls the 'devote imagination' of John Knox concerning Scottish education. In a land hemmed in by circumjacent Catholicism the work done by the Church in maintaining single-handed its army of some 5000 teachers with 300,000 pupils is of immeasurable importance for Protestantism.

The cantonal system of Swiss government has served to restrict the honour of Calvin in the land of Calvin's adoption. All the cantons except three—Geneva, Vaud, and Neuchâtel—favoured the Zwinglian rather than the Calvinist form of Church government; and in the three cantons named the Church remained isolated and quiescent till the beginning of the 19th century. The period of renewed activity which was then inaugurated had been characterized by secessions and divisions. In Geneva, on the occasion of a visit paid by the Scottish preacher, Robert Haldane, in 1817, a revival of evangelical zeal began. C. H. A. Malan, J. H. M. d'Aubigné, and others took up the movement, and the Church showed its resentment by deposing Malan. A separate ecclesiastical community at once began to gather round him. In 1832 d'Aubigné and others founded the Evangelical school of theology, and were deposed in their turn. At the same time the State was engaged in an attempt to destroy the independence of the Church; and the agitation finally issued in the formation of the Free Evangelical Church (1849). This Church is still weak in numbers, but it withdrew sufficient strength from the national Church to leave it at the mercy of the State, and since 1874 the national Church has really become Zwinglian.

In Vaud the famous theologian A. R. Vimet advocated the policy of separation between Church and State; and, when the State, as in Geneva, attempted to subordinate the spiritual to the civil power, 100 ministers seceded in 1845, forming the Free Evangelical Church of Vaud, which has been remarkable for its missionary zeal. The national Church is now controlled by the State, but not too rigidly.

In Neuchâtel a similar effort by the State to assume control of the Church resulted in a secession under F. Godet in 1873.

In Italy, Spain, Portugal, and Belgium 16th cent. Protestantism was strangled in its infancy; and only in the last century have more liberal ideas permitted the rise of a Reformed Church in those countries. The Italian Church, the descendant of the Waldensians, began its work in Piedmont in 1849, received an additional impetus when the unification in Italy under a constitutional government took place in 1861, and now exercises its semi-Presbyterian government over a membership of more than 20,000. In Spain the work was begun by Scotsmen in 1852. Persecution and exile followed in 1860, and the refugees, meeting at Gibraltar, took over the Westminster Confession, and adopted Presbyterian Church government. The revolution of 1868 permitted their return, and their work has since centred mainly in Seville and Madrid. This Church owes a great debt to the support forthcoming from Scotland and Ireland.

Belgium has recently become possessed of two Reformed Churches, each about 7000 strong, one

of which has laid claim to a historic succession by adopting the *Confessio Belgica*. Small Reformed bodies also exist in Denmark, Alsace-Lorraine, Austria, Greece, and Poland; and, if we are justified in regarding democracy as the type of future government, we may confidently assume the present to be only the day of small things, and anticipate a great future for this sanely democratic variety of Church organization.

The total number of Presbyterian communicants in Europe is now well over 3,000,000—more than half of them in the British Isles.

iv. HISTORY OUTSIDE EUROPE.—When we come to consider Presbyterianism elsewhere than on the continent of Europe—*e.g.*, in America—we reach a new phase of Presbyterian history, in which petty obstruction takes the place of sanguinary persecution, in which battles and martyrdoms are replaced by slow development and construction; and, whereas in the heroic days of early European Presbyterianism the leader often bulked larger than the cause, in other continents Presbyterian progress was, on the whole, a triumph of principles rather than of individual men.

i. America. — To American Presbyterianism England, Holland, France, and Germany have all made their contribution, as is seen below; but the contribution of the Church of Scotland has been greatest of all. Episcopacy arrived in Virginia with the early colonists of 1604, and in 1620 the Pilgrim Fathers (*q.v.*) laid the foundation of Independence in America; but not till near 1700 did Presbyterians begin to arrive in considerable numbers, and not till after 1700 was the first Presbytery organized. The Presbyterian wing of English Puritanism was represented from the beginning, but its adherents were at first too scattered to make organization possible or profitable, and only when the persecutions under Charles II. began to drive men from Scotland and Ulster to the colonies did numbers to be organized and minds to organize them make their appearance in the American colonies. Emigration from Scotland was encouraged during the persecution, and from 1660 to 1688 a steady stream poured out of the country — often in compact bands of several hundreds. These settled mostly in New Jersey and Pennsylvania, and the first church was built at Freehold, N.J., in 1692. By 1700 there were over 30 congregations—half of them in the two States above named; indeed, Presbyterianism soon became a feature in the life of the middle colonies. Francis Makemie, a licentiate of the Presbytery of Lagan in Ulster, had been sent out in 1683 in pastoral charge of a band of emigrants; and, combining in the land of his adoption the callings of itinerant trader and evangelist, he found in the country a sufficient number of Presbyterians to make organization worth while and enough Episcopalian opposition to make it expedient. In 1699 he was called to the charge of Snowhill in Maryland, and in 1706 seven ministers, with Makemie as leading spirit, founded the Presbytery of Philadelphia. Thereafter a rapid development took place. Appeals were made to Scotland, Ulster, Dublin, London, and considerable assistance was forthcoming, notably from the Synod and the University of Glasgow. While the home churches supplied ministers, the operation of Test Acts at home supplied the Church with a steady influx of emigrant members, and in 1716 she was strong enough to combine her four Presbyteries into the Synod of Philadelphia. The need of a Creed and a constitution soon made itself felt, but, when the Presbytery of Newcastle, alarmed at the lax doctrine of some of the incoming ministers, ordained in 1724 that all its future licentiates must subscribe the Westminster standards, and overtured

the Synod to make this rule general, the discussion in the Synod revealed the existence of two parties in the Church. In New England elements of Independency had been at work, and the native-born New England clergy looked askance at the more rigid Presbyterianism of Scots and Ulstermen. The resultant controversy lasted some years, and it was mainly the tact of Jonathan Dickinson that ended it in 1729. In that year a compromise was effected by the passing of the Adopting Act, whereby the Westminster standards were taken over as embodying in essence a sound system of doctrine and government, and their observance was enjoined upon the Church as far as circumstances might allow or Christian prudence direct. By this wise measure the Church was enabled to retain its historic connexions, to avoid Congregationalism, and to secure a degree of flexibility fitting it to deal with the conditions prevalent in a new and growing country. A fresh controversy soon arose over the question of ministerial education. The supply of ministers, both from the colony itself and from overseas, fell so far short of the demand that a lowering of the standard was hard to avoid. William Tennent, a Dublin emigrant, attempted to meet the case by founding a seminary, later known as the Log College; but his students frequently possessed more zeal and piety than education or culture, and filled the older Presbyterians with dismay. The visit of Whitefield in 1739 was followed by an outbreak of revivalism, and at length the un-Presbyterian methods of the Tennent school moved the Synod to insist upon Presbyterian discipline and a standard of education for all its ministers. A disruption resulted in 1745, when the Church split into the Synod of Philadelphia, or old side, and the Synod of New York, or new side. But the new side were quite alive to the benefits of education, and the old side not less alive to the blessings of evangelical zeal; and a sense of duty, combined with mutual esteem and a common interest, secured re-union in 1758. The cause of missions to the American Indians, which had been in operation since 1741, was warmly espoused by the re-united Church, which also interested itself deeply in the New Jersey College. When the Revolutionary war broke out in 1775, the Presbyterians of the middle colonies, who had not forgotten the history of their Church at home, took the colonial side almost to a man, and their devotion to the Revolutionary cause earned for the Church the lasting respect of the nation. John Witherspoon, who had come from Scotland in 1768, was the principal actor in the completion of the Church's organization, when, in 1789, 13 Presbyteries, meeting by their representatives at Philadelphia, constituted themselves the first General Assembly of the Church. They organized the Church on Scottish lines, and adopted the Westminster standards, making determinative the principle that 'God alone is Lord of the conscience.' At this stage the Church numbered 4 Synods, 13 Presbyteries, 186 ministers, and 419 congregations. About the end of the 18th cent. 'unions' and 'federations' were the order of the day; and in 1801 the Presbyterian and Congregational Churches drew up the 'Plan of Union,' which was really an effort to secure external and operative unity by ignoring the differences between the Churches. As a result the Presbyterian Church increased rapidly in numbers, but became thoroughly leavened with Congregationalism. Members poured in at the rate of 10,000 to 20,000 per annum; but the younger churches became lax in their adherence to Presbyterian doctrine, discipline, and tradition. A test case came at length in 1830, when Albert Barnes, a Congregational minister called to a

Presbyterian charge in Philadelphia, was vetoed by the Presbytery on account of his known laxity of doctrine. This breach of the 'Plan of Union' ushered in seven years of ecclesiastical strife, which ended in the repudiation of the Plan in 1837. A disruption of the Church into old school and new school followed in 1838, and endured for thirty-two years. Feeling ran high in both schools over the slavery question; in 1857 the northern half of the new school repudiated their brethren of the south, and in 1861 the southern portion of the old school seceded. This fresh dismemberment drew the two northern bodies together, and they re-united in 1870. During the separation the two Churches had been vigorously engaged in Home Mission work, having sent out between them no fewer than 25,000 missionaries; and the united Church followed up the work with enthusiasm. Foreign Missions had been inaugurated in 1810 as the result of undenominational activity, but in 1838 the Church took over her own. Early in the period of separation the new school reverted to the original plan, but in 1854 she resumed control of her own missions; and now the Church has missions in Mexico, Brazil, Africa, Syria, Persia, India, and China. With over 9000 ministers, almost 1,500,000 members, 300 missionaries, and a dozen seminaries, including such famous schools as Princeton and Union, this Church is, in point of size, the greatest single Presbyterian organization in the world.

Of the other Presbyterian bodies of British origin in the United States little need be said. The Presbyterian Church in the United States (South) was formed in 1861 by the union of the old and new schools in the southern States. It possesses missions in Mexico, Brazil, and India, but its principal mission work has naturally been among the emancipated negroes. This Church has upheld the conservative tradition of the South. Since the end of the Civil War it has become increasingly friendly with its northern neighbour, but re-union has not yet taken place. It has over 1700 ministers and nearly 300,000 communicants.

The Cumberland Presbyterian Church, which, with its Coloured Branch, numbers about 150,000 members, had its origin in the Kentucky revival at the end of the 18th cent., when doctrinal and ecclesiastical vagaries increased to such an extent that at length the General Assembly intervened, forbidding the Cumberland Presbytery to ordain illiterate men to the ministry. The consequent secession gave birth to the Cumberland Presbyterian Church, which retains the Presbyterian polity, but has lowered the standard of ministerial education, and has relaxed some of the severer Calvinist doctrines. The United Presbyterian Church of N. America represents the main stream of 18th cent. dissent in Scotland, and its membership is over 100,000 strong. It remains very strict in its adherence to old standards, but is notable for its great evangelical and missionary zeal.

Among the Presbyterian Churches in the United States which trace their origin to continental Europe it will suffice to mention two. The Reformed Church in America (*g.v.*), which till 1867 retained its historic name of the Dutch Reformed Church, enjoys the distinction of being the oldest Presbyterian body in the United States. The first congregation, with Jonas Michaelius as pastor, was formed in 1628 in what was still the town of New Amsterdam, and the Church grew and flourished under Dutch rule till 1664, when the colony passed into English hands and became New York. The English authorities confined the activities of the Church to the Dutch inhabitants of the colony; and by this restriction, which remained in force till about 1700, its expansion was checked. Thereafter the Church itself hampered

its own growth by the exclusive use of the Dutch language in its services and by retaining its affiliation to the Classis of Amsterdam. But in 1764 the use of English in the services was permitted, and in 1785 the Church declared its independence of the Amsterdam Classis as the Synod of the Dutch Reformed Church in America. Since then it has grown slowly and steadily to the number of 100,000 members. The Dutch element and influence in it have naturally decreased, but the old doctrine, government, and ritual are still adhered to, and the doctrinal standard, the Heidelberg Catechism, is expounded weekly in every congregation, the complete exposition covering a period of four years. Foreign missions in India, Japan, and China constitute an important feature of the work of this Church; and the efforts of the Sudder family have made Arcot (S. India) a perfect model of what a mission ought to be.

The German Reformed Church was founded by emigrants, chiefly from the Rhine Palatinate, about the end of the 17th century. These settled mostly in Pennsylvania, and in 1747 M. Schlatter and four other ministers formed the first Coetus or Synod under the Classis of Amsterdam. Schlatter paid a visit to Europe in 1751, and secured substantial help from Holland, England, and Scotland. The Church declared its independence in 1773, and since then it has grown to such an extent that it now numbers about 300,000 members. It is estimated that of the German immigration to America during the last century two-thirds have found their way into the Lutheran Church, and the remaining third into the Reformed Church. The German Church has retained its native language much more tenaciously than its Dutch neighbour. The Heidelberg Catechism remains the doctrinal standard, and German customs and ritual are strongly adhered to, particularly in connexion with the great festivals of the Christian year. The six Churches already spoken of represent well over 95 per cent of American Presbyterianism.

Presbyterianism stands third in order of numbers among the Protestant Churches of America—a very creditable position, considering the comparative smallness of Presbyterian immigration and the restriction that the Church has placed upon her expansion by her insistence upon an educated ministry. Her membership is increasing over 50 per cent faster than the population of the country; and in culture, influence, wealth, and catholicity of spirit she calls no American Church her superior. The huge sphere of labour presented by the United States prevents the overlapping caused by denominationalism in smaller countries, and this, together with the friendly rivalry that exists between the various bodies, is a happy augury for a prosperous union at some future date.

The history of Presbyterianism in Canada presents two main features—enthusiasm for unity and tenacity in the face of opposition. The Huguenots first attempted to lay the foundations of Presbyterianism in Canada, and, while the tradition of Henry of Navarre persisted, they were not unsuccessful; but the revocation of the Edict of Nantes (1685) made an end of their work and turned Canada into a Jesuit preserve. The second impulse began from Britain in the latter half of the 18th cent., and, since then, Scottish characteristics have been well to the front. The increase of immigration early presented a difficulty, which was solved by seeking for outside help, and all the home Churches, as well as the American, did what they could. In this connexion the work of the Glasgow Colonial Society in Nova Scotia is especially worthy of mention. In the early part of the 19th cent. Episcopal opposition had to be faced in Canada as elsewhere. One-eleventh of the unceded

lands in Upper and Lower Canada had been set apart for the maintenance of a Protestant clergy, and it cost the Presbyterian Church twenty years of struggle to wrest its share from the grip of the Episcopalians. The battle raged from 1817 to 1840, at the end of which time the Presbyterians obtained a third of the 3,000,000 acres of 'clergy reserves.' In 1832, feeling the need of a training college, the Church applied to the government to endow additional chairs in King's College, Toronto; but, Episcopal opposition proving too strong to be overcome, the Church herself founded Queen's University in 1841.

The Disruption of 1843 aroused echoes in Canada, and this, with the territorial divisions obtaining till 1867, kept the Canadian Church divided. In 1845 there were seven principal bodies of Canadian Presbyterians; but mutual goodwill speedily developed, and in 1860 a succession of unions began. By 1875 only four separate Churches were left, and these united on 15th June of that year to form the Presbyterian Church in Canada. At present a scheme is afoot to bring about a wider union of Presbyterians, Methodists, and Congregationalists. The General Assembly approved the basis of union in June 1916, but a considerable minority left the house; and so far the matter is incomplete.

The Church does excellent work among the French Roman Catholics, but her finest and most productive activity has been along the line of Church extension in the West, where, especially since the opening of the Canadian Pacific Railway in 1885, a notable work has been done in what is practically a new nation.

The Church at present has 70 Presbyteries, 2336 congregations, 1769 ministers, and about 300,000 communicants.

2. *Australia.*—Four-fifths of Australian Presbyterianism is concentrated in New South Wales and Victoria. The Presbyterian Church of New South Wales came into existence as the original population was outnumbered and absorbed by the respectable immigration of later times. The first Presbyterian minister in the colony was John Dunmore Lang, who went in 1823 and some years later was instrumental in founding the Presbytery of New South Wales. In course of time certain ministers resented Lang's virtual dictatorship, and tried to end it by insisting upon punctilious observance of the rules of the Church of Scotland. Lang and his following, who considered such rigidity injurious to the prospects of a new Church in a new land, seceded in 1838. Union was restored in 1840, only to be broken by a similar secession in 1842. The Scottish Disruption produced a further split in the colonial Church. She did her best to remain neutral, but her dependence upon Scotland for men to fill her pulpits produced the inevitable division in 1846. At length, however, her growing independence, and the problems which she was called upon to face, paved the way for union; and since 1865 all sections have been united.

In Victoria the gold rush, and the situation created by the rapid influx of a certain type of population, brought about union in 1859; and by 1870 all the remnants had come in. Since 1886 there has been a federal union of the original six Australian Churches, with an annual Federal Assembly. Its 44 Presbyteries, over 600 congregations, and about 60,000 members witness to the strength of Presbyterianism in Australia.

3. *New Zealand.*—The first Presbytery of what became in time the Presbyterian Church of New Zealand, occupying the north island and half of the south, was founded at Auckland in 1856. The personnel was largely drawn from the Church of Scotland, but comprised Irish and other elements. Since its early days this Church has done splendid

Home Mission work, and has grown with the growth of the colony. The Presbyterian Church of Otago and Southland resulted from a resolution of the New Zealand Company to ask the co-operation of the Free Church of Scotland in the settlement of the new colony. The Free Church accepted the proposal, and the experiment of founding a model colony was tried at Otago. The first batch of emigrants arrived in 1843, with a nephew of Robert Burns as their minister, and in 1854 the first Presbytery was founded. The gold rush of 1861 presented the Church with a problem which has been very satisfactorily solved. The united strength of the Church in New Zealand now totals 17 Presbyteries, 230 congregations, and 40,000 members.

4. S. Africa.—There was a Dutch Reformed Church in Cape Colony from 1652; but, in spite of the steady stream of Dutch immigration and an influx of Huguenots about the end of the 17th cent., the Church had practically no history for the first century of its existence. After British rule began in 1806, better days dawned for the Church; and a Synod was organized in 1824. A Dutch law of 1804 had given the Church a constitution, but had left the supreme ecclesiastical power in the hands of the State. Ministers of a later date found State control irksome, and agitated to such purpose that the obnoxious feature was abolished in 1843; in 1875 State support also was withdrawn. The mutual animosity of Briton and Boer caused great Boer treks, and the Presbyterian Church in S. Africa was split into a number of territorial fragments. The various Dutch Reformed Churches have a communion-roll of about 200,000, and the British Church numbers over 11,000 communicants.

Leaving out of account the spiritual, ethical, intellectual, political, and economic influence of its splendid history, and regarding it from the point of view of mere statistics, we may allow the following figures, reported to the last General Council, to vouch for the progress of Presbyterianism and to bear testimony to the fact that the seed planted in Geneva has become a great tree overshadowing the world.

Continent of Europe	1,451,423	communicants.
United Kingdom	1,615,432	"
Asia	223,838	"
Africa	281,715	"
N. America	2,713,064	"
S. America	12,234	"
W. Indies	16,101	"
Australasia	104,147	"
Total,	6,418,014	"

As the total for 1888 was only 3,721,680, it will be seen that the communion-roll of Presbyterianism has nearly doubled itself within the last thirty years—a happy earnest of further increase.

III. NATURE AND WORKING OF PRESBYTERIAN SYSTEM.—All forms of Church government are ultimately reducible to three—Prelatic, Congregational, and Presbyterian. The Prelatic type of government, exemplified in the Roman Catholic and Anglican Churches, is characterized by the gradation of ministerial rank, by the institution of the diocesan episcopate, and by the emphasis laid on the distinction between clergy and laity. The Congregational type recognizes neither gradation of ministerial rank nor gradation of Church courts; it places all ministers on an equal footing, and makes of every congregation an independent judicature. It is the boast of Presbyterianism that it avoids the dangers of both its rivals; on the other hand, it has sometimes been charged with combining the evils of both without any admixture of their advantages. As opposed to prelacy, the Presbyterian type of government rests

upon the equality of ministerial status, and seeks to give ecclesiastical power to the members of the Church instead of to clerical individuals or councils; as opposed to Congregationalism, it seeks to realize the unity of the Church, by entrusting to a carefully devised system of graded Church courts legislative, executive, and judicial, not merely advisory, powers. This distinction between the three main types of Church government turns, of course, purely upon questions of ecclesiastical polity, and Presbyterian Church government is not the necessary concomitant of Calvinist doctrine, any more than it implies any definite and particular type of Church worship. Examples occur even of ecclesiastical polities which combine features drawn from more than one of the three chief types mentioned above. It will be noted that in such cases the operation of some factor external to the Church, such as the civil power, has generally to be taken into account. Indeed, in the last resort, any given form of Church polity must logically be based upon some definite doctrine of the Church, and any such doctrine of the Church is bound, in its turn, to form part of some articulated and unified dogmatic system. Thus we find that, on the whole and in spite of exceptions, Calvinistic doctrine, Presbyterian Church government, and a simple type of service which lays great stress upon the homiletic aspect of worship go together; and, in most cases, these exceptions can be traced to some extraneous influence working against the free self-development of the Church. Presbyterianism is characterized by the attempt to combine in its organization the following three features: (a) parity of the clergy; (b) government of the Church by its membership as represented by presbyters or elders, ordained to rule; (c) unity of the Church, so far as the conditions of nationality, language, space, and numbers will permit of organization. It will thus be seen that we have here the attempt to steer a middle course between Prelacy, which has made much of the doctrine of office in the Church, and Congregationalism, which is given over to individualism.

In support of the theory and practice of Presbyterian Church government the *jus divinum* argument has been largely made use of. At the height of the controversy between Presbyterianism and Prelacy which divided Britain in the 16th and 17th centuries the argument was pushed to the extreme of identifying Presbyterianism in detail with the ecclesiastical polity of the NT—a position untenable under the conditions of modern historical research, which would prefer to find the justification of any ecclesiastical system in considerations of expediency or of development. Yet the Presbyterian still clings to the *jus divinum* in a modified form. He holds that the NT, which sets forth the basis of the Christian faith, must necessarily supply the basic ideas concerning the institution which has sought to embody Christianity and to mediate it to the world; and he contends that in the fundamental ideas and principles of Presbyterianism the spirit and ideas of the NT are more faithfully reproduced than in any other polity. He would no more lay claim to a divine succession of presbyters than to an apostolic succession of bishops; the laying on of hands by presbyters has for him no more significance than episcopal consecration as a kind of mechanical device for the transmission of ministerial grace; he would find the true apostolic succession in the successive possession of the apostolic spirit by generations of faithful Christian pastors. His idea is of the *jus divinum* as belonging to an institution which is spiritually the successor of the NT Church, seeking on the whole to retain its offices and its general type of organization while modifying them to meet new requirements in a different age.

The Presbyterian form of polity in modern times is based on the Calvinist doctrine of the Church. According to this view, the Church is a fellowship of believers which aims at realizing the fellowship of each member with the others and of all with Christ. Such an essentially spiritual idea of the Church renders it impossible for the Calvinist Presbyterian to unchurch any professed believer or body of believers on merely external grounds. The true Church is invisible, known only to God; and the mechanical exclusion of any man from salvation by reference to some fixed ecclesiastical theory is a presumption. In fact, evangelical Protestantism must place first the true preaching of the Word and the proper administration of the sacraments, and all Church government is justified only as a means to that end. Up to this point Presbyterianism and Congregationalism are agreed; they differ only as to the means by which the Church can best serve those ends and express her mind to the world. Presbyterianism recognizes more fully than Independency that, in order to secure the three general ends of true preaching, true administration of the sacraments, and true discipline within an orderly and united body of believers, a certain amount of organization is unavoidable, even if of secondary importance, and the founders of Presbyterianism went to the NT for their models. In so far as they attempted or claimed to effect an exact and mechanical reproduction of the NT Church, they were mistaken, but they may at least claim to have worked out a system as nearly like it as anything that can hope to adapt itself to modern times.

1. Ecclesiastical offices and officials.—In order to grasp the significance of ecclesiastical office it is no less important to see the connexion of 'gift' and 'office' than to distinguish between them. At first the ministry of gifts that prevailed in the primitive Church rendered office unnecessary and even impossible, but it was not long before the failure or the capriciousness of gifts rendered office inevitable in the growing community, and offices and officials were undoubtedly existent in NT times. Gifts, on the other hand, were the basis of office, the holding of which originally signified a recognition on the part of the Church that the official possessed eminent gifts. As the Church grew in numbers, and had to face heresy within and persecution without, officialism naturally assumed a position of ever-growing importance. Montanism, *e.g.*, was, from one point of view, a protest against the growth of officialism in the Church, and the reaction against Montanism fostered the very growth against which it protested in vain. Ordination—at first simply the setting apart to a special task of a man with special gifts for it—became a more formal thing; the ritualism of the act came to surpass in importance the prayer which was originally its essence; and gradually the right to confer ordination, from being a distinction between clergy and laity, became a distinction between superior and inferior orders of clergy. The whole tendency of mediævalism was in the direction of this growing sacerdotalism, the original freedom and spontaneity of the Church were crushed rather than preserved as the machinery of it became perfected, and the Reformers aimed at getting behind this perfection of lifeless mechanism to the simpler ideas and organization of primitive times, the earlier among them recoiling even from such harmless symbolism as the laying on of hands in ordination. The Calvinist and Presbyterian wing of the Reformation distinguished in the NT certain offices which were intended to be ordinary and permanent from certain others which were of an extraordinary and temporary character. These permanent offices

were (a) the ministry of the Word, (b) ruling and discipline, (c) the care of goods, their distribution in needful cases, and the care of the poor and sick. Doctrine, discipline, and distribution were the distinguishing features of the three types of permanent official. Or a twofold classification might be made, into (1) elders, (2) teaching and (b) ruling, and (2) deacons. In the earliest times the Church modelled itself on the Synagogue rather than on the Temple, and the ruling body would naturally be the elders, the recognition of whom as a body of men possessed of special gifts of ruling soon became that of a body of men possessed of office. But, as some of them would be better teachers than others, and the need of sound teaching soon became apparent, the distinction between the teaching and the ruling types of presbyter is clearly marked at an early stage of ecclesiastical development. The needs of the Church, the disappearance of charisms, the rise of official doctrine and official books, fostered the need of competent teaching; such teachers would naturally be sought in the eldership, and the presbyter capable of teaching gradually assumed a position of greater distinctiveness—a distinctiveness emphasized by the fact that teaching power and business gifts form a sufficiently rare combination in the individual. Finally there comes about a clear distinction between the office of preacher and teacher and that of ruling elder; we find in Cyprian, *e.g.*, a clear recognition of the difference between teaching and ruling presbyters. The modern Presbyterian Church has always made a point of this distinction, which is very clearly brought out in the theory and practice of ordination. If ordination, as some have contended, admitted merely to order, then no special new ordination would be required to transform an elder into a minister. But the Presbyterian system regards ordination as admitting, not to order, but to office, and the requirement of a special ordination for a minister is a recognition of the different offices of teacher and ruler. Yet there has always been a certain confusion in the mind of Presbyterianism with regard to the exact relationship between the minister and the elder, the teaching and the ruling presbyter. Some, like John Calvin, followed by Gillespie, interpret 1 Ti 5¹⁷ as if preaching and ruling presbyters had held distinct offices from the very beginning; others, like Campbell, have considered the ruling elder simply as a lay coadjutor and councillor of the minister, his spiritual work being only such as might be done by any other pious member of the kirk; a third and more sensible group of thinkers hold that the distinction of office has arisen naturally out of a distinction of gifts in a Church faced by the problems of growth and maturing age. It is, in fact, better to consider the office of presbyter from the practical than from the theoretic and Scriptural point of view. The ruling elder, at the least, discharges the useful function of representing lay needs, ideas, and interests, and of keeping the minister in touch with the general life of the Church; and his tenure of an office which renders him of equal status with the minister as a member of any Church court is of immense practical value to the Church. Both offices declined in the Middle Ages, that of the ruling elder vanishing altogether. But at the Reformation the removal of the crushing burden of sacerdotalism caused both to revive. The minister as pastor, preacher, and teacher came into his own again, and, in the Presbyterian Church among the rest, he has ever since retained the highest place in the esteem of the membership. The office is ministerial, not sacerdotal, and, whatever 'presbyter' may be etymologically, it is certainly something quite different in practical

content from 'old priest writ large' Regarding episcopacy and the episcopal office as a late development, unscriptural and unjustifiable, the Presbyterian reformers have always insisted upon the parity of the clergy, whose functions are preaching, the administration of the sacraments, and the exercise of discipline; and the sacerdotal side of the office has always been carefully kept in the background, lest the minister, in the guise of priest, should stand between God and men. The ruling elder disappeared, as has been said, in the Middle Ages; the attempt to trace him back to the Waldensian movement has not been successful; nor did he reappear in the Lutheran Church. From the beginning the need of a body of men to exercise Church discipline was recognized by the Reformers, who felt that, while the *jus episcopale* ought to be transferred, it must not be allowed to lapse. But the question at once arose as to whether these men should be chosen by the Church or by the civil authorities, and the first to see quite clearly that the Church ought to choose them was John Calvin. In this he differs from both Luther and Zwingli, who left the exercise of Church discipline to the civil power, and, alone among the Reformers, he insisted upon the exercise of discipline by means of an eldership, chosen by the people, founded upon the NT, and possessed of spiritual office for the discharge of a spiritual function. With this is bound up the theory of the relation between Church and State. It may be noted that the very alliance between Church and State in Geneva which realized one side of his ideal balked him in the realization of its other half, viz. the maintenance of a distinct and separate sphere for both. In France, however, the hostility of the State reversed the case: alliance was impossible, but the Church was therefore free to develop along her own lines. And the same state of affairs obtained in Scotland. In these two countries, therefore, the Presbyterian eldership came to its full development, and the office is distinctive of Presbyterianism. The elders are chosen by the general body of the membership, and specially ordained to their office. At first they held office only for a limited period, and then resigned, usually by rotation, to make room for other representatives of the popular voice; but in later times the office has come to be held 'ad vitam aut culpam,' and Presbyterian Church government is by representation rather than by direct reference to the popular will. The elder is recognized as a spiritual functionary; and, while he is debarred from the ministry of the Word and sacraments, he has the right to assist in the administration of discipline and in the government of the Church, in whose courts his vote is of equal value with that of the minister. The work of the diaconate, since the decline of that office, has largely fallen to the eldership; and the assistance of a competent body of elders is invaluable to the minister.

Early in the history of the Church it was found advisable to take the work of almsgiving off the shoulders of men otherwise too busy to attend to it, and thus originated the office of deacon. It is an open question whether the 'Seven' of the Acts of the Apostles were the first of those to be chosen at all, whether we have here the first instance of their work being formally recognized by the Church as the work of ecclesiastical officials, or whether these seven were then chosen in the Gentile interest, because those already in office did not command Greek confidence. The Presbyterian deacon, so far as the office still exists, is a more faithful copy of his prototype than the deacon either of Roman Catholicism or of Anglicanism. The office was never generally regarded as a spiritual one, implying any spiritual function,

though the French Church originally took that view; all that is implied in it is the application of spiritual principles to certain secular affairs. The originally unspiritual nature of the office may be gauged from the fact that, in spite of the disabilities of women for public speaking and the like, deaconesses were very early at work in the Church. Yet the deacon is more than a mere member of a managing board. He holds an ecclesiastical office to which ordination is necessary. We may describe the deacon of Reformation times as a secular Church official. The office has largely fallen into abeyance, especially where State connexion has eased the financial affairs of the Church, and the passing of the diaconal functions in such cases into the hands of the elder has done much to secularize the eldership.

Minister, elder, and deacon are the three ordinary and permanent officials recognized by Presbyterianism, but Calvin and the rest held that NT precedent would authorize the temporary use of extraordinary offices to meet special circumstances. The internal needs of the Church herself or the pressure of outside factors determined the nature and use of such special offices. In the earliest days of the Reformed Church, *e.g.*, there existed the office of teacher, as distinct from that of minister, an office which has quite naturally disappeared; for, with a growing knowledge of Reformed doctrine on the part of the people, and after the issue of Catechisms for the instruction of the young and comparatively ignorant, the special work of the teacher became unnecessary. Similarly, in John Knox's day the difficulty produced in Scotland by the inadequate supply of ministers to meet the national need gave rise to the two special offices of superintendent and reader, both of which disappeared as the ecclesiastical situation became settled. The chairmen of General Assembly committees and the Divinity students who spend their spare time in mission work represent the nearest survival of those two offices to-day; but it is noteworthy that, in Canada, a problem similar to John Knox's is responsible for the existence of superintendents at the present time, and for the use made of special-course men, who are virtually equivalent to readers. We have seen also that special officials exist in the Bohemian and Hungarian Churches, and, though a strict Presbyterian might, on the ground of these special offices, call in question the really Presbyterian nature of these Churches, it is interesting to find that the state of affairs in the Bohemian Church, *e.g.*, raised no qualms in the breast of John Calvin. Undue State interference has in many cases caused modifications in the Presbyterian theory and practice with regard to office; but the offices of minister, elder, and deacon are alone recognized or required as permanent in a thoroughgoing Presbyterian system, and even the deacon tends to disappear when the Church is prospering.

2. Church courts.—By the organization of her officials into a carefully graded system of Church courts Presbyterianism seeks to give expression to the unity of the Church. These courts exercise a threefold function: (a) legislative: they frame laws for the purpose of securing discipline, and for the proper control and dispatch of ecclesiastical business; (b) executive: they give effect to these laws; (c) judicial: they inflict and remove ecclesiastical censures; and the higher courts review the proceedings of the lower. The basis of these activities is, of course, the constitution of the Church, but the claim is made that both the constitution and the activities of the Church are ultimately based upon Holy Writ. In the Presbyterian Church the holding of a spiritual office is a necessary qualification for a seat in any of the

Church courts. Thus only teaching and ruling elders are eligible for membership, and the membership of any court must be composed of both. Congregational Church government is probably more directly popular in its nature, but Presbyterianism is also vigorously democratic; for both ministers and elders are popularly elected, and represent, in the last resort, the will of the people; nor is it more difficult to deduce the representative form of Church government from the NT than to deduce any other. In actual practice, even where the eldership of the Church is theoretically added to by co-optation, popular consent and approval form the basis of election; they are always aimed at, even if they are not considered indispensable.

All members of any ecclesiastical court are equal *qua* members; e.g., it is open to lay elders to consider judicially even the most abstruse theological problems. In legislative work as well all members of any Church court have equal deliberative and voting power. But in the executive sphere there are certain duties which can be discharged only by an ordained minister—such as the pronouncement of censure or of its removal; and herein lies the explanation of the apparent anomaly that in a system of Presbyterian equality only ministers can normally preside over Church courts, and that the presence of at least one minister is therefore necessary to a quorum. This does not render the presiding minister a man of special rank; he is only temporarily *primus*, and even then a *primus inter pares*; and his primacy deprives him for the time of his deliberative vote.

In the Presbyterian system the courts of the Church are graded, the lowest being congregational in their representation and the scope of their activity, the highest national. The essential courts are the Kirk-Session, Presbytery, and Synod; if the Church is very large, a National Synod, General Synod, or General Assembly crowns the edifice. In this way the rights of the individual congregation are neither exaggerated nor minimized. The higher courts supervise and review the work done by the lower; and the distinctive feature of Presbyterianism lies in giving to its higher courts authoritative control over its lower, and not merely advisory powers. Moreover, it has now become the practice of the Church that these courts shall meet at regular intervals, and not merely when occasion seems to demand it. The idea of gradation can be justified from Scripture and is, besides, of so great practical value that independency even follows it to the extent of giving the association power to cast refractory congregations out of fellowship. The grading of Church courts frees the individual from the fear of local prejudice, and at the same time serves to impress upon him the idea of the unity of the Church. Of course, the gradually matured and elaborate organization of Presbyterianism renders inevitable a certain externalism; but, so long as this does not drive men to mistake ecclesiastical sameness for Christian unity, no harm is done.

Of the various courts of the Presbyterian Church and their respective functions only a general outline can be given, which may be taken as broadly characteristic of the Presbyterian system. We need not enter in detail into exceptions.

(a) *Kirk-Session*.—At the foot of the scale of the Presbyterian Church courts comes the Kirk-Session, which consists of the ministers and elders of the individual congregation. Its numbers vary with the size and needs of the congregation, but they should be sufficient to secure efficient working; and, if the congregation is too small to provide a quorum for the dispatch of business, it is in the power of the Presbytery to attach an elder or elders for the purpose. The jurisdiction of the

Kirk-Session extends over its own congregation, but it must act within the limits of the constitution, and its acts can be revised by a higher court. Subject to these limitations, it is a kind of parochial Presbytery. The Session supervises the congregation, takes charge of the communion-roll, and is responsible for its correctness. If necessary, it censures members, its findings being declared and its sentences executed by the moderator.¹ It is responsible, too, for admission to ordinances. The work of the minister is also looked after by the Session, which, if it sees fit, may bring before the Presbytery any matter connected therewith. In certain cases the Session also sees to the proper distribution of ecclesiastical goods.

Where a Deacons' Court exists, the last-named function naturally falls to it. The functions of the Deacons' Court are not of a spiritual nature; it is responsible directly to the Presbytery.

(b) *Presbytery*.—The Presbytery—otherwise known under the various names of Classis, Colloque, Tractus, etc.—is the unit of the Presbyterian system and the means of realizing Church unity upon the smallest scale. This court is a distinctive feature of Presbyterianism. The extent of its bounds and the number of individual congregations within its jurisdiction are matters of convenience. On the Presbytery are represented all the Kirk-Sessions within the bounds, the representation consisting of all the ministers, together with one elder for each Session. Thus, as the moderator, who is always a minister, has no deliberative, but only a casting vote, it may quite well happen that, if there are no collegiate charges within the bounds, the lay element will command a steady majority. Formerly a doctrinal discussion or the study of a portion of Scripture might form part of the proceedings of a Presbytery, but such study or discussion would take place now only under very special circumstances, and, for the most part, the court confines itself to purely business matters. This court has the power to grant licence and ordination, and also to take them away—subject, of course, to the laws of the Church and the revision of superior courts. It has in its hands the oversight and the refilling of vacant charges. The superintendence and review of the proceedings of lesser courts also belong to it—e.g., in Scotland since 1639 it has been the practice of the Presbytery annually to examine the books and records of Sessions within its bounds—and it hears references and appeals from these courts. The Session as a body, individual elders, or ordinary members of a congregation may petition the Presbytery concerning a moderator of Session. In the ordinary way the proceedings of Presbytery are regularly submitted to the Synod of the province. But it is in the power of any Presbytery to submit a suggestion direct to the General Assembly by means of what is called in Scotland an 'overture'; and the converse of this appears in the Barrier Act of 1697, which forbids any General Assembly to pass an act affecting the constitution of the Church until it has submitted the proposal to all the Presbyteries, and their opinions on it have been received by a later Assembly. In the act of ordination only the ministerial members of Presbytery take part.

(c) *Synod*.—The Synod—in some cases called the Coetus—is of the nature of a larger Presbytery. It is composed of the sum of its Presbyteries, together with a minister and elder from each of any neighbouring Synods as corresponding members. As the court intermediate between the Presbytery and the supreme court of the Church, the Synod has a comparatively narrow range of functions. It reviews the proceedings of Presby-

¹ 'Moderator' is the name applied to the president of any ecclesiastical court.

teries, examines their records, can overture the supreme court, can call the attention of any Presbytery to errors and omissions of duty, and is directly responsible to the supreme court. Those three are the necessary courts of the Presbyterian system; and, where there is nothing higher, the Synod would, of course, have extended powers.

(d) *General Assembly.*—In all Churches of more than provincial extent the highest court is the General Synod, National Synod, or General Assembly. The General Assembly has unlimited power—subject to the constitution of the Church, the constitutional rights of inferior bodies, and the law of the land. Its aim is to be representative of the whole Church; but, while Kirk-Sessions are represented in the Presbytery and Synod, Presbyteries are represented in the General Assembly. The proportion of elders to ministers varies in the various Churches. In the Church of Scotland the scheme is as follows:

By an Act of Assembly, A.D. 1694,

- (a) from Presbyteries of 12 or fewer parishes, 2 ministers, 1 elder;
- (b) from Presbyteries of 12 to 18 parishes, 3 ministers, 1 elder;
- (c) from Presbyteries of 18 to 24 parishes, 4 ministers, 2 elders;
- (d) from Presbyteries of 24 or more parishes, 5 ministers, 2 elders.

By an additional Act of A.D. 1712,

- (a) from Presbyteries of 30 or more parishes, 6 ministers, 3 elders;
- (f) by a rule of Assembly enacted in 1893 every Presbytery sends one minister for every four ministers on roll of Presbytery and for a part of four, and one elder for every six ministers and for a part of six;
- (g) 67 town council elders from royal burghs, and two from the city of Edinburgh;
- (h) a representative from each university.

The Free Church simply took one-third of each Presbytery (ministers and elders alike); and every Church has its own scheme of representation. The personnel of General Assemblies necessarily varies much more than that of inferior courts from one meeting to another; and, as a consequence, any given Assembly may differ widely in its opinions from its predecessor. But the judicial findings of one Assembly cannot be reversed by another; e.g., if the Assembly of 1889 has suspended a minister, that of 1890 may think its predecessor wrong, but can alter the decision of 1889 only by finding that the suspension has already been long enough to satisfy justice, or express its disapproval by coming to an opposite conclusion on a similar case. On the other hand, legislation passed by a previous Assembly—any act, indeed, which is not a judicial decision—can, subject to the usual limitations, be reversed, although, up to the time of its reversal, it is binding upon the Church. If the constitution of the Church is affected by any proposal, the Barrier Act prevents hasty action.

It will be seen from the above that in the lowest court, the Kirk-Session, the lay element must predominate; that in the next lowest, the Presbytery, it may; and that in the Synod the same state of affairs will prevail as in the sum of the Presbyteries. Not until we come to the highest court of all can a clerical majority ever be theoretically certain, though, as a matter of fact and practice, the ministerial element does usually predominate in every court higher than the Session. Still, when we consider that all ministers and elders eligible for a seat in any court of the Presbyterian Church are originally elected by the people, and must therefore, in the main, reflect popular opinion, and when we consider that such devices as the Barrier Act stand in the way of hasty and irresponsible decisions even on the part of the highest court of all, we cannot deny the right of Presbyterianism to be called a thoroughly democratic form of Church government.

The Presbyterian system did not spring suddenly

into being full-grown, but is the result of long development, patient study, and long resistance to opposition. On the general lines above indicated it is in use in Great Britain, the colonies, and N. America; but differences occur in various Continental Churches, due either to their smallness or to undue interference by the civil power.

3. *Difficulties of the system.*—The comparatively elaborate organization of the Presbyterian Church is, on the whole, an advantage; but it has its disadvantages as well. When English Presbyterianism was subjected to persecution which it was unable to withstand, it could not, like Independency, simply go into hiding till the storm blew over. It had either to remain organized, in which case it became obvious and was crushed by force, or to sacrifice its organization and so cease to be Presbyterianism. On the other hand, when the successors of Richelieu set themselves to crush French Presbyterianism, they began by suppressing its organization, and the result justified their scheme. This is merely to say that close organization is an advantage in times of strength, but an inconvenience in times of weakness.

From the beginning the political influence of the Reformed Churches has been on the side of popular government, as has been noted in the case of France, Scotland, and Holland, where the Church found itself in conflict with the established ecclesiastical system and the civil power, and under the necessity of fighting for its existence. The action of the existent authorities in each case contributed to identify in the general mind the causes of civil and religious liberty; and modern democracy owes a heavy debt to the religious impulse of the Reformation. It is noteworthy, e.g., that the American War of Independence found the Presbyterians practically solid for the colonial cause—a circumstance due as much to their settled belief in representative government as to their memory of past wrongs on the other side of the Atlantic. In the case of Geneva the people had already won their civil liberty, and were prepared to recognize the Church, so that events took another turn; and in certain Continental states the civil power, while recognizing the Church, has felt itself under the necessity of putting pressure upon Presbyterianism in the interests of its own supreme authority. Indeed, in every land where Presbyterianism has made good its footing the question of the relation between Church and State has arisen in a more or less acute form. Calvin's ideal was that the State and the Church ought to be in alliance, but that there should be no confusion between them. Each should have its own separate, clearly defined sphere of action: the State should not interfere with spiritual affairs, nor the Church with secular matters. But a Church member, who enjoys in that sphere a great measure of religious liberty and a share of ecclesiastical government, will not long be content with less in his civil capacity, and a king who believes in Divine Right, or an aristocracy clinging desperately to its privileges, cannot but look askance at a democratic Church. John Knox and Mary Stuart, Andrew Melville and James I., the Dutch and Philip II., must sooner or later find peace impossible; no theory of the independent spheres of Church and State could discount the truth, from his own point of view, of James I.'s shrewd saying, 'No bishop, no king.' But, even when that phase of the conflict is over, and the position of the Church secured, the difficulty remains of defining the respective limits of civil and ecclesiastical jurisdiction, a difficulty increased by the very fact that friendly relations exist between Church and State. For alliance without mutual interference is hard to secure; the members of the Church are in

another aspect the members of the civil community, and it is constantly hard to mark off a definite boundary between the secular and the spiritual. The same problem as vexed mediævalism on a European scale has recurred on a national scale in Presbyterian lands, and has been a fruitful cause of trouble and division. In Geneva Calvin experienced this difficulty of keeping alliance free from a confusion and conflict of interests; and in Scotland, where a fairly successful solution of the problem has at length been arrived at, this has been accomplished only at the cost of prolonged conflict and wide-spread secession. In spite of Calvin's desire for the alliance of Church and State, the modern tendency of Presbyterianism has rather been towards separation in the interests of peace and concord.

4. *Educational activity.*—The Reformers in general and the Calvinists in particular were from the first deeply impressed with the need for popular education; for a democracy must educate its citizens in the interest of sane self-government. Moreover, the Reformers believed themselves to be possessed of a system of doctrine so near to the absolute truth that it could challenge comparison with any other, and had only to be fully known in order to be accepted by intelligent and educated men. They therefore believed that an educated public was the best guarantee of a successful propaganda. Their doctrine and polity were new, and even among their own adherents many required some detailed and definite instruction in addition to the general considerations that had induced them to adhere. From the beginning, too, an educated ministry was one of the deepest desires of the Reformed leaders. To them the chief thing of all was that the Word of God should be properly expounded and properly understood. In this exposition and understanding, which called alike for an educated ministry and an educated people, lay the best hope, not only for the expansion of their Church, but also for the saving of souls. For all these reasons the Reformed Churchmen were ardent educationists. The school of Geneva, under Calvin's care, soon became famous throughout Europe; the first use that the French Church made of Henry IV.'s annual grant was to found and endow colleges; the settlement of the Dutch Church was followed by an amazing outburst of intellectual activity; and the destruction of John Knox's splendid scheme for Scottish education was a blow from which his country took long to recover. Knox advocated a scheme whereby every parish should have its school, and every considerable town its grammar school, and the scheme was to be completed by the maintenance of universities in certain important cities. The passing of likely pupils from the lower institutions to the higher should be in the public care, and, if need be, at the public expense. Knox shrewdly advocated compulsory education for the children of the very rich and the very poor; he seems to have trusted to the common sense of the middle class. One-third of the confiscated funds of the old Church was to be applied for purposes of education, but the greed of the nobles ruined the project, which became in sad fact a 'devote imagination'; and only in recent times, with her system of primary schools, secondary schools, and universities, with free and compulsory education as far as possible, and bursaries to help the needy scholar, has Scotland reached a stage of educational development resembling that devised by her great Reformer three-and-a-half centuries ago. It must not be forgotten that the educational schemes of the Reformers were devised in the religious interest. Knox, in his enthusiasm, even recommended that likely men should, if need be, be forced into the ministry. But, as time

went on, the educational horizon widened; and, though for a time the Church became the victim of a scholasticism as deadly as the mediæval type, the principle of free inquiry, upon which the Reformation itself rested, could not for ever be denied. The Church, with her doctrinal system fixed and hardened, has not infrequently been unsympathetic and even cruel towards her intellectual offspring; but modern science, with much else that has been attacked by the Church, owes a greater debt to the underlying principles of Presbyterianism than is superficially apparent. Even the much-abused Higher Criticism is a truer spiritual child of the Reformation than the rigid orthodoxy which opposes it, for the Reformers were the higher critics and revolutionary Biblical students of their day; and there are encouraging signs that the Church, on the whole, is coming to see this. It is all to the credit of the Church that, having set on foot educational systems and institutions, she has been content to see other authorities take them over in their maturity, secularize them, and use them in a wider interest than the ecclesiastical, while she herself undertakes the religious education of her own. No part of the work of the Presbyterian Church does her more honour than her efforts on behalf of education.

5. *Morality.*—The morality which accompanies the Presbyterian form of Church government and the Calvinist form of doctrine is quite distinctive. It might be logically expected that a profound belief in the sovereignty of God, in election and irresistible grace, would fill the individual with a deep sense not merely of his insignificance but also of his helplessness, and would conduce to a fatalism destructive of all energy and activity. But in Calvinism we find the same paradox as in early Islām, viz. that a creed apparently inimical to all human activity has animated men to the most prodigious efforts. Calvin and Knox, and others of the same faith, when they considered themselves merely as men, were the humblest of creatures, giving God the glory for all that they did and were; but, when they considered themselves as instruments in the hands of God, they were filled with a sense of their usefulness in the world that made them marvels of energy and even of arrogance. Like Paul, they valued themselves little, but they magnified their office. This combination of personal modesty with diligence and fiery energy has always been characteristic of the best Calvinist morality. The Calvinist morality has generally been a little hard and unsympathetic, tending rather to the concealment and repression than to the consideration of personal feelings, and sometimes the Church's sense of official duty has driven her into tyrannical and inquisitorial interference with the private affairs of men; but a certain probity, a sturdy independence, a reluctance to act except from real conviction, a stiff-necked insistence upon just dealing, and the energetic will to make the best of any given situation have characterized Presbyterian morals throughout, and have made of the Presbyterian a sound and trustworthy business man, an excellent colonist, a soldier to be feared—indeed, a man to be reckoned with in any walk of life. Considering his creed, which makes the almost arbitrary will of God everything and man nothing, the Calvinist's fervency in prayer is as paradoxical as his energy and activity, but is equally a fact.

6. *Conclusion.*—It has frequently been made a reproach against the Reformation that it broke in pieces the unity of Christendom; and for this rending of the vesture of Christ the Reformed Churches have had to bear their share of the blame. But, as has already been pointed out, divergences existed in the Roman Catholic Church

before the Reformation which that crisis only brought to light, and, to a great extent, what occurred was really the substitution of spiritual unity under the headship of Christ for mechanical unity under the headship of the papacy. Moreover, the breaking up of the mediæval Church into national Churches was an inevitable result of the growth of nationalism in Europe; and, while Calvin and those who followed him were deeply impressed with the great truth of the unity of the Church, they found that circumstances prevented its realization in the meantime on any wider scale than the national. Yet, even when this is said, it must be admitted that the overscrupulous conscience of Presbyterianism has led to further divisions which are less justifiable, and not in the same degree necessary. The history of Scotland since 1700 affords abundant illustration of the truth of that statement. It must, however, be noted that, for the last century at least, the general tendency of Presbyterianism has been towards union and reconciliation, as the truth has been increasingly realized that the things which are common to the Churches are more important than the things which divide them. Apart altogether from the schemes which are now afoot in various quarters to unite Presbyterianism with other denominations, in Scotland, America, Canada, and elsewhere, the different Presbyterian bodies have been uniting and are pursuing the policy of union on a wider scale. In 1884 a significant Assembly took place, when for the first time the effort was made to hold an Ecumenical Council of Presbyterianism. Since that time ten such Councils have met in various centres, and one by one all the representatives of Presbyterianism in the world are being gathered in. The alliance has no authoritative control over the various independent Churches, but at least it serves to provide Presbyterians throughout civilization with a sense of the unity of the great Church to which they belong. The statistics collected become more and more full and accurate as time goes on, and it may be that the increasing influence of this pan-Presbyterian movement, and the increasing encouragement afforded by the results of its work, will one day lead to something closer by way of a bond between all Presbyterians the world over.

JOHN HERKLESS.

PRESCIENCE.—See PREDESTINATION.

PRESENTIMENT.—By 'presentiment' is meant a more or less vague anticipation or apprehension of an event, which befalls the individual himself or some one in whom he is interested; as a rule also it is implied that there are insufficient, if any, grounds in his conscious mind for the anticipation; and it is usually implied that the event is an evil, a misfortune. A vague apprehension is one in which the details, the particular mode of the event, are not consciously thought of; e.g., a 'presentiment of death' implies that the manner of the death is not foreseen; it may be merely a feeling of depression, which suggests the idea, more or less definitely, of some unfortunate happening.

The Society for Psychical Research and corresponding bodies in other countries have investigated a large number of cases in which an individual, either in normal waking or sleeping state or in a hypnotic trance—either without apparatus or by means of a mirror, a crystal globe, a pool of ink, etc.—has been said to be aware of, and to have reported, an event about to happen to himself or to a relative, a friend, or even a stranger, which, after the report was recorded, took place as it had been described. The correspondence between the anticipation and the reality varies from the representation in the former merely of the emotional element of the latter, 'something terrible about to happen,' or of its central fact, 'A is going to die on the voyage,' up to the complete representation of date, place, and circumstances.

One of the most famous examples of this class is Williams' dream of the murder of the Prime Minister, Perceval, in 1812, more than a week before it occurred (*Proc. Soc. Psych. Research*, v [1889] 324, and at the end of Spencer Walpole's *Life of the Right Hon. Spencer Perceval*, 2 vols., London, 1874). Another is the painter Segantini's vision of his own death, thirteen days before it happened, which he represented in his last picture; a third, Countess Toulshikoff's dream of her father announcing to her the death of her husband at Borodino (Maeterlinck, *The Unknown Guest*, pp. 112, 158; *Memoirs of the Life and Labours of Stephen Grellier*, London, 1860, i. 434), three months before it occurred, that place being unknown both to her husband and to herself at the time. A case of simple presentiment is that of a lady who dreamt that 'something terrible' was going to happen to a friend, with various circumstances in the dream which were afterwards verified, along with the fact, not visualized in the dream, that the daughter of the person in question became insane.

It does not belong to this article to discuss the many problems that arise in connexion with this branch of psychical research. The question of evidence is all-important, and it may be said that in none of the cases is the evidence such as would satisfy the rigorous requirements of natural science; obviously the prevision, presentiment, or premonition must be fully recorded, before the event to which it refers occurs; the event must be such that it could not have been anticipated or inferred as probable, at least in its details, by the seer; even then we should have to exclude mere coincidence (e.g., dreaming of a person's death, and the death occurring within, say, a week afterwards, would not be a premonition to a person who frequently had such dreams, but not, except in this one case, followed by the death of the person in question). Again, we must exclude cases in which there is a possibility that the presentiment or the dream has led to its own fulfilment—where, e.g., nervousness caused by the presentiment of failure in a difficult or dangerous undertaking is itself a cause of such failure; in more extreme cases the death of the individual may be brought about by a belief, however caused, that it is going to take place on a given date at a given hour (e.g., the death of C. C. Brooks, *Proc. S.P.R.* v. 291). Supposing, however, that all chances of error are excluded, and that either one perfect and unassailable case or a multitude of imperfect cases compels

us to assume the possibility of prevision, different explanations will still be available: (1) spiritualism: it is suggested that spirits, whether of the dead or of higher beings, have clearer vision and deeper intelligence than the living man, and therefore can anticipate more accurately what is to occur, and that they may transmit this knowledge by vision or otherwise to human beings in whom they are interested; (2) telepathy from one living mind to another, as when A dreams of an event happening or about to happen to B, the conditions leading to this event being present in B's mind and transmitted to A's without the intervention of the ordinary senses; and this view may be extended: facts of which B is only latently aware (whatever that may mean) may be transmitted to A and enter his consciousness as a dream or vision; (3) if there occur cases in which a future event, of which the conditions are not and cannot be present to any living mind, is yet foreseen, we must assume a power, perhaps in our subconsciousness, in the subliminal self, of reading the future in the present. The future, in this interpretation, exists in the present, as the present in the past; time, like space, is unreal; and to the perfect vision of God, of which perhaps our higher unconscious self may have partial glimpses, past, present, and future are seen in one glance. It is obvious that this mystical interpretation explains nothing; neither spiritualism, nor telepathy, in the sense defined, nor the supposed powers of the subconscious self, nor the possibility of seeing the future by any other means than the imperfect ones of inference and analogy can be admitted without evidence far more thoroughly tested and far more overwhelming than that which at present exists. Meanwhile we are left with three much less heroic and less attractive suggestions: (1) slight impressions which are felt, but not noticed in our waking life—e.g., the onset of a disease—may force their way into fuller consciousness, in dramatic form, in a dream; we may then in the dream have a vision of what actually occurs, in the future, but through causes which are perfectly natural and normal; (2) we may be conscious at a given time of certain facts, without drawing from them the conclusion which they bear as to the outcome of the situation that they represent; the conclusion may be drawn subconsciously—i.e. in dissociation from our conscious personality, which it then affects either as a mere feeling with a vague sense of coming disaster or as dramatized into an actual vision of the conclusion realized; or (3) the conclusion may have been reached unconsciously, by a sort of summary intuition, by putting together a number of apparently disconnected facts; it may have been forgotten, and yet, again in dissociation from the self, may influence the latter as a presentiment or as a premonition, in any of the possible forms.

Thomas, *Thought Transference*, do. 1905; E. Bozzano, *Des Phénomènes prémonitoires*, Paris, 1914; M. Maeterlinck, *The Unknown Guest*, tr. A. T. de Mattos, London, 1914, ch. iii.

J. L. MCINTYRE.

PRESTER JOHN.—The story of Prester John is woven of the fact and fancy of the Middle Ages, the fact warped by the varying aspects of European policy, the fancy coloured by Oriental imagination and tradition.

Until the 14th cent. the evidence points to Asia as the home of Prester John. In the 15th cent., after the conquest of Timur and the overthrow of Christianity in Central Asia, the African claim took hold of the popular imagination. But the true claim of Asia has never lacked support in the writings of explorers and scholars.

Prester John is no mythical personage, though

myth and legend have gathered round his name. The simple uncoloured report of Friar Johannes e Monte Corvino in 1305 is historical evidence of the first order, and it is supported by many witnesses of the 12th and 13th centuries. This evidence supports the conclusion reached by J. B. Bury in his note to Gibbon (ch. lxiv.):

'Sir H. Howorth has shown very clearly (*Hist. of the Mongols*, i. p. 696 *seq.*) that the Karaites were Turks, not Mongols. Their territory was near the Upper Orkhon, between the rivers Selenga and Kernien. They were Christians. Their chief Tughril received the title of Wang ("king") from the (Manchu) Emperor of Northern China for his services in 1193 against the Naiman Turks of the regions of the Altai and Upper Irtysh. Chingiz also took part in this war, and his services were recognised by the title of Dai Ming, "high Brightness." For an account of Prester John—the name by which the Karait khans were known in the west—and the legends attached to him, see Howorth, l. cap. x. p. 694 *seq.* (Gibbon, *Decline and Fall*, ed. Bury², vii. 2, n. 8).

1. *ASIA*.—i. Otto of Freisingen (1145).—In 1145 Prester John first appears as an Eastern priest-king who had established a wide dominion in Central Asia. This rests on the *Chronicle* of Otto of Freisingen (vii. 33, sub anno 1145 [*MGH* xx.]). The bishop of Gabala (Jibul in Syria) visited the papal court in 1145, and stated that not many years before a certain John, king and priest, who dwelt beyond Persia and Armenia, a Christian but a Nestorian, had made war on the kings of Media and Persia, the Samiardi brothers, and had captured Ecbatana, the seat of their kingdom. He had then marched to the relief of the Church of Jerusalem, but was stopped at the Tigris. He was said to be one of the ancient race of the Magi, and had a sceptre of solid emerald.

2. The letter of Prester John (1165).—The letter was presented by the ambassadors of Prester John to the Greek emperor Manuel I. and the Western emperor Frederick Barbarossa (Albericus, in *Chron.* 1168).

In it Prester John, 'by the power and virtue of God and the Lord Jesus Christ King of Kings,' claims to be the greatest monarch under heaven. He desires to visit the Holy Sepulchre, and to fight against the enemies of the Cross. Seventy-two kings were under his rule. His empire extended over the three Indias, including Farther India, where lay the body of St. Thomas. In his dominions were the unclean nations whom Alexander the Great walled up among the mountains of the north, and who were to come forth in the latter days. Among the marvels of his territory were monstrous ants that dug gold, fish that gave purple, the Fountain of Youth, pebbles that gave light, the Sea of Sand, and the River of Stones. When he went forth to war, thirteen great crosses were borne before him, each followed by 10,000 knights and 100,000 foot. His palace was built after the model of that erected by St. Thomas for the Indian king Gondophoros. He was waited on by 7 kings and 366 dukes; 12 archbishops sat on his right hand, and 20 bishops on his left, besides the patriarch of St. Thomas, the proto-pope of the Sarmagantians, and the proto-pope of Susa, where the royal residence was.

This letter enjoyed great popularity in the West. Zarncke (*Der Priester Johannes*) refers to 100 MS copies of it, 8 in the British Museum, 10 in Vienna, 13 in Paris, and 15 in Munich (*EBr*¹¹ xxii. 304 f.).

(1) The exaggerated style of the letter, the work of Nestorian imagination, was an appeal specially to the Byzantine court. The brilliant fêtes and tournaments of Manuel I. were renowned throughout Europe as the most magnificent spectacles of the kind ever seen (G. Finlay, *Hist. of the Byzantine and Greek Empires*, Edinburgh, 1854, ii. 179). There were also political reasons for the reception given to the embassy. The Seljuk Sultan of Iconium, Khildy-Arslan II., was consolidating his power in Asia Minor, while the Greeks were steadily losing ground during the reign of Manuel (ib. p. 234). The Latin principality of Edessa had fallen in 1144 to the arms of Omd ed-din Zengi, the *atabeg*, or ruler, of Mosul. His son, Nur ed-din (1146-74), united the Muhammadan powers, added the kingdom of Damascus to that of Aleppo, and waged a long and successful war against the Christians of Syria. The Latins and Greeks alike looked favourably at the promise of Christian help against their foe (Gibbon, ch. lxx.).

(2) The reference in the letter to Alexander the Great points to the influence of the Alexander romance in the colouring of the story. This romance is attributed to Callisthenes. It arose in Egypt about A.D. 200. It spread in Latin translations to the West, and in Armenian and Syrian versions to the East. These would be known to the Nestorian ministers of Prester John. It became very popular in the West in the 12th cent. through the

epic of Alberch of Besançon and the *Alexanderbuch* of the German 'Pfafe' Lamprecht (*Chambers's Encycl.*, s.v. 'Alexander the Great').

(3) Two further references in the letter witness to the Asiatic origin of the story. The Three Indias are traceable in the geographical conceptions of the 12th century. The earliest MS of the *Ravenna Cosmography*, itself a work of the 7th cent., is of the 13th cent. (*Ravennatis Anon. Cosmogr.*, ed. M. Pinder and G. Parthey, Berlin, 1890), and is the source of the Three Indias (pp. 40, 44 f.).

(4) The reference to the Sea of Sand, taken in connexion with the Three Indias, points to the Great Desert of Central Asia, and not to the Sahara.

3. The letter of Alexander III. (1177).—Alexander III. was in the midst of his quarrel with Barbarossa when the embassy of Prester John was received by the emperors. The reconciliation between them took place at Venice on 24th July 1177. Alexander remained at Venice until Oct. 1177; it was there that he gave audience to an embassy from Prester John. Philip, a physician of the papal court, had travelled to the Far East and visited the court of Prester John. He had put forward the claims of the Western Church and had returned to Italy with letters from Prester John to Alexander. These letters are lost, but the letter from Alexander to Prester John is preserved in several English Chronicles. The best text is that of J. Brompton (Pagi, *Critica Historico-Chronologica*, in Baronius, *Annales Ecclesiastici*, iv. 650). Prester John not only had asked for instruction, but had requested to have a church in the city. This was conceded to him, with the right of an altar in the church of the Holy Sepulchre in Jerusalem (*Chron. Joh. Brompton*, ap. R. Twysden, *Hist. Angl. Scriptores X.*, London, 1652, col. 1132 f.). The letter was entrusted to Philippus, who was commissioned to return to the East and deliver it to Prester John.

4. The conquest of Jenghiz Khan (1202).—The realm of Prester John was one of the first to fall before the conquering hosts of Jenghiz Khan. It was then ruled by his son David. Pagi gives three authorities: (1) the *Chronicle* of W. de Nangiac, sub anno 1202; (2) Marinus Sanutus (lib. iii. 'Fidelium crucis', pt. xiii. ch. iii.); and (3) the older authority, Vincentius Bellovacensis (*Spec. Hist.* ch. lxix.). They agree in assigning a wide dominion to Prester John before the conquest of Jenghiz; and Gibbon, on their testimony, states:

'The boldest chieftains might tremble, when they beheld, enshrouded in silver, the skull of the khan of the Keraites, who under the name of Prester John had corresponded with the Roman pontiff and the princes of Europe' (ch. lxiv.).

5. The letter of Philip to Gregory IX. (1237).—On the death of Jenghiz Khan in 1227 his son, Ogotai, was proclaimed Great Khan, or emperor, of the Moguls and Tatars. In the year 1237 a long report was received of the successful missions of the Dominicans among the Jacobites and Nestorian Christians in Asia. Matthew Paris (*Hist. Angl.*, sub anno 1237, ed. W. Wats, London, 1874, p. 372) speaks of it as 'jucundus rumor de Terra Sancta.' The report was sent to Gregory IX. by Philip, provincial of the Dominicans in the Holy Land, and was forwarded by Godfrey, the papal penitentiary, to the Dominicans throughout England and France. William of Montferrat with two others had studied the languages of Central Asia, and had received a promise from the archbishop of the Nestorians to submit to the unity of the Catholic Church. It is important to note, in view of the African claim, that Friar Philip had sent also to the patriarch of the Jacobites of Egypt, who had made the like promise. Matthew Paris adds:

'Hunc subdita est minor India, Aethiopia et Libya cum Aegypto. Sed Aethiopes et Libii non sunt subjecti Saracenis.' The realm of Prester John is not therefore in Ethiopia, but in the Far East.

6. The report of Johannes e Plano Carpino (1246).—The annals of Matthew Paris between

1238 and 1245 record the ravages of the Tatar hosts under Batu and the terror which they inspired in the West. They were stayed at Neustadt in Austria by the valour of the Franks. In the winter of 1242 they withdrew to the east. This was in part due to the death of the Great Khan Ogotai in 1241. He was succeeded by his son, Kujuk.

Meanwhile the letter of Philip had stirred up the interest in the West, and the missions to the Nestorians opened the way for missions to the court of the Great Khan. This may also have been favoured by the policy of the Venetians, who were on good terms with the Mongols in the Crimea (Bury's note to Gibbon, vii. 15, n. 42).

Johannes e Plano Carpino was present at the enthronement of the new khan, and states that he was well-affected to Christianity and had many Christians in his service. There was a Christian chapel before his tent (Raynaldus, *Ann. Eccl.*, sub anno 1245, xiii. 595).

7. The mission of Friar Ascelinus (1247).—The hostility of the other leaders is illustrated by the mission of Friar Ascelinus to the Tatars of Persia. He had an audience with the Khan Bajothnoy in the Tatar camp. After suffering much ignominy, he returned with letters from Bajothnoy to the pope, Innocent IV. (*ib.* xiii. 642).

8. The Tatar embassy to Louis IX. (1248).—The Tatar embassy to Louis IX. at Cyprus throws much light on the position of the Great Khan and his relations to Prester John and the Christians of Central Asia. The embassy was sent by a Persian khan named Ercalthay, who had been for many years a Christian, but was not of the royal blood. David, the chief ambassador, had been baptized the year before. The Great Khan of Tartary had been baptized with his eighteen sons and many of his magnates three years before (c. 1245). The king asked many questions of the ambassadors. He was told that Ercalthay was anxious to join hands with the Christians against the enemies of the Cross, and that Bacho, the khan who had insulted the ambassadors of Innocent IV. in Persia, was a pagan and had Saracen councillors. They also reported that Quothay, the mother of the present khan, was a daughter of Prester John (G. de Nangiac, *Gesta S. Ludovici*, ap. A. Duchesne, *Hist. Francorum Scriptores*, Paris, 1636-49, v. 349, 354).

9. The mission of Rubruquis (1253).—In the narrative of Rubruquis the title of 'King John' is assigned to Kushluk, king of the Naimans, who had married the daughter of the last lineal descendant of the Gur Khans. Kushluk was son of a powerful king of the Naimans, whose name, Ta-Yang-Khan, is precisely 'Great King John' in Chinese. It is evident that Rubruquis supposed this king of the Naimans to be the original of this widely spread legend (Yule, *EB*,¹¹ xxii. 306*). Bury says that a new edition of Rubruquis is wanted. Gibbon (vii. 6) refers to the first volume of Hakluyt. Yule gives, among the chief points in the narrative of Rubruquis, the relation between the rulers of the Naimans and the Keraite khans and the habit of exaggeration common among the Nestorian writers.

10. The journey of Marco Polo (c. 1270).—The travels of Marco Polo brought him from Yarkand past Cherchen and Lob Nor to Tenduc. This is placed near the point where the Great Wall crosses the north-east portion of the great bend of the Hwangho. To the north and north-west lay the country of the Keraites with their old capital of Karakorum on the north edge of the desert of Gobi, on the bank of the upper reach of the Orkhon river. It is here that he speaks of Prester John, whose kingdom, though still ruled by a

member of the same family, is tributary to the Great Khan of Tartary (*Travels*, i. 64, *ap. Pagi*, iv. 649).

11. The mission of Johannes e Monte Corvino (1292-1305).—Kujuk, the son of Ogotai, died in 1248. He was succeeded by his cousins Mangu and Khubilag, the grandsons of Jenghiz Khan. On the death of Mangu in 1257 Khubilag became the Great Khan, and on the conquest of N. China removed the royal residence from Karakorum to Peking (Cambaluc). It was here that Marco Polo met him, and it was at his court that the Minorite friar Johannes e Monte Corvino established his mission-centre in the Far East. The letter written to Clement v. in 1305 is valuable testimony to the successors of Prester John and to the realm which was still ruled by them as tributary to the Great Khan (Raynaldus, sub anno 1305, xv. no. 19f.).

12. The evidence from 1145 to 1305.—The evidence for Prester John from Asiatic sources is continuous for 160 years, and the report of the last writer points to the old capital of Karakorum as being the seat in the early 14th cent. of the tributary kings of the dynasty. It is difficult, therefore, in the face of this evidence, to follow Yule in his statement:

‘However vague may have been the ideas of Pope Alexander III. respecting the geographical position of the potentate whom he addressed from Venice in 1177, the only real person to whom the letter can have been sent was the king of Abyssinia. Let it be observed that the “honourable persons of the monarch’s kingdom” whom the leech Philip had met with in the East must have been the representatives of some real power, and not of a phantom. It must have been a real king who professed to desire reconciliation with the Catholic Church and the assignation of a church at Rome and of an altar at Jerusalem’ (*EB*¹¹ xxii. 306^b).

The Prester John of the 12th and 13th centuries was not the king of Abyssinia, but the name by which the Keraite khans were known in the West. It would seem to have shrunk from the wide rule of the Gur Khans in 12th cent. to the tributary rule of the khan of Karakorum in the early 14th century.

13. The Tatar mission from 1308 to 1370.—(1) The work of Friar Johannes was recognized by Clement v. in 1307 by the constitution of the archiepiscopal see of Cambaluc (Raynaldus, sub anno 1307, no. 29).

(2) In 1318 John XXII. took a further step in the organization of the Church among the Tatars by the founding of the archbishopric of Sultania for the empire of the Ilkhans of Persia. Sultania was situated south-west of Resht on the Caspian Sea, and north-west of Kazvin. Friar Franciscus of Perugia, a Dominican, was appointed to the see with six suffragans. His jurisdiction was to extend over Chagdo and India and Ethiopia (*ib.* sub anno 1318, no. 4). The juxtaposition of Ethiopia and India under the authority of the archbishop of Sultania is of importance in the development of the story of Prester John. It is to the work of this mission-centre that the transposition of the story from India to Ethiopia may be traceable.

(3) Raynaldus states that it was the policy of the West to favour the frequent exchange of letters and embassies to the Tatar khans as a check on the encroachments of the Saracens (sub anno 1322, no. 41).

(4) In 1326 Andreas de Perugia sends a report of his work in the Far East to the Father Guardian of Perugia. He states that, after many dangers by land and by sea, he reached Cambaluc in 1308, and consecrated John as archbishop. He stayed there for five years. Gerard was appointed bishop of Zaitun in Fukien. He was succeeded by Peregrinus, on whose death in 1322 he himself became bishop of Zaitun. Four of the brothers were martyred in India by the Saracens.

(5) Yule gives a further reference to Prester John about the same year (1326):

‘Friar Odoric, about 1326, visited the country still ruled by the prince whom he calls Prester John; “but,” he says, “as regards him, not one-hundredth part is true that is told of him”’ (*EB*¹¹ xxii. 306^a).

(6) Johannes e Monte Corvino died in 1333. John XX. appointed as his successor another Minorite friar, Nicolaus. He wrote letters not only to the Great Khan but also to Secede Chigista, king of Corum, who may be a descendant of the Georgius referred to in 1305 (Raynaldus, sub anno 1333, no. 35).

(7) The last mission was in 1370. Urban v. in this year appointed the Minorite friar Guillelmus to the archiepiscopal see of Cambaluc. There are letters to the Great Khan and the people of Tartary (*ib.* sub anno 1370, no. 91).

The curtain then falls. The great conqueror Timur ascended the throne of Zagatai, and was crowned at Balkh in April 1369 (Gibbon vii. 46). Bury adds in a note to Gibbon:

‘As the Mongol power in China was overthrown about the same time by the revolution which set the Ming dynasty on the throne (A.D. 1370), this period marks a general decline of Mongol influence in Asia’ (*ib.* vii. 68, n. 74).

The conquests of Timur meant the overthrow of Christianity and the triumph of Islām in Central Asia.

II. AFRICA.—In the 15th cent. after the overthrow of the Christian missions in Asia by the conquest of Timur and the consequent difficulties of the land-routes to India, it seems that the Indian traditions of Prester John filtered into Europe through Aden and the African coasts of the Red Sea. India, in the popular imagination, lay behind and beyond Egypt and Ethiopia. But there is evidence also in the 14th cent. that the same tendency was taking place perhaps, as has been suggested (I. 13 (2)), through the grouping of India and Ethiopia under the jurisdiction of the archbishop of Sultania.

1. The 14th cent. evidence.—Yule definitely states that the assertion of Ludolf in his *History of the Ethiopians*, that the ascription of the title Prester John to the Christian kings of Abyssinia was an invention of the Portuguese, is a mistake. He brings the following evidence to support his statement:

(1) The earliest witness that Yule gives is Friar Jordanus.

‘Friar Jordanus “Catalani,” who returned from the East before 1328, speaks of the emperor of the Ethiopians “quem vos vocatis Prestre Johan”’ (*EB*¹¹ xxii. 306).

Is this an example of the original source of confusion? In 1330 John XXII. wrote to the Nacairines of S. India, commending to them the Dominican friar Jordanus, whom he had consecrated bishop of Columbo, and the Dominican and Minorite friars who were associated with him in the mission. In a letter written the same year to John of Core, archbishop-elect of Sultania, the bishop of Columbo is referred to as one of his suffragans (Raynaldus, sub anno 1331, nos. 51, 57).

(2) Yule gives two witnesses c. 1350.

John Margnoli, apostolic legate in Asia, speaks of Ethiopia where the negroes are, and which is called the land of Prester John. And a Spanish work of the same date by an anonymous Franciscan states that the emperor ‘Abdeselub, which means “servant of the Cross,” is a protector of Preste Juan, who is the patriarch of Nubia and Ethiopia, and is lord of many great lands, and many cities of Christians’ (*Libro del conocimiento de todos reynos*, Madrid, 1377).

(3) A fourth witness is Simone Sigoli.

He visited Cairo in 1384, and speaks in his *Viaggio al Monte Sinai* of ‘Presto Giovanni’ as a monarch dwelling in India, but it is the India which is conterminous with the dominions of the sultan of Egypt and whose lord is master of the Nile, to close or open its discharge upon Egypt (*EB*¹¹ xxii. 306^a).

It is on this evidence that Yule states that the title ‘Prester John’ had been used long before the name had ceased to be attached to the descendants

of the kings of the Keraites. The juxtaposition of India and Ethiopia under the archbishop of Sultania and the filtering in of Asiatic tradition through Aden at the close of the 14th cent. appear an adequate explanation of the difficulty.

2. The Ethiopian embassies of 1441.—Eugenius IV. in the previous year had sent the Minorite friar Albert on a mission to reconcile the Jacobite Christians of Ethiopia. In 1441 Andrew, abbot of St. Antony, and Peter the Deacon were sent to Italy as ambassadors to the pope on behalf of Constantine, king of the Ethiopians. They were received at the Council of Florence, and a 'form of union' was agreed upon. They then went to Rome with a letter of introduction to the canons and chapter of St. Peter's to allow them to see the Veronica. In this letter the title of Prester John is given to the emperor (Raynaldus, sub anno 1441, no. 2). In the same year another embassy from the Ethiopians was conveyed to Italy by Angelus Maurocenus. On their return Eugenius IV. gave to them a letter of commendation in which he again used the title (*ib.*).

On the occasion of these missions an oration was made before the council by the abbot Nicodemus, who presided over the Ethiopians residing in Jerusalem. In his address he alludes to the remoteness of their country as almost beyond belief, and distinctly asserts that their separation from Rome is due not only to this, but to the negligence of the popes for 800 years (*ib.* no. 3).

3. The map of Fra Mauro (1459).—Yule states:

'From the 14th century onwards Prester John had found his seat in Abyssinia. It is there that Fra Mauro's great map (1459) presents a fine city with the rubric, "Qui il Preste Janni fa residentia principal"' (*EB* xii. 306b).

4. The Roman diary of Jacobus Volterrannus (sub anno 1481).—Raynaldus refers to a mission to the Roman court under Sixtus IV. in 1481, on the authority of the journal of Volterrannus. He speaks of it as a mission from Ethiopia, but says that the writer gives to Prester John the title of 'King of India' (Raynaldus, xix., sub anno 1481, no. 40 f.). Muratori publishes the *Diarium* from a MS in the library of Ferrara. There is nothing in the MS to indicate the country represented by the mission, no mention either of India or of Ethiopia. There is, however, a lacuna in the MS which may betoken some doubt in the writer. The brief record shows the interest aroused in Rome by the strange character of the mission (*Jacobi Volterranni Diarium Romanum*, sub anno 1481, ap. L. A. Muratori, *Rer. Ital. Script.*, Milan, 1723-51, xxiii. 156).

5. The quest of Prester John (1486).—John II. of Portugal made many attempts to get into communication with Prester John, hoping to form an alliance with him. Among other missions is that of 1486 entrusted to Alphonsus Pains and Johannes Petreius. They travelled as merchants and at last reached Aden. There they heard of a Christian king in Ethiopia, but had doubts as to his identity, because they had been instructed that Prester John was a Christian king of India. It is clear from this doubt that the Asiatic tradition of Prester John still maintained its hold among the more educated circles in the West. To solve this doubt they thought it best to separate. Petreius sailed to India and left Pains to await him in Egypt. The quest of Petreius was successful. He found among the Nestorians of S. India the tradition of the Prester John whose power had been overthrown by the Mongols (Raynaldus, sub anno 1486, no. 67).

6. Prester John of Ethiopia (c. 1500).—The quest of 1486 proves that in 1486 positive and negative evidence alike pointed to Prester John of Asia. The two travellers asserted that the king of

Ethiopia did not correspond with the Prester John of history in dominion, in name, or in priestly office, and Petreius in India found the tradition of the Prester John whose power had ended with the Mongol conquests. But the 15th cent. in Spain and Portugal was an age of romance, and the fable of popular imagination triumphed over the facts discovered by the travellers of 1486. In Portuguese writings of the last years of the 15th cent. and the opening years of the 16th cent. the history of Ethiopia and Abyssinia is the story of Prester John. He is synonymous with the emperor of Ethiopia.

7. Christopher Marlowe (1587).—In the earliest English drama when Prester John takes his place in English literature he is Prester John of Africa, not of Asia. In the second part of Marlowe's *Tamburlaine the Great*, Techesles, king of Fez, relating his conquests to Tamburlaine, says:

'And I have marched along the river Nile
To Machda, where the mighty Christian priest,
Called John the Great, sits in a milk-white robe,
Whose triple miter I did take by force,
And made him swear obedience to my crown'
(pt. II act I. sc. 8)

The drier facts of history have to stoop at times to the romantic claim of literature. Marlowe has given his authority to the African story, and the Prester John of literature still lives as an African priest-king in John Buchan's romance of *Prester John* (London, 1910).

LITERATURE.—E. Gibbon, *Hist. of the Decline and Fall of the Roman Empire*, ed. J. B. Bury, London, 1900-04, v. 149, vii. 2, 15; C. Baronius, *Annales Ecclesiastici*, 12 vols., Rome, 1588-1607; O. Raynaldus, *Annales Ecclesiastici*, 9 vols., do. 1646-77; A. Pagi, *Critica Historico-Chronologica*, in Baronius; H. Yule, *Cathay and the Way Thither*, 2 vols., London, 1866, and in *EB* xii. F. Zarncke, *Der Prester Johannes*, Leipzig, 1870-79; G. Oppert, *Der Presbyter Johannes in Sage und Geschichte*, Berlin, 1870; M. P. d'Azévedo, *Recueil de voyages et de mémoires publiés par la Soc. de Géogr.* iv. (Paris, 1838) 547-564; H. Howorth, *Hist. of the Mongols*, London, 1870-93, I. THOMAS BARNES.

PRIDE.—As a self-regarding passion or sentiment of self-love, pride is associated in popular speech with several related qualities of the selfish disposition such as arrogance, conceit, vanity, and egotism. Conceit or self-conceit is an exaggerated form of self-satisfaction; arrogance is an attitude of presumption manifested in temper and act and calculated to arouse resentment or disgust in others; vanity, as a showing off of one's supposed superiority, seeks the praise or good opinion of the world; and egotism is a habit of self-consciousness or self-regard which affects mind, manner, and speech, as in the case of the hero of George Meredith's *Egoist*, while the same writer's portrait of Alvan in the *Tragic Comedians* is an exposure of vanity. On the other hand, in pride there is frequently no idea of a comparison or competition with the rest of the world. Pride is a habit of self-isolation or conscious independence, a perversity of will which is indifferent to the opinions and favours of others. It repudiates all idea of obligation. Cf. the hero of Scott's *Bride of Lammermoor* as a typical example.

'Pride, unlike vanity, does not involve belief in one's own superiority to others. The most deeply rooted pride may be connected merely with the conception of independence or equality and may be manifested mainly by a refusal to accept favours or to be under an obligation' (see *DPhP* ii. 339, s.v. 'Pride').

The distinction between arrogance and pride may be illustrated by the phrase, 'toujours arrogant, jamais fier,' which has been applied to the demeanour of the Prussian officers in defeat (see *Times Literary Supplement*, no. 740 [23rd March, 1916], p. 135, quoting G. Lenôtre, *Prussiens d'hier et de toujours*, Paris, 1916).

Again, pride as a self-regarding sentiment is to be differentiated (cf. W. McDougall, *Introd. to Social Psychology*, p. 191 f.) from 'self-respect'

by the fact that the latter is susceptible to the pressure of outside opinion or authority. Pride, on the other hand, is without this negative self-feeling, and, as a law unto itself, lives on the deference and admiration of others, while at the same time it is indifferent to moral praise or blame. One of its worst features is indifference to the sufferings of others (cf. J. S. Mill, *Essay on Liberty*, London, 1859, ch. v., who speaks of 'the pride which derives satisfaction from the abasement of others'). It is self-love opposed to due respect for humanity and based on a fixed sentiment of satisfaction with one's qualities, actions, views, powers, social status, and reputation. It is capable of elation when the verdict of others coincides with its own preconception and of resentment when this is otherwise. But it is of the essence of pride to be moved by scorn or ridicule rather than by moral censure.

'Pride desires from others an honour it refuses to them and shows, therefore, a spirit which is really abject and mean' (E. Caird, *The Critical Philosophy of Kant*, n 391).

There is a pride of race, a pride of birth, a pride of position; a pride of goodness, a pride of evil; a pride of ignorance, a pride of learning; a pride of eccentricity, a pride of conventionality, and so forth. The forms of self-satisfaction are innumerable. On the one hand, we have Sir Percival in Tennyson's *Idylls of the King* (see *The Holy Grail*¹) exhibiting the pride of monastic repression and holiness, to which the highest vision is denied; and at the other extreme in R. L. Stevenson's *Master of Ballantrae*, the hero personifying the pride of wickedness as a man who 'entirely loved all the parts and properties of himself: a sort of imbecility which almost necessarily attends on wickedness' (ch. ix.).

It may be useful to classify chronologically the treatment of pride and to discuss its place in ethical thought.

1. In pre-Christian ethics. — In Aristotle's famous characterization of the high-minded man (*μεγαλόψυχος*) in the *Nic. Ethics* (iv. 3, ed. Grant) we have a species of pride described as inseparable from this type of excellence. The high-minded man is not only worthy of great things, but holds himself to be worthy of them. His estimate of his own merits is independent of the verdict of others. If he holds himself to be worthy of great things when actually unworthy of them, he is vain (*χαλνός*), while he who underestimates his own worth is mean-spirited. High-mindedness, then, is a mean between vanity and want of spirit. It is, in fact, a lofty type of pride which is its own star. It is without the sense of duty or moral obligation. Its motive is honour (*τιμή*) and it owes nothing to the instinctive sense of right. External honour is the best thing that the world can give to the high-minded man. He is glad to confer a benefit, but ashamed to receive one. If he does receive a benefit, he will wipe it out by doing a greater; he will remember those whom he has benefited, but not those by whom he has been benefited; he will be in want of no one; he will serve any readily; he will be proud (*μέγας*) to the great and prosperous, and lenient towards the lowly. He will not aim at the common objects of ambition; only for great honour or deeds will he strive; he will be open in friendship and hatred, disdainful, timid concealment, contemptuously straightforward, really truthful, but reserved and ironical towards the common people. Indifferent to the praise and censure of others, he will bear no malice and be no gossip. On the whole, vanity is better than mean-spiritedness, which is to be condemned for its lack of energy. Aristotle men-

tions one thing that will provoke the resentment of the *μεγαλόψυχος*, and that is *ὑβρις*—calculated, if irrational, insolence. This is a form of pride much less subtle than the peculiar self-consciousness described by Aristotle in the above picture and more familiar to the Greek mind.

'Insolence or *ὑβρις* . . . has its root in want of reverence and want of self-knowledge . . . [and] is the expression of a self-centred will recognising no power outside itself, and knowing no law but its own impulses . . . This insolence in the Greek tragedy is the deepest source of moral evil . . . It is opposed to both *αἰδώς* and *σωφροσύνη*' (S. H. Butcher, *Some Aspects of the Greek Genius*², London, 1904, p. 109).

In the *Antigone* of Sophocles the tragedy centres in the *ὑβρις* of Creon, the author of a cruel and stern decree which outrages the laws of humanity and results in the sacrifice of Antigone, who defies the decree at the bidding of sisterly love; while in the *Prometheus Vinctus* of Æschylus it is the *ὑβρις* of revolt or self-assertion of the human intellect against the supreme deity.

Theophrastus of Eresus (374–287 B.C.), the successor of Aristotle as the head of the Lyceum, gives us in his *Characters* a picture of the *ὑπερήφανος*, or arrogant man, defining arrogance as 'a certain scorn for all the world beside oneself.'¹ In the Stoic and Epicurean ethics there appears to be no distinctive treatment of the passion of pride as such. But the moral independence of the Stoic sage, his *αὐτάρκεια* (see art. CONTENTMENT) and his equality with Zeus in all but non-essentials (cf. Seneca, *de Prov.* 1) indirectly illustrate the defects of the self-regarding temperament. On the other hand, the tendency of Epicurean ethics favoured the cultivation of the social virtues and helped to tone down the exclusiveness of ancient manners by its emphasis on friendliness, beneficence, and gratitude.

In the OT, especially in the Wisdom literature, we find frequent condemnations of pride in the sense of self-exaltation as manifested by the wicked or foolish (cf. Pr 11² 13¹⁰ 14⁸ 16¹⁸ 29³), while the prophets inveigh against national pride—the presumptuous and scornful sense of power (cf. Is 2^{11, 12} 16⁶, Jer 13⁹ 48²⁹, Zec 9⁶ 10¹¹), though the context occasionally suggests mere 'excellency' or 'greatness' without the implications of moral defect. In the later Wisdom literature the warning against pride recurs (see esp. the essay in Sir 10⁶⁻²⁵). Perhaps, however, the evil of pride is most clearly revealed in the character of outstanding individuals like Saul, Absalom, Joab, Nabshakel, and others. As J. H. Newman says,

'[Saul's] temptation and his fall consisted in a certain perverseness of mind, founded on some obscure feelings of self-importance, very commonly observable in human nature, and sometimes called pride' (*Oxford University Sermons*, new ed., London, 1890, serm. 'Wickedness, the Sin of Saul,' p. 163).

2. In Christian ethics, early and mediæval.—The Christian ethic shows a great advance on the highest Greek thought in its valuation of such virtues as humility, meekness, and reasonableness. The NT conception of love in association with the doctrine of the divine Fatherhood and in its supreme revelation of the humanity of Christ gave a new significance to the moral defectiveness of pride. In 1 Co 13⁴ love is stated to be free from both arrogance and self-conceit. In Ro 12³ we find *ἀλαζονεία*, or proud speech, and *ὑπερηφάνεια*, vain-glorious disposition, classed among the sins of paganism; but it is in the human character of Jesus as one who did 'not strive nor cry,' as 'meek and lowly of heart,' that we find a fresh and unique criterion of the sin of pride. Christianity is the apotheosis of self-surrender; and the Christian character cultivates an outlook upon the world entirely free from 'the pride of life' (1 Jn 2¹⁶) or

¹ Cf. the lines beginning:

'O son, thou hast not true humility,
The highest virtue, mother of them all.'

² La Bruyère renders *ὑπερήφανος* by 'un homme fier superbe,' entitling the section 'De l'Orgueil'; cf. *Les Caractères ou les mœurs de ce siècle*, Paris, 1688.

the valuation of earthly possessions which disregards their transiency and insufficiency. Jesus is no respecter of persons, condemns the Jewish self-righteousness (cf. the parable of the Pharisee and the Publican) and exclusiveness, has no sympathy with the national prejudice against Samaritans, and in His conception of the brotherhood of mankind invests the claims and rights of one's neighbour with a new dignity. The soul of the individual has an intrinsic and eternal worth. Hence His emphasis on the laws of mercy and forgiveness, which are the foundation of His ethical teaching, His inculcation of *ἐνσέλεια*, or a gentle reasonableness, His eulogy of 'the poor in spirit' and of the voluntary surrender of power, His proclamation of self-repudiation as the condition of moral greatness, His warnings against self-assertion and self-advertisement. Pride is obviously a contradiction of the Christian ideal of unselfishness and stands condemned by the general spirit of the Christian ethic as well as by its positive precepts.

So deeply had these aspects of the teaching of Christ and His followers sunk into the consciousness of Christendom that Dante gives pride the first place in his seven sins. Earlier than Dante, Augustine had defined the unpardonable sin as a state of mind consisting of 'a desperate and impious obstination in sin, with a proud refusal to humble oneself before God' (*Epistola ad Romanos Inchoata Expositio*, § 23, quoted in W. Montgomery, *St. Augustine*, London, 1914, p. 198). Moreover, he had linked *superbia* with *voluptas* and *curiositas* in his analysis of the causes of sin (*Conf. x. 36*). But Dante derived his 'moral topography' from the *Summa Totius Theologiae* of Thomas Aquinas (see *Summa*, II. ii. qu. 162, art. 5-8), who regarded pride as a mortal sin and, further, as the first and most serious of all the sins. It is the first sin because every kind of sin springs from it, and the most serious because it involves non-subjection to God. It is most difficult to avoid because it takes occasion from our very virtues, so that some people are proud of their very humility. In art. 7 he asserts:

'Aversio a Deo quae formaliter complet rationem peccati, pertinet ad superbiam per se, ad alia autem peccata ex consequenti.'

Dante classes pride with envy and anger as sins of the spirit, and again follows his master in tracing it to that disordered love from which all moral evil flows.¹ In the first terrace (*Purg. x.-xii.*) Dante meets with those who represent respectively the pride of birth, the pride of intellect, and the pride of dominion. They are depicted as being pressed down by terrible weights and reciting a paraphrase of the Lord's Prayer for themselves and those whom they have left behind on earth. Others follow, drawn from mythology and history, sacred and secular. The poet describes them as sick in mental vision, putting trust in backward steps, and, in spite of their soaring thoughts, but insects and worms. Celestial voices chant, 'Beati pauperes spiritu,' the sin of pride is expiated, and Dante passes on his upward way.

3. In modern ethics.—Pride in its many phases is naturally a theme for moral reflexion, and it finds a place in the discourses of the essayists from Montaigne onwards. Montaigne (see *Essays*, tr. J. Florio, London, 1603, bk. ii. 17, bk. iii. 9) has disquisitions on 'Presumption' and 'Vainitie,' while Bacon treats of 'Vain-glory' in his 54th essay. The English translators or imitators of Theophrastus, such as Joseph Hall (*Characters of Vertues and Vices*, London, 1608), Thomas Overbury (*Characters or Witty Descriptions of the Properties of Sundry Persons*, do. 1614), and John Earle

(*Microcosmographie*, do. 1628, § 1633), with the exception of the last-named, are not wholly successful as analysts of human nature.

Overbury, e.g., 'in his chapter on *A Proud Man* has confused the characteristics of Haughtiness and Vanity which could hardly exist in such a union as he depicts' (see preface to Theophrastus, *Characters*, tr. R. C. Jebb, new ed. by J. E. Sandys).

Of the English ethical philosophers, Hobbes is the first to give a special moral value to pride. He regards it as an offence against 'the lawes of Nature,' which 'are immutable and eternal' (*Leviathan*, xv.). He repeats this in a subsequent chapter (xvii.):

'The lawes of Nature (as Justice, Equity, Modesty, Mercy and (in summe) doing to others as wee would be done to, of themselves, without the Terror of some Power to cause them to be observed, are contrary to our Naturall Passions, that carry us to Partiality, Pride, Revenge and the like.'

But Hobbes's 'psychological egoism' was rejected by Shaftesbury, who sought to establish a harmony or balance of the various impulses or affections as conducive alike to private and social good. In his *Inquiry concerning Virtue or Merit* he states:

'If there be found in any creature a more than ordinary self-concernment or regard to private good, which is inconsistent with the interest of the species or public, this must in every respect be esteemed an ill and vicious appetite, and this is what we commonly call selfishness and disapprove so much in whatever creature we happen to discover it' (*Characteristics*, 2 vols., ed. J. M. Robertson, London, 1900, I. 248).

Pride would naturally fall into his class of 'self-affections' or 'self-passions' which, while aiming at private good, become harmful to society at the point where they are harmful to the individual. Butler follows Shaftesbury in recognizing the general good as the aim of conduct, but clearly regards 'reasonable self-love and conscience' as the chief regulative principles of human nature. Where self-love and conscience are in conflict, the obligation of duty has to supersede that of self-interest. Pride therefore, as a natural or deliberate form of self-love, falls under the condemnation of conscience as being opposed to the happiness of society. But there is no detailed analysis of pride in these writers comparable with the study of it in David Hume's *Treatise of Human Nature* (ed. L. A. Selby-Bigge², Oxford, 1896; see bk. ii., 'Of the Passions,' pt. i. § ii. p. 277 f.). He calls pride an 'indirect' passion—i.e., it proceeds from the same principles as the direct passions (such as desire, aversion, grief, joy, fear, etc.), but by conjunction of other qualities. The indirect passions have the same object, namely self, which is not their cause. For the cause we have to distinguish between quality and subject, the latter being something related to us; e.g., in a beautiful house beauty is the quality and house the subject which must be our property or contrivance. In such passions as pride in country, in friends, in family, in riches, etc., the relations of contiguity and causation are required. Pride is a pleasant feeling; consequently it is derived from the double relation of impressions and ideas. Hume further suggests that the transition from pride to love is not so easy as that from love to pride. He finds in contempt or scorn (see art. CONTEMPT) so strong a tincture of pride that hardly any other passion is discernible; whereas in esteem or respect love and humility are the prominent ingredients. Finally, he asserts that nothing invigorates and exalts the mind equally with pride and vanity. It is to be noted that the psychological analysis of the affections had also engaged the attention of Hume's predecessor, Francis Hutcheson, who had divided the affections into the 'calm' (or extensive) and the 'turbulent' (or narrow). The Scottish school of philosophy represented by Dugald Stewart and Thomas Brown continued the study. The latter, in his *Lectures on the Philosophy of the Human Mind*, arranged the emotions under the heads of immediate, retrospective, and prospective. The first he subdivided into those passions which do

¹ See Aquinas, *loc. cit.* art. 5: 'Superbia semper quidem contrariatur dilectioni divinae'; and cf. Dante, *Purg. xvii.* 112-113.

not involve moral affections, such as wonder, melancholy, etc., and those which are distinctive of virtue and vice, such as love and hate, pride and humility. It is clear from a study of the history of ethical thought that the individual treatment of the affections is coloured by the philosopher's ethical standpoint, whether utilitarian or intuitionist. The hedonistic ethic of Hume, e.g., is in violent contrast with the Kantian theory that the ends at which duty has to aim exclude all consideration of personal happiness—a theory which has powerfully influenced all subsequent schools of thought, Hegelian, neo-Hegelian, and Pragmatist alike. Kant places all inclinations and desires under the single term 'self-regard,' distinguishing between *philantia*, excessive fondness for oneself, and *arrogantia*, satisfaction with oneself (see *DPhP*, s.v. 'Pride').

It remains to add that in most of the great modern dramas of the soul pride has a prominent place as a passion destructive of the moral order. Both the Satan of Milton's *Paradise Lost* and the Mephistopheles of Goethe's *Faust* are incarnations under different phases of the pride of the evil will, the former taking the form of an obstinate hostility to good which will not brook defeat, the latter that of a conscious versatility in evil suggestion which is utterly scornful of the weakness of its instruments. If we pass from dramatic creation to actual history, we shall be reminded of the popular estimate of the character of Napoleon as one who was the embodiment *par excellence* in modern times of Dante's pride of dominion. Nor can it be denied that, as the result of scientific

progress and our increasing control of the forces of nature, a pride of efficiency has developed in the civilized nations. Pre-eminently is this the case with Germany, whose consciousness of power, fostered by the philosophies of Nietzsche and Treitschke on the intellectual side and on the material side by an era of unexampled prosperity, is at the root of the militarism which plunged Europe into war in 1914. Scientific efficiency need not be divorced from ethics; but the progress of the war has shown that civilization is no safeguard against a recrudescence of barbarism when pride of power dominates the ideals of a nation. To sum up, pride, whether in an individual or in a nation, is an anti-social passion which disregards the rights of humanity.

LITERATURE.—There is a useful art. s.v. in the *DPhP* (see also bibliography under 'Emotion and Feeling,' vol. iii pt. II, p. 1010 ff.), and reference may be made to the *DAC* for an article on pride as treated in early Christian literature. The following works, some of which have been quoted in the course of the art., may be consulted: A. Grant, *The Ethics of Aristotle*, 2 vols., London, 1800; Theophrastus, *Characters*, tr. R. C. Jebb, London, 1870, new ed. by J. E. Sandys, do. 1900; Thomas Aquinas, *Summa Totius Theologiae*; E. G. Gardner, *Dante*, London, 1903; W. Boyd Carpenter, *The Spiritual Message of Dante*, do. 1914; J. Butler, *Fifteen Sermons Preached at the Rolls Chapel* (esp. x. 'Upon Self-Decent'), do. 1726; Lord Shaftesbury, *Inquiry concerning Virtue or Merit*, do. 1711; F. Hutcheson, *An Essay on the Nature and Conduct of the Passions and Affections*, do. 1728; D. Hume, *A Treatise of Human Nature*, 3 vols., do. 1739-40; D. Stewart, *The Philosophy of the Active and Moral Powers of Man*, 2 vols., Edinburgh, 1828; T. Brown, *Lectures on the Philosophy of the Human Mind*, 4 vols., do. 1820; I. Kant, *Kritik der praktischen Vernunft*, Riga, 1788, tr. T. K. Abbott, London, 1879; E. Caird, *The Critical Philosophy of Kant*, Glasgow, 1889, esp. bk. II, ch. vii, p. 390 f.; W. McDougall, *Introd. to Social Psychology*, London, 1912.

PRIEST, PRIESTHOOD (Primitive). — Priesthood among uncivilized races includes not only the priests proper, who conduct the religious rites and communicate with the gods, but also magicians, sorcerers, etc., who practise magic, i.e. utilize impersonal supernatural forces acting in accordance with certain fixed rules. 'Priests' or 'magicians' of some kind or other appear among all peoples of whom we have adequate knowledge, and also among those of a very rude type (Australians, Bushmen, Hottentots, Andaman Islanders, Veddas, Fuegians, etc.). The origin of priesthood therefore goes back to a very early stage of social evolution; the first indications of a priest's or sorcerer's office can be traced back almost to the very origin of religious and magical practices. When comparing the origin of priesthood with that of social ranks generally, we become aware that priests and sorcerers everywhere differ from the mass of the population at an earlier period of culture than any of the lay classes: priests and sorcerers are, as a rule, found among all peoples, whereas among a number of peoples at a low stage of development no distinction whatever of social ranks exists.

1. The need of mediators with the supernatural world. — Priesthood, broadly speaking, owes its origin to the universal need felt by mankind of superhuman assistance in the struggle of life.

Among all peoples the belief exists that, under certain circumstances, advantages of some kind or other are obtainable from the supernatural world. Man endeavours to influence by propitiation the powers which govern the universe, or to control the course of events by magical means. Not all the benefits supposed to be obtainable in either of these ways consist of positive blessings; on the contrary, they may in the first place imply the prevention of an evil. The desire for guidance in these matters has given rise to the various kinds of religious and magical practitioners among savage peoples who are to be considered as pioneers of an organized priesthood. But even among civilized peoples surviving traces of the same need characterize the authority of the priesthood. In spite of the universal belief in the existence of more or less infallible means of influencing fortune, certain persons are, as a rule, supposed to possess greater knowledge and power than others to secure the proper results. These appear to us in the form of priests and magicians.

In many cases savages think themselves unable to communicate directly with the gods. Acknowledging their inferiority in this respect, they regard the priests as the only mediators between them and the supreme powers. The priests are their only protectors; without them the ignorant population would be abandoned to the misfortunes

arising from the anger of the gods or from witchcraft (instances from the Kafirs, some American Indians, Eskimos).

The principal duty of the priests is to administer, or give advice as to, the worship of the gods. As all gods do not stand in the same relation to men, the assistance of the priests must often be called in to point out the special deities to whom the people should offer their sacrifices. Very generally the gods are believed to bear ill-will to men, and therefore it is also the duty of the priests to give directions as to the proper offerings. It is all the more necessary to know how to please the gods, as they are among certain peoples held to be very particular about the form of prayer and sacrifice (tribes in E. Russia and Siberia, Lapps, natives of Nias).

In short, the need of priests appears in the most various respects: they are required to influence the wind and rain, to cause good growth, to ensure success in hunting and fishing, to cure illness, to foretell the future, to work harm upon enemies, etc.

2. The first types of priests.—The worship of deified men is confined, as a rule, to the kindred group, and in the first place to the separate families. Owing to the exclusive character of ancestral gods in this respect, a regular priesthood, in the sense of universally acknowledged mediators with the gods, hardly occurs on the basis of mere family-worship. The authority of that member of the family who conducts the worship for his nearest relatives does not extend beyond the group worshipping the god to whom he is related, viz. the family itself.

Deification of ancestors, however, is not confined to families. Whole tribes also frequently worship the spirits of departed men, but in such cases the ancestral gods tend, in a way, to amalgamate with other classes of generally worshipped deities.

Whilst ancestor-worship originally tends to centralize the cult within families, or kindred groups, no such tendency is manifested by worship of gods in nature. Depending on the more or less general occurrence of the phenomena which give rise to the belief in gods of nature, such gods are likely to be worshipped within larger or smaller divisions of mankind, with little or no precedence given to certain kindred groups. Therefore the origin of the priesthood connected with the gods of nature is not influenced by any regard to family ties. These two forms of religion, however, are intermingled to a very great extent among most peoples.

In the earliest history of cult no proper priesthood existed. Although various kinds of priestly practitioners belong to a very early period of religious evolution, all conclusions point to the rule that originally everybody invoked the gods each for himself. Cult therefore existed in some form or other before there were any professional men entrusted with the duty of conducting the different religious observances. Among some peoples every individual still performs his religious or magical rites for himself without the assistance of professional priests (certain Papuans, Melanesians, Australians, and many more).

Among the people who in the early ages attempted to interpret the wishes of the gods and practise magical art the more expert who managed to gain the confidence of their fellow-tribesmen seem, in the course of evolution, to have attained a certain pre-eminence. Some men, more fortunate and more cunning in their predictions, acquired a local celebrity in the art; such men would soon be consulted by their neighbours, pupils or apprentices would be attached to them, and thus would be gradually formed a special class, which would

assume the functions of intermediaries between the people and the gods.

Within the separate families, in which, as has been pointed out, ancestral gods are particularly worshipped, one member is generally invested with the duty of sacrificing for the whole family. As a rule, the priestly functions are put into the hands of the paterfamilias, and the reason seems to be that he is the oldest and most experienced male member of the family, who is generally believed to stand in closer communication with the ancestors than the other members (tribes in India, Africa, and Polynesia). Sometimes the oldest female member of the family may also officiate as priest (Serers in W. Africa). Among the Barais in India the deities are worshipped only by that member of the family who is under the influence of the special divinity—a fact shown by his getting into a state of ecstasy and uttering oracles. Among some lower Dravidian tribes the family-worship is conducted either by the head of the household or by the son-in-law or the brother-in-law. In the Tarawa and Apamama islands, of the Kingsmill group, every family that has a tutelary divinity has also a priest whose office may be filled by any young man of free birth able to recite prayers.

As regards the first appearance of priests, we can distinguish among some peoples certain classes of men who, owing to their unmistakable priestly affinities, seem to be forerunners of a regular priesthood.

(1) One group of persons who occasionally exercise priestly functions without being priests are those who, when in a state of ecstasy, are believed to be inspired by the gods. During their convulsive fits such persons are sometimes interrogated by the people as to the will of the gods, future events, etc., and the gods are believed to speak through them. These ecstatic individuals thus act as mediators with the supreme powers (peoples in India and Polynesia). From the idea of occasional inspiration it is an easy step to the conviction that certain persons are able to put themselves into communication with the gods whenever they like. On the whole, facts show that in the early ages of priesthood men often retain the office only for a specified time or with intermissions. Among some rude tribes, we are told, the priests take up their office and leave it, as they like (Todas, Khotas, Bodos and Dhimals, Dophlās, Munda Kols).

(2) Another beginning of priesthood may be seen in the observance of 'sacred places' or other kinds of sanctuaries which, for some reason or other, are held in high veneration by the peoples in the neighbourhood. As a rule, they are thought to be the abodes of a god, and the men charged with guarding the sacred rooms naturally tend to become mediators between the people and these gods (Gonds in India, natives in Madagascar and Yap, certain Arabs, certain priests in ancient Greece).

(3) We have further to regard as a kind of forerunners to a regular priesthood the 'holy men' who, without being real priests, exercise a certain religious authority among some peoples. This class of men make themselves renowned by occasional miracles, or acquire the religious veneration of the people by their eccentric habits (Muhammadan peoples).

In early stages of cult the rites are naturally very simple, and consequently almost any one is able to undertake the performance of the priestly functions. In general a simple cult and a superficially-instructed, mutable priesthood seem to go together. And it is clear that, where every one is qualified to assume the priestly office, priesthood as such is not likely to be held in great veneration.

Of many peoples we are told that the priests do not form any distinct class, and that almost any man may become a priest (Maoris, tribes in India and Madagascar, Galla, some American Indians).

As ritual observances and magical practices gradually became too complicated for the average man to master, a professional priesthood became necessary. When the people were uncertain about the proper ceremonies, they applied to the more experienced practitioners, asking them to perform the ceremonies on their behalf (Cheremisses). Kindred customs seem to be one reason for the old men officiating as priests and sorcerers among several tribes (Kiangans in Luzon, tribes in India, Africa, and Australia). Certain facts show how, especially on important occasions, the task of performing religious or magical ceremonies seems to have been put into the hands of priests, or of those possessing most experience in the tribe; at the same time every one was supposed to know how to sacrifice for ordinary private purposes (Kafirs, Ostyaks, Lapps, ancient Teutons, and Finns).

The authority of the first semi-priests and semi-sorcerers evidently varied to a great extent. While some exercised only a local influence, the more fortunate and cunning among them gradually extended their fame over wide districts. In this way a class of priests and sorcerers common to whole tribes originated (tribes in Africa and Siberia, certain Eskimos and American Indians).

It is a remarkable fact that among many peoples the sorcerers of neighbouring races are held in greater awe than those of their own tribe. Whole tribes are in certain regions known as powerful wizards, whose services are frequently sought after by their neighbours. E. B. Tylor's¹ explanation is that nations with some education, who, however, believe in the reality of the magic art, cannot shut their eyes to the fact that it more essentially belongs to races less civilized than themselves. This theory, interesting as it is, does not explain the cases where, e.g., certain tribes attribute to each other reciprocally a superior power of magic. The superstitious fear in which peoples in many parts of the world hold other tribes seems also to be connected with a universal belief that the secret powers of strangers are greater than those of well-known people.

3. King-priests.—A remarkable feature in the history of priesthood is the combination of priestly functions with royal authority. Instances of king-priests are met with throughout Polynesia and Melanesia, in India and other Asiatic countries, among many Negro and American Indian tribes, and in ancient Europe. J. G. Frazer² thinks that the priestly king has developed out of the public magician, the latter being a personage of such influence that under favourable circumstances he may easily attain to the rank of chief or king. When once a special class of sorcerers has been segregated from the community and entrusted by it with the discharge of duties on which the public safety and welfare are believed to depend, these men gradually rise to wealth and power, till their leaders blossom out into sacred kings. We may add that ancestor-worship also tends to invest the king or chief with sacerdotal authority. Similarly, as patriarchs of families conduct the worship on behalf of the family, so patriarchs of villages and provinces are the persons likely to perform the sacred offices on behalf of their respective clans or tribes. In the opinion of their followers they are often more intimately connected with the gods than any other individuals, being their nearest living relatives, and therefore all the more naturally can mediate between the gods and men.

¹ *PC* i. 122 ff.

² *GB* pt. i., *The Magic Art*, London, 1911, i. 375.

Besides the union of a royal title and priestly offices there are instances of kings being worshipped as gods, which indicates the highest potentiality of the sacerdotal character of rulers. Frazer has called attention to various instances in which the divine king or priest is put to death by his worshippers, which he explains in the following way.¹ Primitive people sometimes believe that their own safety and even that of the world is bound up with the life of one of these human incarnations of the divinity. They therefore take the utmost care of his life. But no amount of precaution will prevent the divine king from growing old and feeble and at last dying. And, in order to avert the catastrophe which may be expected from the enfeeblement of his powers and their final extinction in death, they kill him as soon as he shows symptoms of weakness, and his soul is transferred to a vigorous successor before it has been seriously impaired by the threatened decay. But some peoples appear to have preferred to kill the divine king while he is still in the full vigour of life. Accordingly, they have fixed a term beyond which he may not reign, and at the close of which he must die, the term fixed upon being short enough to exclude the probability of his degenerating in the interval. E. Westermarck² has a somewhat different explanation, according to which the new king is supposed to inherit, not the predecessor's soul, but his divinity or holiness, which is looked upon as a mysterious entity, temporarily seated in the ruling sovereign, but separable from him and transferable to another individual. See, further, art. KING (Introductory).

4. Qualifications for priesthood.—Priesthood is generally a hereditary institution, although the rules of inheritance can rarely be strictly followed (Polynesians, Melanesians, Australians, peoples in the Malay Archipelago, India, Siberia, Africa, and America). Among certain peoples who have a hereditary priesthood the sacerdotal dignity is not assumed by the son of a priest; one generation is passed over, and the grandchildren are selected (Kafirs, tribes in W. Africa). Of other peoples we learn that priesthood is hereditary, but that the aspirant must in addition be qualified by certain necessary endowments. Thus the faculty to 'see the spirits' and converse with them is in some cases a further condition (Tlingits, Sioux); and the like power is often required of the priests where priesthood as a strictly hereditary institution is not heard of.

As the principal duty of the priests is to mediate between mankind and the higher powers, so the chief qualification requisite for entering the priesthood is the faculty of communicating with the gods. This faculty, however, may be proved in different ways. Thus, when certain wonderful things happen to a person—especially when he falls into a state of ecstasy—the people may think that he is under the influence of some spirit; and such a man is competent to become a priest (Kafirs). Among other peoples the supposed connexion between the priests and the spirit-world appears more particularly in the belief that the priests have one or more tutelary deities of their own, who always give them assistance when required. In some cases it is even stated to be a necessary qualification for priests to have such gods at their disposal (Eskimos, Algonquian Indians).

As the faculty of conversing with the gods is so very generally confined to the priests (other people being excluded from communication with the spirit-world), it is an easy step to the conclusion that the gods themselves have selected their repre-

¹ *GB* pt. iii., *The Dying God*, London, 1911, p. 9 ff.

² *MI* ii. 607.

sentatives among mankind. In conformity with notions of this kind, many peoples believe that the gods confer divine powers upon certain men, and that the only way in which a person can become a priest is by being chosen by the gods (Eskimos, American Indians, Kafirs, tribes in Siberia, India, Borneo, Australia). Generally the gods communicate the necessary secrets to the priests in dreams (Australians, Sea Dayaks, Tunguses), but there are various other means by which the gods are believed to choose their favourites for the priestly vocation. Sometimes they intimate their wishes in a more or less peculiar way.

The Moxo in Brazil think it necessary that the aspirants to the priestly office should have been attacked and wounded by a jaguar, this animal being the visible object of their worship; they believe that he sets his mark upon those whom he chooses to be his priests. The Burjats in Siberia regard men who have been killed by lightning as chosen by the gods, who have thereby conferred a certain distinction on the family of the dead man; he is considered a shaman, and his nearest relative enjoys the right to shamanhood. In ancient Peru and among the Apache we meet with a kindred idea regarding lightning. The Munda Kols find out the proper *pahan*, or priest, to perform their sacrifices by such means as watching a frightened bull which stops before a certain house. When an additional priest is wanted in a village on the Gold Coast, a general meeting of the inhabitants is held, and a number of young men and women are made to stand in a circle. The fetish-priest, after weird and gruesome ceremonies, places on the head of each candidate a bundle of herbs and leaves. In most cases it happens that one or more of the youths and girls fall straightway into a kind of fit and appear to be possessed by some strange influence. This is taken as a sign that the fetish has spoken, and that the deity has chosen the person or persons so affected for his service.

Among the endowments requisite for aspirants to priesthood a very important one is the faculty of wonder-working. We are told in fact of many peoples that the would-be priests are expected to perform miracles, and that the candidate has to manifest his powers in that respect before he is admitted to the sacerdotal order. A person ambitious to become a priest will, *e.g.*, profess to have been told of future events by some spirit; should any of his predictions relating to something which greatly interests the people happen to come true, he is regarded as a duly inspired priest (Fijians, natives of the Isle of Pines, Mälers in Bengal, Siberian tribes, Greenlanders).

Some peoples judge from mere outward signs that certain persons possess mysterious powers and are able to act as sorcerers or priests.

Among the Ojibwa Indians individuals gain a reputation for witchcraft without making any pretensions to the art, merely because they are deformed and ill-looking; all esteemed witches or wizards among these Indians are, as a rule, 'remarkably wicked, of a ragged appearance and forbidding countenance.'¹ The Congo natives are said to number dwarfs and albinos among the priesthood.

Outward peculiarities in children are in certain cases believed to denote that they are bound to become priests—*e.g.*, being born with the eyes open (Australians), or bleeding at the nose or mouth (Tunguses in Siberia).

The mental disposition which is supposed to qualify a person for the priestly office reveals a very important feature of early priesthood. Among a great number of peoples the priests must display a considerable excitability of temperament; consequently certain qualifications of a pathological and psychological nature generally characterize the priests and sorcerers of uncivilized races. From several parts of the world we are informed that individuals of an eccentric disposition are considered to be specially apt for the sacerdotal vocation.

The Siberian shamans are recruited from a class of men distinguished by their habits of contemplation and insight into mysteries as well as by their ardent imagination, and their qualifications for shamanhood are further thought to appear in frequent fits of giddiness and fainting, besides other signs. Certain tribes in those parts believe that the influence of the

evil spirit which compels a person to become a shaman makes itself known by continual yawning, shrieking, and leaping round, etc. The incipient shaman begins to see visions, endeavours to throw himself into the water or fire, and seizes knives to hurt himself, after which he declares that the spirits have ordered him to become a shaman. See artt. Possession (Introductory and Primitive), SHAMANISM.

Instances of similar ideas are furnished by Polynesian, American Indian, and African tribes.

Among certain peoples the mere faculty of falling into convulsions or into a state of unconsciousness seems to be almost all that is required for becoming a priest.

It is stated, *e.g.*, of the Fijian priests that the power of receiving inspiration and of announcing the will of the deity during a violent fit of muscular or nervous shaking, supposed to betoken the possession of his body by the spirit, is a necessary qualification for the priestly office. Before a Fijian is acknowledged as priest, he has to undergo a trial and is required to show publicly that the spirit is entering into him. The proof of this is supposed to lie in shiverings, which appear to be involuntary, and in the performance of which none but an expert juggler could succeed.

Statements to the same effect refer to native tribes in Australia, Africa, S. America, India, N. Asia, etc.

The great importance attached to ecstasy as a symptom of divine visitation also appears in the numerous cases when priests before or at their initiation reduce themselves by special means (such as fasting or narcotics) to a state of delirium or trance which is supposed to indicate their sacred calling.

Would-be priests among the Eskimos, several American Indian tribes, as well as peoples in Africa, Asia, and Oceania, withdraw for a longer or shorter period to a solitary place, where they subsist without food until they begin to 'see into futurity.' Of narcotic or fiery drugs Siberian shamans use the fly-bane (*Amantia muscaria*), while the medicine-men of certain Indians in Guiana drink potions of strong tobacco-juice. The sorcerers of the Guaraní Indians during their period of preparatory retirement live on pepper and roasted maize only.

It is natural to the savage mind to ascribe ecstasy to spiritual agency. The convulsive gestures and incoherent utterances of the inspired seem to show that his own will is absent, and that some strange being has taken possession of his body. A spirit or god is therefore supposed to speak through his mouth and to command his actions. This faculty of falling into an ecstatic condition is all the more necessary for would-be priests, as among savage peoples manifestations of a prophetic or divine delirium do almost universally accompany religious ceremonies.

The observation that an ecstatic disposition is universally associated with priesthood draws attention to the fact that in many cases insane persons are looked upon with superstitious awe. The main distinction between insanity and ecstasy seems to be that the former is generally ascribed to a permanent, the latter to a more casual, possession by a spirit. Some people believe the insane to be under the influence of demons, while others assume that they are inspired by good spirits. In conformity with the latter idea, great veneration is paid to the insane, who are also sometimes thought to possess the spirit of prophecy (Arabs, natives of Celebes, Polynesians, Melanesians, certain American Indian and Siberian tribes).

5. Initiation of priests.—As a rule candidates for the profession of priest or sorcerer have to undergo a preparatory instruction which is imparted by an expert practitioner (African, Siberian, Polynesian, American Indian, and Eskimo tribes). Not always, however, is instruction necessary, and it seems that those who have been inspired by the gods are less in want of information than those who are self-chosen. Among some tribes people assume the office of fetish-man after suitable training, but the priestly order is said in addition to be augmented by persons who can prove that the spirits have suddenly seized upon them (certain tribes in Africa, India, Siberia, Australia, and N. America).

¹ P. Jones, *Hist. of the Ojibway Indians*, London, 1861, p. 145 f.

The preparation of the novices in many cases begins at an early age.

Among the Eskimos and Aleuts the priests are brought up to their calling from their infancy. The Ojibwa Indians encourage their youths from the age of ten to manhood to fast, for in this way they obtain the favour of the gods. Boys destined to be *pieces* among the Panama Indians are taken at the age of ten or twelve to be instructed in the office.

Similar examples come from the Apurina Indians, and tribes in W. Africa and Borneo. It seems to be the rule that, where the priests are subjected to a regular course of instruction, the preparatory period commences early in life, whereas the more impulsive assumption of priesthood, with little or no previous training, is liable to take place at any age.

As a rule we can draw a distinction among most peoples between two different phases of the priestly education. (1) During one period the novice is generally under the care of some experienced priest who imparts to him the necessary religious instruction and initiates him into the practices of the profession. (2) Another phase of the preparation includes a course of self-training, during which the aspirant has to place himself in proper correspondence with gods.

(1) As regards the knowledge imparted to the candidates, mere theoretical learning is little thought of; according to our scanty reports, most importance is attached to practical knowledge which may be of use in the magical and religious performances.

In Greenland the teacher seeks, in the first place, to make the pupil entirely fearless and to direct his mind towards the spirit-world, to the horrors of which he must be rendered insensible. In the Mosquito tribe of Central America the sorceresses, during their preparation for the office, learn various tricks from their predecessors, such as allowing poisonous snakes to bite them, and handling fire. The priestly novice among the Indians of British Guiana is taught the traditions of the tribe, the medical qualities of plants, and to find where game is to be had. During his novitiate the medicine-man of the Bororo in Brazil has to learn certain ritual songs and the languages of birds, beasts, and trees. The priests of the Kukis in India first of all seem to have been taught the secret language which they have among themselves, while the rest of their knowledge is probably picked up during their practice. The instruction of the priests among some African tribes is said to comprehend a good deal of empirical knowledge and other secrets of the craft.

(2) The self-training of a candidate for the priestly office evidently has for its object the preparation of his mind for intercourse with the gods. During this period he generally lives for a longer or shorter time in retirement, whilst in some cases a rigorous asceticism is also prescribed, such as fasting or subsisting on a scanty diet. In certain tribes the novices are required strictly to refrain from connexion with the opposite sex.

With the Eskimos this phase of the priestly education consisted in strict fasting and invocation of the deity while dwelling alone in solitary places, until the soul became independent of the body and of the external world; finally the god appeared and provided the novice with a helping or guardian spirit.

Of a similar description is the self-preparation of the priests among certain American Indians as well as tribes in Africa, Australia, Siberia, and India. In some cases the neophytes use narcotics or stimulants in order to work themselves into a passion of excitement, during which they are supposed to hold converse with the spirits.

Among certain peoples candidates are admitted to the sacerdotal order through a special initiatory ceremony (Negroes, Waraus Indians, Siberian tribes, Laplanders). It is also stated that in certain cases the consecration of a priest takes place several times in succession as he rises from lower to higher degrees of the order (Buriats in Siberia, Moxo Indians).

6. The social position of the priest.—One circumstance which has powerfully tended to distinguish the priesthood from the community at large has been the fact that the priests and sorcerers are, as a rule, recruited from the most

intelligent elements of their peoples. The scanty learning of savage races is almost exclusively confined to the priests, who are generally the only preservers of tribal traditions; they alone possess the knowledge of certain useful arts, and the whole character of their functions tends to develop their intellectual powers and to give them a superiority over their fellow-tribesmen.

It is frequently reported that the priests distinguish themselves from the rest of the people by a more or less considerable knowledge of certain natural phenomena, by means of which they secure the popular confidence in their powers. They have studied the use of medicines, the properties of herbs and other plants, the changes of weather, and the habits of animals; and this knowledge materially assists them in the maintenance of their authority (Negroes, Hottentots, Dayaks, Tahitians, Araucanians, Eskimos).

In order to preserve the faith of the people in their prophetic powers the priests often collect all kinds of information, and whatever they learn in this way they ostentatiously foretell as future events. In many cases they are also said to act in collusion with each other, in keeping the people under their influence (tribes in W. Africa, American Indians, etc.). When the priests exercise the precarious art of prophecy, great significance is attributed to their utterances. Hence we often hear that, in order to ensure that their predictions shall prove true, they make them sufficiently ambiguous or uncertain to admit of a variety of interpretations (tribes in Africa, some American Indians). If, in spite of all precautions, they fail to produce the effects promised by them, they generally have recourse to various excuses. The non-success is attributed, *e.g.*, to some defect in the medicine, or the applicant is labouring under the displeasure of the gods, who refuse to be appeased unless renewed and richer offerings are made (certain American Indians, Negroes, Hawaiians). A very general excuse is the counter-acting influence of some demon (Dayaks, Oceanians, natives of Victoria, Hottentots). No less frequently priests and sorcerers who fail in performing miracles save their reputation by accusing other persons of having, by secret necromancies, frustrated their endeavours (tribes in N. S. Wales, India, N. America).

The respect which the priests and sorcerers enjoy is increased by the mystery in which they generally envelop their proceedings. They do their best to inspire the people with fear, if they think such a course necessary for the strengthening of their power. Thus they may threaten to send the spirits or some magic substance into those who disbelieve them (Tlingits, natives of Victoria), or in some other way let the spirits avenge even the slightest neglect or disobedience (Tahitians, Fijians). The bizarre external appearance of most priests among savage races also serves to a great extent to impress the popular imagination. By painting their bodies in all colours and dressing themselves in the most fantastical manner they inspire their tribesmen with feelings of mystery and awe, and sometimes this effect is expressly sought (Indians of Virginia, Siberian tribes). It is likewise beyond dispute that a strong impression of fear is produced upon the people by the ecstatic orgies which so often form an essential part of the rites of savage priesthood. The gestures and other morbid manifestations of the priests, vivid descriptions of which are given by numerous eye-witnesses, necessarily strike the bystanders with awe and terror. It is in this connexion interesting to note that the religious and magical rites of savages very generally take place in the dark, and in some cases darkness is even repre-

sented as a necessary condition for success. The Siberian shamans perform their ceremonies in some gloomy place and generally at night, in order to appear more mysterious and terrible in the darkness; and the same is said regarding the sorcerers of the Eskimos, Waraus Indians, Congo natives, etc.

Among certain peoples the priests strengthen their authority by attaching themselves to the kings and noble classes in a community, while at the same time they are said in return to support the ruling system (Polynesians, Khonds in India, Kafirs, certain American Indians).

One of the most important methods by which the priests increase their influence is by convincing the people of their supernatural endowments through various miracles. There are reports from many peoples that confidence in the priests and sorcerers depends upon their supposed faculty of performing miracles—one successful instance often causes all previous failures to be forgotten. Priests and sorcerers strengthen their reputation through delusive demonstrations of their invulnerability—*e.g.*, by stabbing themselves with knives in different parts of the body (Ostyaks), by throwing themselves into the fire or seizing live coals with their hands (certain Tatar tribes), by allowing poisonous snakes to bite them, etc. (Mosquito Indians). How essentially the influence of the priesthood depends on their presumed power of wonder-working is shown by the fact that among several tribes priests who fail in their efforts, or otherwise lose the confidence of their people, at the same time forfeit their office and sometimes are subject to punishment (tribes in India and Africa, Andamanese). They are even liable to be killed by the enraged people; this may be due to the idea that worthless priests are of no use and therefore cannot hold the sacerdotal office, but, as they possess dangerous powers, they must be made away with. There are also grounds for connecting the killing of priests with the killing of the divine king.

The methods by which the priests and sorcerers of savage races acquire confidence and reputation among their countrymen raise the question whether, on the whole, we are to look upon them as a class of impostors or not. The opinion predominant in theoretical literature is that we cannot suppose that the priests and sorcerers of the uncivilized races are, generally speaking, impostors (Lord Avebury, J. G. Frazer, A. Réville, R. de la Grasserie, Julius Lippert). The opinions of travellers, again, are divided, but many of them have considered the question from different points of view. There is no reason to condemn the priests and sorcerers as deceivers because their proceedings seem meaningless to European observers, or because some travellers have ascertained, by experiments, that the savage mystery-men are not endowed with those miraculous powers which they claim to possess. The principal point is whether they believe in their own powers or not; this they very generally seem to do, although, on the other hand, impostors are undoubtedly met with among the priests at all stages of early beliefs. Cf. art. POSSESSION (Introductory).

7. *Observances, etc., distinguishing priesthood.*—Numerous practices and observances are among many peoples obligatory upon the priests and tend to separate them from the rest of the community, as they cannot in general be combined with the circumstances of ordinary life.

(1) There are certain ascetic regulations which apply to sexual life. The fact that persons devoted to religion are often obliged to live a single life has been ascribed to the notion that there is something impure and sinful in marriage, as in sexual relations generally. Among many peoples the members of the priesthood are forbidden to marry, and must

keep themselves pure (several American Indian tribes, Kalmuks, Todas, etc.). Celibacy and chastity are, however, by no means universally required of the priests; on the contrary, they seem in some cases to be distinguished from the people as a whole by extraordinary liberties in sexual respects. The *ius prime noctis* accorded to the priesthood among certain peoples exemplifies the sexual privileges which are sometimes enjoyed by the sacerdotal order. Among certain peoples the priestesses must not marry, for the reason that, belonging to the god, they cannot become the property of a man. But this prohibition extends to marriage only, and a priestess is not debarred from sexual commerce (tribes in W. Africa).

(2) Other ascetic regulations concern fasting and prohibited articles of food. Fasting generally seems to be observed when a person wishes to put himself in correspondence with the spirits performing some religious rite (Santalals, Siberian tribes, some Melanesians and American Indians), and sometimes for the same purpose the priests reduce themselves by artificial means to a state of mind which is supposed to indicate their close communion with the supernatural world. Food restrictions of various kinds are imposed upon the priests.

(3) Among many peoples the priests are distinguished by a special costume and also by the colour of their dress.

The priests of the Sinhalese and in Siam are clothed in yellow; and in the Malay Peninsula the priestly magician shares with the king the right to make use of cloth dyed the royal colour, yellow. The priestesses of the Manipuris in India dress in white. Among the Peruvians the priest wore white when invoking the gods. The ordinary dress of the Zapotec priests was a full white robe, that of the Toltec priests a long black robe, and the common Totonac priests wore long black robes of cotton. In ancient Mexico a class of priestesses called 'maids of penance' ordinarily wore a habit all white.

(4) It is rather a general custom for priests to distinguish themselves by the length of their hair (certain tribes in N. America, India, and Africa). Frazer explains the custom of sacred persons leaving their hair long by referring to the dangers which, in the primitive view, beset the cutting of it.¹ Such dangers are common to all, but sacred persons have more to fear from them than ordinary people; the simplest way of evading peril is not to cut the hair at all.

(5) A remarkable fact is that the priests almost universally distinguish themselves from the community at large by means of a separate language which they use in the divine service or in intercourse with each other.

The *angakoks*, or priests, of the Greenlanders have a peculiar language, altogether different from the ordinary tongue of the country, and words of the general language they use in an opposite or metaphorical sense. This particular idiom they make use of only at their practices of witchcraft and when they are consulted by the people.

Similar reports are given of the priests among several tribes in N. and S. America, Africa, India, the Malay Archipelago, and Oceania.

8. *Classification of priests.*—Of the two classes of supernaturalistic practitioners the priests are those who represent the religion of a people; they exercise the duties incumbent on them by invoking the aid of the supernatural beings, and their power consists in influencing the will of the latter. Magicians, on the other hand, act independently of the supreme rulers, with whom they have no communication in the sense in which the priests have. By their magic they are themselves able to bring about the desired results, and the same means of coercion may be applied by them even to the gods.

But, although theoretically separated, the types of priest and sorcerer among uncivilized and semi-

¹ GB³, pt. II., *Taboo and the Perils of the Soul*, London, 1911, p. 268 ff.

civilized peoples almost inextricably blend into one another. Communication with supernatural beings is in no way confined to the 'priests,' nor do the 'sorcerers' monopolize the practice of magic. Very frequently it happens that practitioners in whom the priestly type preponderates have recourse to magic also, and that representatives of the type of sorcerer maintain a religious communication with spirits.

Certain writers associate the difference between priests and sorcerers with the occurrence of a benevolent and a malevolent class of priests among many peoples, the one group of functionaries helping the people, the other exercising a pernicious influence (Eskimos, certain American Indians, Kafirs, Buriats). There is on the whole a tendency to identify priests with protectors of the people, whereas magicians or sorcerers are represented as evil-doers who endeavour to inflict distress upon others. Facts go to prove, however, that the distinction between well- and ill-disposed classes of priests is often very arbitrary; sometimes 'priests,' e.g., forfeit their sacerdotal dignity and are transferred to the class of 'sorcerers,' merely because they have lost the popular confidence in their goodwill (American Indians, Eskimos, tribes in Central Africa).

In a few cases distribution of function makes the types of priest and sorcerer distinct from each other. Thus weather-doctors, fortune-tellers, exorcists, and physicians, who form special professions of their own among certain peoples, also supply, in some cases, instances of the typical magician. Examples of such practitioners acting solely by magical means are, however, extremely rare—which can also be said of the occurrence of the unadulterated priestly type.

To a certain extent the numerous functions are performed by special classes of priests. Although the regular priests almost universally also practise divination, yet among many peoples the diviners form a distinct profession within the priesthood, and in a great number of such cases the performance is stated to take place through other means than consulting the gods.

In the Kafir tribes the *amatola*, who practise augury by burning certain roots, are distinct from other classes of the priesthood. In Uganda the *bahumu*, who foretell the future from the entrails of fowls, constitute a separate class of diviners. Among the Malagasy there is a class of men called *panandro*, 'astrologers,' who calculate and declare unlucky days and hours and foretell the destiny of children. The natives about the Altai mountains in N. Central Asia, besides shamans and weather-makers, have four separate classes of augurs distinguished from each other by different names and different methods of procedure.

Instances of a similar kind are given by the Kirghizes and several American Indian tribes.

The priests and physicians are very generally the same men, but cases of physicians forming a profession of their own in association with the priesthood are not rare among uncivilized races (Polynesians, Melanesians, tribes in India, Negroes, American Indians).

Weather-making is among the lower races universally associated with priesthood, although it is sometimes difficult to ascertain when this function refers to the regular priests and when to a special class of individuals. Among certain peoples, however, the weather-doctors are clearly identical with the priests (Greenlanders, some American Indians, Negroes, and Siberian tribes). In other cases the profession of a weather-maker is kept distinct from ordinary priesthood.

Among the natives of the Altai district there is a special class of shamans who profess to manage the weather by means of a magic stone. The Kirghizes have a class who not only foretell the weather but also have the power to cause or avert rain, wind, and lightning. Among the Yagas in Congo the *seungilli*, or rain-makers, form an inferior class under the *gangas*, or fetish-men. The Okanda Negroes have priests to whom the people apply for producing rain when a bad year is impending,

and these have a special name. The rain-doctors of the Ganguelas in S. Central Africa are pronounced distinct from other classes of the priesthood. Among the Apache and certain other Indian tribes, weather-making and other priestly functions are distributed among different classes of the priesthood. A few peoples even make a distinction between different branches of weather-making as represented by different groups of priests (Maoris).

To the offices associated with the priesthood belongs the judicial authority with which its members are often invested. As a rule the rights of the priests in this respect are closely connected with their religious duties, their supernatural endowments being called into requisition for the administration of justice in the various communities. From the Congo, Loango, and other African countries, as well as from Hawaii, we hear that on such occasions the priests are the chief officiators at ordeals. Similarly, when a person is accused of practising witchcraft, the priests are the most competent to conduct the case (Greenlanders, E. African and Congo tribes). Thieves and other evil-doers are often detected by the assistance of the well-informed priests (Apache, Thingits, E. African tribes). In a few cases the priests are entrusted with a regular judicatory dignity, as, e.g., in Hawaii, where some appearance of judicial forms was preserved in cases of litigation.

Among the Badagry in Guinea 'the fetish-priests are the only judges of the people, and the statutes of their country are recorded in their own breasts only,' yet the people are said never to murmur against their decisions.¹

From almost all parts of the world where uncivilized peoples live come reports that women also officiate as priests and sorcerers; in general no very great distinction seems to be made between the sexes as regards their qualification for priesthood. Often, however, men take precedence in the sacerdotal profession. Female priests or sorcerers are met with among the Greenlanders, American Indians, Negroes, some Siberian tribes, Fijians, Dayaks, etc. From some peoples we learn that all the great ceremonies must be conducted by men, or that the women are not admitted to the priesthood at all (certain Siberian tribes, Chippewa Indians, Andamanese, Australians).

The priestly offices to which women seem principally to devote themselves are foretelling the future (certain American Indians, Kamchadales) and healing diseases (Negroes, American Indians, Papuans). It is a widely-spread notion that women are endowed with mysterious powers in a much higher degree than men (Arabs, Negroes, tribes in India, Australians). Such ideas of the spiritual propensities of women account for the inclination displayed by many peoples to attribute witchcraft particularly to the female sex (Eskimos, certain American Indians, Hottentots, Siberian tribes, Arabs). In a few instances some peoples who have both male and female priests confine special classes of priestly functions to one or other of the two sexes exclusively.

LITERATURE.—W. W. Baudissin, *Die Gesch. des alttestamentl. Priesterthums*, Leipzig, 1889; J. G. Bourke, 'The Medicine-men of the Apache,' in *9 REEW* (1892), p. 451 ff.; A. W. Howitt, 'On Australian Medicine Men,' in *JAI* xvi. (1886-87) 23 ff.; G. Landtman, *The Origin of Priesthood*, Ekenaes, 1905; J. Lippert, *Allgemeine Gesch. des Priesterthums*, 2 vols., Berlin, 1883-84; S. Maybaum, *Die Entwicklung des altisrael. Priesterthums*, Breslau, 1880; A. Réville, *Hist. des religions*, 3 vols., Paris, 1883-85; H. Spencer, *Principles of Sociology*, London, 1893-96, vol. iii. pt. vi. 'Ecclesiastical Institutions.'

GUNNAR LANDTMAN.

PRIEST, PRIESTHOOD (Babylonian).—In view of the great antiquity of their religion, going back, as it does, to over 4000 years before Christ, there is no doubt that the priesthood of the Babylonians, in most if not all of its numerous orders, was very ancient. It is impossible, however, to

¹ R. Lander, *Records of Captain Clapperton's Last Expedition to Africa*, London, 1880, i. 281.

estimate the dates of the institution of these orders, the more especially as they must have grown up rather than come into such sudden existence as founding by any power of the State or the people would imply. There seems to be no doubt that the remote antiquity of the Babylonian priesthood had brought to its members great influence and wealth, as well as the veneration of the people.

The number and the nature of the priestly offices and orders in Babylonia were determined by the requirements of their religion. Theology, mythology, legends of the gods and heroes illustrating their faith, and temple history were probably taught by the scribes (*tupšarru*), or by such of them as had been educated at and received orders through the temple schools. But the superstitions contained in their creed necessitated not only a full staff of sacrificial priests, conductors of special ceremonies, etc., but also numerous conjurors, soothsayers, magicians, etc., each with his special domain, which, however, in case of need, overlapped the others. The sacrificer, therefore, might perform incantations, and the spell-maker might interpret a dream.

1. Priests in general.—In all probability the most usual term for 'priest' in Babylonian was *sangū*, possibly a nasalized form of the Sumerian (non-Semitic) *sag*, 'head.' The Sem. plural was *sangē*, though the plural for professions of men, *sangūti*, was probably not excluded. The last would coincide in form with the abstract *sangūtu*, 'priesthood' in general—i.e. a man's priestly character, as in the case of a Babylonian or an Assyrian king, or the priestly body to which a man might belong. The Sem. form, *sangū*, seems to have been borrowed by the Sumerians, who attached it to the character *mes*, 'hero,' 'man of worth.'¹ It is this root that is found in the Sem. rendering of the Sum. *pa-te-si*, namely, *issakku*, from the Sum. *ig-sag*, 'he who is at the head,' a word often rendered by 'priest-king.' Though probably often a priest, the *issakku* was generally a kind of viceroy, under a royal ruler (*lugal-sarru*, 'king'), and took his title from the place which he governed, as *Gudea patesi Lagaš*, 'Gudea, viceroy of Lagaš.'

2. The high-priest.—Several words which may be thus rendered are known. A *sangū rabū* (so L. Delaporte), 'great priest,' is shown on the cylinder-seal published in his 'Cylindres orientaux' (*AMG* xxxiii. [1909]). This object, which is a talisman rather than a seal, shows Aššur-nimeli, the personage in question, standing before Ištar. His costume is that of an Assyrian of the higher class, and he wears wig and beard.

In what way the *sangū rabū* differed from the *sangū darru*, 'mighty priest,' and from the *sangū mahhu*, 'supreme priest,' is uncertain. In the Surpu-series of incantations² (v./vi. 173) the last-named is spoken of as kindling the fire and the brazier, and throwing therein the means of loosing the spell. He is also spoken of as the holy libation-priest (*ramku ellu*) of Ea, and the messenger of Merodach. As a result of this and similar acts, the man on whose behalf the ceremony was performed would be saved and freed from his sin that very day. Evidently these high-priests had not the power of releasing a man from the effects of his sin, and uttering words of pardon, without these magical ceremonies.

During the period of the Sumerian dynasty of

Ur the high-priest, or a similar temple magnate, was called *en*, 'the lord,' and was seemingly appointed by an oracle and invested by the king. Thus the 11th colophon-date of King Dungi records the proclamation of the lord true prince (*en nir-zī*) of Anu and the lord (*en*) of Nannar (the moon-god).¹ These two temple officials were invested two years later (*The Amherst Tablets*, London, 1908, vol. i. p. xiv). Other examples of similar investitures are Dungi's 31st and 46th dates, as calculated by H. Radau, and Būr-Sin's 4th, 5th, 8th, and 11th, etc. *En* was apparently Semiticized as *ēnu*, fem. *ēntu*, written in Sum. *nin-dingir*, 'lady of the god' = 'priestess.'

3. The subordinate orders.—Unfortunately no trustworthy list of these exists, so that their rank and consequently their order of precedence are difficult to determine. Certain priests were attached to the palace of the Assyrian king, but, as their order does not coincide with what is given elsewhere, this list is of doubtful authority. We find in it seers, incantation-priests, magicians (?), and, apparently, 'inquirers.' Another short list in a letter mentions the *aba*, probably 'temple scribe,' and then 'secretary' in general; the seers; the incantation-priests; the *asē*, or 'physicians'; and the *dagil issurē*, or 'bird-prognosticators.' Here the order of their importance seems to be roughly indicated.

4. The priests' clothing, and the perfection of their persons.—Though the priests shown in the early cylinder-seals wear dresses practically identical—a fringed cloak reaching to the feet, leaving the right arm uncovered and therefore free, with bare feet and (generally) shaven head—there seems to be no doubt that distinctive clothing was worn. Thus the British Museum letter K. 626 (R. F. Harper, *Assyrian and Babylonian Letters*, Chicago, 1910, no. 24) describes the *mašmašu* as wearing a red robe and a mitre of the same colour (Behrens, *Assyrisch-babylonische Briefe kultischen Inhalts*). Details as to priestly clothing are meagre, but apparently the right garments had to be used, or the ceremony would be a failure. A list (*WAI* v. 28) gives the words *pušamtu-tēdiq bēli*, 'robe of a *bēlu*' (chief priest, Sem. for *en*, above), *šubat ništ*, 'dress of the sacrifice,' etc.

To appropriateness of dress was added, at least in the case of the higher orders, the highest perfection of birth and of person. He who aspired to the office of seer (*bārū*) and who was of the everlasting seed of Enweduranki (Euedoreschus, *ERE* vi. 642^b), 'the king with the woollen garment of Samaš,' should be the offspring of a parent whose forbear was holy, and he himself should likewise be perfect in form and feature. Such a one only might approach the presence of Samaš and Adad (the sun-god and the wind-god), the place of the vision and the oracle. One not being thus holy and perfect, defective as to eyes (? squint-eyed), wanting teeth, mutilated of finger, with earth-grey flesh, filled with leprosy, etc., could not be keeper of the decrees of Samaš and Adad, approach the place of Ea, Samaš, Merodach, or Nin-ēdina, or join the brethren at the decision of the seers. They could not reveal to him the word of the oracle, and he could not hold in his hand 'the cedar beloved of the great gods.'

5. Consecration and tonsure.—There are many references to priestly consecration, but nothing is known as to the distinctive marks which the priests bore. The seal-impressions show that they were often clean shaven, and it seems certain that this was part of the rite of consecration, which was performed by the priestly tonsure-outter, *šui* (Sum.) or *gallābu* (Sem.). His work was probably performed before the statue of the deity to whom the

¹ 'Priest' also seems to be expressed by the simple word *awēlu*, 'man'; cf. Assurbanipal's Cylinder A (col. vii. 48), where Nabū-gāta-sabat is called *awēl Sin*, 'man (priest) of the moon-god.' Awel-Marudak (Ewil-Merodach) and many similar names may express the same idea.

² H. Zimmern, *Beiträge zur Kenntnis der bab. Religion*, pt. I., 'Die Beschwörungstafeln Surpu,' Leipzig, 1896.

¹ For a parallel cf. the use of the Heb. *qān* in Gn 14¹⁸ etc.

neophyte was to be dedicated (*PSBA*, 1893, pp. 417-420). The importance of the ceremony is indicated by the fact that even the king might perform it:

'At the beginning of the tonsuring,¹ according to what was their command, (as for) the priest of the house of the junior food distributor, Sennacherib tonsured him (*ugdallib-su*)' (Letter K. 122, Harper, no. 43).

This was apparently followed by the giving of the priestly tiara. In another inscription Assurbanipal, after referring to the appointment of his eldest brother, Samaš-šum-ukin (Saosduchinos), to the kingdom of Babylon, states that his younger brother, Aššur-mukin-palāa, was consecrated to be *uru-gallu* before Aššur, and his third brother, Aššur-ētil-samē-ēršiti-balāti-su, to the same office before the god Sin. The word used is *ugdallib*, 'I (or he) tonsured.'

6. The priesthood and the king.—All the higher priests were naturally in close communication with the court, as many documents, especially the Babylonian and Assyrian letters, show. As has been foreshadowed in § 1, the king himself was (perhaps always) the great high-priest. His position as head of the State, however, must have prevented him from fulfilling many of his priestly functions, except those which had to do with his royal position. Specialists among the various orders of priests had naturally to instruct him with regard to the things which he could not go into thoroughly—lucky and unlucky days, celestial and terrestrial omens, the tablets to be used at the various ceremonies, and the time required for the performance of the rites, which sometimes extended over many days. The tall tiara which the king wore, and the cord behind, which, arising from its highest point, descended, in the case of the Babylonian rulers, to the hem of his robe, were also, probably, priestly signs or necessary portions of their dress. The cord probably has some analogy to that worn by the Parsis under their clothing.

7. The priesthood and the people.—Not less important was the connexion of the priesthood with the people, who were not only its justification, but also its main support. As intermediaries between the gods and the people, in sacrifice, propitiation, penitence, prayer, and oracle, they were the interpreters of all the religious texts, expounders of omens, and indicators of lucky and unlucky days and seasons. It is uncertain whether the judges were of priestly rank or not, but the priesthood had also much to do not only with the interpretation of moral and religious law, but also with many of the civil enactments.

That laymen, and even slaves, could take part in the temple services is shown by Harper's Letter no. 368, where we read that Ninqaya, the handmaid of the king's mother, is not suitable for the service (worship):

'She shall not enter (therein). As the mother of the king, my lord says, let her open the (money-) chest, let her perform the service.'

In other words, she had money, and could make a gift; let her do so, and then take part in the worship. Another letter asks the king whether certain women might enter the temple and take part in the worship, and, if so, would the king's instructions apply to a slave-woman who was with them. It seems probable that the ordinary citizen was merely a tithe-payer, and that the very poor and the landless gave labour. It is not impossible that certain of the more intelligent of the laity were initiated into the mysteries which the tablets show to have been common in the higher orders of the priesthood.

Besides offering sacrifices, the priests conducted

¹ *Gallubu*; but perhaps this word here means the whole ceremony, in which case the rendering would be 'consecration.'

the services, and arranged the *lectisterna*, or tables of offerings to the gods. It was also the duty of some of them to receive the tithes, and to certify that they had been paid (the tablets referring to these are very numerous during the early period). Some of them looked after the temple itself, while others arranged for the services and the processions. What proportion of the offerings the priesthood took for itself is uncertain, but, as the temples became enormously rich, there is no doubt that the priests who served them lived on the fat of the land, and even grew very wealthy. In their position, however, the possession of private means must have been a matter of indifference for all but the most avaricious, but many passed on what they could not use themselves to their family, relatives, or friends (cf. Bel and the Dragon, 187.).

8. The *māšu* and *mašmašu*.—That these two classes of priests were closely allied is proved by the fact that the Sum. *maš* and *mašmaš* were both reproduced by the Sem. simple form *māšu*. The *mašmašu* was the priest who had especially to do with ceremonies and ritual. He anointed the king's head, consecrated his couch, and drove forth the evil which had made its home in the royal abode. After this ceremony a procession was formed, in which torches and a lamb for sacrifice were carried, and it was the custom on these occasions to offer likewise many natural products. After the sacrifice came the purification of the palace. It was also the duty of the *mašmašu* to pronounce numerous incantations on these ceremonial occasions. The order seems to have been classed with that of the *bārē*, 'seers,' and the *dsē*, 'physicians.'

In Letter no. 23 of Harper a *mašmašu* is referred to as not having taken the tablets of the series 'the unpropitious day, the day not good: hand-raising,' i.e. 'act(s) of prayer.' These were apparently documents which he should have used in certain ceremonies. In Letter no. 118 *mašmašē* seem to be spoken of in connexion with the instruction of certain persons in the ceremonies. The writer, Arad-Gula, may have been a member of this order.

9. The *āšipu*.—Like the *māšu* and the *mašmašu*, the *āšipu* was also one of the most important priests of the Babylonian hierarchy. The duty of the order was to make incantations, either for imposing a spell or for releasing a man therefrom. The latter is referred to in the book of the Babylonian Job, 'Lidlul the Sage,' and from the same work it seems that he was able to diagnose in cases of illness (Jastrow, *Die Rel. Babyloniens und Assyriens*, ii. 129. 5)—an indication that he belonged to the physician class. Another form of his name, apparently, is *isippu*, from the Sum. *isib*, and under that title the tablets refer to the *isippu ša ašnan*, 'grain- (or wheat-) magician.' The incantation-series Šurpu seems to indicate that there were priestesses of this class (*sal isib* = *dsiptu*, viii. 52). The lists indicate that the *āšipu* was also a *pašišu*, 'anointer,' as well as a *bārē*, 'seer.' *Āšipu* is represented in Heb. by *נִשְׁפָּא*, *āššiph*, from the same root (Dn 1³⁰, etc.). See *HDB* iii. 210.

10. The *uru-gallu*.—As this word translates the Sum. *mašmaš*, which is also rendered *māšu*, the priest indicated seems to have been one of the same class. The meaning of the word is 'great protector,' and it seems to indicate several groups. A portion of his duties (those connected with the New Year festivities) had to be performed during the night:

'In Nisan, day 2nd, for an hour (double hour) of the night, the *uru-gallu* shall rise up, and shall pour out the waters from the river (the Euphrates). He shall enter before Bel (Merodach). He shall let down the curtain (*gādālanu*)—he shall utter this prayer before Bel.'

Here follow the words of the supplication, in couplets, the first line Sumerian, and the second Babylonian in each case (see *ERE* vii. 3^a). As priest of the temple of Belus (E-sagila, Merodach's temple), the *uru-gallu* glorified this god as 'the fortunate king, lord of the world, glorying in his strength,' etc. He ends his prayer by asking the god's favour on his city Babylon, and on E-sagila, his temple. As indicated above (§ 5), Aššur-banī-apli's younger brother, Aššur-mukin-palēa, was appointed to the position of *uru-gallu* of (apparently) the god Aššur.

11. The *ša'īlu*.—There is much doubt as to the real meaning of this word. Interpretations given are 'man of god' and 'man of the spell.' In both cases, however, a phrase like *šwēl ša'īlu* would be expected, at least for the second alternative. Another word for this priest was *ensi* (Sum. and Sem.), rendering the characters *en-me-gub*, 'lord of the holy incantation,' or the like. His special province seems to have been the interpretation of dreams (see Zimmern, *ZA* iii. [1888] 233). His duties, however, as indicated by Lidlul the Sage, included offerings:

'The *ša'īlu* did not bring forward my cause by an offering.'

Modifications of the ideographic writing expressed the Sum. *enguna* and *endiš*, translated by *ša'īlu* and a word which Zimmern completes as *nūhatimmi* and translates 'baker.' This, however, is doubtful, the more probable rendering being 'food-distributor,' or the like. The feminine is *ša'iltu*.

12. The *pašīsu*.—This was the 'anointing priest,' though the duty of anointing was apparently not confined to any one class. That early type of Noah, Zī-ūsuddu (Σαρρὸς in Lucian, *de Dea Syria*, xii.), is described as having belonged to this order, as did Adapa (*ERE* vi. 644). Jensen renders the word as 'the anointed one,' but there is no doubt that the real meaning is 'anointing priest,' or the like.¹ Divine priests of this class were regarded as dwelling in the Abyss (*pašīš apši*, 'anointers of the Apsū'). As it was the custom to cleanse with oil the foundation-memorials of the Assyrian kings when restorations of buildings were made, the king himself, to judge from the inscriptions, acted as anointer, and may have been regarded, like the pre-historic rulers, as belonging to this same priestly order. Whether the *pašīsu*, who was not of royal race, anointed the palace foundation-stones or not is uncertain and unlikely.

The above deals with the Sum group provisionally read *ah-me*, but *pašīsu* also renders the Sum. *laš* and *mar-maš laš* (*lašša*) apparently means 'cleanser,' and then also 'anointer' for the purpose of producing some undesirable effect on a person believed to be hostile (see K. L. Tallqvist, *Die assyr. Beschwörungsserie Maqlū*, Leipzig, 1895, vi. 102 ff., 110 ff., where the fem. *pašīšu* occurs). These, however, were probably not the priestly anointers, but belonged to the sorcerer class.

13. The *sukkallu*.—This word, which comes from the Sumerian, is generally translated 'messenger' or 'minister' (of a god, etc.). There were many classes of *sukkallu*, with duties correspondingly various. As the ideograph expressing this office is *laš*, his work may have been originally analogous to that of the *pašīsu*, and, for this reason, he was regarded as an 'anointer.' The Babylonian physician, *asū*, also called himself *sukkallu*, probably because anointing formed part of the medical treatment. In the sense of 'minister,' numerous gods bore the title or the name of *Sukkallu* (see § 23, below).

In W. Hayes Ward's *Seal Cylinders of Western Asia*, Washington, 1910, no. 62b, Uru-Nanpar appears as the *sukkallu* of the Babylonian (Urite) king Su-Sin (c. 2500 B.C.). The seal shows him shaven, thus indicating his priestly position.

¹ An 'anointer,' however, would probably be himself 'anointed' at (it may be supposed) his consecration.

14. The *kisal-laš*.—Semiticized as *kisal-lašhu*, this may be classed among the minor orders. The etymology of the word is *kisal*, 'oil-place,' and the above-named *laš*, 'to cleanse.' His duties must therefore have been similar to those of the *pašīsu* and the *sukkallu*, and he may have assisted the king on the occasion of his official building-consecrations.

15. The *surru*.—Priests bearing this title apparently belonged to one of the most important of the Babylonian sacerdotal classes, and might even aspire to the high-priesthood, as is indicated by the fact that the *sura-maš* is once rendered in Bab. as *šangamašhu*, 'high-priest' (see § 2). The lists give also the word *sura-gal* (Sum.), 'great *surru*' (*WAI* ii. 21. 41, 46, 47c). The *surru* probably belonged to the highest class of the musician priests, as represented by the *kalū* (see § 16). Though read *šangamaš(h)u*, it is really the *suramahu* who is spoken of as kindling the fire and the brazier (§ 2). In the list of priests, *WAI* n. 32. 9, either as *suramahu* or as *šangamašu*, he is mentioned between the 'libationer' (*ramku*) and the *mašmašu* (see § 8).

16. The *kalū*.—A Semiticized form of the Sum. *gal*, dialectic *mulu*, this, like *surru*, stood for a variety of offices. From the inscriptions and the bilingual lists it is clear that he was, like the *surru*, a singer, a worker (? of ceremonies, *ga-ga*, dialectic *ma-ma*), an utterer of lamentation (*ir*), Anu's (or god's) fortress (*bad ana* or *bad dingira*), and the invoker of the oracle (*nunus-pā=tamīl pirīšti*). *Kalū* also explains the Sum. groups *sura* and *sura-gal*, 'great *surru*' (see § 15).

Besides being the temple singer, the *kalū* wrote astrological reports, with, probably, the forecasts derived therefrom; and the ceremony of making offerings was also part of his duty. In connexion with his musical duties, it is noteworthy that the god Ea, as patron of their order, bore the name of *Lumha*, the ideogram expressing which is regarded as a wedge-formed picture of a musical instrument, the lyre.

17. The *nāru*.—This was apparently the musician-priest *par excellence*. The god Ea is said to have had a special *nāru* of his own named Hāsīsu, 'the wise one,' and as the god of the *nārē* Ea bore the name of Dunga. They seem to have joined in the lamentations, and thus were classed with the mourners.

For representations of priests of this class (they were shaven), see Earl of Southesk's *Catalogue of Collection of Antique Gems*, London, 1908, n. 64, and L. de Clercq, *Catalogue*, Paris, 1887 ff., no. 101. The *nārē* and *nārāte* of the historical inscriptions, like those sent to Sennacherib by Hezekiah, were evidently not connected with the temple services. See MUSIC (Babylonian).

18. The *gallābu*.—For the work of this priest see § 5, from which it would appear that the rite performed by him, which formed an essential part of priestly consecration, was sometimes, either wholly or in part, undertaken by the king. The *gallābu* and the *asū* carried the implements of their profession in cases of skin or leather (*WAI* v. 1. 2 ff.).

19. The *bārū*.—This was the most important or one of the most important of the orders of seers. Their duties are indicated shortly by Lidlul the Sage:

'The *bārū* forecast not the future by soothsaying.' 'The *bārū* has taken my forecasts away' (Jastrow, *fl.* 125, 169, 129, 4).

The Sum. corresponding word is *gaššu*, attached to a character with the general meaning of 'to pierce,' 'to open.' The bilingual lists give, as the groups which may express this word, the Sum. *uzu*, *azu*, 'physician'; *azu*, *zaleu*, *mezu*, meaning respectively 'water-knowing,' 'oil-knowing,' and 'voice-knowing,' the last referring, probably, to supernatural vocal revelations. Another group

means 'he who explains an oracle (or vision).' As indicated by Lidlul, his duty was to direct men by visions—*bārū ina bīri ul ušēšar-su*, 'the seer has not directed him (the troubled one) by a vision' (*WAI* iv. 22, 42b). To all appearance the *bārū* corresponds with the 'seer' of the Hebrews (*hozeh*, *roeh*).

The above descriptions of his duties corresponded with those of the *ḥartummim*, of the OT (Gn 41⁸, etc.), but he had other duties of greater importance and dignity. Thus Martin's *Textes religieux* pictures him to us in the assembly of the other members of the order, when, raising a branch, he intoned the incantation beginning

'Samaš and Adad, arise. In my supplication, the raising of my hands, whatever I do, let the invocation which I offer be the truth.'

When the presages were not satisfactory, and the god did not answer, he had to perform the ceremony of 'washing the mouth,' pronouncing afterwards the following prayer:

'Samaš, lord of judgment, Adad, lord of the oracle, I bring you, I offer you, a pure fawn, the young of the gazelle, whose eyes are bright, face perfect, hoofs without defect.' (Here follows a list of the innocent pleasures which the fawn has enjoyed.) 'He does not yet know the stag's desire, and I offer him to you'

Samaš, Adad, arise, and in my supplication, in the raising of my hands, whatever I do, let the invocation which I offer be the truth'

Priestly supplication was generally accompanied by the lifting of the hands. They seem not to have been raised on high, but simply to the level of the face, with the finger-tips approaching.

The rites accompanying the duties of the *bārū* were very numerous, as might be expected from priests of such ancient origin and important functions.

20. The *abarakku*.—Closely connected with the functions of the *bārū* were those of the *abarakku*, of whom, however, very little can be said. The word is written with the same character as is used for *ttu*, 'sign,' 'omen,' and the like, and was pronounced in Sum. *isikim*. A mutilated explanation implies also that it was rendered by *bārū*, 'seer.'

Abarakku is probably the *ḥbrk*, of Gn 41⁴³, and, if so, the proclamation made by the Egyptian heralds did not mean 'bow the knee,' but 'the (great) seer,' or the like. The existence of the word in Hebrew is due to Babylonian influence. It is doubtful whether the similar word *abriggu*, from the Sum. *abrig*, has anything to do with this; but it may be noted that the last is expressed by the characters *nun-me-du*, 'prince (divine), command bringing,' or the like.

21. The *āšū*.—There may be some doubt as to this being a priestly order, but the leech in ancient times was so important that the Babylonian priesthood can hardly have failed to include the professors of the healing art among them. Nevertheless, in Hammurabi's Code, they came under the severest clauses of the *lex talionis*—a fact which may be taken to show that priests in general were not a privileged class before the law.

The etymology of *āšū* is interesting, as it comes from the Sum. *azu*, meaning, probably, 'water-knowing,' either from the medical 'waters' that he used or from the knowledge that he was supposed to have of the fluids of the body. Other Sum. words translated by *āšū* were *nizu* or *zazu*, 'oil-knowing,' and *mezu* or *išbzu*, 'voice-knowing' or 'incantation-knowing' (see § 19). As *azu* also stands for *bārū*, 'seer' (§ 19), it is clear that he belonged to the same class of temple-official.

The severity of the *lex talionis* under which they practised proves that a knowledge of surgery was expected of them (see *EEE* iv. 259 f.). Herodotus (i. 197) says that the Babylonians made no use of physicians, as the people trusted to the advice of those who had already suffered from the maladies which afflicted them. The inhabitants of the capital at least therefore seem to have had unsatisfactory experience of their healing powers. The

Assyrians, however, had not come to this conclusion, as many tablets (some of them letters) show. *Āšū* has passed into Heb.-Aramaic as *ṣṣ*, *āšd*, with derivatives.

It is possible that the *mugu* was also a physician (Harper, no 108, rev. 3). The *rab-mugu* is probably the *rab-mag* of Jer 30 (G1 40⁸).

22. Other priestly classes.—Whether the *aba*, which is a similar formation to *azu*=*āšū*, was a priestly class or not is uncertain. It might be translated 'water- [i.e. medicine-] giver.' As a rule, he was a scribe or secretary (in Harper's 33rd Letter he heads a short list of priests). It is probably on account of his apparently secretarial duties that he has been regarded as one of the classes of scribes, *tiptarru*, the *tipsar* of Jer 51²⁷ and Nah 3¹⁷. Notwithstanding their various secular occupations, the scribes were often priests. Considerations of space prevent notice of various other priestly titles, but it is necessary to add to the list the temple-officials designated by the Sum. *tu-ē*, 'temple visitor,' or the like (*tu*, 'to enter' + *ē*, 'house' or 'temple'). They had apparently considerable power, but it is not known in what their great influence originated. One of these, Nabū-šum-ukin, attached to the great temple of Nebo at Borsippa, married Gigitu^m, daughter of Neriglissar (see *L.P.* II. iv. [1890] 101 ff.).

23. The heavenly hierarchy. — Though the priestly titles of the gods of the Babylonian pantheon were imitated from those of their earthly priesthood, it is probable that the Babylonians regarded the reverse as being the case. Thus Engur, mother of Ea, was the true *abarakku* (§ 20) of the heavenly (and the earthly) *ē-kura*, or temple; Nin-šah was the supreme messenger or minister (*sukkal-mah*) of Anu, the god of the heavens; Eninna-ni-zi was the *sukkal* of En-Urta ('Ninip'), one of the gods of healing; Azag-sud was the *sura* (§ 15) of Enlilla, etc. All, or nearly all, of the great deities had their *sukkalē*, and Samaš, the sun-god, had several—he of the right, he of the left, the one who was supreme (*mah*), and two *sukkal ša-kušša*, 'heat-resting.' He had also a *gallābu* (§ 18), one who shore him (of his rays), either when he set or when he was eclipsed. The name of this deity was Engana, 'lord of repose,' or the like.

The great god of the various orders of priests seems to have been Ea, who was patron of the *kalē*, 'chanters,' *nārē*, 'musicians,' *āšipē*, 'incantation-makers,' *bārē*, 'seers,' *tiptarrē*, 'scribes,' *āšē*, 'physicians,' and *gallābē*, priestly tonsure-cutters. The abode of Ereš-ki-gal or Allatu^m, goddess of the under world, was regarded as similarly organized. Namtar, or 'Fate,' was the goddess's *sukkal*, and she had, as well, a divine ('and priestly') food-distributor (*mu* or *mu-haltimnu*). The lists of gods also give certain divine titles, which may be priestly, but are not represented on earth.

LITERATURE.—Morris Jastrow, *Dre Religion Babyloniens und Assyriens*, Giessen, 1905-12; E. Behrens, *Assyrisch-babylonische Briefe kultischen Inhalts*, Leipzig, 1906; and the special lexical articles in F. Delitzsch, *Assyrisches Handwörterbuch*, Leipzig, 1890; and W. Muss-Arnolt, *Concise Dict. of the Assyrian Language*, Berlin, 1905. As the subject is a very extensive one, notes on priestly titles are scattered throughout recent Assyro-Babylonian literature, the most noteworthy being F. Martin, *Textes religieux assyriens et babyloniens*, 1st ser., Paris, 1903.

T. G. PINCHES.

PRIEST, PRIESTHOOD (Buddhist).—For all purposes, ecclesiastical and social, the priesthood in Buddhism is coterminous with the order of monks (*Saṅgha*). Every ordained member of the *Saṅgha* is qualified to act as priest, and to perform those duties which in Buddhism may be considered to attach to the office. Of priestly function, however, in the narrower, more restricted sense of the term with which Western ecclesiastical

history is familiar, Buddhism knows nothing. The monk or priest, in so far as he has obligations and duties towards the laity, is the servant of all, for their edification and conversion. His relation to them is that of a minister to their religious necessities, and a confidant and guide on all the critical occasions of life, as they on their side serve his temporal needs and provide him with the requisite minimum of food and clothing. In neither of the great schools of the North and the South is there any suggestion of the thought that through a human intermediary man may or must approach unto God; and Buddhism has no order or ritual of sacrifice to require the services of an officiating priest with expert knowledge of the modes and significance of the rites. Whether, as in the Hīnayāna, in theory at least a man must rely solely upon his own endeavours and virtues to achieve salvation, or, as in the Mahāyāna, upon the merits and assistance of powerful *bodhisattvas* to sustain his faltering and wayward steps and to bring him to his goal, in neither case is deliverance through or by a human priest.

This was the view consistently adopted and enforced by Gautama Buddha himself, if the Pāli books rightly interpret the tenor of his directions and teaching. After his death the Law which he had given to his disciples was to be their guide. Each man might gain a knowledge of the truth by his own insight and exertions, as the Buddha himself had done; and there was no other road to emancipation and rest. If, however, the Mahāyānist teachers are right in maintaining the fundamentally mystical and esoteric character of his later instructions, he himself made provision for effectual external aid to be at the disposal of all who sought deliverance from suffering and wrong; but that deliverance was from a superior divine source and not mediated through a man.

The offices, therefore, which the Buddhist priests undertake for the laity are chiefly those of reading and exposition of the Scriptures. In most of the monasteries also, especially in Burma, instruction is given by the older monks or those appointed for the purpose in the elements of secular learning and the simpler doctrines of the faith together with narrative of the life or lives of the Buddha. In this service the Buddhist priests have been for many centuries the national schoolmasters; and in most Buddhist countries, except as undertaken and forwarded by European government authority or missionary enterprise, no other teaching has been available. On all important occasions, moreover, in the private life of the people, at marriages and births and especially in cases of sickness, the priest is summoned to perform ceremonies and prophylactic rites, to pronounce incantations, and by recitation of sacred texts to expel and keep at a distance evil influences. In some instances simple remedies may be applied. For the most part it is only in Vassa that formal exhortations or orations are made. The practice varies, however, in the different lands in which Buddhism prevails. Usually also the sermons or discourses are delivered not in the temples, which the laity are not expected to frequent for that purpose, but in private houses or in halls erected or lent for the occasion. The preaching work of the early itinerating monks seems to have been done to a large extent in the open air; but this practice obtains little if at all at the present day.

The services within the temples themselves can hardly be said to call for the exercise of any priestly function. They consist for the most part of invocation and recitations, in which all the resident members of the monastery share, but the laity are not present, unless as accidental spectators. The latter frequent the temples for worship

and to present their offerings individually or in small groups. There are no general assemblies or combined devotional services. At the principal service of the day the senior monk or another to whom the duty is delegated will deliver a sermon or exposition on Buddhist doctrine or ethics; he acts, however, less by virtue of his position or office as priest than on account of the superior knowledge with which he is credited. From him the junior monks may expect to receive instruction in the right way of life. In his private capacity also the priest will give advice, and receives confessions.

The most elaborate ceremonial and suggestive ritual is to be found in Tibet. Here, at a service that has derived some at least of its main features from Christian example and the commemorative observance of the Last Supper, the Buddhist Lāma officiates as priest. Formal Buddhism, however, owns no doctrine of sacrifice or propitiatory offering. The Lāmaism of Tibet is Buddhist in little more than name, and the Lāma priest of high rank is endowed with more of priestly function and consideration than the Buddhist monk of other lands. The services in the temple include formal and elaborate liturgies, in addition to the ordinary recitations and instruction. At the frequent festivals the ritual observed is often intricate as well as highly ornate. Extra services also are held at the request of laymen, for which payment is made in the form of gifts to the monastery, the merit of which accrues to the donor. To a considerable extent these practices have been derived from the West through the agency of early Nestorian missionaries. The monks also visit the houses of the laity to perform ceremonies and to read portions of the Buddhist sacred books.

Among the various peoples professing the faith there is no great difference in the offices thus undertaken by the Buddhist priests. Recitation of the Scriptures and more or less formal and regular discourses in the temples on the topics of the Buddhist religion form the larger part of their recognized duties. Moreover, in all the northern countries at least Buddhist usage and ceremonial have been to a considerable extent modified, as in Tibet, by indigenous beliefs and practices. With this one exception the process has advanced farthest perhaps in China, where Buddhist and Taoist priests interchange facilities and mutually officiate in the temples of either faith. Chinese monks conduct the services and perform their duties in a very perfunctory manner. The Japanese priests, on the contrary, are alert and intelligent, often well-read and interested in the history and doctrines of their sect, and punctiliously observant of the duties that are incumbent upon them. In some sects they add to their other services that of an active missionary propaganda in defence of the faith. Between the Shintōist and Buddhist priests no interchange of ministry or office takes place at the present time, and the demarcation in manners and appearance, as in duty and ceremonial, is complete. The relations formerly must have been much more intimate and friendly, and Buddhism has taken over from the national faith functions which would seem to be entirely incompatible with its principles and creed. At funerals especially Buddhist priests are summoned to officiate; on the other hand, at marriages and births, on the more joyous occasions of the family life, the services of the Shintō clergy are in request. In the presentation of the ancestral offerings also the Buddhist priesthood takes an active and recognized part. The equipment and dress of the monks is similar to that found in China, and the same practice of branding at initiation into the order prevails. Whereas,

however, in China the branding is upon the shaven head, in Japan the mark is made upon the arm of the monk.

It is in Korea that the priesthood holds a position of least prominence, having maintained little authority or dignity. It was otherwise in the earlier centuries of the history of the country, when Buddhist priests took a leading part in the political as well as in the religious control of the people. More recently their influence diminished, and for a long time they have had little interest or concern in the national life. Their numbers do not increase, they live apart from the people, and are little honoured or consulted.

The service of the priest or monk therefore in Buddhism has been closely determined by the origin and early history of the faith, and, except where other conditions have been imposed by its environment, has not travelled beyond those limits. The absence of a doctrine of sacrifice, or of any recognized belief in a future life beyond this world, has necessarily placed a hindrance in the way of the development of a priestly office, and has retarded or altogether checked the growth of any felt need for the ministry of the priest. Notwithstanding, the Buddhist priest, although to a less extent than in Christianity or Hinduism or some other faiths, has a real place among his people, and his office carries with it prerogatives and an influence that are of much importance. It is true that the honour paid to his office has not always, any more than in other countries, been transferred to his person; and the order is sometimes recruited, as in China, from the lower classes of the population. There can be little doubt, however, that the ascendancy of the priest or monk has been a real and perhaps decisive factor in the history and development of the Buddhist religion.

A. S. GEDEN.

PRIEST, PRIESTHOOD (Chinese).—The statement, which is so commonly made, that there are three religions in China is apt to convey a very misleading idea of the religious state of that country. Setting aside the members of the various Christian churches, and the adherents of Judaism and Islām, and perhaps the Buddhist monks and nuns, it would be hard to describe the average Chinaman as being an exclusive adherent of any of the three systems which are usually called the three religions of China—Confucianism, Buddhism, and Taoism. It would scarcely be too much to say that the basis of his religion is practically the same as that of his ancestors in the days before any of the three teachers from whom these systems professedly derive their origins had been born. As a clearly defined physical type of man has been in occupation of Eastern Asia since pre-historic times, so certain elements in the religious stratification of that area appear to have remained unchanged for an immense period. These elements are shamanism (*q.v.*) and ancestor-worship (see art. COMMUNION WITH THE DEAD [Chinese]). When we first meet with the Chinese, we find them practising shamanistic rites and paying honour to their ancestors, though in addition there appears to have existed belief in a supreme being. Under the Chou dynasty (1122–249 B.C.), when we are beginning to touch firmer ground, there appeared two remarkable ethical teachers, Confucius (551–478 B.C.) and Lao-tse, his elder contemporary, and a

somewhat more shadowy personality, whose teaching exercised a great influence on the subsequent development of Chinese religion. It became separated into two currents: Confucianism, which is more correctly described as a moral than as a religious system, becomes the basis of the state cultus (for the sacerdotal functions performed by the emperor before the fall of the Manchu dynasty in 1912 see art. CONFUCIAN RELIGION); and Taoism, the more popular current, becomes to a large extent identified with the shamanistic substratum of Chinese religion, which de Groot terms 'universal animism,'¹ or the worship of the *shen*, departmental spirits animating the various parts of the universe. In the 1st cent. of the Christian era Chinese religion became profoundly modified by the advent of Buddhism, which now became influential in its northern form, the Mahāyāna, or 'Great Vehicle,' during the reign of the emperor Ming-ti (A.D. 58–76), though the first missionaries of the Indian faith may have reached China as early as 217 B.C. From Buddhism the national religion of Taoism borrowed the conception of monasticism, which now became acclimatized on Chinese soil by the votaries of the two faiths.

1. Primitive shamanistic priesthood.—From the earliest times there appear to have existed in China persons of both sexes credited with the possession of *mana*, or spiritual power (see art. MANA), of a kind found all over the world, which enabled them to wield extraordinary powers in the spirit-world. These shamans are for the most part to be identified with the *wu*, exorcists, mentioned in very early literary records. From the *Shu King*, or 'Canon of History,' it appears that they were entirely possessed by spirits of *yang* material, which represents the principle of light and warmth, according to the primitive dualist philosophy of the Chinese (see art. COSMOGONY AND COSMOLOGY [Chinese]). Their functions appear to have been threefold: (a) invocation of the spirits of the dead for the purpose of inducing them to partake of offerings; (b) prophecy by means of knowledge obtained from the possessing spirits; (c) exorcism of all evil; this they accomplished in virtue of the *yang* power which resided in them and enabled them to neutralize the *yin* element, or element of darkness. In this capacity they would accompany potentates when entering a house of death. Ch. xii. leaf 46, of the *Lǐ Kǐ*, or 'Treatises on Ceremonial Usages,' says:

'When a ruler goes to the funeral rites of a minister, he has with him a *wu* and an invoker, holding respectively a piece of peachwood and reeds.' (The peach-tree was believed to be a source of terror to ghosts, and the bundle of reeds has a magical significance, being employed for the purpose of sweeping away evil.)

The *Chou Li*, or 'Book of Institutions of the Chou Dynasty,' ch. xxv. leaves 30 and 39, says:

'When the sovereign pays a visit of condolence, the invoker for the funeral rites marches in front of him, in company of the *wu*'; and 'the male *wu* on the same occasion walks ahead of him with the invoker.'

In the time of the Shang dynasty (1766–1122 B.C.) these *wu* appear to have been a kind of order of singing and dancing dervishes. They danced at sacrifices to secure rain.

'At the altars raised to pray and sacrifice for rain,' says de Groot, 'the priestesses, representing the Yin or female part of the Universal Order, to which clouds and water belong, performed dances; and when disasters prevailed, they conjured the gods by means of chants expressive of grief and distress.'²

The early texts appear to suggest that the *wu* were the Chinese representatives of a primitive animistic priesthood found all over Asia, such as the dervish of Muhammadan countries, the Indian *faqir*, and the shaman of the Siberian aborigines. When 'possessed,' they suffer convulsions and distortions. The possessing spirit is believed to endow them with the power of second sight and of

¹ *The Religious System of China*, vi. 1188.

² vi. 1180.

exorcizing spectres. Some ancient texts refer to the male *wu* as *hih*. They also mention a class of persons called *chuh*, i.e. invokers or conjurers. In texts of the Han dynasty (c. 200 B.C.-A.D. 200) the expression *wu-chuh* occurs, thus indicating that the functions of the two classes had become assimilated. The *wu* were frequently employed by the emperors of this dynasty. Since disease was popularly ascribed to demoniacal possession, the *wu*, being exorcists, were much sought after as physicians. In this capacity they were employed in the 4th cent. A.D. to chase away foxes and lizards, which were believed to bring disease. What gave the *wu* their greatest influence, however, appears to have been the fact that in their mediumistic capacity they claimed to reveal to their clients the wishes of their departed ancestors. The southern provinces have always been the great stronghold of *wu*-ism. Its influence with women was enormous, and probably in early times there were more female than male *wu*. Any woman, married or unmarried, who felt herself capable of becoming a medium could do so. A state of ecstasy was induced by dancing, and perpetuated by monotonous music and the beating of drums. At certain periods *wu*-ism constituted a grave political danger, and, under the influence of its representatives, mandarins were induced to plot against the emperor. Its social influence was, moreover, so great that it led to the complete transgression of the canons of Confucian morality, by which women were forbidden to appear in public in the presence of men. Repressive edicts against *wu*-ism were therefore not infrequent. The *wu* were often employed as exorcists by the Tatar dynasty of Liao, but under the Ming dynasty which succeeded it (1368-1643) vigorous measures were adopted against them. Texts of the Ming period make it clear that the *wu* had temples and images of their own gods, to whom they offered sacrifice. They were no doubt the same as the thousands of village-temples existing in China at the present day. In all ages the *wu* appear to have been paid for their services in employing spells, and also for the crime of 'life-plucking,' i.e. dismembering a living body for the purpose of sorcery. At the present time their functions fall into three classes: (1) clairvoyance and soothsaying; (2) exorcism; (3) sacrificial work, with invocation and conjuration. Formerly there existed a division of labour, one class exercising each of these three functions separately, and this condition still exists in the province of Fukien and on Amoy Island. All over China, however, there is found a class of so-called *sai-kong*, which is almost exclusively occupied with sacrificial work and magical exorcism. In popular estimation this class is the most important branch of the *wu*-ist priesthood. The *sai-kong*, who are permitted to marry, wear no distinctive costume. Their houses are indicated to clients by sign-boards, on which are written the characters, 'There is a Taoist altar here,' showing that they regard themselves as Taoist priests.

In practice the *wu*-ist priesthood is more or less hereditary; it is usual for every *sai-kong* to design one of his sons for his own profession, as he does not like to initiate strangers into its *arcana*.

Before initiation the prospective *sai-kong* undergoes a fast or vigil. When the hour for the ceremony arrives, attired in clean underwear beneath a sacrificial robe, and with bare feet, he is carried on some one's back to the temple in which it is to take place. The reason for his being carried is that the earth is a great repository of *yin* substance, and contact with it might therefore be dangerous, as it might neutralize the *yang* substance within him. The ceremony of initiation is performed by a *wu* of advanced age, who is known as a *kao tsu*, 'chief of religion.' The chief portion of the ceremony of initiation consists in the candidate undergoing the ordeal of climbing a *to t'ui*, or ladder which has swords with the blades placed upwards

for its rungs. While he undergoes this ordeal, a bundle of baby-clothes and some paper charms are fastened on his back; the latter he throws down when he reaches the top of the ladder, and the former are restored to their owner at the conclusion of the ceremony. After the ordeal of ladder-climbing is over, the neophyte kneels before the chief to receive the joyful news that he is now a fully qualified *sai-kong*. His influence will be proportionate to the number of rungs which he has mounted.

No *sai-kong* may adopt more than one pupil to succeed him in his profession. Each has a State diploma granting him permission to exercise its functions. This must be registered by the prefect and a fee must be paid. In Amoy the *sai-kong* belong to a club to which each member is bound to contribute, and has the privilege of drawing upon it in time of illness. A *sai-kong* will call himself a *tao shi*, or Taoist doctor, and most of his ritual is Taoistic in character. The work of the *sai-kong* is the propitiation of the gods, who constitute the *yang* part of the universe. The line of demarcation between *wu*-ism and Taoism is ill-defined. It was from the *wu* that the *tao shi* derived the art of exorcism.

'The difference between the *tao shi* and the *wu* class,' says de Groot, 'was finally effaced entirely when the older part of the function of the *tao shi*, viz. assimilation with the Tao by mental and bodily discipline in seclusion, was discarded, being incapable of being maintained by them against the competition of Buddhist monasticism, and against the oppression of ascetic and conventual life by the Confucian State.'¹

A respectable *sai-kong* accepts what his employer offers him in the shape of money or kind in return for his professional services, but never demands payment. In officiating at religious ceremonies the *sai-kong* wears a square silk garment, resembling a chasuble in being without sleeves, and embroidered on the back. It is of magical significance, representing the shape of the earth according to primitive Chinese philosophy, and invests the wearer with the power of the order of the world or *Tao*, and enables him to restore that order. It is called *tō pō*, 'gown of the *Tao*.'

There exists also a class of youths known popularly as *ki-tong*, 'divining youths.' They are believed to possess *shen*. They usually acquire it at a religious ceremony in a temple, at which they suddenly begin to hop and dance, making strange gestures. When a youth behaves in this way, the bystanders realize that he has become 'possessed.' The case is investigated by a *sai-kong*, and the possessed youth begins to form a clientele, who employ him as a medium. The *ki-tong* are employed as exorcists. When an epidemic prevails, they are organized into processions, in which, stripped to the waist, and covered with blood flowing from self-inflicted wounds, they indulge in frantic dancing. They have even been seen carrying heavy pewter lamps, fastened to hooks thrust through their arms. Female *wu* are frequently mentioned in Chinese texts subsequent to the Han dynasty. De Groot knows of no female *sai-kong* in the Amoy district. Women, however, participate in other kinds of *wu*-ist work.

2. The priesthood in the State religion.—We learn from the *Chou li* that at the time of its composition the *wu* were not the only priesthood in China; there was also a body of officials charged with the performance of rites and ceremonies, among which those connected with the State religion were the most important.

'Under the direction of a Minister, entitled *Ta tsung poh* or Superintendent of the Ancestry, . . . those officers had to direct the erection and conservation of the temples and altars of the State and the mausoles and tombs of the reigning House, furthermore, the celebration of sacrifices with music and dances, victims and implements, besides the funeral rites in the royal family, divination and auguration, etc. This ministerial department was undeniably a priesthood of Universal Animism, the gods whose worship they had to maintain and regulate being the *shen* which animate Heaven and Earth and their constituent parts and phenomena, as also the spirits of the dead.'²

¹ vi. 1264

² De Groot, vi. 1138

This priesthood was in its inception an official creation, not a spontaneous development of the animistic substratum of Chinese religion.

It was probably the prototype of the *li-pu*, 'board of rites,' which in later ages supervised the ceremonial aspects of the State religion. The board of rites was the fifth in order of precedence among the eighteen boards to which the administration of the empire was entrusted prior to the Revolution of 1911, when it was suppressed, its functions being absorbed into those of the ministry of the interior. The *Chou li* (xvii.-xxvii.) gives a list of the officials who served under the ministry of rites, with a description of their functions. They include the superior of the sacred ceremonies and his assistant, a master of the sacrifices, an officer in charge of the vases containing the libations and of the preparation of the sweet-smelling wine, an officer charged with providing the sacrificial cocks, an official who sets in their places the cups containing the libations at sacrifices, one to set in order the mats, a keeper of the ancestral hall of the imperial family, a keeper of the seals, a keeper of the imperial wardrobe, annalists and imperial secretaries, musicians, a grand augurer, invokers, and sorcerers. The last were the *wu*, who were already at that period incorporated into the State religion. The board of rites cannot, however, be regarded as a priesthood, since it was charged with the supervision of the State sacrifices merely, and was not a body charged with the task of mediating between God and man.

3. The Buddhist priesthood.—There is not in Buddhism any clearly marked distinction between the priest and the monk as in Catholic Christianity. In the latter religion the priest is one whose duty it is to officiate at the holy mysteries, while the monk is one who seeks to sanctify his soul by a life of retirement from the world, it being unusual during the earlier period of Christian monasticism for monks to be priests. In Buddhism, however, there is only one type of religious official whom we may call priests or monks, some of whom live in communities and some of whom do not. In the earliest form of Buddhism, which was agnostic, the idea of mediation was of necessity completely absent. In the first two and a half centuries after the introduction of Buddhism into China Buddhist monks were all foreigners, as it was not till the 4th cent. A.D. that Chinese subjects were permitted to adopt the monastic life. At the present time Buddhist monasteries in China are usually situated outside the cities in the open country, the ideal situation being a wooded height. Their inmates are for the most part recruited from the ranks of children, who are frequently sold to them by a necessitous mother after the father's death. Hackmann mentions a case in which twenty-five Mexican dollars (40s.) were paid for a child.¹ Only a few monasteries receive any appreciable number of adult novices. When in their seventh year, these children begin to be initiated into their religious duties. Their heads are completely shaved, and a special teacher is appointed to each. When the final consecration takes place, the novice is branded on the head as a sign of his willingness to endure hardship. Sometimes this branding is voluntarily repeated in later life. Nine vows are usually taken—to abstain from taking life, stealing, adultery, slander, reviling, lying, and feelings of jealousy, hatred, or folly. Sometimes others are added. Devotional exercises, which consist of invocations, praises, and the reading of extracts from the scriptures, usually take place three times a day. They are frequently accompanied by a sacrifice, in which the oblation usually consists of rice or tea. Meditation, both

ambulatory and sedentary, is still continued in some monasteries, but it has widely fallen into desuetude. A moderate-sized community consists of about thirty to forty members. There is a well-organized domestic economy. All owe obedience to the abbot (*fang-chang*). The community is divided into an eastern and a western half. The eastern deals mostly with secular matters. It includes a book-keeper, guest-master, commissioner of stores, superintendent of field labour, superintendent of water-supply, overseer of the kitchen, manager of the clothing department, another for giving out tea, superintendent of repairs, and others. The western division deals with the religious side of life, and includes sacristans, chanters, lecturers, and monks, who expound the sacred science to laymen. Chinese monks wear trousers, stockings, and shoes, besides an undergarment extending from the waist to the knees, and a garment covering the whole body. A wide garment is worn over this for full equipment. Poverty has ceased to be enforced, and monks freely accept gifts. The average monk has no real knowledge of the Buddha's teaching. Penalties are imposed on those monks who commit ritual offences, but moral offences often go unpunished. Punishment is generally administered by flogging on the naked back by lay-brothers. The monks are for the most part at a low stage of intellectual culture, though a thousand years ago, when Europe was in the Dark Ages, the monasteries of China were filled with philosophers and scholars. A person of good family rarely becomes a monk. When he does so, however, he speedily attains to abbatial rank. Immorality is wide-spread, and this led to the suppression of all the monasteries in Fuchow in the years 1830-40. It is, however, unwise to generalize on this point, as the reputations of individual monasteries vary very greatly; that of the celebrated monasteries of Chiu-hua and Puto stands high. The use of opium is also prevalent among the monks. Individual monks of ascetic life are found, and even in recent times a monk has sometimes been voluntarily burnt alive on a funeral pyre. Monks are usually cremated at death. Besides the cenobitical communities, Buddhist hermits are found in China. They dwell in poor huts or in holes in the mountains, and are maintained by alms or by a neighbouring monastery. The hermits do not shave their heads, but wear their hair long. Some who are more ascetic than their fellows live in small mountain caves, into which the sunlight never penetrates. When such a one dies, his body is embalmed in a special manner, and, after being painted and gilded, is set up in a temple as an object of veneration. There is no supreme authority over all the monks in China, each monastery being self-contained. The government has, however, bestowed an official status on some of the abbots, who act as intermediaries between it and the monasteries. These abbots are responsible to the government for the conduct of the monks. Any ordained monk may move at will from one monastery to another, on showing a pass issued by his abbot, or he may adopt an itinerant mode of life. Buddhist monks are usually known as *bonzes*, a Japanese term introduced into China by Roman Catholic missionaries.

4. The Taoist priesthood.—The indigenous religion of Taoism, which, though it professes to be founded on the ethical teaching of Lao-tse, nevertheless in some of its manifestations appears to merge imperceptibly into the popular animism of the country, began under the influence of Buddhism to evolve an organized priesthood and ritual soon after the opening of the Christian era. At

¹ *Buddhism as a Religion*, p. 218.

present there are two orders of Taoist priests, one celibate and one married, the latter, however, being composed of priests married before ordination. They reside in their own dwellings and wear the ordinary dress of the country. The Taoist priests do not shave the head like the Buddhist ones, but bind the hair on the top of the head. Many lead an itinerant life, and derive a livelihood from the sale of charms. They are for the most part as ignorant of the teaching of Lao-tse as are the Buddhists of the teaching of Sakya-muni. They study instead the pseudo-sciences of astrology and alchemy. Candidates for the Taoist priesthood study for five years. Before initiation they fast for three days, and bathe in water scented with orange-leaves; then, going into the presence of an image of Lao-tse, they seek his blessing. A licence has then to be obtained from a mandarin. The abbots of Taoist monasteries are called *sze-sze*. At the head of the Taoist Church is a patriarch who lives in the temple known as Shang-ch'ing-kung, on the Dragon and Tiger mountains in Kiang-si. He is descended from Chang-ling, a noted healer, who flourished in the province of Sze-ch'wen under the Han dynasty. His cures obtained for him a great reputation, and he healed a number of sick persons by inducing them to write down a confession of their sins on paper and swear not to sin again. When this had been done, he threw the confessions into the water. Chang-ling's cures attracted a great number of followers to him, and he instituted a semi-clerical caste, which appears to have been the genesis of the Taoist priesthood. His work was continued by his son Heng and his grandson Lu. It is said that the patriarch is chosen in the following manner. When one dies, all the male members of the clan assemble, and the names of each are engraved on pieces of lead, which are deposited in an earthenware vessel full of water. Priests then invoke the deities of the Taoist triad, to cause the piece on which the name of him whom the gods have chosen is inscribed to float to the top.¹ The services of the Taoist and Buddhist clergy are for the most part made use of quite indiscriminately by the population. The late empress-dowager once employed Buddhist priests to pray for rain at one altar and Taoists at another. At the funeral of Li Hung Chang priests of both religions officiated. Owing, however, to the elaborate eschatology evolved by Buddhist theologians, the priests of this religion rather than the Taoists are generally employed for the purpose of offering sacrifices to alleviate the sufferings of the departed.

5. The clergy and the State.—The monastic ideal was naturally alien to the Chinese temperament, with its deep inbred respect for the ties of family life, and this antipathy showed itself in the hostility of official Confucianism towards Buddhism on its arrival in the country. In A.D. 714 a fierce persecution broke out, during which 12,000 religious of both sexes were compelled to return to the secular state, while in a still more bitter persecution in the following century 4600 religious houses were closed and 200,000 monks and nuns were secularized. Buddhism, however, survived these persecutions and was very powerful in the 10th and 12th centuries. The Taoist church also felt the hand of the State, celibacy being enforced upon its clergy by the first emperor of the Sung dynasty. The legislation affecting the convents and clergy is embodied in the *Ta Ts'ing kuh li*, 'Fundamental and Supplementary Laws of the great Ts'ing Dynasty.'² Many of the laws contained in this work are also found in the Ming

code. It provides that, if any Buddhist or Taoist priest is ordained without a State diploma, he shall receive eighty stripes with a long stick. No abbot may administer the rite of ordination without governmental permission. Since this has been frequently refused, there has grown up a large body of unconsecrated clergy, who wear clerical dress. A Buddhist or Taoist priest is permitted to adopt one pupil on attaining the age of forty.

Hung Wu, the founder of the Ming dynasty, who ascended the throne in 1368, ordained that all the clergy demanding State recognition should pass a competitive examination in the Confucian classics, thus creating an intellectual link between them and the national culture. Various edicts were issued by the Manchu emperors, restricting the growth of the clergy, though their services were often made use of during the rule of that dynasty. In the southern provinces Buddhist priests have frequently been employed by mandarins in rain-making ceremonies and in exorcizing swarms of locusts. Of late years, however, monasticism has declined rapidly, and the clerical profession is universally despised. A census taken by the Peking police in 1903 revealed the fact that there were in the capital only 1553 Buddhist and 133 Taoist priests. It seems most probable that one of the chief causes which have operated in checking the growth of a powerful sacerdotal caste in China has been the system of making admission to public offices dependent on the results of competitive examinations.

H. J. T. JOHNSON.

PRIEST, PRIESTHOOD (Egyptian).¹—I. INTRODUCTION.—All the numerous communities that occupied the Nile valley just before the dawn of history possessed their respective local divinity or divinities.² Civilization had already so far advanced that the members of each political group would have been severally engaged in agricultural, industrial, or administrative occupations. Consequently the task of performing the services which every community as a whole owed to its gods would have devolved upon, or been deliberately deputed to, a special body of men. An Egyptian priesthood, therefore, may be described as a body of men separated from the rest of the community for the service of a god. At the head of the local priesthood or priesthods was the local chief, members of whose family held all or some of the more important priestly offices.

This is presumed from what we know to have been the prevailing practice of the historic period, in accordance with which the nomarch, or chief official in a district, seems *ipso facto* to have been 'superintendent of the prophets' (*imy-r, kmw-ntr*) of the local divinities.³

II. THE POSITION OF THE KING.—**I. The king as high-priest.**—In historic times, under the strongly centralized form of government instituted by Menes or his immediate successors, all the religious functions of the local chiefs, along with their political functions, were united in one person, the king. Thus the king became in theory the high-priest of all the local divinities. The

² The Manchu dynasty, which gained possession of the throne in 1644.

current beliefs about the divine nature of the king facilitated his assumption of all the high-priesthoods. He was not merely looked upon as the earthly representative of the god Horus, who, originally the local god of Buto, was early identified with the sun-god Rē of Heliopolis,¹ but he was actually regarded as a form or manifestation of that god.² The king was therefore a god, and indeed was commonly spoken of as the 'good god.'³ Moreover, by the time of the Vth dynasty the king was believed to be the physical son of the sun-god, the State god of Egypt.⁴ The king was thus the natural mediator between the gods and mankind—he was in fact the high-priest *par excellence*. In this capacity he built the temples; and in the reliefs which adorn their walls he alone is depicted as worshipping the gods and making offerings to them.⁵ But it was impossible for the Egyptian king, who was the responsible head of a highly complex system of government, to exercise his high-priestly functions except on rare occasions; he accordingly was obliged to depute them to the heads, or higher members, of the various local priesthoods,⁶ who were conceived of as the Pharaoh's representatives, or else to special emissaries.⁷

(a) The foregoing statement explains why a priest of Harshet of Herakleopolis Magna is called 'king of Upper Egypt' (*nyswt*).⁸ One of the formulae used in the daily service in the temple distinctly states that the officiating priest represents the king: 'I am a prophet (*hm-ntr*), the king has sent me to behold the god.'⁹

(b) The king always appears to have retained the right to appoint the high-priest of the temple, who was his deputy in a special degree (see § XII. r).

2. The king as son of the divinity.—The king, as we have seen, was Horus, and also the son of Rē, the State god. Many of the local gods, in order to enhance their prestige, were identified with Rē.¹⁰ Hence the king would not only be the high-priest of these local gods but also be regarded as their son. This idea of the sonship of the king would soon affect the relationship of the king with all divinities, male or female.¹¹ The living king, according to the characteristic theological conception of him, was Horus. But Horus was son of Osiris (= the dead king). Under the influence of the Osiris myth the relationship of the king with any god or goddess was conceived of as that of Horus with Osiris; accordingly every divinity was an Osiris for cult purposes.¹² The high-priests, or leading members of the local priesthoods, were, as we have seen, the king's deputies, and as such impersonated the king in the temple services. Occasionally, therefore, as will be seen in the two following sections, the priest appeared in the rôle of the son of the god whom he served, or he displayed some of the characteristics of sonship.

III. THE PRIEST AS SON OF HIS GOD.—1. The 'son whom he loves.'—A priest with the title

⁶ E.g., H. Schafer, *Die Mythen des Osiris in Abydos unter König Sesostrius III.*, Leipzig, 1904, p. 10 ff.; see also § III. x.

⁷ H. Brugsch, *Dictionnaire géographique de l'ancienne Égypte*, Leipzig, 1877–80, p. 1377; Sethe, *ZÄ* xlix. [1911] 33. The title of a priest of Min in the Denderah list (Brugsch, p. 1374) which looks as though it were *lity*, 'king of Lower Egypt', is probably, in view of W. M. F. Petrie, *Koptos*, London, 1896, pl. viii. line 2, the word generally determined with the seal-sign *Q* and translated 'treasurer' or 'chancellor.'

⁸ A. Moret, *Le Rituel du culte divin journalier en Égypte*, Paris, 1902, p. 42 f., and cf. p. 55. Cf. also Davies-Gardiner, p. 87 f.

⁹ Erman, p. 57.

¹¹ *Ib.* p. 52.

¹² *Ib.* p. 45; see also art. PURIFICATION (Egyptian), § V. 4.

'son whom he loves' figured in the 'Opening of the Mouth,' a ceremony performed on behalf of statues in what the Egyptians called the 'House of Gold,' i.e. the sculptor's studio.¹ The 'son whom he loves' represents Horus,² while the statue from the ritual standpoint is Osiris. At a very early date the use of this ceremony may possibly have been restricted to the statue of a dead king (= Osiris). In such a case the 'son whom he loves' would naturally have been the living king (= Horus). When the use of the ceremony was extended to all statues, the office of 'son whom he loves' necessarily devolved upon a deputy.

Thus Schetepibre, a high official under Sesostis III., informs us that he 'acted as son whom he loves in the procedure of the House of Gold' at Abydos—i.e. he took the part of the king at the consecration of a new statue of Osiris.³ So also Ikhernefret, who was commissioned by the same king to superintend the making of a statue of Osiris and other accessories of the Osirian cult.⁴

The fact that the *sem*, a title of the high-priest of Memphite Ptah, plays a prominent part in the 'Opening of the Mouth' suggests that the ceremony originated in the sculptors' workshops, which, from an early date, were closely connected with Memphis and the great temple of Ptah.⁵ The *sem* figures not only in the 'Opening of the Mouth' but in all the funerary ceremonies (see § XIV. [e]), which, as is now generally recognized, were originally performed on behalf of the kings of the Memphite dynasties.⁷

'Son whom he loves' was also a title of one of the priests of Harshet, the god of Herakleopolis Magna.⁸ It was not a distinctively high-priestly title, for it was held by a *wē'eb* of Harshet.⁹ Herakleopolis, it should be remembered, was the seat of the IXth and Xth dynasties, the successors of the feeble kings of the VIIth and VIIIth dynasties, who were Memphites.¹⁰ That probably accounts for the presence of a 'son whom he loves' and a 'king of Upper Egypt' (see § II. [a]) among the priests of the Herakleopolitan god Harshet.

For the mortuary priest as Horus, son of Osiris, see below, § VI. 2.

2. The *hy* priest of Hathor.—Hathor, the goddess of music and dancing, is often depicted with a small boy rattling a sistrum in front of her. This boy is her son, Harsamtowi the child, also called 'Hy' or 'great Hy.'¹¹ The king, in the capacity of Hathor's son, similarly rattles a sistrum in front of her and is called 'goodly Hy' of the golden one of the gods, i.e. of Hathor.¹² Like the king whom they represented, Hathor's priests also impersonated her son Harsamtowi, for *hy* occurs in the list of titles of the priests of Hathor of Denderah.¹³ A variant form, *hwy*, is applied to priests of Hathor, represented as dancing and clattering castanets, in the tomb-chapel of a Cusite nomarch¹⁴ and in that of a Theban official.¹⁵ The inscription attached to a similar scene in another tomb-chapel at Meir clearly shows that the *hwy*-priests there depicted belonged to the temple of Hathor of Cusæ.¹⁶

IV. THE PRIEST EXERCISING THE FUNCTIONS OF THE GOD.—In human families the functions of the parent often descend to the son. Does that

account for the titles of the high-priest (a) of Ptah of Memphis, (b) of Rē-Atum of Heliopolis?

1. The high-priest of Ptah.—Ptah was the craftsman of the gods¹ and the patron of craftsmen.² His high-priest was entitled 'he who is great at directing the craftsmen,' *wr htp hmw*; one of his duties was to supervise the work of the royal craftsmen, who were closely associated with the Ptah temple.³

2. The high-priest of Rē.—The chief title of the high-priest of Rē was 'he who is great at seeing,' *wr m*.⁴ He was also described as being 'over the mysteries of heaven,' or as 'he who sees the mysteries of heaven.'⁵ A. H. Gardiner has suggested to the writer that the sun-god's high-priest bore these titles not because he was permitted to gaze upon the god, but because the god's function of unrestricted vision was transmitted to him as deputy of the king, to whom, as 'son of Rē,' this and other functions and qualities of Rē were frequently assigned.⁶

V. HONORIFIC PRIESTHOODS.—A somewhat similar conception to that discussed in § IV. lies, perhaps, at the back of the honorific priest-hoods of the Old Kingdom,⁶ the holders of these priest-hoods reflecting in their functions the character of the divinity whom they served. Thus the 'prophet of the great morning-god,' *hm-ntr dwj-wr*,⁷ seems to have been the king's barber, the god in question being the royal beard personified.⁸ The 'prophet of Mēet,' the goddess of righteousness and truth, was a judge;⁹ the 'prophet of Hike,' magic personified, a magician;¹⁰ the 'prophetess of Hathor,' the goddess of music and dancing, a dancer.¹¹

VI. IMPERSONATION OF DIVINITIES BY PRIESTS AND PRIESTESSES.—Egyptian priests and priestesses not merely exercised the functions of divinities; they sometimes actually impersonated them.

The classic example of this is of course the Pharaoh himself. The primitive kings of Buto and Ombos were originally no doubt high-priests of their respective local gods, Horus and Seth. The historic Pharaoh actually was Horus and Seth (see above, § II),¹² and his queen is called 'she who sees Horus and Seth.'¹³ Similarly the king is the embodiment of the Upper Egyptian vulture-goddess of El-Kab and of the snake-goddess of Buto, and as such is called *nbtj*, 'the two mistresses.'¹⁴

1. Iun-mutef, 'pillar of his mother,' as is clearly shown by a number of inscriptions, is a name for the young god Horus.¹⁵ Most of the representations of Iun-mutef, however, depict not the god, but a priest impersonating him.¹⁶ Iun-mutef is

¹⁶ An exception, perhaps, is Lepsius, ii. 123a.

always associated with the king, and he seems to represent Horus in the rôle of tutelary god¹ of the Egyptian Pharaohs.² In this capacity he officiated at the coronation,³ and at the jubilee, or *sed-festival*,⁴ walked in front of the king in the procession to the temple,⁵ and acted as intermediary between the king and the gods.⁶

(a) The divine status of Iun-mutef is strongly emphasized in his relations with the dead king, in whose presence he is often seen pronouncing the *hotp di nswt* formula and making offering. Since Iun-mutef was Horus and the dead king Osiris, the latter would naturally be expected to appear in the rôle of the former's father. The reverse, however, is the case, and the dead Pharaoh is spoken of as Iun-mutef's son.⁸

(b) Iun-mutef represents Horus as a youth in Khemmis,⁹ the supporter and protector of his widowed mother Isis. Iun-mutef, therefore, generally wears the side-lock of hair. Compare the name 'pillar of his mother' with the expression 'staff of old age,' used of a young man who is associated in office with his aged father in order to lighten the burden of his responsibility.¹⁰

2. In the funerary ceremonies as originally performed¹¹ in the early Memphite age the parts of Osiris and his son Horus were duly filled by the dead and the living king. Since the king could not possibly officiate in the funerary temples of all his dead predecessors, the part of Horus the son would be deputed to the chief mortuary priests¹² (cf. §§ II. 2 and III.). When the funerary rites came into general use and all dead persons were identified with Osiris, every mortuary priest, when making offering to the dead, impersonated Horus.¹³ Again, the embalmer (*wt*) impersonated Anubis—the god who embalmed Osiris, and hence the prototype of all embalmers—and accordingly often wore a jackal mask.¹⁴

(a) A funerary priest is therefore actually entitled 'Anubis the embalmer,' *Inpu wt*.¹⁵ The same title is also borne by Detaihap, ruler of the Lycopolite nome of Upper Egypt,¹⁶ at whose capital Asyût there was a temple of Anubis as well as one of Upwawet.¹⁷ Detaihap held this title in his capacity of high-priest of Anubis, whom, in certain religious performances, he must have impersonated. In a funerary scene in a tomb-chapel at Meir a priest, instead of being labelled *wt*, 'embalmer,' is called 'he who presides in the god's booth,' a regular epithet of Anubis.¹⁸ Similarly a priest, who seems to have officiated at the 'Opening of the Mouth' (see above, § III. 1), is entitled on his friend's stele¹⁹ 'Anubis in the House of Gold.' Another priest (mentioned in the same stele), who was 'chief of the lecturers in his town,' bears the appellation 'Anubis in the Good House,' i.e. this priest impersonated Anubis in the embalmer's workshop (see below, § XIV. b).

(b) The officiants who wash the corpse during the process of embalming impersonated Horus and Thôth.²⁰

3. (a) Two priests, impersonating Horus and Seth, or Horus and Thôth, and wearing appropriate masks,²¹ sprinkled the king with water before he officiated in a temple.

(b) Atum and Month, or Rē-Harakhte and Amūn, may have been similarly impersonated by priests at the purification of the infant heir to the throne.¹

(c) So probably also was the god Yahes, who officiated at the coronation.²

4. The priestesses of Hathor, who danced in her honour, consciously impersonated her.³ They partook in consequence of the nature of the goddess, and were able to impart her qualities to her devotees.⁴

5. Two female mourners, called the 'great kite' and the 'little kite,' impersonated Isis and Nephthys in the funerary ceremonies.⁵

In two passages in the *Pyramid Texts* Isis and Nephthys are spoken of as two birds—the form which they assumed when they set out to seek for the missing corpse of the murdered Osiris.⁶

VII. FURTHER RELATIONSHIPS OF PRIESTS AND PRIESTESSES WITH DIVINITIES.—1. 'Father of the god.'—The relationship of the priest with the god could be other than that of son. A very common priestly title in the New Kingdom and subsequent age is 'father of the god,' *it ntr*; the holders of this title, in the enumerations of priests of those periods, come between the prophets and *wēb-priests*.⁷

The appellation 'father of the god' primarily belonged to the king's father-in-law.⁸ As a priestly title it probably meant that the holder had one or more daughters in the god's *harim*.⁹

2. The god's concubines.—Human concubines were assigned to certain gods—e.g., Amūn of Thebes,¹⁰ Onuris,¹¹ Iun-mutef;¹² also possibly Upwawet of Asyūt¹³ and Khnum of Hermopolis.¹⁴ These concubines are in a special degree a feature of the cult of Amūn, probably owing to his markedly sexual character; they are frequently referred to in the texts of the New Kingdom and subsequent period.¹⁵

It should be noted that the name of the great temple at Luxor is 'southern *harim* of Amūn,'¹⁶ and that the inscription on the statue of Ibe¹⁷ mentions Amūn's *harim* of concubines (*ipt:n hrmt:n*).

At the head of Amūn's concubines was the wife of his high-priest, her title being 'chief concubine of Amūn.'¹⁸ The concubines were doubtless the female musicians (*smwt*)¹⁹ who were attached to his, as apparently to every other, temple (see below, 3 [b], and § VIII. 3 [d] i.). The view that the female musicians of Amūn formed his *harim* is further supported by the fact that in one instance the wife of a high-priest of Amūn, instead of the

regular title 'chief concubine,' bears that of 'singer (*hnt*) of Amūn.'²¹

3. 'The god's wife.'—(a) From the Vth dynasty onwards² the king was regarded as the physical offspring of the sun-god (*s: R' n ht:f*, 'son of Rē of his body').³ According to the scenes and inscriptions in the XVIIIth dynasty temples of Deir el-Bahri and Luxor,⁴ Amūn, then identified with the sun-god,⁵ assumed the form of the reigning Pharaoh,⁶ had intercourse with the queen, and so begot the heir to the throne. The queen was therefore called 'the god's wife,' with the additional title of 'votaress of the god.'⁷

Possibly the union of Amūn and the queen was supposed to take place in Luxor temple, 'the southern *harim* of Amūn' (see above, 2);⁸ that would explain the presence in this temple of the scenes depicting the birth of Amenophis III., by whom the greater part of the present building was erected. A statuette in the Cairo Museum⁹ represents 'the god's wife,' 'the god's votaress,' Amenirdis, sitting on Amūn's lap; the pair mutually embrace.

(b) 'The god's wife' acted as chief priestess of Amūn,¹⁰ and her duties, as we know from inscriptions, consisted in rattling the sistrum 'before his beautiful face.'¹¹ In performing this service she would be assisted by the concubines,¹² over whom she presided in her capacity of Amūn's legitimate consort.¹³ The concubines, as we have seen, were probably the female musicians of Amūn (*smwt n 'Imn*), who are specifically stated to have been attached to the house of 'the god's votaress.'¹⁴

Perhaps the statement in Herodotus, i. 182, about the woman who 'lies in the temple of Theban Zeus,' refers to 'the god's wife' or to the chief concubine of Amūn.¹⁵

(c) 'The god's wife' is first mentioned in inscriptions of the early XVIIIth dynasty.¹⁶

After the fall of the XXth dynasty Thebes became a spiritual principality ruled by the high-priests of Amūn. But from the reign of Osorkon III. of the XXIIIrd dynasty to that of Psamtik III. of the XXVIth, Thebes was governed, not by the high-priest of Amūn, but by a succession of five 'god's wives.' 'The god's wife' was now no longer the queen, but a daughter of the ruling house, and she had to adopt a daughter to succeed her.¹⁷

(d) While Thebes was governed by these sacerdotal princesses, the high-priest of Amūn was merely a religious figure-head, all power being vested in the hands of individuals of minor sacerdotal importance, such as Menthemhêt,¹⁸ who was only fourth prophet of Amūn. Finally, upon her adoption by 'the god's wife,' Nitokris II., the first prophetship (high-priesthood) of Amūn was bestowed upon Psamtik III.'s daughter, 'Enkhneseferibre'.¹⁹

¹⁹ Breasted, *Anc. Records*, iv. 988 D.

4. 'The god's hand.'—Below 'the god's wife' in rank, but above the chief concubine, was the priestess called 'the god's hand,' *ḏrt nṯr*.¹

The fact that 'the god's hand' was also called 'the daughter of Amūn of his body, whom he loves,'² suggests that this title was perhaps originally assigned to a daughter of the queen.³ Both titles were borne by 'Enkhesneferibre', a 'god's wife' in the Saitic period. Since, however, 'god's hand' comes last in her titulary,⁴ it was possibly the title which she bore as the adopted daughter of Nitokris⁵—i.e. before she became 'god's wife' at Nitokris' death.

VIII. THE CONSTITUTION OF THE PRIESTHOOD.—1. The general term for 'priest.'—In ancient Egypt purity was considered to be essential in all persons and things associated in any way with the cult of the gods (see art. PURIFICATION [Egyptian], § V. 1, 5-8). Accordingly the general term for 'priest' is *wḥ*, 'pure person.' The word was retained in Coptic to denote the Christian priest, and is written οὐνης; hence *wḥ* is to be vocalized *wēḥ*. The verb *wḥ*, 'officiate as *wēḥ*,'⁶ is used also to denote the service of the highest grades in the hierarchy.⁷

2. The two main classes of the priesthood.—The priesthood consisted of two main classes—the prophets, *ḥmw-nṯr*, being the higher, and the *wēḥ*-priests, *wḥw*, the lower.

(a) The word *ḥm-nṯr* (Coptic Ⲭⲟⲛⲧ),⁸ which, after the Greek custom, is usually rendered 'prophet,' literally means 'servant of the god.'⁹

(b) *Wēḥ*, besides being the name for a member of the lower class of the hierarchy, was also, as already stated, a general term for 'priest'¹⁰ (cf. the general application of the verb *wḥ* discussed above). Defaihap, a nomarch of the Lycopolite nome, and a 'superintendent of the prophets,' in an address to the governing body (*knbt*) of the temple of Upwawet,¹¹ asserts that he is the son of a *wēḥ* like each one of them, though Defaihap's father and the fathers of some of the members of the *knbt* almost certainly must have belonged to the higher order of priests.

(c) From the time of the New Kingdom onwards the members of the priesthood were roughly classified as 'prophets, fathers of the god, and *wēḥ*-priests'.¹² The 'fathers of the god' are to be regarded as belonging to the same class as the 'prophets,' the title 'prophet' being reserved for the higher members of that class. As Gardiner¹³ points out, the rare titles, 'first father of the god' and 'second father of the god,' are synonymous with 'first prophet' and 'second prophet'.¹⁴

(d) The *Decree of Canopus* (hieroglyphic text, line 2 ff. = Sethe, *Urkunden*, i. 126) gives the following correspondences between the Egyptian and Greek titles of priests: 'the superintendent of the temple' = ἀρχιερεύς, 'high-priest';¹⁵ 'the servants of the god, *ḥmw-nṯr* = προφῆται, 'prophets';¹⁶ 'those who are over the mysteries, *ḥryw-sḥt* = σοφιστῆς';¹⁷ 'the learned scribes of the god's book' = περροφόροι καὶ λερωγραμματοῖς, 'feather-bearers and sacred scribes';¹⁸ while 'the fathers of the god and the *wēḥ*-priests in their entirety' = οἱ ἅλλοι ἱερεῖς, 'the rest of the priests.' For the *περροφόροι*, 'shrine-bearers' (?) = ἱεργὴ *wnw*, 'shrine'-openers,¹⁹ who were functionaries below the class of *wēḥ*-priests.²¹ See Otto, i. 96 f.

(e) A priest had to begin his career as a *wēḥ*, becoming a

'father of the god' before he passed on to the rank of 'prophet'.¹ Even a king's son had to serve as a *wēḥ* before he could be appointed to a prophethood.²

3. The staff of the temple.—The priesthood in each temple was called the 'staff' (*wnwt*, lit. 'service') of the temple, *wnwt nt ḥt-nṯr*. The *wnwt* seems to have included the 'prophets' as well as the *wēḥ*s. We find mention of the *wnwt* of royal mortuary temples.³

The word *wnwt* means 'regular service'.⁴ According to the generally accepted view,⁵ the *wnwt* consisted of 'lay priests.' But Defaihap of Asyūf speaks of the members of the *wnwt* as *wēḥ*-priests;⁶ moreover the expression 'the entire staff' (*wnwt*) of the temple' often sums up a preceding enumeration of priests among whom are prophets and *wēḥ*-priests.⁷

(a) The phylæ, or courses, of priests.—The temple staff with one or two exceptions (see below [b]) was divided into four courses (Egyp. *sḥw wnwt*, 'courses or gangs of the service'), or, as the Greeks called them, φυλαί.⁸ The priests of royal mortuary temples were also divided into phylæ.⁹ Each phyle served one lunar month on end by rotation; thus every priest had an interval of three months between two periods of service.¹⁰

This system, probably already established under the Old Kingdom,¹¹ remained unaltered, except for the addition of a fifth phyle in the reign of Ptolemy III.,¹² till the middle of the 3rd cent. A.D., and probably till the fall of paganism.¹³

(i) In the small temple of Amūn at Tenzoī each phyle consisted of twenty priests.¹⁴ In Græco-Roman times each phyle in the comparatively small temple of Soknopaios numbered thirty-one members.¹⁵

(ii) Middle Kingdom papyri from Illahūn show that every outgoing phyle drew up an inventory of the temple property, this was handed over to the ingoing phyle. Both parties verified the list, and the members of the incoming phyle appended their names to the document in token that it was found correct.¹⁶

(iii) Over each phyle, in dynastic as in Græco-Roman times,¹⁷ there was a phylarch, who changed every month with the phyle.¹⁸ In the XIIIth dynasty the phylarch was called *nty n sḥ*, 'regulator of a phyle'.¹⁹ In the New Kingdom the usual term for 'phylarch' is *ḥr sḥ*, 'over a phyle'.²⁰ In the *Decree of Canopus* the phylarch is called 'great one of the phyle'.²¹ The office of phylarch could be held by a prophet,²² a *wēḥ*,²³ or even the high-priest himself.²⁴ According to the *Decree of Canopus*,²⁵ the phylarch must be a prophet. We have therefore good grounds for supposing that, in dynastic as in Græco-Roman times, the priests both of the higher and of the lower grades belonged to the phylæ.²⁶

(b) The permanent officials of the temple.—From a Middle Kingdom papyrus found at Illahūn we learn that the 'superintendent of the temple' of Anubis (like the ἐπιστάτης of the Græco-Roman period)²⁷ and the 'chief lector' were permanent functionaries and not members of a rotating phyle.²⁸

²¹ Griffith, *Demotic Papyri*, p. 79 with note 6.

The superintendent of the temple apparently often was identical with the high-priest (cf. *ἐπιστάτης καὶ ἀρχιερεὺς*),¹ who also frequently held the office of chief lector or lector.²

Minor officials, such as the door-keepers and the temple-sweeper (*kwtj*),³ were also permanent.⁴

(c) *The governing body.*—(i.) *During the Middle Kingdom.*—The administration of an Egyptian temple at this time seems to have been in the hands of a small committee. The temple of Upwawet at Asyūt, e.g., was administered by a body of ten priests called the *knbt* ⁵ *nt ht-ntr*, 'governing body of the temple,' at whose head was the nomarch in his capacity of high-priest or 'superintendent of the prophets.'⁶

(1) The members of this governing body are given their administrative, not their priestly, titles,⁷ so that we do not know whether they were all prophets, or whether included among them were priests of the rank of *wēb* only. But they were certainly members of the priesthood.⁸ Compare the list of members of an incoming phyle,⁹ in which each individual is denoted not by his priestly rank, but by his special priestly function.

(2) The governing body of the XIIth dynasty might be compared with the committee of councillor priests (*βουλευταὶ ἱερείς*) of the Ptolemaic period,¹⁰ who assisted the superintendent of the temple or high-priest (*ἐπιστάτης καὶ ἀρχιερεὺς*) in the administration of the temple. The councillors, who changed every year, belonged to the phylae of priests, by whom they were elected, each phyle contributing five members.¹¹ We have no information as to how the governing body of the temple was chosen in the Middle Kingdom.

(ii.) *Under the Empire.*—During the New Kingdom the high-priest had supreme control of the often great wealth of the temple, and was responsible for the administration of its estates, for the care of its buildings, and for the erection of new ones. He had a great host of officials of all grades serving under his almost autocratic rule.¹²

(iii.) *In the Roman period.*—Though there were still superintendents of the temples (*ἐπιστάται*) in the Roman period,¹³ the temple administration generally was in the hands of the college of *πρεσβύτεροι* or *ἡγούμενοι*, who, like the *βουλευταὶ ἱερείς*, changed every year.¹⁴ After A.D. 202 the temples lost all that still remained of their once specially privileged position and were placed under the administration of the municipal senates.¹⁵

(d) *Priestesses and the position of women in the temple.*—Women played a by no means unimportant part in the worship of the Egyptian divinities, and the assertion of Herodotus¹⁶ that no woman could serve as a priestess is incorrect, and indeed does not agree with his own statements elsewhere.¹⁷

(i.) *Musical priestesses.*—All temples, apparently, had a number of priestesses attached to them, at the head of whom was a chief priestess with a special title,¹⁸ followed by the attribute 'playing with the sistrum in front of him (her),' i.e. the

divinity.¹ The chief priestess was doubtless in most cases the wife of the high-priest.² Evidently the principal duty of these priestesses was to rattle sistra and to dance and sing in honour of the deity whom they served.³

The musician priestesses in the Middle Kingdom were called *hwt*, var. *hwt*,⁴ but from the New Kingdom onwards generally *smwt*; both words mean 'musicians.' In the New Kingdom women of all classes, from the highest to the lowest, were musicians at some temple or other.⁵

The functions of the priestesses of the Ptolemaic and Roman periods were doubtless mainly musical.⁶ *The Deceit of Canopus* (hieroglyphic text, line 33=Sethe, *Urkunden*, i. 161) gives the title *wēb* to musician-priestesses (*smwt*), in the light of which, perhaps, is to be explained the *wbt* of Upwawet⁷ and the *wbt* who was the wife of a soldier.⁸ *Ispeiat* are commonly mentioned in Græco-Roman documents.⁹

(i.) *Prophetesses.*—In the Old and Middle Kingdoms women of important families often bear the title 'prophetess.' It was nearly always the goddesses Hathor and Neith¹⁰ that they served in this capacity.¹¹ Occasionally during the Old Kingdom we meet with prophetesses of a god or king, e.g., the queen Meresonth was a prophetess of Thoth.¹² The royal acquaintance Hetpheres was prophetess of King Kheops.¹³ Upon a certain Nitemhâ, the wife of a priest who lived in the XXVth dynasty, was bestowed 'the share of the prophet of Khons.'¹⁴ Griffith,¹⁵ referring to Herod. i. 35, presumes that Nitemhâ did not act as prophet of Khons, but that 'she only received the stipend while the duty would be performed by her husband.' But in the Vth dynasty we find the sons and daughter of a noble and high-priest all serving as prophet of their local divinity,¹⁶ by rotation, and apparently exercising exactly the same functions.¹⁷ In the reign of Ptolemy III. the first prophetship (high-priesthood) of Amun was held by the sacerdotal princess of Thebes (§ VII 3(d)). In the Ptolemaic period we meet with the daughter of a 'father of the god' who is described as a *wēb*-priestess of Amun and a prophetess of Zêni.¹⁸

(ii.) *Phylæ of priestesses.*—In the New Kingdom the musician priestesses, like the priests, were divided into phylæ with a priestess as phylarch.¹⁹ The phylæ of the priestesses are often mentioned in Ptolemaic and Roman documents.²⁰ A priestess who married a priest remained in her original phyle.²¹

IX. *PAYMENT OF PRIESTS.*—The priests derived their incomes from two sources—the temple estates,²² and 'all that enters the temple,' i.e. the daily and incidental offerings.²³

i. *The temple estates.*—The revenue produced by the lands belonging to the temple of Amun at Teuzoi was divided into 100 equal portions. Twenty portions, a fifth of the whole revenue,²⁴ went to the chief prophet, while one portion was assigned to each of the 80 priests who served under him.²⁵ These stipends seem to have been paid yearly.²⁶

the Old Kingdom as in Ptolemaic times (A. Kamāl, *Annales du Service*, xi. [1915] 214, 238; Brugsch, *Diet. géogr.* p. 1361).

¹⁶ n. 35. ¹⁷ n. 54, 56, 171, 182; cf. i. 182.

¹⁸ The antiquity of these titles is attested by the fact that the title of the chief priestess of Hathor of Cusæ was the same in

In Roman times the temple estates became Crown property, which the priests could hold on lease from the State.¹ The temples were also supported by taxes and voluntary contributions.²

2. The offerings.—The offerings, or, as in the temple of Anubis at Illahūn (see below), a portion of them, seem to have been divided every day³ among the priests proportionately according to their status.⁴ On this principle the chief prophet of the temple of Hathor of Reonet (Tehneh) received as his share a tenth of 'all that enters the temple.'⁵

The priest's daily rations consisted of bread, beer, and meat.⁶ According to Herodotus,⁷ they included 'a great quantity of beef and geese' and also wine. With this agrees a document of the Saitic period.⁸ In the above-mentioned temple of Anubis at Illahūn the greater part of the daily offerings of bread and beer, 'after the gods were satisfied with them,'⁹ was handed over to the *ka*-servants (see § XIV. (a))—of course in return for adequate remuneration¹⁰—for presentation to the dead, the priests getting what remained over.¹¹

3. Other sources of income.—The priests could increase their incomes by performing periodical or daily services for the dead.¹²

4. Special perquisites of the high-priest.—In addition to receiving the largest annual stipend and daily rations, the high-priest of a temple evidently had special perquisites.

At Asyūt, e.g., the superintendent of the prophets of Upwawet was entitled to a roast of meat for every bull slaughtered in the temple and a *sf*-measure of beer for every *ds*-vessel of beer offered on a day of procession.¹³

5. Stipends of the wives and daughters of priests.—According to the *Decree of Canopus* (line 35=Sethe, *Urkunden*, ii. 152 f.), an allotment from the temple revenue was due to the daughters of priests from the day of their birth. The same authority also informs us that the wives of priests received an allowance of bread.

X. PRIESTLY PRIVILEGES.—1. Immunity from forced labour.—The fact that a man was a *wēb* did not necessarily bring him exemption from compulsory State labour, such as work in the quarries or on the dykes and canals.

Thus the phylax of *wēb*-priests of the Hermopolite nome are among those depicted dragging the colossal statue of Djuthotep from the quarries of Hatnub to its appointed resting-place.¹⁴

Perpetual immunity from all such labour was granted to the priests of certain temples by special royal decrees.¹⁵

In the later Ptolemaic period the priests seem to have been immune from all compulsory State service. In Roman times they forfeited more and more of their old privileged position, being sometimes taken off by force for the cultivation of Crown land.¹⁶ Only priests of important temples (λόγισται ἐν τῇ πόλει) enjoyed immunity from compulsory labour.¹⁷

2. Immunity from taxation and imposts.—In the Old Kingdom the temples were liable for imposts, such as the furnishing of government officials

with supplies.¹ It appears that in the Saitic period the 'great temples of Egypt' at least were exempt both from the above-mentioned imposts and from taxation.²

Under the Ptolemys the majority of the temple estates were liable to taxation. Only the estates made over as a gift to the god and administered by the priests themselves were immune.³ For the position of the temple estates in Roman times see § IX. 1.

3. Immunity from poll-tax.—The priests were free from poll-tax under the Ptolemys.⁴ Under Roman rule all but a specified number of priests at each temple had to pay this tax.⁵

4. Right of asylum.—All temples possessed the right of asylum in the later Ptolemaic period.⁶ Under Roman rule this right was severely curtailed.⁷

XI. ADMISSION TO THE PRIESTHOOD.—1. Tendency of the priesthood to become hereditary.

—The priestly status, i.e. that of *wēb*, seems in some cases⁸ to have been hereditary as early as the XIIth dynasty. But there are no grounds for supposing that then, as in Roman times, the priesthood was denied to all but persons of priestly descent.

(a) In the Middle Kingdom numbers of *wēb*-priests appear to have been the sons of non-priestly parents.⁹ As late as the XXth dynasty we find that out of six sons two are priests and the rest officials.¹⁰

(b) It is not till after the XXth dynasty that the purely priestly families seem to have begun to come into being.¹¹

(c) By the time of the early Ptolemys admittance to the priesthood seems to have been restricted to persons of priestly descent.¹² Possibly this restriction was already in force in the Saitic period.¹³

2. Tests for admittance to the priesthood.—In Roman times these were very strict.

(i.) No one could be admitted unless it was satisfactorily demonstrated that the applicant belonged to a priestly family;¹⁴ he had to show that both his father and grandfather were priests.¹⁵ It may here be noted that a priest the purity of whose birth had been challenged was considered to have satisfactorily proved his claim by being able to read a hieratic book produced by the *ἱερογραμματεῖς*.¹⁶

(ii.) An aspirant to the priesthood had to be free from all bodily defects as well as of priestly birth.¹⁷ Cf. perhaps the instructions of Psamtik I. with regard to the appointment of Petesii as *wēb* in various temples: 'Let Petesii be priest in them if it were fitting.'¹⁸

(iii.) By a law of Hadrian only priests might be circumcised.¹⁹ If a candidate proved his priestly descent and his freedom from blemish, permission was granted to circumcise. Until he had been circumcised, no person could exercise the priestly office.²⁰ For full particulars of the procedure to be followed in order to obtain permission to circumcise see Grenfell, Hunt, and Goodspeed, no. 292, p. 58 f. See also art. CIRCUMCISION (Egyptian).

(iv.) It is probable that admission to the priesthood entailed circumcision as far back as the Old Kingdom, for even *ka*-servants, who probably were not as a rule *wēb*-priests (see

§ XIV. [a] i.), were circumcised.¹ Griffith suggests that the descriptive label attached to one of the two groups in the scene in question, viz. *sbt hm-k*, should be rendered: 'qualifying the ka-servants by circumcision'. For a full discussion of the circumcision of Egyptian priests see art. CIRCUMCISION (Egyptian).

With the scene in the temple of Khons at Karnak,² depicting two mothers presenting each a son to be circumcised, we might well compare Grenfell, Hunt, and Goodspeed, n. no. 292 (v.). We learn from the *Decree of Canopus* (hieroglyphic text, lines 14, 34 f.), that it was the king who admitted new priests. This seems to have been the custom also in Saitic times.³ We know nothing about the regulations for admittance to the priesthood in the earlier periods.⁴ In Roman times it was the *ἀρχιεπίσκοπος*, or high-priest of all Egypt (the representative of the emperor in all religious matters), who, after the necessary particulars had been laid before him, granted permission to circumcise the candidate and then admitted him to the priesthood.⁵

(vi.) In Roman times a new priest, on being admitted to the priestly order, had to pay a fee to the State called *τὸ τελεστικόν*.⁶

XII. APPOINTMENT TO PRIESTLY OFFICES—

1. High-priesthoods.—High-priests seem regularly to have been appointed to their office by the king.⁷ See below, 2(f), and above § II. i.

(a) When the central power was weak, the high-priesthoods, along with the local governorships, tended to become hereditary.⁸ and in all periods, too, the high-priesthoods of certain famous temples seem frequently to have become vested in one family for several generations.⁹ But even so the actual appointment to the high-priesthood seems still to have rested with the sovereign.¹⁰

(b) We have two instances of the high-priest of Amūn of Thebes being chosen by an oracle of the god himself.¹¹ In the first case the king confirmed the choice of the god; in the second we may presume that the king ratified the choice, as the new high-priest was his son.

2. Priestly offices below the rank of high-priest.

—Such offices could be (a) assigned by the king, or (b) by his representative, the local governor and high-priest, (c) purchased, (d) conveyed by deed of transference, (e) bequeathed to descendants.

(a) A king of the XVIIIth dynasty promoted a certain Amenemhēt from the rank of *wēb* to that of 'father of the god'.¹² He was perhaps later appointed prophet by the king.¹³

(b) The local governor and high-priest, as Pharaoh's representative, seems to have appointed persons to vacant priesthoods.¹⁴

(c) Priesthoods were bought and sold from the earliest times onwards.¹⁵ Appointments to priestly offices in Roman times were usually obtained by purchasing them from the government.¹⁶

(d) Priesthoods could be conveyed by the holder while living to another person by deed of transfer.¹⁷

³ Griffith, *Demotic Papyri*, pp. 83, 81, note 8.

⁴ The statement of Amenemhēt, high-priest of Amūn in the XVIIIth dynasty—'I was admitted to hear what the *wēb*-priests hear' (A. E. Gardiner, *ZÄ* xlvii. 93)—apparently does not refer to his admission to the priesthood, but to some special promotion that came to him after he had been a *wēb* for many years.

(e) Priestly offices were frequently obtained by inheritance.¹ In the case of mortuary priestships it is often specifically stated in the deeds of appointment that the offices are to be transmitted to the children.²

(f) In Roman times a person, on entering upon a priestly office, whether obtained by inheritance or otherwise, had to pay to the government a tax called *τὸ εὐσεβεῖον*.³ This tax suggests that perhaps even in the dynastic periods all such appointments had to be ratified by the State—i. e. the king (cf. [a], [b]).

3. Investiture and installation of priests.—Rameses II., on appointing Nebwenenef to the high-priesthood of Amūn, invested him with two gold signets and a gold (*d'm*) staff.⁴ At the installation of the chief priestess (*ihyt*) of Amūn of Napata a silver pail for libations of milk⁵ was placed in her right hand and a silver sistrum in her left.⁶ Perhaps on his appointment or at his installation the high-priest of Ptah of Memphis was invested with his curious chain of office.⁷

At the installation of 'the god's wife' and high-priestess of Amūn, 'Enkhnesneferibā', the prophets, fathers of the god, *wēb*-priests, lecturers, the staff (*unwāb*) of the temple of Amūn, were behind her and the great companions were in front thereof, performing for her all the customary ceremonies of the induction of the god's votress of Amūn into the temple. The god's scribe and nine *wēb*-priests of this house fastened on for her all the amulets and ornaments of the god's wife and god's votress of Amūn.⁸ The newly-appointed prophet of Amūn of Teuzoi had to 'anoint the hands' at his induction.⁹

XIII. THE FUNCTIONS OF THE TEMPLE PRIESTS.—

The temple was the 'house of the god,' *ht-ntr*, and the priesthood in certain aspects was regarded as domestic service.¹⁰ The word *hm-ntr* (Coptic *ϣONT*),¹¹ which we, following the Greeks, render 'prophet,' means 'servant of the god.' Similarly the tomb was the 'house of the ka,' *ht-k*, and the mortuary priest was the 'ka-servant,' *hm-k*.¹²

1. Accordingly in the daily services the priest sprinkled the god with water—a ceremony derived from servants bathing their master¹³—fumigated him with incense,¹⁴ clothed and anointed him,¹⁵ applied cosmetics to his eyes,¹⁶ and arrayed him in his various ornaments.¹⁷

(a) The formulae that were repeated during the performance of these ceremonies are full of allusions to the legendary tales about Osiris and Horus, and brought every one of the priest's manual acts into relation with some episode in the Osiris myth.¹⁸ The god was regarded as Osiris, and the priest (=the king) as his son Horus.¹⁹

(b) The daily duties of the prophet, or, as the chief daily officiant was sometimes called, the 'great *wēb*,'²⁰ involved opening the doors of the shrine containing the god's statue and taking the statue out of it.²¹ He is therefore described as 'entering in upon' such and such a god or goddess, 'seeing him' ²² or

Memphis they and the *choachytæ* were united in one large group and their functions were interchangeable.¹

For the embalmer's impersonation of Anubis see § VI. 2.

(c) *Chief lectors and tectors*.—These figure as prominently in the funerary as in the temple services. As mortuary officiants their duty was to direct the ritual of the embalmer's workshop and of the tomb-chapel, and to recite the accompanying formulae. The functions of the lector and embalmer were not sharply differentiated. Thus a chief lector is described as being 'over the mysteries of the good house,'² and an ordinary lector is entitled 'Anubis in the good house, chief of the lectors' or 'treasurer of the god, Anubis the embalmer.'⁴

This explains, perhaps, why Diodorus calls the chief embalmer a scribe, *γραμματεὺς*,⁵ and why the Greek rendering of *hry-hb*, 'lector,' is *ταρχευτής*, 'embalmer.'⁶

(d) *Treasurer of the god*.—The presence of a functionary bearing this title at funerary ceremonies⁷ is a legacy from the time when they were performed for the Pharaoh only.⁸ The 'treasurer of the god' was closely associated with the acquisition of precious commodities⁹ such as turquoise,¹⁰ the produce of Byblos and Punt,¹¹ stone from Hammamat for monuments,¹² incense, etc., from the Sudan.¹³ he would naturally, therefore, play an important part in the royal obsequies, for he would have to supply many of the articles required for the embalming and burial of the king. 'Treasurer of the god,' as a mortuary title, could be combined with those of 'lector' and 'Anubis the embalmer.'¹⁴

(e) *Sem-priest*.—The funerary officiant with this title represents, of course, the high-priest of Ptah of Memphis.¹⁵ That ecclesiastic naturally pronounced the offering formula,¹⁶ and burned incense and offered libation,¹⁷ at the burial of a Memphite king. As was to be expected, the *sem* was the chief officiant in the 'Opening of the Mouth'¹⁸—a rite originally performed, perhaps, on royal statues,¹⁹ and therefore in early times a function of the Memphite high-priest in his capacity of chief artificer, *wp hpy hmut* (lit. 'great in directing the craftsmen').²⁰

(f) *Imy-khant (imy-hnt)*.—This priest is frequently figured in representations of funerary ceremonies, especially those of the Middle and New Kingdoms.²¹ Sethe²² thinks that *imy-hnt* means 'festival priest.' Connected with the Osiris cult at Abydos there was a 'great *imy-khant*' who was also entitled 'prophet' and 'great *wēb*.'²³

XV. *PRIESTS OF THE REIGNING KING*.—The *wēb* priests and prophets of the reigning Pharaoh²⁴ were a prominent feature of the Old Kingdom priesthood. We also meet with them later.²⁵

XVI. *PRIESTS AS DOCTORS*.—The professions of physician and priest (*wēb* or lector) were often combined.²⁶

A *wēb* who is also a physician (*swm*) pronounces the sacrificial victim pure.²⁷ Priests of the goddess Sakhmet were regarded as especially skilled in the art of medicine.²⁸ The business of the priest of Sakhmet depicted with cattle in a scene in the tomb-chapel of a Cusite nomarch at Meir²⁹ was thus evidently to decide whether they were fit for sacrificial purposes or not. There was apparently a medical school at Sais attached to the temple of Neith. It was restored in the reign of Darius

by a 'chief prophet of Neith' who was also styled 'great in medicine' (*wr sm*).¹ In a Ptolemaic bilingual an embalmer *ταρχευτής*, is termed *syn*, 'physician,' in the Demotic version.²

XVII. *PRIESTS AS MAGICIANS*.—See art. MAGIC (Egyptian), vol. viii. p. 268; supplemented by A. H. Gardiner, *PSBA* xxxix. 31 ff.

XVIII. *PRIESTS AS JUDGES*.—Priests acted in this capacity in the New Kingdom. Of a board (*knbt*) of ten judges who sat on one day, six were prophets (including the high-priest of Amūn, who presided), and three *wēb*-priests. Only one, a scribe, was a layman.³

XIX. *PURIFICATION AND PURITY OF PRIESTS*.—See art. PURIFICATION (Egyptian), § V. 7.

XX. *CLOTHING, ETC., OF PRIESTS*.—See art. PURIFICATION (Egyptian), § V. 7 (g), (h).

XXI. *THE PRIESTHOOD AS A CIVIL FUNCTION*.—The higher priestly offices were sometimes evidently civil appointments; i.e., the holders of them were not professional priests.⁴

Defaihap, e.g., a Middle Kingdom ruler of the Lycoopolite nome and therefore *ipso facto* high-priest (superintendent of the prophets of the local divinity),⁵ cannot have exercised his priestly functions for a considerable part of his career, as he was resident governor of the newly acquired territory in the Sudan, the administrative centre of which was the modern Kerma.⁶ The same may be said of a local prince like Ameney of Beni Hasan, who, in addition to being very active as civil administrator of the nome, went on military and mining expeditions.⁷ Similarly Seti, an important official in the reign of Ramesses II., combined with a number of important civil and military appointments several priesthoods, which must surely have been sinecures.⁸ Cf also the case of Petēsi, a busy civil servant of the Saitic age, to whom was assigned 'the share of the prophet of Amūn of Teuzoi and his enead of deities,' but who, apparently, never once officiated in this capacity.⁹

The offices of *sem*, 'son whom he loves,' and *sm*? (7), in the case of Ikhnofret, were practically civil appointments, and were doubtless only temporarily held by him in his capacity of special envoy and representative of the king;¹⁰ he was, as we can see from his titles,¹¹ not a professional priest. The same may be said of Sehetepibre,¹² also of Menthhotep,¹³ who, though he bore several priestly titles,¹⁴ was vizier and chief justice,¹⁵ and held several other posts of secular administration.

LITERATURE.—This has been sufficiently indicated in the article. AYLWARD M. BLACKMAN.

PRIEST, PRIESTHOOD (Greek) (*ιερεύς, ιέρεια, ιερωσύνη*).—I. General characteristics.—The Greeks did not possess a priesthood, in the sense of a sacred caste or class of men through whose medium alone the gods could be approached. Priests and priestesses existed everywhere among them in great numbers, but their significance is quite other than that of a sacred order, such as was seen among the most highly developed of the surrounding nations. It is true that there are in Greece also considerable traces of ideas of a kind that might have led to similar hierarchic institutions. For the Greeks were familiar with the idea that certain individuals or classes of people possessed some inherent capacity for particular sacred functions—that women, e.g., were the chosen medium of communication between gods and men at certain oracular seats, or that some men possessed inherent mantic powers, and the like; but this does not greatly affect the general Hellenic attitude, which was on the whole to refuse to define any department of life as tabu, but on the contrary to throw open all its possibilities to any and every individual claiming the name of citizen. This is true also of the Homeric

poems, which, while admitting the claim of, e.g., Kalchas to special mantic endowment (*Il.* i. 72), and indicating the high honour in which priests of various deities were held (*Il.* v. 78: *θεὸς δ' ὡς τιερό δῆμῳ*; cf. xvi. 605), exhibit Nestor sacrificing to Athene with the assistance of his sons only, no priest being mentioned, and none, so far as we can see, finding any place in the ceremony (*Od.* iii. 430 f.). This accords with the facts of historical times. Priests and priestesses alike throughout the Greek world enjoy considerable social and civic distinction, which tends to increase rather than to diminish as Greek civilization develops, yet Isocrates can say, with but slight exaggeration, that any man might be a priest (*ii.* 7. *ὅτι βασιλείαν ὥσπερ ἱερωσύνην παντὸς ἀνδρὸς εἶναι νομίζουσιν*).

Whatever may have been, among the Greeks, in the ages below the historical horizon, the relations existing between priest, king, and community, in historical times the priesthood, like everything else, has had to submit to the all-embracing sway of the idea of the State, and has become to a very considerable degree secularized and is regarded almost purely from the politico-social point of view. This is clearly and emphatically asserted not only in regard to the administrative activities of the priest, but also in regard to his purely sacerdotal functions (*Æschin.* iii. 18: *διδάξω δ' ὑμᾶς πρῶτον ἐπὶ τῶν παραδόξων, οἷον τοὺς ἱερεῖς καὶ τὰς ἱερείας ὑπευθύνους εἶναι κελεῖναι ὁ νόμος, καὶ συλλήβδην ἅπαντας καὶ χωρὶς ἐκάστους κατὰ σῶμα, τοὺς τὰ γέρα λαμβάνοντας καὶ τὰς εὐχὰς ὑπὲρ ἡμῶν πρὸς τοὺς θεοὺς εὐχόμενους, καὶ οὐ μόνον ἰδίᾳ ἀλλὰ καὶ κοινῇ τὰ γένη*; cf. *Dem. in Neaer.* 116; *Plut. Quæst. Gr.* 38). Only the actual sacred rites which priests perform escape from this secular control, simply because, being traditional, they dated from an age anterior to the birth of the historical State itself, and owed much of their force to that very fact. Hence the so-called *leges sacrae* are found to be confined to regulations touching qualifications for office, priests' perquisites, the establishment of additional ceremonies, etc.—just such details as fell to be regulated in connexion with purely secular offices; they teach us nothing of the details of ritual. In this sense, then, it is not incorrect to describe the Greek priest as in some sort a State official. The ultimate authority in a question concerning τὰ ἱερά is not a synod of priests, but the council and the assembly (*Ar. Ath. Pol.* 43).¹

The Greek priest or priestess, then, is one who is charged with certain specific religious functions or ritual acts, directed godwards, in the due performance of which the State, either as a whole or through its organic groups (*gentes*, phratries, families, etc.), is vitally interested. These functions, based as they were mainly upon a traditional ritual, demanded a certain, often a high, degree of professional or technical knowledge, just as did many other departments of civic life; the priest is simply one who is 'skilled in the rules of sacrifice, prayer, and purification.'² Practically, therefore, the *ἱερεὺς* implied the existence of a temple or some form of holy place dedicated to the particular deity in whose service he ministered. For the Greek priest was always the servant of a particular deity, and that at a particular shrine,³ and at none other. There was no such thing as a priest with a general competence of sacerdotal functions at any and every shrine, or as minister to any and every deity, simply by virtue of his priesthood as such. For there was in fact no general or universally applic-

able use or style of worship, notwithstanding the large common element in the manner of making prayers and offerings.¹

The existence of a priesthood, however, by no means abrogated the religious functions exercised by, and as a matter of course demanded from, laymen, such as magistrates of the State, heads of families or other organic groups within the State. It was, in fact, hardly possible to say where the layman stopped or the priest began. Nor, on the other hand, did the holding of a priesthood necessarily involve the surrender of all other occupations and interests on the part of the priest. Certainly this was not the case with many of precisely the highest and most distinguished priesthoods. In this respect there seemed, indeed, some room for improvement, as a matter of mere civic organization, and Aristotle proposes that one and the same individual citizen shall assume successively the functions of soldier, statesman, and priest, according to his time of life—the priesthood thus tending to be regarded as a dignified sinecure for men no longer able to serve the State in a more active capacity (*Pol.* iv. [vii.] 9. 4 f. = 1329 A).

The combination of sacerdotal functions with royal authority is as familiar as it was normal in the ancient world. In Homer the king with his own hand strikes the victim on behalf of the whole people (*Il.* iii. 249 f., 271 f.). In this sense the king was head of the State religion, as being capable of and responsible for the proper performance of the ritual acts designed to secure the favour of the deities that were in the strict sense national. Thus in Sparta, almost the only purely Greek State retaining monarchical government in historical times, all State sacrifices were offered by the kings, as descendants of the god (*Xen. Rep. Lac.* 15. 1: *ἐθνε γὰρ ὅθεν μὲν βασιλεὺς πρὸς τῆς πόλεως τὰ δημόσια ἅπαντα, ὡς ἀπὸ θεοῦ ἔσται*; *Ar. Pol.* iii. 14. 3 = 1285 A: *ἐπὶ δὲ τὰ πρὸς τοὺς θεοὺς ἀποδίδονται τοῖς βασιλεῦσιν*), one of the two kings holding the priesthood of Zeus Lake-dæmon, the other that of Heavenly Zeus, with the usual perquisites (*Herod.* vi. 56; cf. *Hom. Od.* iv. 65). Sometimes, on the decay and abolition of the royal office, the descendants of the old kings were allowed to retain these immemorial sacred functions and privileges, and even at times also the honorary title of king (e.g., Ephesus (*Strabo*, p. 635), Cyrene (*Herod.* iv. 161)). Or, again, the title and the functions might pass to one or other of the republican magistrates. Thus in Athens the second archon was called king (*βασιλεὺς*), and his wife queen (*βασιλίσσα*), both with religious functions, the king archon superintending the Eleusinian mysteries and the Lenaian Dionysia, there being assigned to him, as Plato says, 'the most solemn and most truly ancestral rites of the ancient sacrifices' (*Pol.* 290 E; cf. *Dem.* lix. 1370; *Lysias, Andoc.* 4: *ἀν . . . ἁρχὴ βασιλεὺς, ἄλλο τι ἢ ὑπὲρ ἡμῶν καὶ θυσίας θύσει καὶ εὐχὰς εὐχεται κατὰ τὰ πάτρια*).²

Within the family itself, which had been in fact its starting-point, this primitive coincidence of sacred function (*θωλίαι πάτρια*) and physical or legal headship continued undisturbed,³ and was reflected in the larger groups, of phratries and *gentes*, which purported to be merely the family 'writ large,' and, indeed, in every sort of organization within the State, by the institution of priests of the particular association, that is to say, by the endowment of certain of its members with religious functions; for all such corporations had a religious as well as a political or social aspect,

¹ Though traces are not wanting of the tendency towards such universalism or panhellenic use. Cf. *Ar. Pol.* viii. (vi.) 8. 20 = 1322 B: *ἐχομένη δὲ ταύτης ἡ πρὸς τὰς θυσίας ἀφωρισμένη τὰς κοινὰς πάσας, ὅσας μὴ τοῖς ἱερεῦσιν ἀποδίδωσιν ὁ νόμος, ἀλλ' ἀπὸ τῆς κοινῆς ἐστὶν ἔχουσαι τὴν τιμὴν καλοῦσι δ' αἱ μὲν ἀρχοντες τοῦτον, οἱ δὲ βασιλεῖς, οἱ δὲ πρυτάνεις*. For the sacred functions of the Athenian archons see *Ar. Ath. Pol.* 55-58.

² We merely mention here the curious religious polities found in Asia Minor in the Roman age, ruled by hereditary high-priests, or by royal and hereditary families, sometimes of a not very religious type—e.g., Komana (*Strabo*, pp. 559, 574). For these see J. P. Mahaffy, *The Greek World under Roman Suav.*, London, 1890, p. 222 f. They, of course, fall outside the purely Hellenic institution here treated, just as the deities worshipped in such communities were Asiatic in character, though called by Greek names.

³ Strictly taken, Plato's language (*in Laus.* 909 D: *ἱερά μὲν εἰς ἐν ἰδίᾳ οἰκίᾳ ἐκτίσθω, ὅθεν δ' ἔσται ἐπὶ νοῦν ἢ τινα, πρὸς τὰ δημόσια ἔστω θύσιον, καὶ τοῖς ἱερεῦσι τε καὶ ἱερείαις ἐπιτελεῖσθω τὰ θύματα, οἷς ἀνεκὰ τοῦτον ἐπιτελεῖσθαι*) would indicate a desire to abolish these domestic worship. See W. L. Newman, *Politics of Aristotle*, i., Oxford, 1887, p. 179.

¹ This is true even in cases where reference was made to an oracle, for such reference could be made, in a matter of State, only by properly accredited representatives; nor was such reference absolutely essential, though it was in harmony with Hellenic, and especially Athenian, sentiment to refer such matters to Apollo (*cf. Plat. Rep.* 427 C: *οὗτος γὰρ δῆπου ὁ θεὸς περὶ τὰ τοιαῦτα πᾶσιν ἀνθρώποις πάριος ἐξηγήτης ἐν μέσῳ τῆς γῆς ἐπὶ τοῦ ὀμφαλοῦ καθήμενος ἐξηγείται*).

² *Stob. Eccl. Ecl.*, ed. Gaisford, ii. 562: *τὸν γὰρ ἱερεῖα εἶναι δεῖν ἐμπεριον νόμον τὸν περὶ θυσίας καὶ εὐχὰς, καὶ καθαρμῶν, καὶ ἱδρύσεως καὶ πάντα τὰ τοιαῦτα*. Perhaps the best definition is given in Plato, *Pol.* 290 C: *καὶ μὴν καὶ τὸ τῶν ἱερῶν ἀδ' ἑνός, ὡς τὸ νομιμὸν φησι, παρὰ μὲν ἡμῶν δωρεὰς θεοῖς διὰ θυσῶν ἐπιστημῶν ἐστὶ κατὰ νόμῳ ἐκείνοις διατελεῖσθαι, παρὰ δὲ ἐκείνων ἡμῖν εὐχαῖς κτήνῃ ἀγαθὸν αἰτήσασθαι· ταῦτα δὲ διακίνοισι τέχνης ἐστὶ πῶς μῦθος ἀμφοτέρω*.

³ Cf. *Plat. Laus.* 769 A: *λέγωμεν μὲν δὴ τοῖς μὲν ἱεροῖς νεωκόροις τε καὶ ἱερεῖας καὶ ἱερείας δαίνεσθαι*. Large temples would have more than one priest, but one was the rule; cf. *Diod.* i. 73. 5: *οὐ γὰρ, ὥσπερ παρὰ τοῖς Ἑλλήσιν, εἰς ἀνὴρ ἡ μία γυνὴ τὴν ἱερωσύνην παρελάμβανεν, κτλ.*

and had their special deities, rites, and religious observances.

Perhaps this very multiplicity of individuals invested with priestly or quasi-priestly functions did as much as anything to check the rise of a definite priestly class, the conception of sacerdotal function being too inextricably intertwined with that of civic life in general. Undoubtedly, also, much was due to the general sanity of Greek institutions, from which it resulted that the rites performed by the priesthood were, as a rule, not of such sort as to enthrall the intellect by extravagant claims to a specially recondite or mysterious character. It was, in fact, partly by way of reaction against this somewhat threadbare simplicity that Orphic and Dionysiac mysteries won such vogue. A further powerful factor making against the rise of a priestly caste was the fact that temple funds were, as a rule, not controlled by the priests of the temple themselves; and at the same time the interpretation of sacred law was almost entirely beyond their control, being, at Athens, in charge of a special secular board of interpreters (*ἐξηγηταί* [see P. Ehimann, *De iuris sacri interpretibus Atticis*, Giessen, 1908]). The significance of the last feature can hardly be overrated in this connexion. It meant that nothing of the nature of a school or course of training for priesthood could arise.

2. Qualifications for priesthood.—Plato, following doubtless the universal requirement, lays it down for his ideal State that a priest must be sound and perfect in body, and of pure and genuine civic pedigree (*Lysis*, 759 C: *δοκιμάζειν δὲ τὸν ἀεὶ λαγχάνοντα πρῶτον μὲν δλόκληρον καὶ γνήσιον, κτλ.*). No alien could hold an Athenian priesthood or perform its rites—a rule that was probably general.¹

The tendency was not to be content with this, but to put priesthoods into the hands of men of leisure and substance (just as, in Athens, the State services, or leiturgies, naturally fell to the same class). So Aristotle would have no husbandman or mechanic appointed, but only citizens, who, in his scheme, would be the sole landed proprietors (*Pol.* iv. (vii.) 9. 9=1329 A: *οὔτε γὰρ γεωργὸν οὔτε βάναντον ἱερεῖα καταστατέον· ὑπὸ γὰρ τῶν πολιτῶν πρέπει τιμᾶσθαι τοὺς θεοὺς*. Cf. Paus. vii. xxvii. 3: *κατὰ δόξαν γένους μάλιστα αἰρούμενοι*, at Pellene; D. 594. 10: *ἀνείηθε δὲ ἐς καὶ ἡ δλόκληρος καὶ ὡς δαιμονουργίας μέτεστι*, at Chalkedon). At Halicarnassus the priestess of Artemis Pergaia must be of full citizen pedigree on both sides for at least three generations (D. 601. 6: *ἀστὴν ἐξ ἀστῶν ἀμφοτέρων ἐπὶ τρεῖς γενεάς γεγεννημένην καὶ πρὸς πατρός καὶ πρὸς μητρός*). Good looks were a recommendation, in some cases an essential (Paus. vii. xxiv. 4 [the boy *μυκὼν κάλλει*, priest of Zeus at Aigai]; cf. ix. x. 4 [Thebes]). Notorious vice naturally disqualified,² and Plato insists upon purity from the stain of blood and the graver offences. On the whole, the insistence is upon somewhat external or formal qualifications, identical with those demanded of candidates for purely secular offices; no great stress is laid on moral, and none at all apparently

¹ Cf. Dem. lix. 1369: *εἴθε δ' οὐ προσήκειν αὐτῇ ὁρᾶν ξένην οὖσαν*; W. Dittenberger, *Syllage Inscriptionum Graecarum*³, 3 vols., Leipzig, 1898-1901 (hereafter cited as D., followed by a number to indicate the running number of inscriptions quoted), 565. 8: *μηδ' ἐξέιναι κατάρχεσθαι εἰς τὸ Ἡραῖον ξένην μηδενί (Amorgos)*; Herod. vi. 81: *βουλόμενον δὲ αὐτὸν θύειν ἐπὶ τοῦ Βομοῦ δ' ἱερεὺς ἀπηγόρευε, φῆς οὐκ ὅστιον εἶναι ξένην αὐτοῦ θύειν*—of the Spartan king Kleomenes at the Heraion of Argos. Foreign cults and religious associations authorized by decree would, one supposes, be served by their native priests (cf. inscr. from Perrhaeus [A. Wilhelm, *Jahreshefte der Gesch. Arch. Inst.* v. (1902) 127: *ἐπειδὴ τοῦ δήμου τοῦ Ἀθηναίων δεικνύοντος τοῖς Θραξί μόνους τῶν ἄλλων ἐθνῶν τὴν ἐγκτεσιν καὶ τὴν ἱερουργίαν τοῦ ἱεροῦ, κτλ.*]).

² Cf. Eschin. i. 188: *καὶ δ' αὐτὸς οὗτος ἀνὴρ ἱερουργήσῃ μὲν οὐδένος θεοῦ κληρώσεται, ὡς οὐκ ἂν ἐκ τῶν νόμων καθαρὸς τὸ σῶμα, κτλ.*

on intellectual qualifications. In regard to the last point, it is to be remembered that a Greek priest was not called upon to deliver ethical teaching of any kind or to handle any problems of interpretation.¹ The case of the Delphian priesthood and that of the priests of certain great oracular healing shrines are somewhat special and do not affect the general validity of what is here said.

There was naturally great variety in the special qualifications for priesthoods of the different cults. These special qualifications are hardly referable to general principles. The hierophant at Eleusis, *εἰ δ'*, must, in the time of Pausanias at any rate, be celibate; not so the hierophant at Phleious, although the latter mysteries professed to be based upon the Eleusian (Paus. ii. xiv. 1: *λαμβάνων, ἢν ἐθέλῃ, καὶ γυναῖκα· καὶ ταῦτα μὲν διάφορα τῶν Ἐλευσίων νομίζουσι, τὰ δ' ἐς αὐτὴν τὴν τελετὴν ἐκείνων ἐστὶν ἐς μίμνησιν*). The foremost place here must be assigned to ceremonial purity, especially chastity. In its strictest form the demand is for absolute virginity,² the priesthood being held by *παῖδες οἱ παρθένοι*. There is no attempt to violate nature, as in the eunuch priesthoods of Kybele and the Ephesian Artemis and other Asiatic cults, which do not call for further consideration here. The same end was more wisely pursued by the selection either of the age when the passions are yet dormant, or that in which they have subsided (C. Thirlwall, *Hist. of Greece*, London, 1885-47, i. 204). Examples are the priestess of Herakles at Thebes (Paus. ix. xxvii. 6: *ἱεράτα· δὲ αὐτοῦ παρθένοι ἐστὶν ἂν ἐπιλέξῃ τὸ χρόνον αὐτῇ*); of Poseidon at Kalauria (ib. ii. xxxiii. 3: *ἱεράτα ἰδὲ αὐτὸς παρθένοι, ἐστὶ ἂν ἐς ὥραν προέλθῃ γάμου*); of Athene at Tegea (ib. vii. xlvii. 3: *ἱεράτα δὲ τῇ Ἀθηνῇ παῖς χρόνον οὐκ ὀδᾶ ὅσον νύνα, πρὶν δὲ ἡβάσκειν, καὶ οὐ πρόσω, τὴν ἱερουργίαν*). Or, again, chastity during the term of office might be held sufficient, and this could be secured with care (cf. Plut. *de Pyth. orac.* 20: *νομίζεσθαι τὸν ἱερόμενον ἐν τῇ ἐνταύτῃ γυναικὶ μὴ ὁμιλεῖν· διὰ καὶ πρεσβύτας ἐπικαλῶς ἱερεῖς ἀποδεικνύουσιν*—at the temple of Misogynos Herakles in Phokis). So Artemis Hymnia in Arcadia was served by a priestess *ἑμῶν ἀποχωρήτως ἔχουσα*, a temple legend accounting for the change from a priesthood held by a *κόρη παρθένη* (Paus. vii. v. 12; cf. what is told about the Pythia, Diod. xvi. xxvi. 6). Yet another form of this qualification is found in the condition that no woman more than once married could be priestess of *ἑὲς* at Aigai (Paus. vii. xxi. 12—a curious test, by drinking bull's blood, applied to candidates). What proportion of Greek cults demanded a celibate priesthood, as compared with those which permitted marriage, is not known. It is to be remarked that the requirement of chastity stands in no sort of relation to the nature of the divinity, as is clear by comparison of IG ii. 550, married priestess of Athene, and Paus. ii. x. 4, virgin priestess of Aphrodite of Sikyon (whose *νεανῆρος* also may no more *παρ' ἀνδρα φοιτῆσαι*). Nor, again, is there any necessary argument from the sex of the divinity worshipped to that of the minister (e.g., Paus. ii. xxxiii. 3 [*παρθένης* priestess of Poseidon], vii. xlvii. 3 [boy priest of Athene]).

3. Regulations concerning age.—These were, of course, closely connected with the foregoing, and there is no general rule. Some cults demand ripe age in their ministers, especially in the case of priestesses (Paus. vi. xx. 2: *πρεσβύτης ἡ θεραπεύουσα* in temple of Sosipolis at Olympia). In many temples the priesthood was held by a girl, until she reached an age for marriage (ib. ii. xxxiii. 3 [Poseidon at Kalauria], vii. xix. 1 [Artemis Triklaria], xxvi. 5 [Artemis at Aigeira]), or by a boy, up to the age of puberty (ib. vii. xlvii. 3 [Athene at Tegea], ix. x. 4 [Apollo at Thebes], x. xxxiv. 8 [Athene Kranaia, near Elateia]). In such cases the functions of the holder of the priesthood must have been purely ceremonial, carried out under the guidance of a permanent temple staff which controlled also the administration of the temple. Under such a system abuses would be possible. Hence in a decree of Kos a stipulation of a minimum age is found (*Leges Graecorum Sacrae, e titulis collectae*, ed. I. de Prot et L.

¹ Cf. F. de Coulanges, *La Cité antique*⁴, Paris, 1885, p. 195: 'La doctrine était peu de chose; c'étaient les pratiques qui étaient l'important.' It should also be noted that there must have been a tendency, especially on the part of priests of limited tenure and priests by purchase, to lean upon the knowledge and experience of the permanent temple staff, just as the head of a government department must rely upon the trained experience of the civil service. This in part, doubtless, explains the importance of the neocate in Asia Minor, where purchase of priesthoods was in vogue.

² No doubt this demand was reinforced by the idea, in some cults at any rate, that the priestly function implied in some sense union (*συνουσία*) with the divinity. Cf. Ar. *Ath. Pol.* iii. 5, for the marriage of the wife of the Athenian king archon with Dionysos.

Ziehen, *pars altera*, fasc. i., Leipzig, 1906, no. 133):¹ ἡ δὲ πριαμένη ἔστω ὀγμῆς καὶ ὀλόκληρος καὶ μὴ νεωτέρα ἑτῶν δέκα· ἱεράσεται δὲ διὰ βίου; cf. 135, also of Kos, where the minimum age is laid down at fourteen years). It is to be remembered that this was not a matter of caprice, but that in many cases youth, and sometimes extreme youth, on the part of the priest or priestess was demanded by the cult itself (cf. the demand for a παῖς ἀμφιθαλής as essential in certain ceremonies). Often, no doubt, the temple legend would profess to explain such regulations, but these legends have mostly perished. Plato, naturally, has no patience with all this, and, going to the opposite extreme, would have all priests to be not under sixty years of age, and would allow them to hold office for a year only (*Laws*, 759 D).

4. Modes of access to priesthood.—(a) *Inheritance*.—Originally, perhaps, all cults were family worships, whether or not they were all cults of dead ancestors. In historical times many cults which have come to be national are demonstrably still closely connected with particular families,² which retain their priestships as a hereditary possession guaranteed by an appeal to legend. Some are perhaps really cases of blending, so that several families or clans maintain their representatives side by side, though not all on the same level, as hereditary cult officials (cf. Paus. IV. xv. 7, I. xxxvii. 1).

Such hereditary national priestships can be seen in the making. Thus the family of Gelo of Syracuse claimed to be hereditary hierophants of Demeter and Persephone at Gela because their ancestor Telmeas had originally possessed the sacred symbols (ἱερά) of the cult (Herod. vii. 153). So Melaandros of Samos proposed to lay down his sovereignty on condition of his family being allowed to retain in perpetuity the priesthood of Zeus Eleutheros, whose cult he founded and endowed (ib. iii. 142; cf. the Battadaai at Cyrene [ib. iv. 381]). Inscriptions furnish examples of private foundations of this type (e.g., the will of Epikteta of Thera [*CIG* II. 2448, § 5: τὰν δὲ ἱερατειῶν τῶν Μουσῶν καὶ τῶν ἡρώων ἐχέτω ὁ τῶν θυγατρῶν μου υἱὸς Ἀνδραγόρας, εἰ δὲ τίς καὶ πάθῃ οὗτος, αὐτὸς δὲ προσβύτατος ἐκ τοῦ γένους τοῦ Ἐπιτελείας—the latter her daughter]).

How succession was arranged within the family itself in respect of these hereditary priestships is not always clear. Obviously, the ordinary rules of inheritance might sometimes give an unsatisfactory result. An inscription of Halicarnassus (D. 608) shows us that the priesthood of Poseidon had passed from brother to brother, thence to sons of the eldest brother in succession according to seniority, and so to sons of the next brother, and back again to grandsons of the eldest brother. Naturally, a priesthood arranged on principles of hereditary succession was just as liable as any other property to give rise to disputes. Such in Athens were settled in the court of the king archon (Ar. *Ath. Pol.* 57: καὶ τις ἱερωσύνης ἀμφισβητῇ πρὸς τινα διαδικαίει· δὲ καὶ τοῖς γένεσι καὶ τοῖς ἱερατεῖσι τὰς ἀμφισβητήσεις τὰς ὑπὲρ τῶν ἱερῶν ἀπίστος οὔτος). The oldest cults seem in general to retain this method of filling their priestships. The tenure under this system was naturally for life, subject to the proviso of sanity and a conduct that did not fount public opinion.

(b) *Election*.—Possibly the earliest example of this method occurs in Homer, where it is said of Theano that the Trojans had 'made' her priestess of Athene (*Il.* vi. 300: τὴν γὰρ Τρῶες ἔθηκεν Ἀθηναίης ἱερεῖαν)—but the inference is not very rigid. The mutilation of the inscription D. 911. 5 instituting a priestess of Athene Nike (460–446 B.C.) ἐξ Ἀθηναίων ἀπάντων does not allow us to say whether pure election was employed in that instance. More commonly the practice was to elect by means of the lot (cf. D. 558. 9: ὁ εἰληχὺς ἱερεὺς Ἀσκληπιοῦ καὶ Ὑγιείας, at Athens; and often in inscriptions). Often a mixed method, of election and lot, is used, the sortition being preceded by a selection from among the candidates (cf. Dem. lvii. 1313: προ-

εκρίθη ἐν τοῖς εὐγενεστάτοις κληροδοθῆαι τῆς ἱερωσύνης τῷ Ἡρακλεῖ. For Syracuse, Cic. *Verr.* ii. 126: 'lex est de religione, quae in annos singulos Iovis sacerdotem sortito capi iubeat, quod apud illos amplissimum sacerdotium putatur; cum suffragiis tres ex tribus generibus creati sunt, res revocatur ad sortem'; cf. Paus. vii. xxv. 13). In some cases a method of election seems to have replaced the older hereditary priesthood—e.g., in the great inscription of Andania relating to the mysteries (D. 653), where the representative of the old sacerdotal family seems to have surrendered his rights to the State. In course of time lack of suitable candidates for election led to a partial revival of the older method (cf. D. 592 [priesthood of Asklepios of Pergamum confirmed to Asklepiades and his seed for ever by decree of the people]; *L.S.* 56 [decree of Gythion confirming the priesthood of Apollo to Philemon and his son and their descendants—εἶναι αὐτοὺς ἱερεῖς τοῦ Ἀπόλλωνος καὶ ἐκγόνους αὐτῶν αὐτὸν δὲ διὰ βίου καὶ εἶναι παραδόσιμον τὸ προγεγραμμένον ἱερὸν τοῖς ἐκγόνοις αὐτῶν αὐτὸν δὲ διὰ βίου, in recognition of their munificence in restoring the cult and temple fallen on evil days]).

Even when reliance was placed upon the lot alone, it is probable that, in Athens at any rate, its frequent use, and perhaps not infrequent manipulation, in connexion with secular official life much impaired its significance as an indication of divine will, though that way of looking upon it might linger in formal expression (e.g., Plato, *Laws*, 759 C: τὰ μὲν οὖν τῶν ἱερῶν τῷ θεῷ ἐπιτρέποντα αὐτῷ τὸ κεχαρισμένον γίνεσθαι, κληροῦν οὕτω τῇ βίᾳ τύχῃ ἀποδιδόντες—but, he continues, the successful candidate must [subsequently?] be duly approved as ceremonially pure and of proper age, and the like; that is to say, in the eyes of Plato also the priesthood is on all fours with any ordinary secular office).

Under this method limited tenure was usual (cf. D. 608, 610), a year being the general term. Longer tenures, short of a life tenure, are found (e.g., five years [Paus. x. xxiv. 8: τὸν δὲ ἱερεῖα ἐκ παίδων αἰρουνται τῶν ἀνέβων, πρόνοιαν ποιοῦμενοι πρότερον τῆς ἱερωσύνης ἐξήκειν οἱ τὸν χρόνον πρὶν ἢ ἄρῃαν ἱερεύειν δὲ ἐπὶ συνεχὲς πέντε—boy priest of Athene Kranaiā]). Such longer tenures are probably in all cases connected with the festival cycle of the particular deity, as is expressly asserted of the priesthood of Demeter at Keles (Paus. ii. xiv. 1: ἱεροφάντης δὲ οὐκ ἐς τὸν βίον πάντα ἀποδέδωκεται, κατὰ δὲ ἐκάστην τελευτὴν ἄλλοτὲ ἑστὶν ἄλλος σφίσιν αἰρετός—the celebration taking place δι' ἐνιαυτοῦ τετάρτου, every third year).

(c) *Purchase*.—This method was especially in vogue in the coast cities of Asia Minor and in the islands.³ The earliest examples belong to Miletos, the home of Ionic free-thought; but it is unknown in Athens, the reputed mother of the Ionic colonies. The method does not necessarily imply the abandonment of older methods (e.g., at Halicarnassus the priesthood of Poseidon Isthmos is held κατὰ γένος [D. 608; see above]). Possibly it is not unconnected with the general financial distress of the age after Alexander, though its origin undoubtedly lies much farther back.⁴

A long list of priestships sold at Erythrai, with the prices paid for each, is extant (D. 604, 3rd cent. B.C.), distinguishing several varieties, showing that the method was carefully organized from both a fiscal and a legal point of view. Three species are recorded—ἱερατεῖαι πρᾶθειναι, priestships sold as then vacant, with immediate possession; ἱερατεῖαι ἐπιπρᾶθειναι, eventual succession upon death of the existing occupant; διασυσταεῖς, where the priest in occupancy purchases the right to appoint his own successor, that is to say, generally his own son. Prices show great variety, the highest being that paid for the priesthood of Hermes Agoraios, probably because it carried with it a claim to market dues (4610 dr.; the lowest price is 10 dr., for the priesthood of Gē; several run to over 1000 dr.). It is clear that purchase of a priesthood was simply one method of making an investment for a livelihood, or provision for one's family, with a sound title. Inferences as to a general decay of

¹ Hereafter cited as *L.S.*, followed by the number of the inscription.

² An excellent example of the process involved is afforded by *L.S.* 112, of the 4th cent. B.C., a decree relative to the transference of the ἱερά of the Klytadaí of Chios—τὰ ἱερά τὰ κοινὰ ἐκ τῶν ἰδιωτικῶν οἰκῶν εἰς τὸ κοινὸν οἶκον ἐνεγκεῖν; cf. Ar. *Pol.* viii. (vi) 4. 19=1819B: φυλαί τε γὰρ ἕτεραι ποιητέαι πλείους καὶ φαρτρία, καὶ τὰ τῶν ἰδίων ἱερῶν συνακτέον εἰς δαίτια καὶ κοινὰ, κτλ., see Newman, iv. 524.

VOL. X.—20

³ Proved, by inscriptions, for Erythrai, Miletos, Sinope, Chios, Priene, Magnesia, Mylasa, Chalkedon, Halicarnassus, Kos. It is to be observed that the vendor is always the State itself, which consequently takes a certain percentage (ἑσώγιος) of the purchase money, according to a sliding scale.

⁴ The inscription given by Otto, in *Hermes*, xlv [1906] 594 f., from Miletos, belongs to the 5th cent. B.C., or at latest to the beginning of the 4th cent., and certainly refers to the purchase of priestships. Nor is this the only example to be referred to a date before that of Alexander. Whether the origin of this traffic lay in Eastern, non-Hellenic influences cannot as yet be determined, but it seems likely.

religious sentiment are beside the mark. Naturally, under this system the tenure was for life (cf. D. 595, 603, and many examples).

5. Duties of priests.—These were partly liturgical, partly administrative. The Greek priest was in no sense a teacher, or expounder of dogma. His duties for the most part began and ended within the precinct of his own temple. Firstly, he must conduct, or at least superintend, the sacrifices and other ceremonies offered by the State or by private persons, making or indicating the proper prayers and invocations as being the duly appointed expert (cf. the parody in Aristoph. *Birds*, 865 f.: *λερεῦ, σὸν ἔργον, θύε τοῖς καινοῖς θεοῖς, κτλ.*; D. 594, 601. 9: *θύσει τὰ ἱερὰ τὰ δημόσια καὶ τὰ ἰδιωτικά*).¹ Secondly, the priest, like the dean of a cathedral nowadays, was personally responsible for the care of the fabric of the temple and the cultus image and contents of the shrine, and for conservation of the precinct (cf. D. 594. 24: *κοσμεῖν δὲ τὸν ἱερὴν τὸν ναὸν κατ' ἀμέραν ἐπιμελεσθαι δὲ αὐτὸν καὶ τὰς στοῶς τὰς πύλεις τῷ Ἀσκληπιεῖ ὅπως καθαρὰ ᾗ—at Chalkedon*). Where there was a *νεωκόρος* the priest's duties would be lightened (cf. D. 589. 6: *καὶ ἐπαναγκάζειν τὸν νεωκόρον τοῦ τε ἱεροῦ ἐπιμελεσθαι*). Illicit use of the precinct by trespassing stock, and mutilation of the trees within it, evidently caused much trouble (cf. D. 568; Paus. II. xxviii. 7). The priest was also responsible for decent and orderly conduct on the part of visitors to his temple,² and for observance of its special regulations (D. 592. 24: *ἐπιμελεσθαι δὲ καὶ τῆς εὐκοσμίας τῆς κατὰ τὸ ἱερὸν πάσης ὅν ἱερὰ ὡς ἂν αὐτῷ δοκῇ καλῶς ἔχειν καὶ ὁσίως, ἰ.ε. he is empowered to make by-laws*. Cf. Herod. v. 72 [priestess of Athene Polias at Athens forbids the Spartan king Kleomenes to enter her temple—*οὐ γὰρ θεμετὸν Δωριεῦσι παρέναι ἐνθάδε*], vi. 81 [a similar scene at the Argeian Heraion]). In the smaller temples and country shrines the financial administration also fell to his care (Ar. *Pol.* viii. (vi.) 8. 18 f.=1322n), but in general this belonged to State officials or boards (*ταμίαι, ἱεροποιοί, ἐπιμέληται*, etc.). These took over most of the active administrative functions that once perhaps had been solely in the hands of the priests—repairs, provision of victims and accessories, disposal of skins and offal, disbursements from the temple treasury, etc.³

Just as the administrative competence of the priesthood was much diminished in historical times, so also its ritual side in certain respects survived only in a somewhat mutilated form. In certain festivals it was still the duty of the priest or priestess

of particular cults to don the garb and mask and to impersonate the divinity (cf. Paus. vii. xviii. 12 [priestess of Artemis impersonates the goddess in the procession in honour of Artemis Laphria at Patrai—*ἡ ἱερωμένη παρθένος ὀχεῖται τελευταία τῆς πομπῆς ἐπὶ ἐλάφῳ ὑπὸ τῷ ἄρμα ἐξενυμένῳ*], viii. xv. 3 [priest wears mask of Demeter at Pheneos]). Sometimes also the priest must resume his primitive character as magician, and work spells, especially for rain (ib. ii. xii. 1 [wind spells at Titane], viii. xxxviii. 4 [rain spells by the priest of Zeus on Mt. I. kaion]). Both these occasional rôles are survivals of the primitive conception and the once normal duties of the priesthood.

A similar gradual narrowing of functions is observable when we consider more definitely what it was that the priest actually did in connexion with the act of sacrifice and worship.

In historical times his participation does not appear to have been essential on purely religious grounds, so as to make the sacrifice ritually effective; for many inscriptions specifically guard against the practice, not infrequent on the part of economical worshippers, of performing the ceremonies without invoking the assistance of the priest, in order to save his perquisite (cf. *L.S.* 33. 6: *μηδὲ καθαρμοὺς ποιῶσιν μηδὲ πρὸς τοὺς βωμοὺς μηδὲ τὸ μέγαρον προσώσιν ἀντὶ τῆς ἱστέας*; ib. 41. 7: *παραβόμια δὲ μὴ θύειν μηδὲνα ἐν τῷ ἱερῷ—a fine being imposed for breach of this regulation*). He would, in the larger shrines at least, use his own discretion about participation, whether invited or uninvited, according to the importance of the occasion. In Herondas, 4, where two women offer the poor man's offering of a cock in the Asklepieion of Kos, we hear nothing of the priest, but only of the *νεωκόρος* (cf. *L.S.* 66 [Oropos]). The perquisite, however, must always be given.

Originally, there is no doubt, the priest must actually have performed the sacrifice, slaying the victim with his own hand and dismembering it for offering, assisted by the worshippers and the temple servants. So in Hom. *Il.* iii. 271 f. the king both initiates the sacrifice by the ritual cutting of hair from the victims' heads (*τρίχας ἀπάρχεσθαι*) and subsequently himself slays them (so also in *Il.* xix. 252 f.; Eur. *El.* 791 f., where Aigisthos performs the sacrificial slaying, but by way of compliment invites Orestes to show his skill in slaying and dismembering the animal. Cf. Eur. *Iph. Taur.* 40: *κατάρχομαι μὲν, σφάγια δ' ἄλλοισιν μέλει*, and 623 f.: *ὁ δὲ σφαγὰς τίς; . . . εἰσω δόμων τῶνδ' εἰσὶν οἱ μέλει τάδε*, where the poet seems at pains to explain a departure from normal procedure). In the smaller temples the priest perhaps continued to perform this office; in others there were apparently special slaughterers (Paus. viii. xlii. 12: *λεποθύται*, at Pligaleia; D. 553. 19: *τοῦ λητουργούντος θύτου τῇ πόλει*, at Magnesia).

The special function of the priest was thus reduced, it seems, in general, to the preliminary ceremony of dedication by cutting the hair from the forehead of the victim, and to the formal prayer or invocation (*κατευχή*) and the placing of the parts of the sacrifice in due ritual manner upon the altar (cf. Aeschin. iii. 18, already quoted; Herond. iv. 79 f.). The temple law of the Amphiarion at Oropos in fact thus expressly defines the duty of its priest (*L.S.* 65. 26: *κατεύχεσθαι δὲ τῶν ἱερῶν καὶ ἐπὶ τὸν βωμὸν ἐπιτιθεῖν ὅταν παρῇ, τὸν ἱερέα, ὅταν δὲ μὴ παρῇ, τὸν θύοντα, καὶ τεῖ θυσίαι αὐτὸν ἑαυτοῦ κατεύχεσθαι ἕκαστον, τὸν δὲ δημοσίῳ τὸν ἱερέα*).¹

6. Privileges of priests.—Greek priests do not seem to have been able to claim any special privileges simply by virtue of their office, but such were freely bestowed. The inscriptions on the extant seats in the theatre of Dionysos (Athens) illustrate the grant of *προεδρία*; for special place in religious processions (cf. D. 653. 29: *ἐν δὲ ταῖς πομπαῖς ἀγέλωι Μναστράτος, ἔπειτα δὲ ἱερέος τῶν θεῶν οἱς τὰ μυστήρια γίνονται μετὰ τὰς ἱερέας, κτλ.*). Freedom from taxes (*ἀρέλεια*; cf. D. 592. 20), from war-service (D. 603. 14), right of *στέγησις ἐν πρυτανείῳ*, were some of the more highly prized privileges that might be bestowed upon particular priests.

¹ In Homer the two designations of a priest are *ἱερεῖς*, as sacrificer, and *ἀρητήρ* (*Il.* i. 11, v. 78: *ἀρητήρ ἑρέτρικο, θεὸς δ' ὧς ἱερό διμῷ*) as invocant, showing the importance of the latter aspect. So these two functions are pitched upon by Plato in his definition quoted above from *Pol.* 290 C.

¹ How far a priest had an exclusive right of sacrifice and prayer in his own temple is not quite clear; on the whole it would appear that he had no right of exclusion, as a rule, against ordinary decent people, subject of course to such by-laws as were locally in force. A worshipper would always be well advised in inviting the co-operation of the recognized expert, under pain of finding his private sacrifice vitiated through neglect of some ritual detail (cf. D. 633. 8: *καὶ μηδὲνα θυσιαῖς ἀντὶ τοῦ καθιδρυσαμένου τὸ ἱερὸν ἰδὼν δὲ τις βιάσθαι, ἀπρόσδεκτος ἢ θυσία παρὰ τοῦ θεοῦ—where note the absence of any sanction*). In 396 B.C. Agreilaos of Sparta, on his way to Asia, attempted to sacrifice to Artemis at Aulis (Plut. *Agres*, 6: *καὶ κατασφύγας ἐλαφόν, ἐκέλευσεν ἀπάρχεσθαι τὸν ἱαντοῦ μάντιν, οὐχ' ὥστερ' εἰδοὶ τοῦτο ποιεῖν ὁ ὑπὸ τῶν Βοιωτῶν τεταγμένος*). The Boiotarchs sent men to forbid it (*ἀπαγορεύοντες τῷ Ἀγροίλῳ μὴ θύειν παρὰ τοὺς νόμους καὶ τὰ πάτρια Βοιωτῶν*), and scattered his sacrifice from the altar. Here the ritual was confessedly irregular; and political considerations also came in—the Boiotians had no very tender conscience in regard to Panhellenic sentiment in this domain (cf. Thuc. iv. 97: *παραβάνοντες τὰ νόμιμα τῶν Ἑλλήνων*) in 424 B.C.

² On the other hand, in the case of the temple of Aphrodite Pandemos in Athens this duty fell upon the *ἀστυνομοί* (D. 550); but there the circumstances were naturally somewhat special.

³ For inscriptions relative to Athenian administration of temples see E. L. Hicks and G. F. Hill, *Manual of Greek Historical Inscriptions*, new ed., Oxford, 1901, p. 88 f. (Delos), p. 124 f. (inventories of the Parthenon treasures—of which lists there is an almost complete series extending from 434 to 404 B.C.). The financial management of great temples like that of Delos, with their vast accumulations of capital, was a matter of great importance; see W. S. Ferguson, *Hellenistic Athens*, London, 1911, p. 346 f.

Even more substantial, and more universal, were the rights of perquisite (*λεῖψονα, γέρα*).

These are carefully defined and enumerated in a large number of inscriptions. In general, the priest had a right to a leg (*σκέλος* or *κωλή*) of each victim, and very often to the skin,¹ to the skin not always, even in private sacrifices (cf. D. 601 14), and in the case of the great State sacrifices, in Athens at least, the *δερματικόν* was an important item of State revenue (cf. D. 620). In some instances the priest receives also, from the worshippers, a small fee at each sacrifice, probably to cover incidental expenses,² for wood, oil, etc.—all of which small accessories it was his duty to provide for those who wished to sacrifice (cf. Paus. v. xii 21. of the *ἐλαίης* at Olympia; D. 734 39 [Kos]). *παρχέτω δὲ καὶ ξύλα ποτὶ τὰν θυσίων* (D. 734 39 [Kos]). The priests of certain cults had also the right of *ἀγερῶν*, street collection of alms (D. 686 *ὑπὲρ ὧν ὁ ἱερεὺς τῆς ἰσῆος ἐθετο τὴν ἱκετηρίαν ἐν τῇ βουλῇ καὶ ἐγνώσθη ἐνομος εἶναι ἀξίων τῇ θεῷ καθύτι καὶ πρότερον ἀγείρειν, κτλ.*—evidently a case of appeal against restricting legislation' of Plat. Rep. ii 384 B, and 381 D. *Ἦσαν ἠλλοιωμένην ὡς ἱερῆαν ἀγείρουσαν*) This was mainly an Eastern custom which received little encouragement among the Greeks, and is somewhat strictly regulated—e.g., in the case of the cult of Artemis Pergna at Halicarnassus (D. 601 26: *ἐν ᾧ δὲ μὴ καὶ θυσία συντελείται ἡ δημοτελής, ἀγείρεται πρὸς τῆς θυσίας ἡμέρας τρεῖς ἐπ' οἰκίαν μὴ προνομμένη ὁ δὲ ἀγερῶν ἐστὶν τῆς ἱερέας*).

As a salaried office the priesthood is known in very few cases, notably in that of the priestess of Athene Nike in Athens, who receives fifty drachmai a year, together with the usual perquisite (*L.S.* 11; D. 911; Hicks and Hill, p. 59 f.). How far, if at all, the priest enjoyed the income from the temple endowment of lands, etc., is not known. The variety of the sources of wealth open to priests, as revealed to us from inscriptions, is very great (cf. Paus. i. xxxviii. 1). This, of course, gave them the means of enhancing the pomp of their processions, and of spending large sums upon the adornment of their temple, for which liberalities they were duly honoured, as appears from numerous decrees (e.g., D. 558).

7. Minor points—(a) *Tabus*—These apparently did not differ from those imposed upon all who would use the temple—avoidance of impurity from contact with the dead (cf. Paus. iv. xii 6 [Messene]); law of Kos, in *ARW* x. [1907] 400 f., and avoidance of certain foods, either permanently or for a season (cf. D. 683. 3: *καθαρῶς ὅσω δὲ ἀπὸ σκρόδων καὶ χοιρέων, κτλ.* See the curious regulation forbidding the priestess of Athene Polias to eat fresh Attic cheese (Strabo, p. 395: *τὴν ἱερῆαν τῆς Πολιάδος Ἀθηναίαν χλωροὺς τυροὺς τοῦ μὲν ἐπιχωρίου μὴ ἀπείσθαι, ξενικὸν δὲ μόνον προσφέρεισθαι, χρῆσθαι δὲ καὶ τῷ Σαλαμινίῳ*); cf. Porphyry, *de Abst.* iv. 5: *τοῖς τοίνυν ἱεροῦσι τοῖς μὲν τῶν ζώων πάντων, τοῖς δὲ τῶν ὕλων προστίτταται ἀπέχεσθαι βορᾶς, ἂν τε Ἑλληνικὸν ἔθος σκοπῆς, ἂν τε Βάρβαρον*). The priest of Poseidon at Pylos might not eat fish (Plut. *Quaest. Conv.* viii 8. 4), nor might the priestess of Hera at Argos eat red mullet (Plut. *de Sollert. Anim.* xxxv 11; of the reluctance of the Homeric Greeks to eat fish [*Od.* iv. 368 f., and J. G. Frazer, *Comm. on Paus.* vii 22. 4]). Probably similar tabus were operative to a much greater extent than is revealed by our literary sources. Yet regulations of the severity imposed upon the priest and priestess of Artemis Hymnia (Orchomenos) do not seem to have been in accord with general Hellenic practice, apart from the imported cults (Paus. viii. xiii 1).

(b) *Dress*.—Priests and priestesses wore no uniform distinctive dress, except that priests seem all to have worn the long ungirdled *χιτών* that once had been the ordinary civic dress (Thuc. i. 6; cf. sculpture, and especially vase-paintings). Fillets and chaplet were also probably worn by all, at least when officiating. Of the numerous titles borne by priests, according to the local usage, those of Stephanephoros and Daphnephoros are derived from distinctive accessories (Paus. ix. x. 4. *ἐπὶ κληῖς δὲ ἐστὶν οἱ δαφναφόρος· στεφάνους γὰρ φύλλον δάφνης φοροῦσιν οἱ παῖδες* [sc. the priest of Apollo Ismenios at Thebes]). The wreath, however, was as much a mark of the magistrate as of the priest. White was the usual colour of the dress, but purple is not infrequent—white being held appropriate for the heavenly powers and purple for chthonian deities (Plato, *Lysis*, 956 A: *χρώματα δὲ λευκά πρόποντ' ἂν θεοῖς εἴη καὶ ἀλλοθι καὶ ἐν ὑφ' ἡμῶν βύματα δὲ μὴ προσφέρειν ἀλλ' ἢ πρὸς τὰ πολεμικὰ κοσμηματα*). So the archon at Plataiai, who was also a priest, always wore a white dress, and was forbidden to touch iron, but exchanged his white for purple, and a sword, on the day on which he offered the great sacrifice to the spirits of those who fell in the Persian war (see Plut. *Arist.* 21 for the very striking ceremony). For various interesting regulations concerning dress see the Andania in-

scription (D. 653; cf. 939). The hair was worn long (Herod. ii 36: *οἱ ἱερεῖς τῶν θεῶν τῇ μὲν ἄλλῃ κομῶνται, ἐν Διγύπτῳ δὲ ξυρῶνται*; cf. Plut. *Arist.* 5).

(c) Something of the nature of an enthronement, with accompanying festivities, seems to be alluded to in D. 591. 22 *ἐπεὶ δὲ καὶ τὰν τιμῶν πᾶσαν καταβάλλῃ, ἀνατίθησθαι τὸ δὲ ἀνάλωμα τὸ ἐς τὰν ἀνθρώπων παρέξει αὐτὸς ἑαυτῷ*, but we know nothing further of any ceremony of consecration or inauguration.

Newton, *Essays on Art and Archaeology*, London, 1880, p. 136 f. (from epigraphic material).

W. J. WOODHOUSE.

PRIEST, PRIESTHOOD (Hebrew).—1. *Date of institution*.—Those portions of the OT which are most priestly in tone are latest in point of time. When we lay these aside and try to get a historic view, we discover that the earliest legislation¹ does not mention priests at all. It may be said that, where firstfruits and festival offerings are spoken of,² a priest is implied; but this is not necessarily the case. The earliest offerings, including tithes and firstfruits, were brought directly to the Divinity and presented to Him in a feast in which the worshipper and his family, with their invited guests, consumed the whole. For sacrifice it was not deemed essential to have any official. Many passages of the OT show that the ritual was familiar to every adult male of the clan and that any man could perform the ordinary acts of worship.

It does not follow, however, that priests were unknown even in the earliest stages of Israel's religion. For other purposes than sacrifice a priest is implied even in the earliest documents. When the Covenant Code provides that cases of dispute shall be brought before God,³ it thinks of the sanctuary as a place where the will of the Divinity is made known. But this clearly implies that there is some person to interpret that will to men. When the narrator speaks of the perplexed Rebecca going to 'seek Jahweh,'⁴ he has in mind an oracle and its interpreter. From this point of view we understand the primitive priesthood.

2. *Designations*.—The Hebrew word for 'priest' is *kohen*, and the corresponding Arabic word (*kāhin*) means 'a soothsayer'—more exactly, as we learn from the Arabic lexicographers, one who has a familiar spirit to tell him things otherwise unknown. This 'priest' is the familiar friend of a god or demon, and his interpreter to those who seek him.

The priestly caste, however, is designated by another word in Hebrew, the explanation of which is not so easy. To understand it, we must think of the many sacred places in the land which offer an asylum to fugitives or criminals. It would easily happen that the broken man, who was outlawed by his kin, one who had survived the massacre of his family, would settle in such a place under the protection of the god as his client. Gradually he would become acquainted with the customs of the place; if susceptible, he would receive intimations of the god's will in dreams of the night or visions of the day, and would serve as guide to strangers who resorted to the place. Thus the man would become an attaché of the

¹ So in Sparta the kings receive as perquisite the skins of all State sacrifices (Herod. vi. 56: *τῶν δὲ θυσιῶν ἀπάντων τὰ δερμάτα τε καὶ τὰ νύκτα λαμβάνειν σφέας*. Cf. Hom. *Od.* iv. 65).

² In D. 591 (Kos) certain categories of worshippers apparently receive the privilege of paying a lump sum of five obols to cover all such incidental charges—*πέντ' ὀβολὸς διδοῦσας ἀποκλείσθαι τὸν ἄλλον ἀναλωμάτων πάντων*.

³ The Covenant Code, Ex 20-23.

⁴ Ex 23:19; the occurrence of tithes in the story of Bethel (Gen 28:22) is parallel.

⁵ Ex 22:7n.

4 Gen 28:22.

place, a slave of the god, as he would doubtless delight to call himself. The Hebrew word for 'one attached to another' is *lēwī*, which we translate 'Levite,' but which originally meant one 'joined' to a person or place.¹ The Levite is the priest viewed as an attaché of a sanctuary; the *kōhēn* is the same person ministering as the interpreter of the oracle.

We may illustrate the state of things in Israel 3000 years ago by what is found in Syria to-day. That country, we are told, is full of local shrines dedicated to saints—Christian or Muhammadan. Each shrine has one or more attendants who are supported in part at least by the sacrifices, generally receiving the hide and one of the quarters of the slain animal. The office is usually hereditary, though cases are known where a boy is given to the saint and becomes his slave. Holy men connected with the shrines claim prophetic power.² So priests and prophets were both found at the sanctuaries in Israel. Samuel was a boy who was presented to the Jahweh of Shiloh, and he would have succeeded to the priestly office had the sanctuary not been destroyed. At the same time he developed prophetic powers which made him the vehicle of the divine will, though not bound to any one place.

Of the two Hebrew words *lēwī* and *kōhēn*, one came to designate the man qualified to act in divine things, the other described him as officiating at a sanctuary. This is well brought out by a narrative in the book of Judges (ch. 18).

Here we read of a man named Micah who had an idol of precious metal. At first he set apart one of his sons as its attendant. But one day a stranger announced himself as a Levite from Bethlehem. Micah recognized his opportunity and engaged him. The way in which he congratulated himself on having a Levite for priest shows the light in which the professional was looked upon. There was nothing illegal in the ordination of the layman who had first undertaken the office, but it was in every way better to have a man who belonged to the gild.

If we may argue from this case, the Levite was often obliged to seek his living by entering the service of strangers, and we can see how the decline in the popularity of a sanctuary might force its attendants, or some of them, to emigrate.

3. Functions.—The earliest priests, then, were not sacrificers, but guardians of the sanctuary and its treasures—gold or silver images or utensils would need such—and interpreters of the oracle. The last point must be borne clearly in mind. It comes out in the story of Micah, for, when the Danites came to the house of Micah, they asked a response from Jahweh. So favourably were they impressed by this experience that they carried off image and priest and settled them in their new possession. In the history of Saul we find a priest with an ephod in the camp,³ and no step was taken without the approval of the oracle. When the priests of Nob were massacred, the one who escaped brought the ephod to David and gave him counsel in the same way.⁴ Whatever theory we may adopt concerning the ephod, we must recognize in it the instrument by which the priest ascertained the divine will. The ephod remained the property of the priest down to the latest time, as did the Urim and Thummim, which we know to have been the sacred lot.

The technical name for the instruction given by the priest is *tōrāh*. From the earliest to the latest period of Israel's history, it is assumed that *tōrāh* belongs to the priest. The severe arraignment of the priests by the older prophets specifies their

neglect of the teaching function as their most serious crime.¹ The priests of other nations were supposed to have the same duty as those in Israel. When the Philistines were at a loss how to treat the Ark, they consulted their priests, who told them the proper method.² Jeremiah speaks of the priests as those who handle *tōrāh*, and, when Haggai wants to know about a matter of ritual cleanliness, he seeks *tōrāh* from the priest.³ Even the Priestly documents, which lay stress on the sacrificial duties of the priest, speak of imparting *tōrāh* as one of his offices. The activity of the priest at the examination of the leper and at the ordeal of jealousy⁴ is therefore in line with his earliest duties. From giving responses in answer to such legal questions as were brought before him, the priest easily assumed the office of judge. Both Deuteronomy and Ezekiel indicate that the priests act as judges, and the earliest picture drawn of Moses shows that he was as much priest as prophet in making known the decisions of Jahweh.⁵

4. Priestly and prophetic ideals.—The Levites early traced their origin to a common ancestor. Whether there was a clan or tribe that bore the name 'Levi' before the rise of the priesthood is a question on which scholars are not agreed. (a) In the *Testament of Jacob*⁶ we find such a tribe spoken of in terms used of its brother tribes. It is coupled with Simeon in a denunciation which ends with the threat to scatter them in Israel. Of Simeon we know that he was ground to pieces in the struggles between Israel and the frontier Bedawin. It is natural to think of Levi as scattered in a similar way. But this is not a necessary inference. The author of the poem, living in the time of Solomon, may have inferred the threat from the scattered condition of the gild—a fact which must attract attention from its singularity.

(b) The next mention of Levi shows a considerable advance in the esteem in which the tribe was held. It is contained in the poem called the *Blessing of Moses*. Here we read:

'Thy Urim and thy Thummim belong to the man of thy friendship
Whom thou didst prove at Massah,
For whom thou didst strive at the waters of Meribah;
Who says of his father and his mother: I have not seen them,
He does not recognize his brothers and does not know his sons;
For they keep thy word
And they guard thy covenant;
They teach Jacob thy judgments
And Israel thy *tōrāh*;
They bring fragrance into thy nostrils
And whole burnt-offerings upon thine altar' (Dt 33:8-10).

The change of tone between this and the preceding must be evident. Here the tribe or gild is said to be isolated because its members have chosen to ignore father and mother, brothers and sons, for the sake of Jahweh. The priesthood is the reward of this disregard of the ties of kindred. And the great leader and prototype of this calling is Moses, who was tried at Massah and Meribah. We recall that Moses was an outcast for the sake of his devotion to his mission, and that he was priest as well as prophet. One thing more comes into view in this poem. This is that the Levites are now the ministers of the altar. They not only teach the *tōrāh*, but also burn the sacrifices. It is not asserted that they have an exclusive right to do this, and in fact it is very doubtful whether an exclusive right could have been established in the face of early example. The earliest legislation makes it the duty of every Israelite to erect a

¹ The writer of Nu 18:7 and 28:10 is aware of the original meaning of the word *lēwī*, and plays upon it (see A. Kuenen, *National Religions and Universal Religions* [HL], London, 1882, p. 881).

plain altar of earth or unhewn stone in every place where he discovers traces of God's presence, and there to offer his sacrifices. The exclusive right could hardly have been established where this law was distinctly in mind. But it is clear that at the more conspicuous sanctuaries the ritual would, as it became more complicated, fall more and more into the hands of the official ministers.

(c) The *Blessing of Moses* was written some time after the division of Israel into two kingdoms. It shows that at that time the Levites were regarded as an organism, and that to them belonged preferential rights to minister at the altar as well as to manipulate the sacred oracle. The next document of importance is the book of Deuteronomy. To understand its position we shall have to recall the sharp polemic of the prophets against the popular worship. These preachers of righteousness believed that the cultus was useless because Jahweh required something very different, viz. righteousness between man and man; or else they believed it to be an abomination to Him because it was really offered to another divinity. In the condemnation which the prophets so emphatically utter the priests have their full share. The sanctuaries are represented as centres of moral corruption, and the priests are active fomenters of what by their calling they ought to oppose. The people perish for lack of knowledge, because the priests, whose business it is to teach the will of God, neglect their duty. This state of things is not confined to the northern kingdom. In Judah also we hear of priests who are drunken, ignorant, profane, violent, and addicted to lying.¹ Hosea, Isaiah, and Jeremiah are the witnesses to these charges.

The author of the book of Deuteronomy was a practical man. He was in sympathy with the prophetic ideas, but he saw that the cultus could not be dispensed with. Vested interests were on its side, and the craving of the heart for religion needed the traditional ordinances. His book therefore represents a compromise between prophets and priests. We learn from him that all priests belong to the class of Levites and that all are entitled to the same rights and privileges. In fact he usually speaks of them as 'Levite-priests.'² Although in some cases he uses the simple term 'Levite,' he nowhere intimates that there was any difference of function between a Levite and a Levite-priest. The Levites are called carriers of the Ark (the carrying of the Ark is elsewhere assigned to the priests); the Levite-priests have charge of the curious expiatory rite over the body of a man found slain; disputes are to be brought to the central sanctuary, there to be decided by the Levite-priests, such decision being, as we have seen, a distinctively priestly function. In a passage in Jeremiah, which is in the tone of Deuteronomy, we learn that the Levite-priests shall have the privilege of offering burnt-offerings and of performing sacrifice for ever; and in the same connexion we find the Levites described as the priests who minister to Jahweh.³

The thing that comes prominently into view in reading this author is the poverty of the class as a class. While we may suppose that the great sanctuaries, especially those which had kings for their patrons, gave an adequate support to their officials, the mass of the Levites connected with the village high places were dependent on the charity of their neighbours. They are mentioned along with the widow and the fatherless, and commended to the benevolence of the people. The

Levite is to be invited to the family feast, for 'he has no portion or lot with thee.' Tithes and free-will offerings are to be shared with the Levite, and every third year the tithe is to be wholly distributed among the needy, the Levite being expressly mentioned. This care for the Levite extends to the time when, as the author intends, the country sanctuaries shall be done away in favour of the exclusive right of the Jerusalem Temple. The privation that will thus be inflicted on the priests of these shrines is in the author's mind, and he directs in so many words that the deprived Levites shall be admitted to the service at Jerusalem on the same terms as the priests already in possession. This provision was never carried out, but the enactment shows what now interests us—that the author knew no difference between priests of one sanctuary and those of another.¹

(d) As Deuteronomy exerted a great influence by its union of priestly and prophetic ideals, so the next step was taken by a man who united the two offices in his own person—Ezekiel, a priest by birth and a prophet by calling. He was fully possessed by the idea of the earlier prophets that the calamity which had overtaken Israel was the punishment for sin. But his priestly training made him look upon sin as a trespass upon ritual requirements. Ritual and ethical transgressions were alike violations of the holiness of Jahweh. The problem of the future was to prevent the intrusion of either on the isolation in which the Deity lives. The problem was solved in the programme drawn up by the prophet, the foundation principle of which is that only consecrated persons and consecrated things shall approach the place of worship.

The distinctness with which this matter is formulated shows that Ezekiel was conscious of introducing something new. In fact, the kings of Judah had been accustomed to have the inferior offices of the sanctuary performed by slaves of foreign origin, whom they presented to the Temple or to the priests. Ezekiel's statement and his correction of the abuse are combined in the following passage:

'Enough of all your abominations, house of Israel, that you have brought foreigners uncircumcised of flesh and uncircumcised of heart into my sanctuary to pollute it when you offered my bread, the fat and the blood, and broke my covenant by all your abominations! You did not keep guard over my sacred things, but set them as guards over my sacred things in your stead. Therefore thus says Jahweh: No foreigner uncircumcised in heart and uncircumcised in flesh shall enter my sanctuary. . . . But the Levites who departed from me when Israel wandered away after their idols—they shall bear their guilt; they shall be in my sanctuary, serving in the place of sentinels at the doors of the House and serving the House. They shall slay the burnt-offerings and the sacrifices and shall stand to serve them. . . . They shall not approach me to act as my priests to approach the most sacred things. . . . But the Levite priests, the sons of Zadok, who kept watch over my sanctuary when the sons of Israel wandered from me, they shall come near to serve me, and they shall stand before me to present fat and blood, says the Lord Jahweh. They shall come into my sanctuary, and they shall approach my table to serve me' (Ezek 44:8-10).

The innovations which are thus made part of the new law are two. (1) The entrance of any but consecrated persons into the Temple is strictly prohibited; even the worshipping Israelite is debarred, as we learn elsewhere. (2) The consecrated persons are divided into two classes. For the first time the family of Zadok receives special duties and privileges. Below them stand the Levites, who are to have the menial offices once in the hands of the Temple-slaves. With regard to the promotion of the sons of Zadok, we may say that Ezekiel only sanctioned a *status quo*. This family was in hereditary possession of the Jerusalem priesthood. The book of Deuteronomy had

¹ Hos 4:1-2; Zeph 3:4, Is 28:7, Jer 23:6, 35:10.

² Dt 17:9, 18:24; cf. Jos 8:33, Jer 33:18.

³ Cf. Dt 32:25, where the Levites are called carriers of the Ark, with Jos 8:3, 1 S 6:18, 2 S 15:24; further, Dt 21:5, Jer 33:17-22, and Dt 18:5.

¹ Dt 18:6-8, 12:12, 18:1, 14:27, 20, 16:11, 14, 26:11.

demanding that the Levites from the country sanctuaries be admitted on an equality with those already in possession. But the most that the immigrants had been able to secure was admission to the lower offices. Ezekiel gave the stamp of his authority to this arrangement and thus introduced a new period of ecclesiastical history.

(e) What took place in Jerusalem in the time of Darius at the rebuilding of the Temple is not very well known to us, but one thing stands out distinctly: the chief priest at once assumed a prominent position in the community. This was inevitable, because the unity of the Jews was no longer political but ecclesiastical. There are, indeed, indications that Joshua, the chief priest, was the object of enmity on the part of some—whether rival claimants to the office or defenders of the rights of the secular authority cannot distinctly be made out. While Zerubbabel, a scion of the house of David, was civil governor, the community seems to have cherished the hope that the civil and ecclesiastical powers would work harmoniously¹ for the introduction of the Messianic kingdom. Perhaps for this very reason the Persians thought it unwise to retain Zerubbabel in office. His removal left the chief priest the highest Jewish dignitary in the country, and there was no check to the growth of his influence. This prominence of the chief priest was quite apart from Ezekiel's thought, for he makes no mention of such an officer.

(f) Nevertheless the ideas of Ezekiel did work. The evidence is found in the two documents which are dominated by the priestly ideal—the Priest Code, now embedded in the Pentateuch, and the books of Chronicles. They differ from Ezekiel in that he located his ideal commonwealth in the future, while they place theirs in the past. The divergence of their picture from the one drawn by earlier historical writers did not trouble them. They were not writing history, even when they seemed to themselves to be doing so; they were embodying an idea. That idea was Israel, not as a political community, but as a Church whose only business was to carry on the worship of God.

The central object in the wilderness wandering is therefore the Tabernacle, and the Tabernacle as nearly like the historic Temple as a movable building could be like one of stone. Its plan was exactly the same as that of the Temple, the dimensions being reduced one half. In ornamentation it was not inferior, for the imagination of the author was able to furnish gold and gems and the finest stuffs even in the desert of Sinai. This dwelling of Jahweh in the midst of His people is exactly the ideal of Ezekiel, though Ezekiel did not suppose it had been actual in the past. What immediately concerns us is that the staff of attendants assigned to this sanctuary also realizes Ezekiel's idea.

The Tabernacle has the whole tribe of Levi assigned to it to care for it, and the tribe is divided into the two classes of priests and Levites. In the representation made by the author the historic process is exactly reversed; i.e., instead of the whole tribe being taken and then the family of Aaron being separated to their special duty, the family of Aaron is first consecrated to the priesthood and then the rest of the tribe is assigned to this family as helpers. The enormous number of Levites finds an ostensible justification in the necessity of taking down the Dwelling and transporting it. Yet the discrepancy between the three priests and the 22,000 Levites remains surprising and even grotesque.

Ezekiel ordains that the Levites shall camp about the Temple; so our author makes them camp around the Dwelling in the desert. The

importance of having consecrated persons in this position to guard the sanctuary from the danger of pollution is seen in the consecration of the Levites. They are purified by the triple rite of sprinkling with holy water, washing of clothes, and a purificatory sacrifice. Thus prepared, they are 'waved' by Aaron in imitation of the presentation of a sacrifice. The significance of the whole is to indicate that the Levites are given to Jahweh by the Israelites, and by Him in turn given to Aaron and his sons to assist in the service.

The priesthood is the prerogative of Aaron and his sons. How Aaron came to take the place of Zadok, to whom Ezekiel gave the office, is still a mystery. Earlier indications are that Aaron was connected with the calf-worship of Bethel. Between Ezekiel and the time of the Priestly writer some influence of the northern kingdom must have made itself felt in Jerusalem. The fact stands out quite clearly that in the Priest Code Aaron and his sons are fully established in the priesthood. The whole responsibility for the service is theirs; they bring the blood of the sacrifice to the altar, burn the fat, offer the unbloody gifts. It is their duty to light the lamp in the sanctuary, to eat the 'bread of the presence,' and to burn incense within the Dwelling. For them the ritual of the great festivals and of the daily offerings is laid down.² For them also the author includes in his book the so-called Holiness Code³—a body of regulations drawn up in the Exile for the government of the priests in their daily life.

It will be seen that the office of the priest has now become mainly sacrificial. But the old theory of his duty as interpreter of the will of God still remains in such cases, e.g., as the inspection of leprosy. Here the priest appears as examiner and judge of the kind of infection, and director of what is to be done for the ritual restoration of the afflicted person to the community. The difference between the present system and the earlier administration of the oracle is that now everything is laid down in a book by which the official must be guided. The result of thus formulating the cultus is to deprive it of its old character as an expression of joy and gratitude on the part of the worshipper, and to emphasize it as an *opus operatum* by which alone the relation between Jahweh and His people is kept intact.

The prominence of the chief priest in the post-Exilic community has already been spoken of. In the Priestly document his position is made sure by divine appointment. In him, in fact, the culmination of the sacerdotal system is found. It is he who represents the people before God, and whose ministrations secure them the divine grace. He it is who once a year goes alone into the Most Holy place to restore the purity of the dwelling and of the people. No part of the OT is more familiar to Christian and Jewish students than the ritual of the great Day of Atonement. Its solemnity indicates the intercessory value of the high-priest. But the sacerdotal head of the community is also in this writer's mind the political head. His vestments are regal, and they are meant to be so. He wears a tiara which cannot be distinguished from a kingly crown, a robe of royal purple, gold and gems of untold value. In the theory of the code there is no one above him in rank. Moses, indeed, may be said to be his superior, in the sense in which the king-maker is above the king. But this is because Moses was the necessary inaugurator of the new state of things—a special organ of divine grace, who is to have no successor. The civil ruler in his relation to the high-priest is represented by

¹ Lv 1 and 2; Nu 28 and 29.

² Lv 17-26, based no doubt on earlier tradition.

³ Zec 3 and 4, cf. 6:11.

Joshua in his relation to Eleazar, and it is plainly one of inferiority.¹

The book of Chronicles is wholly of the mind of the Priest Code in recognizing the difference between priests and Levites. But the author, who was perhaps himself a Levite, takes great interest in the lower clergy. In a part of his work we find (perhaps under the influence of tradition) the post-Exilic community divided into Israel, priests, Levites, Nethinim, and the sons of Solomon's servants. In another place the door-keepers and singers are found between the Levites and the Nethinim.² The Nethinim (*q.v.*) we know to be descendants of those Temple-slaves to whom Ezekiel objected, and the sons of Solomon's servants were one particular class of the same order. Ezekiel's regulation had not been able to overcome the traditional claim of these men to a place in the hierarchy. What actually took place was the absorption of all classes of lower clergy into that of the Levites. The Chronicler shows a purpose to defend this absorption and establish its legitimacy. This he does by dating the organization of the Levites (into gilds of singers and door-keepers) in the time of David.³ His desire to magnify the office of the Levites leads him to vindicate for them the function of teaching the Law. He pictures them also as having in charge the sacred vessels of the Temple as well as preparing the shewbread and the sacred ointment.⁴

The Levites never assumed the importance in actual life which they had in the system of the scribes. The inferior offices fell into the hands of the priests, while the high-priestly family formed an aristocracy which arrogated the higher functions to itself. In Maccabean times and later we hear of higher and lower orders of priests, but scarcely any mention is made of Levites. The reason for this is not far to seek. The income of the Temple was never sufficient to support the large body of attendants provided by the Law; and what came to it was seized by the higher orders of the clergy. The economic situation is revealed by the list in the book of Ezra, which gives one in seven of the population of the restored commonwealth as priests. It was impossible for a poor people, who had to pay taxes to the Persian power, to support so large a body of Temple-servants.

5. Revenues.—In conclusion a word must be given to the matter of priestly income and support. In the earliest times there was no fixed income for the priest. Some portion of the sacrifice was given to him by the offerer, and the hide of the slain animal came to him from the nature of the case. Deuteronomy goes so far as to legislate on this as on some other subjects. It gives the priest the shoulder, the cheek, and the maw of the sacrifice.⁵ In this book we also have mention of the firstfruits and the tithe. These were not given to the priest directly, but were brought to the sanctuary, where they were consumed in a joyful feast by the one who brought them—the priest being invited to share, no doubt. Every third year, however, this author directs that the tithe be distributed to the needy classes, among which the Levites were counted, as we have seen.⁶

The advance in ideas is seen in the Priest Code, which ordains distinctly that a tenth part of the produce of the land is to be given the Levites for their support. The firstfruits are also disposed of in the same way, the sin-offerings and trespass-offerings become the property of the priests, and a yearly tax of half a shekel is laid upon each male

Israelite for the support of the sanctuary.¹ In fact the provision, if carried out, would have given adequate support to the whole sacerdotal caste. But the difficulty in collecting so heavy a tax must be evident. The theory of the Law gave the priests a tenth of the tithes collected by the Levites, and logically the high-priest would receive the tenth of what came to the priests, but this is nowhere enjoined.

A purely ideal construction is the assignment of cities with pasturage, though without farms, to the Levites, a certain number of them going to the priests. Almost all the towns of importance in the country are thus given to the Levites by the Priestly writer. The earlier historical writers know nothing of any such arrangement, and in fact to them the most striking mark of Levi is that he received no territory at the conquest and settlement of Canaan.

LITERATURE.—An enormous literature exists on this subject. The older view is to be found in J. H. Kurtz, *Sacred Worship of the OT*, Eng. tr., Edinburgh, 1833, K. F. Kell, *Handbuch der bibl. Archæologie*, Frankfurt, 1875, pp. 166-196; and A. Kohler, *Gesch. des AT*, Erlangen, 1875-86, i. 375-385. The critical view is indicated by J. K. W. Vatke, *Die Religion des AT*, Berlin, 1835, and is more fully developed by A. Kuenen, *The Religion of Israel*, Eng. tr., London, 1873-75, ii. 202-307. The best discussion is that of J. Wellhausen, *Proleg. zur Gesch. Israels*, Berlin, 1906, Eng. tr., *Prolegomena to the Hist. of Israel*, Edinburgh, 1885, pp. 121-164. More elaborate, but not more convincing, is W. W. Baudissin, *Die Gesch. des alttest. Priesterthums*, Leipzig, 1889. A. van Hoonacker attempts to establish an unhistorical view in a work of great learning entitled *Le Sacerdoce lévitique dans la loi et dans l'hist. des Hébreux*, Louvain, 1899. Mention may be made also of S. Maybaum, *Die Entwicklung des alttest. Priesterthums*, Breslau, 1880; and the *Hebrew Archaeologies* of W. G. H. Nowack (2 vols., Freiburg, 1894), and I. Benzinger (2do. 1907). Special points are treated by J. Braun, *Vestitus Sacerdotum Hebræorum*, Amsterdam, 1680; J. Selden, *De Successione in Pontificatum Hebræorum*, London, 1636; S. I. Curtiss, *The Levitical Priests*, New York and London, 1877 (a reply to Kuenen); further, a discussion on the origin of the Aaronite priesthood by R. H. Kennett and A. H. McNelle in *JThSt* vi. [1904-05] 161-186, and vii. [1905-06] 1-9. Recent discussions are luminously reviewed by Kuenen in an essay entitled 'Die Gesch. des Jahwepriesterthums und das Alter des Priestergesetzes,' in his *Gesammelte Abhandlungen zur bibl. Wissenschaft*, tr. K. Budde, Freiburg, 1894. The Jerusalem priesthood in the time of Christ is described by A. Edersheim, *The Temple: its Ministry and Services as they were at the Time of Jesus Christ*, London, 1874, pp. 89-78; and by E. Schürer, *GP* ii. 224-305, Eng. tr., *HJP* ii. i. 195-272.

HENRY PRESERVED SMITH.

PRIEST, PRIESTHOOD (Hindu).—1. Rigveda.—As a collection of sacred poetry covering in all probability the period from 1200 to 1000 B.C., the *Rigveda* cannot be expected to afford any complete picture of the actual position occupied by the priests in the age in which the hymns composing it came into being. It represents only the priestly activity of a limited number of families among a certain body of Vedic tribes settled for the most part in the country later known as Madhyadesa, and there is no probability that it completely mirrors that activity on all its sides. But the information which it does afford is consistent and, so far as it goes, gives a clear picture of the sacerdotalism of the period.

The priestly function appears to have lain entirely in the hands of a special class, to which appertained the duty of acting as the instrument of securing the divine favour. There is nothing in any hymn of the *Rigveda* to suggest that it was composed by a man of other than the priestly class, though of course it is impossible to prove that the authors were all priests. Later tradition² indeed asserts that the author of one hymn (x. xcviii.) was Devāpi Arṣiṣena, a prince of the Kuru family, but the hymn itself makes no such statement, and Devāpi appears in it in a purely priestly capacity. The tradition of the *Brāhmaṇas* treats occasionally as of royal origin great priests of the *Rigveda*, such as Viśvāmitra and the more

mythic Prthī Vainya, and, still later, tradition ascribes several hymns to royal authorship, but none of these traditions has any support in the actual text of the *Saṁhitā*. On the other hand, the collection is full of references to the activity of the priests under the generic title of *brahman*, and to several different kinds of priests, and the hereditary character of the priesthood is attested by the word *brāhmaṇa*, 'descendant of a *brahman*.' Moreover, there is abundant proof in the *Saṁhitā* itself that, as in the immediately following period, the *brahman*s worked in the service of kings or wealthy nobles, whose generosity in sacrificial gifts is celebrated in the *dānastutis* appended to several hymns; the amounts of the gifts recorded are too great to be accepted as genuine records, but they at least prove that the priests already set upon their services the highest value. Side by side with these praises of the generosity of patrons and with broad hints to others to follow their example in the form of encomia on generosity, there are many proofs of the extremely good opinion of themselves entertained by the *brahman*s, though it is not clear in any passage that they had yet arrogated to themselves the description of gods on earth which they claimed shortly afterwards. They seem to have adhered as strictly as possible to their own occupation; if priests like Vasiṣṭha and Viśvāmitra appear as assisting their princes in battle, doubtless it was by their priestly power, not by their prowess in arms. But the priestly sphere included in all probability medicine, for one poet declares (IX. cxii.) that his father is a physician—an occupation in which, to judge from all analogy, the use of spells would be of the highest importance. Naturally enough, the *Rigveda* contains very little of this side of priestly activity, but in its tenth and latest book there are found certain spells which touch on the medical art, one against the disease Yakṣma (X. clxiii.) and two to preserve the life of a man lying at the door of death (X. lvi. 1, lx. 7 ff.). These hymns, with a few others, containing spells to procure offspring, to destroy enemies, and to oust a rival wife from a husband's affections, constitute, in conjunction with the funeral and wedding hymns, practically the only sign in the *Rigveda* that the activities of the priests extended to the ordinary affairs of human life, the domestic ritual which is of so great importance in modern India. It is probable that, as in the next period, the activity of the priests was confined in the main to the greater sacrifices and to such only of the domestic rites as had begun to assume special importance; the wedding hymn (X. lxxxv.) bears clear marks of comparatively late origin and is not primitive in character, and the funeral hymns exhibit a decidedly complicated and refined religious belief.

It has proved impossible to trace to the *Rigveda* the full sacrificial liturgy of the following period, but the hymns abundantly prove that there already existed much complication of ritual and subdivision of function among the priests. The main subject-matter of the *Rigveda* is clearly the *soma*-sacrifice, and it was precisely in this sacrifice that the greatest number of priests was required. In one passage (II. i. 2) to the god Agni are assigned the offices of *hotṛ*, *potṛ*, *neṣṭṛ*, *agnīdh*, *praśāstr*, *adhvaryu*, and *brahman*, as well as that of the lord of the house for whom the sacrifice is being performed. We hear also of an *upavakṭṛ*, who is doubtless to be identified with the *praśāstr*, as his business is to give directions to the *hotṛ*, of an *udagrābha*, and a *grāvagrābha*, and of two *samitṛ*s. The latter are doubtless the slayers of the victim, who in the later literature rank merely as attendant priests, their function of killing probably having tended to lower them in rank compared with the ordinary priests,

while the two former, whose functions, to judge from their names, must have been the drawing of the water and the taking of the pressing stones required for the sacrifice, disappear as special priests from the later ritual. There are also mentioned *sāman*-singers in general and the *prastotṛ* and *udgātṛ* in particular. These various priests fall clearly into three divisions, according as their main business was the recitation of hymns to accompany the offering, or the actual manual acts of sacrifice, or the singing of songs. It is probable enough that the original ritual was of simpler character, and that the actual sacrifice and the uttering of prayer were entrusted to one priest; this conclusion, based on *a priori* grounds, is strongly supported by the fact that the name for the reciter of hymns is *hotṛ*, a term which denotes the 'offerer' of the oblation, but the evidence of the Avesta agrees with that of the *Rigveda* in showing a multiplicity of priests, so that it is fair to conclude that the specialization of the ritual is prior to the separation of the Iranians and the Vedic Indians. At any rate in the *Rigveda* the *hotṛ* is the reciter of hymns celebrating the feats of the gods who are to partake of the offerings, and to him also we must assign the verses to accompany the actual offering, series of which occur in the *Saṁhitā*. Closely associated with the *hotṛ* was the *praśāstr*, at whose instigation the *hotṛ* recited his litanies; doubtless it is he who is meant when in the *Āpril* litanies of the animal sacrifice the two *hotṛ*s are referred to. The *brahman* of the *Rigveda* is probably the name of the priest later called *brāhmaṇāchchhainsin*, an assistant of the *hotṛ*. Of the second group of priests the *adhvaryu* is in the later ritual, and probably enough in the *Rigveda*, already the chief of the officiants at the actual sacrifice; the *potṛ*, or cleanser, is paralleled by the Avestan *āsnatere*, the *agnīdh* by the *ātarevakhsha*, who, like him, is charged with the care of the sacred fire, while the *neṣṭṛ*, or leader, may already have had the function from which he, later at least, derives his importance as the leader up of the wife of the sacrificer to play her part in a fertility ritual in the course of the *soma*-sacrifice. The *sāman*-singers had even in the *Rigveda* a double duty. on the one hand, they had to recite the addresses to Soma Pavamāna which are collected in the ninth book of the *Saṁhitā*, and, on the other, they had to sing songs addressed to the deities to which the *hotṛ* recited the hymns. The singing of *sāmans* was doubtless, in the form in which it occurs in the *Rigveda*, a much elaborated form of the ritual, and it is worthy of note that the list of priests given in II. i. 2 does not include any singer.

In addition to those priests who were engaged in the performance of special sacrifices for which they were selected by the sacrificer as occasion required, the *Rigveda* mentions the *purohita*, the domestic priest of the king or of some wealthy noble. It may be assumed that he himself performed the domestic ritual of the king, but at the great sacrifices he probably merely superintended the whole rite. There is, however, clear evidence that he might act as the chief of the priests, the *hotṛ*. Agni is both the *hotṛ par excellence* and the *purohita*; the two divine *hotṛ*s of the *Āpril* litanies are also called (X. lxx. 7) the two priests—the *purohitas*. Unlike the other priests, the *purohita* was not merely in the constant and intimate service of the king, but he was closely concerned with the king in his more worldly functions. Viśvāmitra, Vasiṣṭha, and others appear to have taken part in their priestly capacity in the wars of their kings, and the hymn X. xcviii. records the activity of Devāpi for his master Śantanu and its success. It was rather from the *purohitas* than from the

ordinary sacrificial priests that the high claims of the *brahmanas* to priority in the State proceeded.

Great as the position of the priest clearly was in the Vedic community, he does not claim as yet to be powerful enough to constrain the gods to his will; it is probable enough that in his own view and that of the people he was possessed of magic powers; we have indeed in the *Rigveda* (X. cxxxvi.) the mention of a *muni*, one of those divinely inspired ascetics who figure in all the life of India. But on the whole the relation of the priests of the *Rigveda* to the gods is that of devout worshippers who seek by skilful song and well-paid offering to win the favour of the god for the sacrificer, in whose service they are.

2. *Brāhmanas*.—In the *Brāhmana* literature, which covers the period up to the 6th cent. B.C., the priesthood appears quite definitely as a separate class, contrasted with the Ksatriya, or warrior class, the Vaiśya, representing the main body of the people whether engaged in agriculture or trade, and the servile Śūdras. The priesthood was normally hereditary, but the class system at this period and much later still allowed marriages between priests and women of inferior castes, and, though priests might be despised, as were Kavaśa Ailūśa and Vatsa, for descent real or alleged from slave-girls, still they were not thus necessarily be regarded as excluded from priestly functions. Nevertheless, much stress is laid on descent from a *ṛṣi* and on purity of origin, and certain ceremonies could be performed only by priests who fulfilled the prescribed condition of birth in a family which for a number of generations had practised the rite. On the other hand, there are assertions (e.g., *Kāthaka Samhitā*, xxx. 1) that what matters is not descent but learning, and we actually hear in the *Chhândogya Upaniṣad* (IV. iv. 4) of Satyakāma Jābāla, who was allowed to be taken as pupil, though his parentage was uncertain, his mother being a slave-girl who had been connected with several men. This evidence, however, merely shows that the class was not absolutely closed by the rule of heredity. Nor was the practice of priestly functions absolutely restricted to the members of the priestly class. The legend which treats Viśvāmitra as a king of the Jāhnuṣ (*Pañcaviṃśa Brāhmana*, XXI. xii. 2; *Aitareya Brāhmana*, VII. xviii. 2) is supported by the occurrence in the *Brāhmanas* of the terms *devarājan* and *rājan-yarṣi*, referring to a seer of royal origin; all the stories which mention such kings are of a legendary character, but that does not alter their significance as evidence that the view of the priestly class of the time did not see any impossibility in kings composing poetry for the sacred rites.

As in the period of the *Rigveda*, the sacrifice is carried out for the profit of an individual, even in the case of the horse-sacrifice, which is formally an offering of the king alone, although intended to secure the prosperity of all classes of the people. To this rule the only exception is in the case of a *sattra*, or sacrificial session, which might last from twelve days to any number of years, and of which the most important form is the *gavāmayana*, lasting a whole year; in that offering all the participants must be consecrated and thus made for the time being priests, and the sacrifice is for the benefit of all and not merely of the sacrificer. The *sattra* is known as early as the *Rigveda*, and it is possible that we may have in it a trace of an earlier period when the sacrifice was a clan sacrifice, but of that we have no proof. As in the *Rigveda*, the sacrifice is conducted by priestly families, but the separate traditions of these families, though they are often recorded, are of relative insignificance in comparison with the general uniformity of the sacrifice throughout the texts, which indicate that

a steady process of assimilation of customary usage was in progress. This assimilation was doubtless helped by the lack of temple worship and by the absence of any close connexion between the State and the cult, such as is so marked in the growth of early Greek religion.

The number of priests mentioned is greater than in the *Rigveda*, and more specific information as to those required for each type of offering is given. The *adhvaryu* alone is required for the *agnihotra*, the daily offering to Agni; for the *agnyādheya* and the new and full moon offerings the *agnidh*, the *hotṛ*, and the *brahman* are required besides the *adhvaryu*; for the four monthly offerings also the *pratiprasthātṛ*, and for the animal offering, in addition to the *sumitṛ*, who does not rank as a priest in the full sense, the *matrāvaruṇa*. In the *soma*-sacrifice the number rises to sixteen, classified in the ritual texts as *hotṛ*, *matrāvaruṇa*, *achhāvāka*, and *grāvastut*; *adhvaryu*, *pratiprasthātṛ*, *neṣṭṛ*, and *unnetṛ*; *udgātṛ*, *prastotṛ*, *pratihartṛ*, and *subrahmanya*; *brahman*, *brāhmaṇāchchhan-sin*, *potṛ*, and *agnidhra*. To this list the Kauṣītakin school added a seventeenth—the *sadasya*, who was charged with the duty of general surveillance of the sacrifice. The arrangement of priests does not, however, correspond to their actual employment in the ritual, in which the three assistants of the *brahman* and the *neṣṭṛ* are really assistants of the *hotṛ*, and not of the *brahman* and the *adhvaryu*. Of the priests the *matrāvaruṇa* is identical with the *prasāstṛ* or *upavaktṛ* of the *Rigveda*, and bears his name because of his reciting litanies to the gods Mitra and Varuna: the *achhāvāka* is clearly a later addition, the *Brāhmanas* themselves (*Aitareya*, vi. 14; *Kauṣītaki*, xxviii. 4-6) emphasizing his exceptional character. The functions of the *unnetṛ* and *subrahmanya* are unimportant. On the other hand, the *brahman* is a priest of great importance, whose task it is to take charge of the whole rite and by his silent presence to make good any errors which may be made in the carrying out of the sacrifice. He is actually declared to be as important for the sacrifice as all the other priests put together, and the tendency to multiply the priestly functions evidenced in his appointment is curiously indicated by the addition by the Kauṣītakin of the *sadasya*, who would seem to have merely duplicated the work already performed by the *brahman*. The existence of the *brahman* in this capacity has been seen¹ even in the *Rigveda*, but the evidence for this view is extremely doubtful, unless perhaps in one of the latest hymns (X. cxli. 3). On the contrary, the evidence of tradition supports the view that the *brahman* as a special priest was an innovation of a comparatively recent period in the history of the ritual by the Vasiṣṭha family, and that for a time only one of that family could perform the duties of the office, doubtless because such a priest alone would be in possession of the special knowledge which constituted the characteristic of the post.

At the same time, the *purohita* steadily increased in importance; even the *Brāhmanas* are sufficient to show that he had become in temporal matters the constant adviser of the king; in some cases at least the same *purohita* acted for two or even three tribes, which placed him in a position of quite exceptional consequence and influence. The relation between king and *purohita* is most effectively described in the *Aitareya Brāhmana* (viii. 27), where the formulae of appointment are given; they are based literally on those of the marriage ceremonial; the *purohita* thus becomes for practical affairs the *alter ego* of the king, and

¹ See R. Pischel and K. F. Geldner, *Vedische Studien*, Stuttgart, 1888-1901, II. 144 f.

the duty of the *purohita* is made out to be the defeat of the king's enemies and the securing of the prosperity of the realm. The importance of the aid of the *purohita* in war is indicated by the fact that the gods in their struggles with the *asuras* repeatedly are worsted until they are able to summon to their aid Brhaspati, who is *par excellence* the *purohita* of the gods. The *Atharva-veda* (iii. 19) shows us the *purohita* engaged in a spell for success in battle. When a king, as often, is sent into exile by his people, it is his *purohita* who is expected to extricate him from his misfortune. In one respect, however, there is a change in the position of the *purohita* from that occupied by him in the earlier period: when in a sacrifice he takes the part of any special priest, it is not, as formerly, that of the *hotṛ*, but that of the *brahman*, as is proved by the concurrent testimony of two texts (*Taittirīya Samhitā*, III. v. 2. 1; *Aitareya Brāhmaṇa*, vii. 26)—a fact which stands in accord with the clear indications that the *hotṛ* has ceased to be the chief priest in the ritual.

The *Brāhmaṇas* claim for the *brahman*s high privileges. A priest deserves respectful reception and hospitable entertainment wherever he goes, and no limits are set to the amounts of the gifts which should be made to him at the several rites or portions of rites, one specially excellent sacrifice being that in which a man bestows all his wealth upon the sacrificial priests. On the other hand, the value of their services was maintained by the rule that no priest could accept gifts which another priest had rejected. The sacrificial offerings also fell to be consumed by the priest, as he alone was holy enough to partake of them; even in the royal consecration the king cannot partake of the *soma*, but only of a special drink prepared for the purpose. The priest also claims to be superior to the royal jurisdiction; when the king is proclaimed to the people, the proclaimer adds that the king of the *brahman*s is Soma. The king may not censure a *brahman*; when he gives away all the earth with what is in it, still he cannot include in that gift the property of a *brahman*. The crime of slaying a *brahman* is the only real form of murder, and it can be expiated only by the expensive horse-sacrifice. The fine for an insult to him is 100 cows or coins; for a blow, 1000. In a civil case the arbitrator must give his decision in his favour as against a non-*brahman*. But there is evidence in the *Pañchavimsa Brāhmaṇa* (xiv. vi. 8) that a treacherous *purohita* might pay for his sin with his life, and it appears from the *Aitareya Brāhmaṇa* (vii. 29) that, as regards his place of abode, the priest was not exempt from the general power of the king to remove his subjects from their settlements at pleasure.

In return for their special position the priests were expected to show such qualities as kindness and gentleness, devotion to duty, and knowledge of the ritual. Intellectually their outlook on the sacrifice with which they were busied has undergone a profound change since the period of the *Rigveda*, and presents a curious admixture of magic and speculation. The principle of the sacrifice is not merely that of giving in expectation of a return; the priests assume that the return is compelled by the gift, and that they are complete masters of the universe through the mechanism of the sacrifice, if only that is duly performed. This power enables them not merely to assure to the sacrificer for whom they act what he desires, but at their pleasure, by the slightest error in the rite, to bring him to ruin. They are powerful by the sacrifice to heal dissent between the people and their princes; they are equally powerful to produce such dissent—a fact which explains clearly enough the rise of their

influence in the land. On the other hand, the priests are theosophists, and find in the sacrifice the explanation and cause of the universe, which is daily renewed in the performance of the piling of the sacred fire, and from this speculative side of their efforts comes into being the priest of the schools which oppose themselves to the sacrificial ritual.

3. Upanisads, Buddhism, and Jainism.—From the time of the earliest *Upanisads*, dating about 600 B.C., a new function of the priest comes clearly into view, which differentiates him more and more from the sacrificial priest. The sacrifice ceases to be for some priests the chief object of their interest, which centres in the attempt to explain the nature of the universe and its relation to the self. The philosophy of the *Upanisads* is not in any sharp manner differentiated from the philosophy which commences with the doctrine of the unity of the universe in the sacrifice, but it is carried far beyond its first beginnings and to a certain extent the earlier *Upanisads* in particular hold aloof from the study of the Veda and the sacrifices; the former is shown not to be the true means of knowledge; thus in the *Chhândogya Upanisad* (vii. 1) Nārada confesses that all his Vedic learning has not taught him the true nature of the self, and in the same text (vi. 1) Svetaketu, despite his study of the Veda for the prescribed period, is merely conceited and not well instructed. The *Bṛhadāranyaka Upanisad* contains (i. iv. 10, iii. ix. 6, 21) several distinctly hostile references to the sacrifice, and the same spirit may be traced more faintly in the *Chhândogya Upanisad* (i. 10 f.). At the same time, these *Upanisads* show no complete approval of the rival method of holiness, which undoubtedly existed at this time and was much in favour—asceticism. For the sacrifice, for Veda study, and for penance they substitute knowledge as the all-important thing, and the life of the *brahman* becomes concentrated upon study on the one hand and the teaching of pupils on the other. Stress is also laid on the fact that knowledge can be gained from others than *brahman*s; if the stories which ascribe the teaching of *brahman*s to kings like Janaka, Pravāhana Jaivali, Aśvapati Kaikeya, and Ajātasatru cannot be pressed into proof of the derivation of the doctrines of the *Upanisads* from the Ksatriya class, as has been maintained, still they do show that intellectual activity was encouraged by free discussion, and the mention of women in the *Upanisads* as taking part in such discussions reveals a new feature in religious life; the sacrificial ritual knows of no woman priest, and the functions permitted to the wife of the sacrificer are even more limited than his own. The later *Upanisads*, however, show a distinct attempt to reconcile the claims of the study of the Veda, the sacrifice, and asceticism with the search for true knowledge, and, without making these things adequate means of discovering that knowledge, they treat them as a useful or necessary propædætic. The same view is in effect already enunciated in the *Bṛhadāranyaka Upanisad* (iv. 22), where we find the germ of the theory of the four *āśramas*, or stages of life, which an Aryan or at least a *brahman* should follow: the first is study of the Veda, the duty of the *brahmachārin*; the second sacrifice and almsgiving, the lot of the *gṛhastha*, or householder; and the third is asceticism, the lot of the *vānaprastha*, which later ingenuitously unjustifiably divides into two states—that of the forest-dweller and that of the wandering and homeless beggar, *bhikṣu* or *parivrājaka*. The *Chhândogya* (ii. xxiii. 1) carries the matter a little farther: it ranks as three branches of duty sacrifice with Vedic study and the giving of alms, asceticism, and studentship with a teacher, and

then sets over against them the abiding in *brahman*, which is later developed into the fourth *āśrama*. The *Kenū* (33) and the *Kaṭhu Upaniṣads* (I. ii. 15) are equally clear in their recognition of the value of study and asceticism, and the *Kena* also mentions sacrifice expressly as a condition of true knowledge. The significance of these requirements is clear: in face of the tendency of the day to resort to asceticism and to abandon the use of sacrifice, which indeed in the Buddhist texts is regarded with much contempt, the Brāhmins were anxious to find due place and room for the different sides of human activities, even if their doctrines of the nature of the *ātman* were such as logically to deny all value whatever to Vedic study, asceticism, and sacrifice.

It is clear that great importance attached to the relation of pupil and teacher, especially as the doctrines of the philosophical schools were held to be specially sacred, such as could indeed be imparted in some cases only in the seclusion of the wild, whence the title *Aranyaka*, 'Forest Book,' for portions of the philosophic literature. The teacher is bound to impart all his knowledge to the pupil, who stays with him, and in return the pupil is bound to afford all possible assistance in the affairs of daily life to the teacher—to tend his cattle, to collect fuel, to guard the sacred fire, and to beg. The giving of payment for teaching is not approved by the texts, but the practice seems to have grown up under which at the termination of his studentship, which might extend over any period, twelve years being a common time, the pupil took leave of his teacher by presenting him with a gift proportioned to the pupil's means. Not only Brāhmins might go as pupils; the *Sūtras* formally contemplate members of the Kṣatriya and the Vaiśya class studying, but doubtless these cases were comparatively rare, just as the normal ascetic was the Brāhmin, not one of the other two classes. The teacher was expected to perform for his pupil the formal rite of initiation by which his spiritual training commenced—an event which is the refined form of the puberty rites of new birth which are found wide-spread throughout the world. The relation of pupil and teacher is of special interest, as it forms the root of the Hindu veneration and deification of the *guru*.¹

The relationship of the pupil and teacher doubtless led in many cases to the formation of schools of thought in which the views of a distinguished teacher gradually spread and attained considerable vogue, as we may judge from the frequent reference to teachers such as Āruṇi or Yājñavalkya. In two famous cases, however, the influence of the teacher has far surpassed normal limits, and given rise to the formation of a sect which has created a form of religion differing in essentials from Brāhmanism. The older and the more closely akin to Brāhmanism is undoubtedly Jainism, which represents a definite tendency to develop systematically the ascetic side of Indian views of life. The ideal is to reach the condition of perfection, which is the end of existence, by means of rising superior to all the needs of the ordinary life of man, and by laying aside all the passions which man feels. Hence the regulations which applied in the Brāhmanic system, and which enjoined abstinence from the taking of life, honesty, chastity, and the speaking of the truth, appear in Jainism in forms exaggerated out of all reality. The doctrine of *ahimsā* was a natural enough revolt from the absurd prodigality of life in the ordinary sacrifice, and its growth can be traced in the Brāhmanic literature; in Jainism it degenerates into an objection to the destruction of even the most infinitesimal insect life, which compels the most ridiculously minute precautions

to be taken against harm to such life or even to the air itself. The doctrine against the taking of another's property is carried by Mahāvira to a prohibition of attachment to any object or person, which counts as the fifth of the great vows of the priesthood. The Digambara sect of the Jains go farther, and carry out the principles of the school to the logical conclusion, which seems to have been adopted by Mahāvira, of wearing no clothes.

It was inevitable that the success of Mahāvira and the spread of his doctrines among a far wider class than the followers of any particular Brāhmin teacher should lead to the formation of a community with some distinctly original features. Such a community followed the lines of the pre-existing system of pupilship; a formal initiation by a priest of the order acts as a preliminary to the adoption of the life of the Jain monk, who then becomes a homeless wanderer like the Brāhmin ascetic, forbidden to possess any property, and compelled to beg his food, to live on what he thus obtains, to wear at most the rags that he can gather, and to avoid dwelling long in any one place save in the time of the rains. The necessity for fixed dwellings during the three or four months of the rainy season gave the impulse to the development of the quasi-monastic life, more or less permanent dwelling-places, though of the simplest kind, being allotted to the monks by the kindness of laymen. But the rule of wandering is still applicable. The essential duty of the monk is meditation and spiritual exercises, life being supported by begging, but in the course of its development the intellectual part of the discipline has become of less importance than the devotion of effort to avoid the destruction of life, and the provision of food. Moreover, from an early date, perhaps as early as the 2nd cent. B.C., a definitely Hindu element has been introduced in the form of idol-worship, accepted by both the Śvetāmbara and the Digambara sects, but rejected by the reforming sect of the Sthānakavāsī from the 15th cent. onwards. The introduction of this new element has added to the duties of the Jain monk a temple worship, consisting in the main of mental devotion and contemplation of the idol of the Tirthaṅkara, accompanied by the singing of hymns in his honour. There has also arisen a temple priesthood, who in the case of the Digambaras must be Jains, and who perform to the idol the ordinary Hindu rites of washing, dressing, and adorning it, the waving of lights before it, the burning of incense, and the giving of offerings of fruit, sweet-meats, and rice. The Jain priest does not, however, eat the food thus presented, differing in this from the Brāhmin priest and the Hindu temple-priest. In the temples of the Śvetāmbaras men who are not Jains, even Brāhmins, may be employed.

Besides the monks the Jains recognize an order of nuns, subject to the same general rules of life as the monks, and, what has been of the first importance for the persistence of the faith, orders of lay male and female adherents, *śrāvakas* and *śrāvikās*. This recognition gives the laity definite duties and obligations, based upon but modified from those binding on the monks and nuns. Among the vows undertaken by the laity are those of from time to time observing for a brief period the full restrictions incumbent on the *sādhu*, and of constantly helping the monks by gifts to them of the food and other articles which they are allowed to have, and the lending of such articles as they may not take for their own. Probably from the first these adherents have been largely of the mercantile class—a result contributed to by the fact that the Jain restrictions on the taking of life shut many avenues of profession even to the lay community (cf. art. MONASTICISM [Hindu]).

¹ See K. Glaser, *ZDMG* lxxvi. [1912] 1-37.

Tradition, probably correctly, ascribes Mahāvira to a Kṣatriya family, and the Buddha was undoubtedly not of Brāhman birth. Moreover, in the eastern country in which he preached there is evidence¹ that the Brāhmanical system was much less rigidly determined than in the west, and that the practice of Kṣatriyas and Vaiśyas becoming ascetics was far more widely spread. But the Buddha in his precepts of life for his followers differed essentially from Mahāvira in laying stress on avoiding extremes of asceticism, such as the religious suicide encouraged by Jainism; greater freedom was accorded to the monks to receive the aid of the laity, and no attempt of any kind was made to organize the laity into a community formally dependent on the order of monks. The admission of women as a special order of nuns was only grudgingly conceded, and subjected to such restrictions that the spiritual effect of the community of nuns on the faith cannot be discerned. But from the death of the founder there entered into the duty of the pious monk the obligation of paying reverence to the four places of special importance in his life—that where he was born, that in which he obtained enlightenment, that in which he decided to set going the wheel of the law, and that in which he entered *nirvāṇa*. The actual reverence of the relics of the departed Buddha was perhaps at first reserved to the lay adherents, but it passed naturally enough into that idol-worship which assimilated the worship of Buddha to that of a Hindu god. Moreover, the doctrinal development of Buddhism in the Mahāyāna school displaced the historical Buddha as the centre of Buddhism by mythological figures essentially divine.

In one important point both Buddhism and Jainism agreed—the introduction of the formal confession of sin as an essential part of the duty of the monk and in Jainism also of the laity. In both cases the fortnightly gatherings and the great yearly meeting of the monks were the specially fit occasions for the confession, but great stress was laid in Jainism on immediate confession to the *guru* in order to avoid by repression the accumulation of *karma*. For such systematic confession there was no place in Brāhmanism with its lack of defined tenets, though the importance of confession for certain ritual purposes was recognized. In these formal assemblies there was the possibility of the development of an ecclesiastical organization, but such an organization never developed itself any more than Hinduism has been able to produce a regularly organized hierarchy.

The Indian ascetic, whatever his religious belief, is credited with the attainment of magical powers of every kind, and this is true of both the Jain and the Buddhist—indeed in even a higher degree of the latter faith, for one of the four rules for monks in that belief is not to boast of the possession of such powers as they do not enjoy. This is the better side of the magical powers which ordinary Indian belief ascribes to the priest, and of which so much is made in the Brāhmanical literature.

4. Early Hinduism.—The two great epics of India, the *Mahābhārata* and the *Rāmāyaṇa*, taken in conjunction with the early law-books and with the Buddhist and Jain scriptures, present us with a form of religion and custom to which the name of Hinduism can fairly be given as distinguishing it from the doctrines of the *Brāhmaṇas*. The religion of these texts is only in part the natural development of the religion of the *Brāhmaṇas*; it contains many elements of faith, doubtless as old as that religion, but appealing to different sections of the people; it is essentially a more

popular faith than that which was concerned with the sacrificial ritual and the speculations arising out of it. Hence the priest of the sacrificial ritual is of less prominence, while the *purohita* comes forward. The priests of the epic may be divided into the ordinary priests, whose life is spent amid simple surroundings in the performance of their functions, and the spiritual advisers of the kings, who of course were often also the spiritual teachers of their youth. The office was one which tended to be hereditary in the same degree as the monarchy, and the mere fact that a priest might be at once the *guru* of the king and his *purohita* naturally exalted the claims to importance of the latter office. The boast of the *Brāhmaṇas* that the priests are the gods on earth is repeated with increased force; the gods are made out to be dependent on the priests, who, if need be, could create new gods. The power of the king is really derived from the priests, and they have the power to destroy a king who proves unwilling to meet their demands for gifts which have now grown beyond all measure; cows and land are expected as matters of course and even villages and districts, *i.e.* the revenues derived from these places. The assembly of the people, which is a real thing in the *Rigveda* and still seems to have lingered on in the age of the *Brāhmaṇas*, disappears in the epic, passing through the forms of the council of warriors and of priests, and finally becoming in effect the secret conclave of the king and the priest, who gradually was able to persuade the king that his advice was worth much more than that of the people or even of the warriors. Naturally enough, this view of the comparative value of the two elements for the purposes of State affairs was not accepted always by the warriors; the legends of disobedient kings like Viśvāmitra and Nahuṣa show, indeed, the terrible fate of those who were bold enough to question the position of the priests, but also indicate that there were kings impious enough to doubt the all-sufficiency of the priesthood. Naturally enough, the claims of immunity to punishment made by the priests are of the most wholesale character; even for the gravest crimes they insist that no corporal punishment of any kind can be inflicted on a priest, though, as in the *Brāhmaṇas*, kings seem to have felt themselves entitled to punish treachery by death. In return for this privileged position, the priests were evidently conscious of the need of providing themselves with all the learning possible to help them in the guidance of the king in his administration of justice and his executive government, as well as in the conduct of his sacred duties of sacrifice; the horse-sacrifice, as especially an imperial sacrifice, revealed the value of the skilled assistance of the priests. A priest, however, might also actually perform feats of arms, though the general rule is opposed to any active participation in fighting by the priest; of this there is a classic example in Drona, who combines, with the greatest success in each, spiritual and warlike functions, while his son, who was a warrior of no small fame, was taunted with impropriety in bearing arms against the rule of the priesthood. But it was not only by the legitimate arts of statesmanship that the *purohita* commanded so fully the obedience of the king; he was an expert in astrology and a soothsayer and magician, all of which features are given prominence in the tales of kings and their *purohitas* narrated in the *Jātakas*. Further, his position at court lent itself to intrigue of every kind, as is evidenced by the semi-mythical account of Chāṇakya's relations to his sovereign.

It is probably to this period that we must attribute the beginning of the division of the Brāhman class into different sub-classes divided by occupa-

¹ See Fick, *Die sociale Gliederung im nordöstlichen Indien*, p. 117 ff.

tion, though probably as yet still theoretically and in feeling one. The Buddhist texts show us Brāhmanas as agriculturists, as engaged in pastoral occupations and in trade, and the *Dharma-sūtras* (*Āpastamba*, i. vii. 20. 12; *Gautama*, vii. 1 ff.) confirm this account to the extent of permitting these occupations, in certain circumstances of pressure, to the Brāhmanas. It is possible also that in the eastern country, such as Magadha, Brāhmanas went farther and undertook professions of a class never approved by the stricter schools: in the *Jātaka*s (iv. 361 ff.) we find suggestions that they could act as hunters, and fulfil other menial tasks. It does not appear that Brāhmanas who occupied themselves in these unpriestly functions at the same time devoted themselves to any priestly offices, whether sacrificial or intellectual; and we may therefore see in this adoption by priests of other than their appropriate functions the beginning of the breaking up of the unity of the class into castes determined in the main by hereditary occupation.

The attitude of the priesthood towards the gods as depicted in the epic is what might be naturally expected as the outcome of the theorizing of the *Brāhmaṇa* period. The priests then degraded the gods from all real importance except in their connexion with the sacrifice, and the priests of the epic have likewise no real respect for or belief in the minor deities of the pantheon, and to this rank even Indra and Varuṇa have sunk. The great gods of the epic are in the first place Viṣṇu, and in the second place, as the result of later working over, Śiva; both these gods are of essentially popular origin, but in the epic that popular worship has been overlaid by the philosophic pantheism which is most congenial to the temperament of the Brāhmaṇa. Even the devotion of the worshipper to the divinity, which was clearly prevalent in some sects, as reproduced in the epic, is overlaid with pantheistic elements.

5. *Mediæval and modern India.*—The priest of the middle age of India as revealed in the *Purāṇas* and in the classical Sanskrit literature presents essentially the same features as the priest of modern times. The chief distinction between this period and the epic age is that of the growing complexity of life and the progressive Hinduization of the centre and south of India. As a result the priestly class becomes split up more and more into different subdivisions which in effect constitute castes within the main class, between which there is no marriage possible and sometimes not even complete freedom of intercourse and commensality. The tendency of the Brāhmanas to adopt very diverse modes of life, of which there are only traces in the earliest period, becomes more and more marked, and, combined with geographic differences, this fact has contributed to the growth in the number of the castes. Further support has been given to the development by the practice by which aboriginal deities have been taken over bodily into the Hindu pantheon, doubtless, at least in some cases, together with the priesthood attached to the deity, just as the ruling family of the tribe was taken into the rank of the Kṣatriyas. Hence arose innumerable subdivisions among the ten great divisions into which the Brāhmanas are popularly divided—the Sārasvatās, Kānyākubjas, Gauras, Utkalas, and Maithilas north of the Vindhya range; and the Mahārāstras, Andhras or Tailaṅgas, Drāvidas, Karmātas, and Gurjaras south of that range. But of these castes many have no priestly functions at all, and have devoted themselves to occupations of the most diverse type, ranging from the learned professions to the humblest duties of agriculture, and even trade. Even within the sphere of religion the differences

between the different classes of Brāhmanas is most marked. At the lowest level stands the village-priest, who is, however, of great importance in the life of the village, as his presence is requisite for the due performance of the religious ceremonies which make up so great a part of the life of a Hindu; at initiation, at marriage, at birth, and at death his presence is essential, even if other priests may be allowed to take part in the more important of these functions; and in return for his services he receives a fixed allowance of grain, with special presents on important occasions. The village-*purohita* is often also the astrologer, who prepares horoscopes, predicts the days for sowing and reaping, tells fortunes, and often as a magician averts disease and controls evil spirits. The important science of omens is also in the hands of the astrologer. Other Brāhmanas, again, are engaged in the performance of the temple worship, though many of the functions of that worship are performed by men of lower caste. In its normal form the ritual of a great temple is mainly centred in the ceremonial treatment of the idol of the god whose temple it is. The daily round involves the awaking of the god from slumber, his dressing and undressing, bathing, anointing, and painting, and frequent feeding; the priests partake of the food, which through its consecration by the eating of it by the god is holy, and which is therefore sometimes given or sold in part to the people. Further, incense is burned, lights are waved, bells are rung, and flowers and other offerings as well as food are presented. During these performances Brāhmanas often recite texts taken from the holy books of the religion of the god in question, mainly, in the case of Kṛṣṇa, the *Bhāgavata Purāṇa*, in the case of Śiva, the *Liṅga Purāṇa*, Śiva's most potent representation being in the form of a *liṅga*. The priests, however, while they superintend and control the performance of the temple ritual, do not claim for themselves the sole power to perform the acts of which it consists. The layman, on payment of the due fees, may be permitted to perform most if not all of the acts of worship.

As opposed to the Brāhmanas who concern themselves with the temple worship, a far higher intellectual rank is occupied by those who are members of one of the religious schools, the abundance of which is attested throughout the period. These schools have naturally undergone numerous changes in the course of time; the devotees of the guru, who appear to have flourished in the time of Sankara (9th cent. A.D.), have disappeared, and the Vaiṣṇava sects have attained much greater prominence since the revival of Vaiṣṇavism by Rāmānuja in the 11th cent. A.D. In the Vaiṣṇava schools the traditional respect for the teacher, which is seen in the claim of the Brāhmanas in the Vedic age to be gods on earth, reveals itself in its highest form in the sect of Vallabhācārya, in which the *gurus* are even in life treated as living embodiments of the god, and receive the formal marks of respect which are accorded to the image of the god whom they serve. But, even in the sects that carry the process of deification of the *guru* less far, the greatest importance is placed upon him, as he is the source from which alone the saving knowledge which will procure the heaven of bliss open to Vaiṣṇavas can be derived. The Sikh *guru* baptized the disciple and taught him the name of Hari, which alone can procure him salvation, and in return demanded and received the implicit obedience which raised the Sikh to so high a pitch of military power when its bent was definitely turned under Govinda to warfare with the Muhammadans. Common again to all sects of Vaiṣṇavism is the stress laid on the sacramental meal, which is decidedly a development of the

giving or selling of the sacramental food by the temple priests to outsiders, and which is the most definite sign of the belief, more or less clearly held by the Vaiṣṇava teachers, that caste divisions were not ultimately in accord with the principles of their faith. Both in the practice of the sacramental meal and in the respect paid to the *guru* there has been seen the influence of Christian doctrines, but in the latter case at least the supposition is gratuitous, the respect being a natural Indian development.¹

The teaching of the schools is not normally antagonistic to idol-worship, which it allows as a mode of approaching the divinity; even the Sikhs, who are in theory opposed to idolatry, make a fetish of the *Granth*, the sacred book of their scriptures, and guard it in a shrine, paying to it the same rites as are offered to Hindu idols. There is therefore no necessary incompatibility in the combination of the duties of priest in a temple and spiritual teacher, and the two functions are sometimes united. This is essentially the case with the priests of the Tantric rites, who themselves take a part in the performance of the rites which they approve, and to which they give in their theoretic teaching a symbolical signification. These priests are reckoned as gods by their followers, for their command of *mantras*, or spells, makes them superior to the gods, on whom again the whole world depends. The possession of magic power by the priest is a commonplace of later as of earlier Indian belief, but it is carried to its farthest extent in Tantrism, which in this aspect is closely allied to the Yoga philosophy. Another side of the same element of priesthood is seen in the varied classes of ascetics, who undergo severe penances of all kinds in order to produce ecstatic states, and many of whom are doubtless connected in origin with the ascetics of whom we hear in the Buddhist texts. The better side of asceticism shows itself in the persistence of the practice by which, after the performance of the duties of life as a householder, in old age the Brāhman, be he priest or politician, ends his days in the meditation of the *sannyāsin*.

In one respect there is a clear distinction between modern and epic and, still more, Vedic India. The Vedic sacrifice is all but extinct at the present day, and has clearly been moribund for centuries; in its place have come the temple worship on the one hand and the great popular festivals on the other. These festivals, such as the Makarasankranti, the Vasantapañcami, the Holi, and the Dipali, are of essentially popular origin, and traces of them can be seen in the Vedic ritual, but in that ritual they have been deprived of their original nature and brought into the scheme of sacrifices performed by and for the profit of the sacrificing priests and their employers only. Doubtless outside the Brāhmanical circles they persisted in their simpler form, which can often be recognized in the ceremonials of the present day, though many elements of sectarian religion have found their way into these.

A certain distinction in the religious methods adopted by the priesthood may be observed between this and the earlier periods. In place of the schools of the Brāhman ritual or the wandering monks of the Buddhists or the Jains, we find the wandering monk of the type of Sāṅkara, Rāmānuja, and Madhva, who go here and there challenging others to discuss the new theories of the *Vedānta Sūtra* which they have to propound, and retiring from time to time to a monastery for study and literary composition; these are obviously in spirit and in method a natural development of the philosophers of the *Upaniṣads*, but with their intellectual activity definitely directed by the authority of the

Vedānta Sūtra and of the *Upaniṣads*. A very different method of religious propaganda appears in the Tamil south, at an undefined but certainly early date, in the shape of the itinerant poet, devotee, and musician, who wanders hither and thither with a large retinue, singing his own compositions in the vernacular in honour of the god whose shrine he frequents; this is a type of priest corresponding to the conception of *bhakti* and differing entirely from the type of theologian produced by the Brāhman schools, and of more popular origin. Rāmānanda, to whom is due the spread in N. India of the doctrine of Rāmānuja and the more definite rejection of the importance of caste, introduced the type, at once intellectual and popular, of the wandering theologian who could dispute with the most learned opponents, but was anxious to preach in their own tongue to the people and to express in vernacular verse the tenets and principles which he sought to inculcate. An attempt to strengthen this appeal to the popular mind was made by Chaitanya at the beginning of the 16th cent. by introducing from the south its ecstatic religious dancing and singing. The older method of Rāmānanda was, however, followed by Nānak (A.D. 1469-1538) and Tulsi Dās (A.D. 1537-1622); both of these were married men, as opposed to Rāmānanda, who was a monk—a fact which distinguishes the adherents of the *bhakti* cults from the Buddhists or Jains.

Since the beginning of the 19th cent. the influence of Christianity has produced considerable effects in the Hindu conception of priestly methods and ideals. Apart from the effects on doctrine, the general result of this influence has been, on the one hand, to create for Hinduism a feeling of unity and individuality hitherto not to be discerned; there has even been created a society, the Bhārata Dharma Mahāmandala, for the defence of Hinduism as such. It is, however, characteristic of the nature of Hinduism that no effort has been made to create a controlling spiritual centre, such as would assimilate Hinduism to the great Churches of the West. On the other hand, the minor reforming bodies have some conception of church organization, and in practically all aspects of Hinduism a strong impulse has been given to the priesthood to undertake the direction and support of various forms of social service.

6. Animistic tribes.—The primitive tribes have from the beginning of Indian history been continually falling under the influence of the higher culture of the tribes among them, and their conceptions of priesthood have been affected by the views and practices of these tribes. There are still, however, abundant traces of a more primitive view in which the priest is mainly a medicine-man, whose strength lies in his magical powers and his ability to become the subject of divine possession. In this view the priesthood is not, as in Vedic India, a hereditary profession based on sacred learning and knowledge of tradition, but a spiritual exaltation which betrays possession by the divinity. Thus among the Kols, when a vacancy occurs in the office of village-priest, the next holder of the office is determined by a process of divination. A winnowing-fan with some rice is used, and the person who holds it is dragged towards the man on whom the office of priest is to be conferred. A similar practice is observed among the Orāons. In N. India in addition to the professional exorcists there are others who do not learn their work from a *guru*, as do the professionals, but are naturally inspired by a spirit. In accordance with this view is the practice of the semi-Hinduized Dravidian tribes of the Vindhya range, who often worship Gansam or Raja Lakhan. The shrine of the god is in charge of the village-*baiga*, who is

¹ See R. Garbe, *Indien und das Christentum*, Tübingen, 1914, p. 276.

invariably selected from among some of the ruder forest tribes such as the Bhuiya. Much of the work of the *baiga* is sorcery pure and simple, and for this purpose no doubt the most uncivilized person is the best adapted, as being in closer touch with the spirits in nature. Similarly the Kurumbas in the Nilgiri Hills are employed by the Badaga, who are much above them in culture, for the sake of their special powers. So it is with the ordinary axe carried by the dweller in the jungle that the victim is slain at the shrine, the *baiga* then taking as his share the head, while the rest of the meat is consumed by the male members of the tribe. When the *baiga* in villages of the hill-country south of the Ganges desires to exorcize a disease-ghost, he attains the necessary divine possession by beating himself with the iron chain which hangs from the roof of the shrine of the village-god, and which among the Gonds is considered to be in itself divine. The same principle of divine possession is exhibited in the worship of Bhiwāsu, the regular Gond deity, who is identified with Bhimasena, one of the Pāndavas; once a year a special feast is held in his honour, at which the god inspires the priest, who, after leaping frantically round, falls in a trance. In an analogous manner throughout S. India priests in fantastic attire, often with masks human or animal, dance in order to cause the entry into themselves of some spirit, possessed by whom they can predict the future for those who make inquiry. Moreover, even the sacrifices in which the priests take part in large measure are obviously mere fertility-charms, as in the case of the famous human sacrifices of the Kandhs. The cult which they performed was simple in the extreme; the elaborate temples and formal worship of the Hindu gods is unknown in aboriginal religions, where the temple is often of the simplest possible formation, consisting merely of a heap of stones, while even in more advanced communities at most a small hut forms the abode of the priest of the god, who is aniconic. Of the development of higher religious conceptions among the aboriginal priesthoods we have no clear proof, as the occasional appearance of what may be considered higher beliefs may easily be explained by borrowing from the surrounding tribes which have fallen under Hindu influences. Among the Kandhs there are priests who have no other occupation than their sacred functions; others, again, can engage in other employments, but are forbidden in any event the profession of arms, just as in theory this profession was closed to the Brāhman. The Todas in the south have a celibate priesthood, but it is uncertain whether this conception is borrowed from Hinduism or is merely one instance of the superiority of the celibate for the exercise of functions connected with divinity, of which there are traces in the Vedic period itself, though the principle is not carried very far. In many cases, however, the penetration of Hindu practice goes very far; thus the out-caste tribe of the Tiyas in Malabar have since A.D. 1890 created for themselves a temple worship modelled on the ordinary Hindu type but served by non-Brāhman priests. A much older example of the same principle is probably to be seen in the growth of the Liṅgāyat (*q.v.*) sect of Saiyas in S. India, whose priests, *jangamas*, are not Brāhmans, but may belong to any other caste.

LITERATURE.—For the Vedic period the chief authorities are: J. Muir, *Original Sanskrit Texts*, 1³, London, 1890; H. Zimmer, *Altindisches Leben*, Berlin, 1879; A. Weber, *Indische Studien*, Berlin and Leipzig, 1849–84, ix., x., and xiii.; H. Oldenberg, *ZDMG* li. [1897] 287–290, *Religion des Veda*, Berlin, 1894; A. Hillebrandt, *Ritual-Lit.: Vedic Opfer und Zauber* (= *GIAP* vi. 2), Strassburg, 1897; M. Bloomfield, *The Religion of the Veda*, New York, 1908; A. A. Macdonell and A. B. Keith, *Vedic Index*, London, 1912; S. Lévi, *La Doctrine du sacrifice dans les Brāhmanas*, Paris,

1898; P. Oltramare, *L'Hist. des idées théosophiques dans l'Inde*, do. 1907; P. Deussen, *The Philosophy of the Upanishads*, Eng. tr., Edinburgh, 1906. For Buddhism see H. Oldenberg, *Buddha*, Stuttgart, 1906; T. W. Rhys Davids, *Buddhist India*, London, 1903; R. Fick, *Die sociale Gliederung im nordostlichen Indien zu Buddha's Zeit*, Kiel, 1897; L. de la Vallée Poussin, *Bouddhisme: Opinions sur l'hist. de la dogmatique*, Paris, 1909; for Jainism, Mrs. S. Stevenson, *The Heart of Jainism*, London, 1915; J. G. Buhler, *On the Indian Sect of the Jainas*, London, 1915; do. 1903. The epic material is dealt with by E. W. Hopkins, *JAOS* xlii. [1899] *The Religions of India*, London, 1896; the latter work deals also with Hinduism, as does A. Barth, *Religions of India*, Eng. tr., London, 1889; for Hinduism see also M. Monier-Williams, *Brāhmanism and Hindūism*, do. 1891; R. G. Bhandarkar, *Vaishnavism, Saivism and Minor Religious Systems* (= *GIAP* vi. 6), Strassburg, 1913; J. N. Farquhar, *Modern Religious Movements in India*, New York, 1915. On the animistic tribes there are important notices in W. Crooke, *PR*, London, 1896, and E. Thurston and K. Rangachari, *Castes and Tribes of Southern India*, Madras, 1909.

A. BERRIEDALE KEITH

PRIEST, PRIESTHOOD (Iranian).—1. Pre-Zarathushtrian times.—That the religious beliefs and practices of the Iranians before the reform of Zarathushtra necessitated and actually commanded the services of a priestly class scarcely admits of any doubt, though, in the absence of direct records, the proof of this, as of so many other facts relating to the early life of the Iranians, rests upon indirect evidence. In the Avesta we find that the generic term for 'priest' is *āthravan*, clearly derived from *atar*, 'fire'—a fact which is significant alike of the early origin and of the principal function of the sacerdotal office in Iran. That reverence for fire was a marked feature of the religious life of the Iranians in the most primitive period is well established;¹ and, when taken in conjunction with the fact that the word *āthravan* in the *Rigveda* has, among other related senses, the same connotation as the Iranian form *āthravan*, the inference becomes irresistible that both the office and its Avestan name are derived from Indo-Iranian days. Moreover, although *āthravan*, as the common appellation of the priests, suggests that they had as their chief care the maintenance and guardianship of the sacred fire, nevertheless it can hardly be supposed that even in the pre-Zarathushtrian period their duties were not more extensive. The old Iranian pantheon enshrined other highly venerated divinities,² whose cults would naturally require the mediation of priests. The cult of Haoma, to name only one, involving, as in all probability it did, in the earliest times a somewhat elaborate ritual, would afford a special opportunity for priestly intervention. Later tradition also, as reflected in *Ys.* ix. 1 f., lends support to this contention. In that passage the poet describes Haoma approaching Zarathushtra in the morning while he was chanting the *Gāthas* in the presence of the sacred fire, and entreating the prophet to pray to him, to consecrate his juice for libations, and praise him as the other sages or priests were praising him. Nor can there be any doubt that prayers, invocations, and sacrifices offered to all their gods at this period were mediated by their priests.³

Regarding the organization of the priesthood and the relation of the priests to the laity and to other classes in society at that period, we have but little data from which to draw any conclusions with absolute certainty. Although Firdausi's attribution of the establishment of the three orders of priests, warriors, and husbandmen to Yima belongs to the sphere of legend rather than to that of history, still the division itself represents an early stage in the development of the Iranian commonwealth. Moreover, the position of the priests at the head in every enumeration of these orders in the Avesta, suggesting the veneration

¹ See art. *ATAR* (Persian), vol. i. p. 847, with the references.

² See art. *GOD* (Iranian), vol. vi. p. 291.

³ Cf. Herod. i. 182.

tion in which they were held, is in perfect accord with what we know of the deep moral earnestness and marked religious susceptibilities of the ancient Iranians.¹ There is no evidence, however, that the *āthravans* of Irān were regarded or claimed to be regarded with the same superstitious awe and reverence as the Brāhmans of India arrogated to themselves. No superiority as regards descent or higher nature was ascribed to or demanded by the priests of Irān. That priestly families² existed at this period, who handed down to their descendants the secrets of correct sacrificing and the approved forms of invocations, may very well have been the case, though nothing in the nature of a close priestly caste resulted in Irān—at least during the period now considered. The high regard in which agriculture came to be held at an early period and the constant dependence of the community for its defence upon the warrior-class would in themselves militate against the development of castes in Irān.³ Moreover, the fact that, according to the Avesta,⁴ Zarathushtra was the first priest, warrior, and agriculturist indicates that tradition at least did not regard the gulf between those classes in the earliest times as an impassable one.

2. The Zarathushtrian reform.—In the nature of things it was very unlikely that the great spiritual movement which is associated with the name of Zarathushtra should leave the priesthood unaffected. What its influence actually proved to be, so far as it is ascertainable, must be learnt from its reflexion in the hymns, or *Gāthas*, of the Avesta. In those hymns the *āthravans* are not once mentioned by name. In one passage,⁵ it is true, the prophet applies to himself another old Aryan term for 'priest,' namely *zaoatar* (Skr. *hotar*), which may serve to show that, however insignificant the sacerdotal element in the new movement proves to have been, he did not entirely renounce priestly functions. But the character of his reform helps to account for the recession of the *āthravans* into the background. It was a change in the basal truths of the religion more than in its external symbols. It was a question not of the manner of expressing their devotion to the deities, but rather of the object to whom their worship should be directed. It was a great prophetic and religious revolution, not a priestly transformation. New and more spiritual conceptions of deity were born, which were only afterwards to be clothed and expressed in ritualistic forms.⁶ Still, no doubt the *āthravans* of the old religion, at least those of them who yielded themselves to the great reform, found a place in the religious life and ministry of the new Mazdæism; for the sacred fire continued to burn and was jealously guarded during the new and more spiritual epoch, even if it found a higher meaning and significance in the reformed religion. That all the old Iranian priests did not conform, as might naturally be expected, can be proved from the frequent references to the bitter opposition of the *kavis*, *usij*, and *karyapans*.⁷

It should be observed that all that has been said so far has application, in all probability, to only eastern Irān, our knowledge of the religious institutions of the west during this period being practically nil. On the other hand, in reference to the succeeding periods, matters are entirely reversed.

3. The Magi and the Iranian priesthood.—

¹ See W. Geiger, *Civilization of the Eastern Iranians in Ancient Times*, tr. D. P. Sanjānā, London, 1885-86, ii. 163.

² See M. W. Duncker, *Hist. of Antiquity*, tr. E. Abbott, London, 1877-82, v. 186; cf., however, J. H. Moulton, *Early Zoroastrianism*, ed. 1913, p. 194.

³ For other reasons supporting this contention see F. Spiegel, *Iran. Alterthumskunde*, Leipzig, 1871-78, iii. 546 ff.; also Geiger, ii. 76 ff.

⁴ Yt. xii 88 f.

⁵ See Moulton, p. 118.

⁶ Ys. xxxiii. 6.

⁷ Cf. Ys. xlv. 20, etc.

When we turn to Greek and Latin authors, the other important source for Iranian history, we find no evidence of any acquaintance whatsoever, on their part, with the priesthood under any equivalent of its Avestan name.¹ According to all the classical writers from Herodotus to Agathias, the sacerdotal office in Irān was occupied by a tribe or caste of Medes called Magi (Old Pers. *Magu*, Gr. *Máγos*, Lat. *Magus*); and no suggestion is given that any other sacerdotal class shared with them the priestly functions at that period, or that they were the heirs of an earlier order of priests. But it should be observed that these writers speak mainly, if not exclusively, of Iranian religious rites as they existed among the Medes and Persians, or, speaking geographically, as they were found in western Irān. Furthermore, with the exception of Herodotus, the classical authors in question wrote of events and at a date posterior to the condition of things represented by the earlier part of the Avesta.

Nevertheless, an additional explanation of the difference of nomenclature in the Avesta as compared with the writers of Greece and Rome is felt to be necessary when it is remembered that much of the so-called Later Avesta was written under the influence of, and probably by, the Magi themselves, and at a period contemporary with several of the Greek authors.

In this connexion it is to be remembered that even in late Achæmenian times the Magi had not outlived the prejudice which had become associated with their name in the mind of Persians since the revolt of Gaumata, and hence they had a strong motive to avoid the use of the term *magus* under all circumstances; while the preservation of the old term *āthraavan* throughout the Avesta, besides being a convenient substitute for the offensive ethnic designation, may have been prompted by the desire to further establish the claim of the Magi to the succession of the ancient *āthravans* in the Iranian priesthood.

That the Magi were the recognized priestly order in western Irān in the earliest Achæmenian times (and, probably, in pre-Achæmenian days, i.e. during the ascendancy of the Medes) cannot be doubted. What influence or authority they achieved and exercised later in eastern Irān as a result of the conquests of Cyrus in Bactria we have no means of determining; and for the remainder of this article, therefore, *magus* and priest will be convertible terms,² and Irān, in the main, coincident with Media and Persia.³

4. The organization of the Magian priests in late Avestan and post-Avestan times.—It is sufficiently established that the priesthood during this period possessed a more or less definite inner organization, though probably varying much in character and completeness at different epochs. Even in Achæmenian days the Magi seemed to have recognized a chief or head of their order. Diogenes Laërtius,⁴ quoting Xanthus the Lydian, speaks of a long succession (*διαδοχή*) of Magi between the time of Zoroaster and that of Xerxes, and names Ostanes, Astrapsychus, Gobryes, and Pazates. These, there can be little doubt, were among the chief priests who stood at the head of the sacerdotal order during that period.⁵ In his succinct account of the Magi Ammianus Marcell-

¹ The one probable exception is Strabo, who says (xv. iii. 15) that in Cappadocia the Magi were also called *Pyraethi* (*Πυραῖθοι*), which is, there can be little doubt, a Greek rendering of the Iranian *āthraavan*.

² Cf. Apuleius, *de Magia*, xxv. : 'Persarum lingua Magus est qui nostra sacerdos.'

³ See art. MAGI, vol. viii. pp. 242-244.

⁴ *Proœm.* ii.

⁵ It should be stated, however, that Pliny (*HN* xxx. 1 f.) regards these, and others whom he mentions, merely as distinguished teachers and not necessarily superior in priestly rank.

linus¹ says that the Magi tribe was at first a small one, and that the Persians, who were politically in the ascendancy, availed themselves of their services for the conduct of public worship. Gradually they increased in number and founded an exclusive class, with a special area for their dwelling-place and a proper constitution.

But the Later Avesta itself contains clear indications of the existence of a priestly organization, although there is much uncertainty as to the time to which they have reference. In *Ys.* i. 3-7,² where the names of the *gāhs*, or divisions of the day, are mentioned, the priestly writer proclaims his purpose to bring offerings at each *gāh* to a special divinity, and also to the *fravashī*, or spirit of a chief or holy person. One of the chiefs whose spirit is invoked is the *zarathushtrótēma*³—i.e. the one most like Zarathushtra, or the successor of Zarathushtra. Now, the *zarathushtrótēma*, as we learn from other passages,⁴ being the spiritual (and, in Ragha, also the secular) head of the community, the Pahlavi commentators have inferred that the other chiefs whose *fravashīs* are associated with the other *gāhs* also represented members of the same organization. These were *daggyuma*, or lord of the province; *zantuma*, or lord of the tribe; *visya*, or lord of the village or clan; *nmaniya*, or lord of the house. The interpretation is no doubt entirely fanciful, but it has served a valuable purpose in that it has preserved for us some vestiges of the organization of the priesthood as it seems to have existed at least in Sasanian times. At the head, according to the tradition embodied in this interpretation of the *Yasna* passages, we have the *zarathushtrótēma*, who was a kind of supreme pontiff at Rai. Under him each satrapy or province (*daggyum*) had, as Darmesteter surmises, a superintendent of the cult, or *andarapat*.⁵ In each district (*zantu*) there was a bishop—*rat* or *ratu*; in each borough (*vis*) a *mōbed* or *magupat*.⁶ Beneath the *mōbeds*, and yet belonging to the priestly race, were the civil judges (*dātōbar*, Mod. Pers. داور). We know that the priesthood underwent a thorough re-organization under the Sasanians and at that period attained its fullest development.⁷ Another classification of the priests is known to the Avesta,⁸ not according to social or ecclesiastical rank, but according to their functions in regard to certain parts of the Mazdæan ritual. On this basis they were divided into eight classes, and their names for the most part indicate their special functions. The *zaotar* (now called *zōt* or *zōti*) had the supremely sacred duty of reciting the *Gāthas*. The *hāvanam* pressed out the juice of the *haoma*-plant, which was such a marked feature of the ritual in all ages. The *atarevakhsha* had as his primary charge the nourishing of the sacred fire, but in addition he was responsible for the washing of three sides of the fire-altar and making the responses to the *zaotar*. The *frabaretar*, besides his duties of preparing and handing the utensils to the *zaotar*, washed the fourth side of the fire-altar. To the *asnatar* was assigned the work of filtering and washing the *haoma*, while the *rathwiskare* made the mixture of *haoma* and milk. The *abaret*, in keeping with his name, brought the water necessary for all the priestly

ceremonies. He bears also the name *dānazvāza*.¹ The eighth was the *sraoshavarez*, who seems to have superintended the whole ceremony. At the present time the functions of these eight priests are all performed by only two: the *zōt*, who has much the same functions as in earlier times (see below also), and the *rāspi* or *rathwī* (Pahl. *rāspīg*), who is in attendance upon the *zaotar*, while discharging the duties devolving upon the seven ancient assistant priests. Though taking his name from the Avestan *rathwiskare*, his chief functions correspond more nearly to those of the *atarevakhsha*.

This great reduction in the personnel of the priesthood resulted, there can be little doubt, in the first instance from the Arab conquest in the 7th century. The change is reflected in the tone of the *Bahman Yasht* and the *Dātistān-i-Dīnik*.

5. The functions of the priesthood.—The principal functions have already been touched upon incidentally. Performing the sacrifices, so long as they were practised,² mediating the offerings and all public worship, constituted the central and most characteristic parts of the priestly duties. No sacrifice, Herodotus³ tells us, could lawfully be made without the presence of a Magus. Still the extent of the priestly intervention at these sacrifices, on the one hand, and of the lay-assistance⁴ at these and other parts of ritual, on the other, seems to have varied at different epochs in Iranian religious history. In the days of Herodotus the part of the Magus in the sacrifice was confined to merely chanting the theogony or hymn; the person who brought the sacrifice both prepared it and disposed of the flesh after the ceremony. In Strabo's days the priestly duties at such sacrifices were more extended.⁵

The purifications constituted another primary function of the priesthood, and formed the most fruitful source of their revenue. Duncker maintains that even the purifications could be performed by a layman.⁶ It is expressly stated in the *Vendidad*,⁷ however, that none could perform these ritualistic cleansings unless they had learnt the law from one of the purifiers or priests. It is scarcely probable that the priests would impart to many laymen the qualification which would enable them to share with themselves their already slender means of subsistence. It becomes very clear from the *Āērpatastān*⁸ that the priestly revenue did not suffice to maintain the whole of their tribe, and as a result the participation in secular pursuits was legalized. It is true, their fees were substantially augmented by what they obtained from the practice of medicine. The art of healing was a priestly function in very early times in Irān, and, if not originally, yet ultimately fixed dues were attached to such services.⁹ The priesthood, as we have already stated, was intimately associated with judicial functions in the Iranian commonwealth. 'To the Magians,' Duncker says,¹⁰ 'belonged the judicial power.' It is quite legitimate to infer that the *zarathushtrótēma*'s position at Ragha, referred to before,¹¹ would entitle him to high legal authority among his other prerogatives. During the ascendancy of the Arsacids the Magi together with the members of the royal race formed the Council of the Empire,¹² and during the Sasanian period the Grand Magian performed the coronation of the kings.¹³

6. Qualifications and symbols of the priestly office.—However much or little at different periods racial or tribal descent may have counted as affording a right to exercise the priestly functions, the primary qualifications clearly and strongly insisted upon in the Avesta were of a moral and spiritual character. According to the *Vendidad*, the priest must be patient, contented, satisfied with a little bread, and should eat what is offered to him.¹

¹ Call him a priest, O pure Zarathushtra, who enquires of the pure intelligence the whole night of the wisdom which purifies from sin and makes the heart wide . . . He who sleeps the whole night without praising, or hearing, or reciting, or learning, or teaching—call not such an one a priest.²

The *Aērpatastān* speaks in the same tenor:

‘Which member of the house shall proceed to the sacred calling? He who has the greatest thirst after righteousness, that is, he who is the truest friend unto the soul whether he be great or humble.’³

Diogenes Laertius,⁴ after Sotion, says that the Magi were forbidden to wear ornaments or jewellery; their resting-place was the ground; vegetables, a little cheese, and bread their food. Nevertheless they possessed certain outward symbols of office. The first was the *paṭidāna* (Parsi *penōm*), a cloth or napkin⁵ with which they covered, and still do cover, the lower part of the face as they recited the Avesta and especially when tending the sacred fire, lest perchance any pollution of the fire should result therefrom. Secondly, they had the *khrafstraghna*, a leathern thong or strap with which they killed insects and other unclean creatures. They also carried the *urvara*, or staff, and the *astra maini*, or knife, with which to kill snakes. But perhaps the most characteristic symbol was the *baresma*, or *barsom*, a bundle of slender rods or twigs of a specially sacred tree, but now substituted by a bundle of metal wires, which are held before the face at the prayers and sacrifices (see art. BARSOM, vol. ii. p. 424 f.; cf. Ezk 8⁷).

7. The priesthood in modern times.—To-day the priesthood is a hereditary privilege, though it does not seem always to have been so.⁶ All priests in India at the present time claim to be descended from a single priest, Minuchihr, who came from Persia with the first settlers in the 7th century. The unity of the priesthood is a cardinal doctrine among the Parsis. Every son of a priest, however, is not *ipso facto* himself a priest able and entitled to officiate. Although no consecration can make a layman a priest, still every acting member of the priestly family must pass through a series of symbolic actions to initiate him into the different grades of the sacerdotal office. There is in India a preliminary function called *nōzūd* (really meaning ‘new *zaotar*’), which, although not a door to any stage of actual priestly grade, is essential to every aspirant to such dignity, and by which he becomes a recognized member of the Zoroastrian church or community—a *bīhdim*, a status corresponding to full membership in Christian churches, or, as Darmesteter observes, a *קָהָן* among the Jews. In Persia this ceremony is called *sudrah va kūstī dādām*, i.e. the investing with the *sudrah*, or sacred shirt, and *kūstī*, or holy girdle, which are the outward distinctive marks of the Zoroastrian. The term *nōzūd* is employed by the Zoroastrians of Persia for the ceremony termed *nābar* by the Parsis of India, and is the function that makes a *mōbed*’s son into a priest of the lower grade called

*herbed*¹ (Avestan *athrapaiti*) and qualifies him for performing the ceremonies of the second grade. Before he is allowed to perform the *nābar* ceremony the candidate must have completed his fourteenth year, and must know by heart all the texts and formulæ connected with the sacrifices of the *Yasna*, *Vispārād*, and *Khurda Avesta*. He twice undergoes the great purification of nine nights called *baresnum*, after which he is conducted to the temple by a *dastūr* and his patron, followed by his friends and other guests. He carries the *gurz* i *gavyānā*, or club, a reminder of that which was in the hand of Faridun, and a symbol of spiritual authority over the demons. The head of the assembly asks if they admit him as a candidate for the holy office, and, taking their silence for assent, he enters the *izāshnah Gāh*, where he celebrates the *Yasna*—the *zōt*, or head priest, who initiates him, acting for the time being as his *rāspī*, or ministering priest. He performs the purification of *nīrang* and water for four successive days, and on the fourth day he has attained the degree of *herbed*, with a right to celebrate all the ceremonies of the *Khurda Avesta*. For exercising the more important ceremonies of the *Vendidad* together with that of initiating other candidates to *nābar* it is essential that he should be a *mōbed*, or fully qualified priest. To attain the *mōbed*-ship he must have passed through the ceremony called in India *marātib* (pl. of Arabic مرتبت, meaning ‘grade’ or ‘degree’). This consists of another nine nights’ purification. On the morning of the succeeding day he performs the *Yasna* with a fully qualified priest. On the following or second day again he performs the sacrifice of the *fravashis* or that of the *srosh*; at midnight the *Vendidad* is performed and henceforth the candidate is a *mōbed* and entitled to all the privileges of a fully qualified priest.

Another frequent designation of the chief priest in India is *dastūr*. The name and office probably arose, as Darmesteter observes,² after the Arab conquest of Persia. The origin of the term is not altogether clear.³ It is used in the translations to render the Avestan *ratu*. In the *Shāh-nāmah* it sometimes denotes a high ecclesiastical functionary; at other times a minister of State. To-day in India many *mōbeds* assume and are accorded the title without any real or moral right to it. But it is frequently applied as a title of honour to a learned *mōbed* who knows his Zend or Avestan and Pahlavi. But it specially and more correctly designates the priest attached-in-chief to a fire-temple of the highest order, i.e. an *ātash i bahrām*. The office is generally hereditary, but not necessarily so, inasmuch as the patron or founder of such a temple may choose his own *dastūr*. See, further, artt. SACRIFICE (Iranian) and WORSHIP (Iranian).

LITERATURE.—In addition to the works referred to in the article the following may be consulted: Anquetil du Perron, *Zend-Avesta*, Paris, 1771, ii. 629-619; A. Rapp, ‘Die Religion und Sitte der Perser und übrigen Iranier,’ in *ZDMG* xx. [1866] 68-77. Much further additional material may be found in the *Aērpatastān*, ed. S. J. Bulsara, Bombay, 1915, which could not be included in the compass of this article. Darmesteter’s excellent Introduction to vol. i of his *Le Zend-Avesta* already referred to, to which in the treatment of the modern period this article is greatly indebted, may be further profitably consulted.

E. EDWARDS.

PRIEST, PRIESTHOOD (Jewish).—I. Exclusiveness of the priesthood.—According to the Levitical code, the Hebrew priest is born, not made. This principle has always been so rigorously upheld that, after the return of the Jews from the Babylonian captivity, all those who

¹ *Herbed* did not originally designate a priest of inferior as opposed to one of superior degree, but only the master or instructor as opposed to *hāvishia*, or disciple. See *Dāristān*, xlv. 4.

⁴ *Proem*, vi.

⁵ In Strabo’s time we read that the Magus’s headgear consisted of a high felt turban reaching down on either side of the face so as to cover the lips and cheeks (xv. iii. 15).

⁶ D. F. Karaka, *Hist. of the Parsis*, London, 1884, ii. 285, says that the Parsi religion does not sanction the hereditary character of the priesthood, ‘which is, indeed, contrary to the ancient law. The custom is merely derived from usage.’ Duncker also (p. 139) strongly contends that the priesthood was not a closed caste in earlier Iranian times.

claimed priestly rank but were unable to produce documentary evidence of their descent from Aaron were disqualified (Ezr 2², Neh 7⁶⁴). In order to safeguard the purity of lineage for future generations, the Biblical laws regulating priestly marriages were not only strictly enforced, but also strengthened in various directions. Priests were forbidden to marry a *ḥaliṣāh* (childless widow whom the brother of the deceased husband had refused to marry), or a woman who had spent some time in captivity, or a freed slave, or the daughter of a proselyte, unless the mother was of Jewish descent (Mishnāh, *Bikkūrim*, i. 5). The high priest was bound to be wedded to a pure virgin, who, however, was allowed to be of lay origin. These restrictive regulations, added to ancestral pride, gradually converted the priestly class into an exalted theocracy which, from the nature of public affairs, at the same time formed the social aristocracy. The priestly family of the Hasmoneans acquired royal dignity. Later the high priest was the president of the Sanhedrin. Thus power, both spiritual and temporal, and wealth accumulated in some priestly families.

2. Classification.—(a) The principal duties of the priests were those connected with the sacrificial service of the Temple in Jerusalem. It was also their business to prepare and kindle the 'perpetual lamp' daily and to arrange the shewbread on the golden table every Sabbath. From Biblical sources we know that the number of priests had in the course of time increased to such an extent that only a limited number could be employed in the Temple at the same time. The four clans mentioned by Ezra (2³⁶⁻³⁹, Neh 7³⁹⁻⁴²) numbered more than 4000 male members. It was, therefore, necessary to fix a rota of attendance, in order to give every priest an opportunity of discharging his duty at the service. For this purpose the whole priestly tribe was divided into 24 companies, probably irrespective of the 22 families mentioned in Neh 12¹⁻⁷. At what time this division was first made is uncertain, but the most reliable tradition seems to be that preserved in the *Tôseftā* (*To'anith*, ii. 1; *Talm. Jer.* fol. 68a) to the effect that the classification was undertaken by the prophets. As both Jeremiah and Ezekiel were priests, it is not unlikely that they, especially the latter, had a voice in the constitution of the priestly order. Each section was called upon to do duty in the Temple for one week. Each company, officially called 'watch,' or *mishmār*, was again subdivided into several 'houses of Fathers,' each of which was probably composed of the members of one family. The *mishmār* was presided over by a 'head,' and the 'house' by the eldest member. Besides these there was a number of officers, but much uncertainty prevails as to their status and functions. In the older sources (Mishn. *Shekalim*, v. 1; *Yômā*, ii. 1, iii. 1; *Tôṣ. Shek.* ii. 14) they are described as *m'munnēh* (sing. *m'munnēh*). One of them superintended the daily morning offering, determining by lot the share which each priest had in the ceremony. He also gave the signal for the beginning of the morning prayer. Others were keepers of seals, keys, stores, vestments, tapisserie, overseers of the manufacture of shewbread and perfume, musicians and choirmasters, criers and constables. Their number was 15, but not all of them seem to have held equal rank. Thus *m'munnēh* is a general description of office-holder rather than a fixed title.

(b) *'Amarkelīm*.—Of somewhat higher status seem to have been the seven *'amarkelīm* (*Shek.* v. 2; *Tôṣ. ib.* 15). The exact meaning of the word is doubtful, but it seems that they were the keepers of the keys to the sanctuary itself. The Targum uses the term for the translation of the

'keepers of the door' in 2 K 12⁹ and similar passages. The *Tôseftā* remarks that all seven *'amarkelīm* had to be present when the door was opened. We might infer from this that each one had a different key, so that the door to the Temple could never be opened without a certain amount of publicity, strict control being kept over every one who wished to enter. As the word is also employed in connexion with secular supervisors, it does not really describe any priestly function, although the officers who bore this title were priests. Together with the *'amarkelīm* are mentioned three *gizbārīm*, or treasurers, who were probably responsible for the golden vessels and the Temple funds.

(c) *S'gan*.—One of the highest offices was that of the *s'gan*, commonly believed to have been the high priest's lieutenant. Here, however, it should be noted that the Mishnāh (*Yômā*, i. 1), when speaking of the appointment of a deputy high priest for the Day of Atonement, does not use the term *s'gan*, but simply says 'another priest.' Other passages (*Yômā*, vii. 1; *Sôfāh*, viii. 7f.) have it that the *s'gan* stood next to the high priest and handed the scroll of the Law to him. The Talmud (*Yômā*, fol. 39v) records a tradition on the authority of R. Hanīnā, himself a *s'gan*, that, if the high priest was suddenly disqualified from ministration on the Day of Atonement, the *s'gan* took his place. Now this Hanīnā is always called '*s'gan* of the priests' (in plural), which cannot mean that he acted as deputy to a priest of lower rank, or to one high priest only. It seems rather that he did duty to several high priests either by fixed appointment or by re-election. It stands to reason that at a time when many high priests were ignorant or neglectful of their duties an experienced assistant had to be near at hand to prevent them from making mistakes. The frequent change of high priest was most likely of less importance as long as a tried *s'gan* looked after the proper execution of his duties. He was probably also meant to be in constant attendance on the high priest in order to give greater dignity to his office. According to the Mishnāh (*Tāmid*, vii. 3), one of his duties was to assist the high priest whenever the latter ascended the staircase to burn the perfume. Then he took the flags and gave the Levites the signal to start singing.

(d) *High priest*.—The office of the high priest is characterized by his title. He was the spiritual head of the people, but since the period of the Hasmoneans he added the regal crown to the ecclesiastical mitre. His participation in the sacrificial duties during the year was left to his discretion, but he was supposed to act as offering priest on the Day of Atonement. There is no reason to assume that even on this day he nominated any other priest for his work, as otherwise the Mishnāh would have had no cause to describe the preparations which began a week beforehand, when he had to make himself familiar with the details of his task for the holy day. Even an emergency wife was appointed for the event of his wife's sudden death. His evening meal was restricted, and sleep was denied him entirely. Before entering the Temple hall he was solemnly warned by the lay heads of the Sanhedrin not to alter anything of the Pharisaic teachings. The service itself, which claimed his undivided attention and included the fast, five baths, and ten lavings of hands and feet, must have made great demands on his physical strength. When we add to this the anxiety not to commit a mistake, we can understand the Mishnāic allusion to the satisfaction expressed at the close of the day (*Yômā*, vii. 4) which is reflected in the glowing tribute given to the high priest by an eye-witness

in the person of Ecclesiasticus (ch. 50). Poetic descriptions by various authors form an integral part of the present liturgy for the Day of Atonement.

3. Rules for the priesthood.—There was one condition which all priests, high or low, had to fulfil, viz., they must be free from bodily defects, and the rules were as elaborate as their enforcement was strict. It made no difference whether the blemishes were chronic or temporary (Mishn. *Bekhoroth*, vii.). The Mishnah even forbade a priest whose hands were stained with dye to pronounce the blessing over the people (*Megillah*, iv. 9). A careful compilation of these blemishes (amounting to 140) is given in Maimonides, *Mishneh Torah* (*Hilkhoth b'ath hamigdashah*, viii.). Needless to say, the Biblical prohibition against drinking wine or any other intoxicant was most strictly enforced. The Talmud (*Ta'anith*, fol. 17vo) strengthens these rules considerably for the company whose turn it was to attend the Temple service. A similar rule holds good for the present time as far as the public blessing is concerned.

4. Remuneration.—As the priests were allowed no share in the land (Nu 18¹⁰), the Levitical law (vv. 8-19) assigned certain emoluments to them in compensation. These originally formed their sole source of income. On the basis of the passages just mentioned, the Tosefta (*Hallah*, ii. 7f.) enumerates 24 classes of priestly 'gifts,' viz., 10 to be partaken of in the Temple premises, 4 within the precincts of Jerusalem, and 10 within the borders of the Holy Land. These 'gifts' consisted in the first instance of the flesh of sin-offerings and trespass-offerings, which was eaten by such male priests as were not debarred from so doing by Levitical uncleanness. None of it could be eaten outside the Temple. The officiating priests were also entitled to the skins, including those of the burnt-offerings. In view of the large number of 'heavy' sacrifices, the income derived from the skins must have been considerable. Of the lighter kind of sacrifices, such as peace-offerings and festival-offerings, the priests received only the breast and the right shoulder. These not only could be eaten within the boundaries of the holy city, but also could be shared with women, children, and even slaves. Another source of revenue was the cereal offerings, viz., the part of the meat-offerings which was not burnt on the altar, the shewbread, the 'omer,' etc. Priests who lived in the provinces were recipients of the *terumah*, the gift of fruits from field and garden. From the Levites they claimed the tithe of the tithes due to them from the people. To these were added the firstfruits and first-born domestic animals suitable for sacrifices. First-born sons had to be redeemed by the payment of five shekels, which belonged to the priest who performed the ceremony. The first-born of unclean animals were likewise subject to redemption according to the priest's estimate. To these were added gifts of the 'first dough' of wheat, barley, spelt, oats, and rye, and of the first cut of wool from a flock consisting of at least five sheep. All these regular imposts were occasionally supplemented by vows and free gifts either in kind or in the form of money. Lastly must be mentioned things 'devoted' (*he'rem*), which no layman was allowed to touch.

Such was the income of the ordinary priest. If he was free from any physical blemish, he shared the emoluments of the sacrificial service twice a year. Priests who lived in Jerusalem benefited by the influx of the people for the celebration of the three festivals of pilgrimage. It may be assumed therefore that the majority of priests lived in or near the holy city, as the care of their families

forced them to be in touch with clients who bestowed dues and gifts on them. In the nature of things there must have been a great disparity of income, and the social status of priestly families must have varied. The greater number probably remained poor. Many, as alluded to above, were obliged to practise some trade, in spite of the fact that the imposts seem to have been regularly paid (Neh 10³⁵ et.). This is vividly illustrated by the Mishnah (*Bikkurim*, iii.), which gives an account of the cutting and conveying the firstfruits to the Temple. Rich and poor joined in the festival procession, every one carrying his basket, and even the king, probably Agrippa I., handing his gift in person to the officiating priest, whilst reciting the prayer prescribed in Dt 26⁵⁻¹⁰.

The revenue of the high priest was placed on a different level. His position demanded that he should be wealthy. If he came from a poor family, it was the duty of his brother priests to make him rich. Josephus (*Ant.* XX. viii. 8, ix. 2) speaks of the violent conduct of some high priests who sent their servants into the threshing floors of the people to take away the tithes so that their poorer brethren died from starvation. Unfortunately he mentions no names, but attaches this remark to the paragraph in which he tells of the appointment of Ismael b. Phabi II. as high priest. This, however, is the priest of whom the Mishnah (*Sotah*, ix. 15) relates that with him the lustre of priesthood came to an end. It is therefore probable that the censure of Josephus (who was himself a priest) was meant for Ismael's predecessor, the avaricious Ananias, son of Nedebeios, who was removed from office, and later met with a violent death at the hands of the people.

5. High priest's legal status.—Notwithstanding his exalted position, the high priest did not stand above the law, at least in theory. Both the Mishnah and Tosefta point out that, in the event of his committing breaches of the religious or moral laws, he was liable to be called before the court. No such case is recorded in the sources. High priests were occasionally removed from office, but for personal and political motives rather than for religious ones. In flagrant cases of defiance of the traditional teaching the people acted independently. The Mishnah (*Sukkah*, iv. 9) relates that one high priest (whose name is not given) who endeavoured to introduce Sadducean practices during the ceremony of pouring out water on the Feast of Tabernacles was done to death by the people, who pelted him with their citrons.

6. Decline of the priesthood.—The destruction of the Temple by the Romans not only put an end to the sacerdotal service, but also deprived the priests of their chief source of income. Although the laws connected with land-tenure remained in force, the Jewish population was so reduced in numbers and so impoverished that their tithes and gifts could not have amounted to much. The priests living in the Diaspora were reduced to a number of empty privileges, and only the redemption of first-born sons, which is practised to this day, preserved a remnant of monetary gift due to them. In the storm and stress of the times the real control of priestly pedigrees has been irretrievably lost, and is replaced by family tradition. Certain family-names, some of them being of considerable age and literary renown, carry an indication of the priestly descent of the bearers with them. In modern times the claim of priesthood has lost its title to social distinction. The religious duties of priests are limited to pronouncing the blessing (Nu 6²⁴⁻²⁶) over the people during the public worship on festival days. The ancient rules of disqualification are still in force, with the exception of the preservation of Levitical cleanli-

ness, since the means of re-establishing the same no longer exists, and are merely intimated by the ceremony of washing of hands with the assistance of Levites. The prohibition of coming in contact with a dead person or a grave, with the exceptions mentioned before, is likewise still in force. There is still one privilege specified in the Mishnâh (*Hôrayôth*, iii. 8) to be mentioned, viz., the precedence of the priest over a Levite or an ordinary Israelite in every religious ceremony, especially in the order of persons 'called' to the reading of the lessons from the Pentateuch during public worship. The same paragraph holds up to contempt those high priests who held office not by virtue of learning and piety, but from worldly motives. It places them beneath the *mamzôr* in the Rabbinical sense (*Mishnâh*, *Yebhâmôth*, iv. 13). The historical background of this is undoubted.

H. HIRSCHFELD.

PRIEST, PRIESTHOOD (Mexican).—In ancient Mexico the priestly office had arrived at a condition of high complexity, the various grades of the priesthood being sharply differentiated. At first the priest was merely the tribal medicine-man, and in nomadic times had charge of the tribal god, the image of which he carried from place to place. The temporal and religious authorities were never quite distinct, the *tlatoani*, or king, being necessarily a man conversant with hierophantic as well as military practice. In the Mexican hierarchy proper, as apart from those of the surrounding and subject peoples, were two chief priests, each of whom was entitled Quetzalcoatl (the name of the god who was the founder of religious orders), but who were distinguished from one another by the titles of *totec tlamacazqui* and *tlaloc tlamacazqui*, and who were respectively the leaders of those castes which especially served the gods Huitzilopochtli and Tlaloc. These pontiffs were equal in grade and held their positions in virtue of their piety and general fitness. Occupying a lower rank was the *mexicatl teohuatzin*, head of the *calmecac*, or priestly college, and interpreter of ritualistic difficulties, in which duties he was assisted by the *huitznanuac teohuatzin* and the *tepan teohuatzin*, the latter being executive educational officer. The rank and file of the priesthood consisted of two grades—the *tlānamacac*, or upper grade, and the *tlamacazqui*. Beneath these were the *tlamacaston*, or neophytes. The first grade included many special functionaries who served various deities or performed definite rites.

The costume of the priesthood in general consisted of a black mantle, the body being painted black, relieved, in some cases, with yellow designs. The hair was allowed to grow long, and the ears were torn and ragged from the practice of penitential blood-letting. The priest who performed the act of human sacrifice was garbed in red.

The offices of the Mexican priesthood were numerous; and, besides sacrifice, the care of the temples, and ritualistic labours, they were employed in astrological observation and divination. The *amamatini*, a special class, were engaged in the preparation of the painted MSS which served the Mexicans as written records; and others were employed as singers and dancers. Ritual practice, however, occupied most of their time, especially incense-burning, which was performed several times a

day. The education and preparation of a priest were severe. The neophyte commenced his priestly life at about the age of seven by sweeping the temple buildings and preparing the body-paint for the priests from pine-soot, gathering aloe spines for blood-letting, and making adobe building bricks. Later he made night pilgrimages to a holy mountain in the vicinity as a test of austerity.

The Mexican priests were, however, above all, diviners, and their practice in this respect is minutely outlined in the works of Sahagun. The basis of their calculations was the astronomical calendar known as the *Tonalamati* ('Book of Days'), from which they cast horoscopes and foretold lucky days and seasons (see DIVINATION [American], CALENDAR [Mexican]).

LEWIS SPENCE.

PRIEST, PRIESTHOOD (Muhammadan).

—In the Muhammadan system there is properly no caste, class, or profession which monopolizes the performance of religious rites; when these were at first performed in public, the leader was properly the chief of the community, and the name *imām*, 'leader in prayer,' is therefore used for 'sovereign,' 'chief authority,' and the like. Taking the lead in the religious service of the mosque was therefore the duty of the sovereign in the capital and of his representative in the provinces; but in 'Abbāsid times we find the *ṣalāt*, or 'public prayer,' occasionally separated from the governorship and combined with another office—e.g., the judgeship (Tabarī, *Chronicle*, Paris, 1867-74, iii. 378 [anno 156], 458 [anno 158]) or the headship of police (*ib.* iii. 469 [anno 159]). As mosques multiplied it became customary to make provision for an *imām*, and, if there was a Friday sermon, for a *khatīb* ('preacher'). Such a man was supposed to be of good character (*Aghāni*, Būlāq, 1868, xvii. 11), and of course had to possess sufficient learning to discharge his functions.

The legal aspect of the matter is treated by Mawerdi, *Constitutiones Politicæ* (ed. M. Enger, Bonn, 1853, pp. 172-185). A distinction is there made between royal and civil mosques; in the former the minister must normally be appointed by the sovereign, in the latter by the congregation; if there are more than one candidate, a majority are to appoint; if votes are equal, the sovereign is to do so. The founder of a mosque has not the right to lead prayer in it himself, but on this point there is a difference of opinion. Prayer may not be led by a woman, if there are any men in the congregation. D. S. MARGOLIOUTH.

PRIEST, PRIESTHOOD (Roman).

—Under the old Roman monarchical system the office of king included religious as well as secular functions. The ruler was both king and priest. But on the establishment of the Republic a line of cleavage was drawn, and, although religion remained a branch of the general State administration, all its technical phases were assigned to priestly organizations. The relation of the priestly colleges to the secular authorities was one of the characteristic features of Roman religion. The powers of the priests were not co-ordinate with those of the senate and the magistrates, but were subject to their control. They performed the routine duties of their office without special instructions, but, when unusual circumstances arose, it was only at the command of the State authorities that they became active. Neither *pontifices* nor *haruspices* took measures in

regard to prodigies until the senate had ordered them to do so; the *quindecimviri* were not permitted to inspect the Sibylline books except at the express command of the senate.

Of the numerous priestly organizations (*sacerdotes¹ publici populi Romani Quiritium*) four were of special importance (*sacerdotum quattuor amplissima collegia*): the *pontifices*, the *augures*, the commission in charge of the Sibylline books and of all ceremonies conducted 'ritu Graeco' (*quindecimviri sacris faciundis*), and the college which supervised the sacred banquets (*septemviri epulones*). Next to these in rank came the priestly *sodalitates*: the *fetiales*, the *sodales Titii*, the *sodales of the divi imperatores* (modelled on the *sodales Titii*), the *Salii*, and the *fratres Arvales*. There is evidence that the rank of the *fetiales* and of the *sodales Augustales* approached very closely that of the four great colleges; of the relative ranking of the *Arvales*, *Titii*, and *Salii* we have no definite indication. The runners of the Lupericalia (the *Luperci*) were inferior to the others. The *sodales Augustales* were founded A.D. 14; but all the other priesthoods mentioned, with the exception of the *septemviri epulones*, go back to the regal period. This fact is significant of the conservatism of the Roman national religion. Moreover, the *septemviri epulones* were organized (196 B.C.) merely for the purpose of relieving the *pontifices* of one of their functions; the priesthood did not represent any new religious ideas. There were, however, some minor priesthoods organized during the Republic to take care of the rites of some god or gods belonging to communities which the Romans had assimilated (*sacerdotes Lanuvini*, *sacerdotes Tusculani*, etc.). The Greek and Oriental cults introduced during the Republic and the Empire brought their own priests with them.

The qualifications for membership in any of the priesthoods were free birth, Roman citizenship, an unblemished civil record, and a physique free from infirmities. Originally, with the exception of the *quindecimviri*, all the old priesthoods were limited to patricians. But in the course of time this exclusiveness passed away, except in the case of the *rex sacrorum*, the *Salii*, the three great *flamines*, and later the *flamines* of the deified emperors. By the *lex Ogulnia* (300 B.C.) five of the nine places in the colleges of the *pontifices* and the *augures* respectively were reserved for the plebeians, while the four others were open to both orders. Wissowa² suggests that in all probability it was the *lex Ogulnia* that opened to the plebs the other priesthoods also. From the beginning of the Empire a new classification prevailed: senatorial and equestrian priesthoods. To the former belonged the four great colleges, the *sodales of the divi imperatores*, *sodales Titii*, *fetiales*, *fratres Arvales*, and *Salii*; to the latter the *Luperci*, the minor *flamines*, the minor *pontifices*, and the *sacerdotes Tusculani*, *Lanuvini*, etc.

The extent to which the accumulation of priesthoods in the hands of one man was customary varied with the kind of priesthood and with the period. As regards the combination of two of the four great priesthoods, we find examples in the earlier Republican period, but not in the later until the time of Cæsar, who was both *pontifex maximus* and *augur*. Moreover, the accumulation of priesthoods of this class did not become common till the 3rd and 4th centuries, except in the case of the emperors and other members of the imperial family. There was less objection to the combina-

tion of one of the great priesthoods with one or more of the *sodalitates*, and many examples occur. The *Salii*, however, could not hold any other priesthood. If they joined another, they ceased automatically to be *Salii*. Whether a *flamen* could hold any other priestly office is doubtful.

Priests were allowed to hold civil and military offices. This probably was not intended in the readjustment of civil and religious offices that took place after the expulsion of the kings, but gradually it became the regular practice. There were, however, exceptions. The *rex sacrorum* could not hold any civil or military office, and the *flamen Dialis* was virtually prevented from doing so by the numerous tabus which hampered his actions.

In the early Republican period the usual method of choosing members in the priestly colleges and *sodalitates* was that of co-optation, but in the year 103 B.C. the *lex Domitia* was passed, by which vacancies in the four great colleges were filled by election at the *comitia sacerdotum*, which consisted of seventeen (that is a minority) of the tribes, chosen by lot. The nominations to the sacerdotal *comitia* were made by the respective colleges, which after the election went through the form of co-optation. In the case of the *sodalitates* the old system of co-optation remained. Under the Empire the influence of the emperor in the appointments both to colleges and to *sodalitates* was almost unlimited. Appointment to a priesthood was generally for life. The Vestals and the *Salii* were exceptions.

The priests were provided by the State with funds for the maintenance of the various cults and for the performance of the duties of their office, and with attendants and slaves (*apparitores*, *lictors*, *tibicines*, *viatores*, *servi publici*). Some of them were furnished with residences—e.g., the *rex sacrorum* and the Vestals. They had the privilege of wearing the *toga praetexta*, and, if they cared to take advantage of it, exemption from civil and military duties (*vacatio militiae munerisque publici*).

1. Collegium pontificum.—(a) *Pontifices*.—While the old derivation of *pontifex* from *pons* and *facere* is probably sound, it is not possible, with the data available, to determine precisely the original significance of the term. It is not even known positively that *pons* here means 'bridge,' though scholars once more tend to interpret the word in that way, finding an explanation in those religious associations of bridge-building which are known to have existed in ancient times. The priesthood was not peculiar to Rome, but existed also in other places in Latium—e.g., Praeneste and Tibur.¹ According to the tradition, the *pontifices* were originally five in number. Including the king, however, who doubtless performed the functions which under the Republic fell to the *pontifex maximus*, there were six. Subsequently the number was increased to nine (300 B.C.), and later by Sulla to fifteen.

With the *pontifices* were closely connected certain other priests or priestesses: the *rex sacrorum*, the *flamines*, and the Vestals. So close was the association that from the beginning of the Republic all these were regarded as belonging to the college of *pontifices*. Towards the close of the Republic the *pontifices minores*² were also members of the college (cf. Cic. *de Har. Resp.* vi. 12).

The *pontifex maximus* was the president of the college and represented its authority. But it is a mistake to suppose that the other *pontifices* consti-

¹ See indexes to *CIL* xiv.

² We find this word used of the whole body of Roman priests as in this phrase, but it is not applied to the priests of individual Roman gods, with the exception of the municipal groups, *sacerdotes Lanuvini*, etc. It is used, however, of the priests attached to various Greek cults.

² *Religion und Kultus der Römer*², p. 492 f.

² The title of *pontifices maiores* was applied to the regular *pontifices* only towards the end of the 3rd cent. after Christ. The title was used to distinguish them, not from the *pontifices minores*, but from the *pontifices Saks*, the priesthood founded by the emperor Aurelian to supervise the worship of his sun-god.

tuted merely an advisory body. A question submitted by the senate was discussed by the whole college, and the opinion of the majority prevailed, even if the *pontifex maximus* held a different view.¹ But along many lines he could act without reference to them. In the earlier period especially his power was very great; e.g., he originally appointed the *rex sacrorum*, the *flamines*, and the Vestals, even against the wishes of the appointees. Later this power seems to have been modified, and in the case of the *rex* (Livy, XL. xlii. 4) and the *flamines maiores* (Tac. Ann. iv. 16) he made his appointments from a list of candidates nominated probably by the college, while Vestals were chosen by lot from a list of twenty whom he nominated (Aul. Gell. i. xii. 11). He had also the power to punish these priests: the *rex* and the *flamines* he could fine, and under some circumstances dismiss from office; in the case of the Vestals he had the right of corporal punishment, and originally of inflicting the death penalty.

It was the duty of the *pontifices* to conserve the body of Roman religious tradition. They were primarily theologians, professors of sacred law. They were the final authority on all questions pertaining to the old Roman gods, and on the proper methods of maintaining satisfactory relations with them. It was a fundamental belief in Roman religion that a benevolent attitude on the part of the gods could be secured only by scrupulous attention to all the minutiae of ritual. With these minutiae the *pontifices* were familiar. They knew not only the names of the gods, but also their attributes and the formulae by which they should be addressed. They were consulted not only by the magistrates in regard to matters which concerned the State, but also by private citizens who found themselves under the stress of some religious problem.

They were not, however, merely authorities on sacred law. They themselves took an active part in religious services, and their sacerdotal functions are clearly indicated by the insignia of their office, which include the bowl for libations (*simpulum*), the sacrificial knife (*secespita*), and the axe (*securis*). It was, moreover, with special reference to their duties as officiating priests that, at least in the earlier period, they were subject to tabus similar to those which persisted with so much more rigour in the case of the *flamen Dialis*: they could not look at a corpse or mount a horse. The *pontifex maximus* in particular was not permitted to absent himself from Rome, or at any rate from Italy, for a period of any length. They officiated at the most important ceremonies in the public worship of Vesta and the *penates* as well as at those of the Capitoline triad, for with these cults, which embodied some of the oldest and most sacred of Roman religious ideas, they, as members of the ranking priesthood of the State, had especially close associations. They had the rare privilege of entering the inner sanctum of Vesta; the *regia*, the official headquarters of the *pontifex maximus*, was adjacent to the house of the Vestals, and he stood 'in loco parentis' to them. When Augustus became *pontifex maximus* (12 B.C.), he built a temple of Vesta close to his own residence on the Palatine. The cult of the Capitoline deities had an equal claim on the attention of the *pontifices*. They supervised the monthly sacrifices offered by the *rex* and the *flamen Dialis* on the kalends and the ides. On the ides of September and November the college celebrated a sacred banquet (*epulum Iovis in Capitolio*), till in the year 196 B.C. this function was transferred to the college of the *epulones*. Furthermore, the *pontifices* officiated at the ceremonies held in connexion with cults which,

though recognized by the State, were not provided with special priests. And it was they who, in order to prevent the complete disappearance of the worship of certain ancient divinities like Angerona, Carna, Acca Larentina, and others who were fading out of Roman religious life, made annual libations and sacrifices in their honour. Moreover, they were in charge of certain ceremonies belonging to the category of lustration, as, e.g., the *Fordicidia* on 15th April. They also took part in the rites of the *Argei* (in March and May).

On all these occasions the *pontifices* either officiated in person or were represented by subordinate priests. But there were many important ceremonies in which they participated merely as the advisers or assistants of the magistrates — e.g., when vows were made on the outbreak of a pestilence or at the beginning of a war, or on the occasion of the annual vows on 1st Jan., which were pronounced by the consul or other magistrate, who repeated the words after the *pontifex maximus*.¹ When relations with the gods were endangered by a flaw in a ceremony, the *pontifices* were consulted and charged with the supervision of appropriate expiatory rites; when a prodigy (*monstrum, prodigium*) was reported to the senate, that body consulted the *pontifices*, who gave their opinion as to the best methods of placating the gods of whose anger the prodigy was regarded as a manifestation. At a comparatively early date, however, the *pontifices* relinquished for the most part the care of prodigies to the *haruspices* or to the priests in charge of the Sibylline oracles, reserving for themselves the expiation of certain ones only (e.g., showers of stones, speaking oxen, etc.), in regard to which the efficacy of their methods had long been established. Moreover, the ceremony of consecration (*consecratio*) was performed by the pontiffs; e.g., a new temple or altar was dedicated by the magistrate who had vowed it, or, if he was no longer in office, by a committee appointed for the purpose (*duoviri aedi dedicandae*), but was consecrated by the *pontifices*. By the act of dedication the magistrate gave it up to the god; by the consecration the *pontifex maximus* or one of his colleagues declared it to be the property of the god (*res sacra*). To the *pontifices* also belonged the act of *consecratio capitis et bonorum*. A husband who had sold his wife, a son who had killed his father, or some other equally reprehensible offender could, after adequate investigation, be expressly consigned by the *pontifex* to this or that divinity or group of divinities ('Sacer esto'); and one who had been pronounced *sacer* could be killed with impunity by any one of those whom his crime had injured. In historical times, however, the punishment of one upon whom the sentence of 'Sacer esto' had been passed was left to the tribunes. Another ceremony in which the participation of the *pontifices* was indispensable was that known as devotion (*devotio*). The words in which the commander of an army, in the hope of extricating himself from a perilous position, devoted himself, or one of his countrymen, or the army of the enemy to the gods of the lower world were pronounced first by a *pontifex*; the commander repeated them, phrase by phrase, after him. Again, the *pontifices* supervised both the making of the vow of the sacred spring (*ver sacrum*) and, if necessary, its fulfilment. Through another activity they not only were brought into contact with political life, but sometimes influenced it to a very considerable degree. This was their supervision of the calendar. Besides providing for

¹ Livy, iv. xxvii. 1. 'Dictator, praeseunte A. Cornelio pontifice maximo . . . Iudaei vocati,' xxxvi. li. 3: 'Id votum in haec verba, praeseunte P. Licinio pontifice maximo, consul nuncupavit.'

¹ A case is cited for the year 200 B.C. by Livy, xxxi. ix. 7.

the proper observance of the festivals—a duty which was incumbent on them as the representatives of the rights of the gods—they had charge of the intercalations, and there is evidence that they sometimes manipulated them to further the aims of political leaders or parties.

In the early period of Roman society law and religion were inextricably intermingled, and so we find that the *pontifices* were authorities in the former as well as in the latter field. Even in later times, when the legal system had attained to independent development, the *pontifices* still retained functions that belonged to the sphere of law—e.g., their participation in the marriage rite of *confuratio*, in the kind of adoption known as *arrogatio*, and in the making of wills, as well as their control of burial, of sepulchres, and of the whole cult of the *manes*. In the case of an arrogation or the making of a will they convoked the people in the *comitia calata* in order to secure their approval of the act.

The archives of the college were in the *regia*. These included the formulæ which had to be used in appealing to the gods (*indigitamenta* [q.v.]); the forms for vows, dedications, etc.; the directions for the proper observance of all the details connected with sacrifices; the necessary instructions for the performance of expiatory rites, or, where the offence could not be expiated, for the infliction of the penalty; the calendar (*fasti*); and the annual transactions of the college (*annales maximi*), which, on account of the connexion of the *pontifices* with the political administration of the country, became so important an element in Roman historiography. But the archives contained other documents of even greater importance, namely the decrees and responses which the college formulated on questions submitted to them by magistrates or by the senate. These decrees dealt with the new problems which were constantly arising in regard to vows, dedications, sacred sites, festivals, the cult of the *manes*, and other phases of Roman religion which fell within the scope of the activity of the *pontifices*. These decrees formed a growing body of pontifical law.

(b) *Rex sacrorum*.—On the establishment of the Republic, while most of the spiritual activities of the king devolved upon the *pontifex maximus*, some of them were assigned to a priest whose office was instituted at that time, and who was given the name of *rex sacrorum*.¹ While the office, as we see from the name and know from other sources, was one of great dignity, it was vastly inferior to that of the *pontifex maximus* in power and influence. The *rex* could not hold any political office, and it is clear that appointment to the office was regarded as equivalent to political extinction. The incumbent was honourably but effectively shelved for the rest of his life.

He officiated at the *regifugium*, the ceremony held in the *comitium* on 24th Feb.; and the calendars show the notation *Q.R.C.F.* ('quando rex comitiavit, fas') on 24th March and 24th May. At the *regifugium* the *rex* sacrificed a victim as a sin-offering, and immediately after the sacrifice took to flight, apparently with the idea of escaping the taint.² The old explanation, by which the name of this rite was referred to the expulsion of the kings, is wholly without foundation. Equally unsatisfactory is the explanation usually given in regard to the functions of the *rex* on 24th March and 24th May. It is generally said that these two days were especially appointed for the making of wills (*testamenti factio*) and that on them the *rex*

¹ This is the form of the title attested by inscriptions. Latin authors use *rex sacrificulus* frequently. Livy, ix. xxxiv. 12, has *rex sacrificorum*.

² Cf. the *poplufugia* (5th July), where, from a similar motive, the people fled from a sin-offering.

presided at the *comitia calata* convened for the purpose. No adequate evidence has ever been adduced to establish this theory, and in all probability, as Rosenberg¹ contends, *comitiavit* here means 'has come to the *comitium* (and sacrificed there),' and the ceremony in each case was, like that of the *regifugium*, of an expiatory character. The *rex* also made an offering on the Capitol on the nones of each month, when he announced the festivals to be held during the rest of the month (Varro, *de Ling. Lat.* vi. 28). Macrobius (i. xv. 9) tells us that in the early period the *rex* made sacrifice on the kalends, after the *pontifex minor* had announced to him the appearance of the new moon. But this ceremony apparently was given up. In fact the evidence of its ever having taken place is somewhat flimsy.

The *rex* was the special priest of Janus, and we have record of the offering which he made to that god in the *regia* on the occasion of the *agonum* on 9th January. It is partly in his capacity as priest of Janus, who presided over all beginnings, though partly also in recognition of his position as a representative of one phase of the royal power, that the *rex sacrorum* is given first place in the old ranking of Roman priests: *rex sacrorum, flamines Dialis, Martialis, Quirinalis, pontifex maximus*.

(c) *Flamines*.—The *flamines*² were special priests attached to the service of individual gods, and charged with the duty of officiating at sacrifices and other ceremonies in their honour. The name of the god is regularly indicated by an adjectival form: *flamen Dialis*, *flamen* of Jupiter, *flamen Martialis*, of Mars, and so forth. Only one exception is cited to this system of designation, namely the title of the *flamen* of the deified Septimius Severus: *flamen divi Severi*. The best attested form of the name of the office is *flamonium*, but *flaminatus* is also found.

The most important of the *flamines* belonged to the college of *pontifices*, and were fifteen in number: three *flamines maiores*, the *flamen Dialis*, *flamen Martialis*, and *flamen Quirinalis*, and twelve *flamines minores*, ten of whom are known to us: *flamen Carmentalis*, *Volcanalis*, *Portunalis*, *Cerealis*, *Volvurnalis*, *Palatualis*, *Furrinalis*, *Floralis*, *Falacer*, *Pomonalis*. The *flamines maiores* were always patricians. This was true of the *flamines minores* also in early times, but later this office became plebeian. Under the Empire *flamines minores* were frequently members of the equestrian order.

In regard to the *flamen Dialis* we are reasonably well informed. He was chosen by the *pontifex maximus* out of three candidates, nominated by the college of *pontifices*, only those born of parents married by *confarreatio*, and themselves married by that rite, being eligible. He had many prerogatives (the right of the *toga praetexta*, of the *sella curulis*, and the services of a *lictor* and heralds), but was subject to galling restrictions and a long list of tabus. Although in the old list of priests his title appears before that of the *pontifex maximus*, and he had precedence over him at the priestly banquets, he was, so far as all the duties of his office were concerned, completely under his control. In the early period he was not allowed to spend a single night away from Rome, and even in later times his absence from the city was limited to two and afterwards to three nights. From the year 200 B.C. he was eligible for political office, but the rule that required his continuous presence in the city acted as a bar to his holding any office which required residence in the provinces.

¹ Pauly-Wissowa, s.v.

² The derivation is uncertain. It has been connected with *flare*, 'blow' (from kindling the altar fire; Marquardt), with *flagrare*, *flamma* (Curtius, Corssen, Usener); with the Skr. *brahman*, 'priest' (Meyer).

The numerous tabus by which he was bound show the degree of sanctity associated with his office.

He could not touch, approach, or name any animal or object with which in Roman religious consciousness an idea of uncleanness was associated: a corpse, a bier, raw meat, beans, a dog, a goat, or a horse. He was forbidden to hear the sound of the flutes played at a funeral. In a word, he was excluded from every possible contact with death or with anything connected with the cult of the dead.¹

Moreover, there was another series of tabus, which, while indicating the freedom of the *flamen* from the usual ties of human society, emphasized the extent to which he belonged to his god. He could not come in contact with anything that was tied or knotted,² or with a ring or chain. If he wore a ring, it had to be a broken one. His garments could be fastened only by safety pins (*fibulae*), or some other device lacking continuity. He could not touch or name ivy on account of its tangled and intertwining fibres; he could not walk under a trellis or in a vineyard. If a man in fetters entered his house, he was immediately released and the chains, in order to prevent the pollution of the house, were thrown out through the *compluvium*. A slave could not touch him, and only a free man was allowed to cut his hair. He could be shaved only with a bronze razor. Furthermore, for him every day was a holy day, and he was not permitted to see any kind of work. On his walks an attendant always preceded him to warn workmen to desist from their labours while he was passing.

One of the chief duties of the *flamen Dialis* was to officiate at the sacrifice of a sheep to Jupiter on the ides of each month (*ovis idulis*). He himself laid the entrails of the victim on the altar fire. He officiated at the sacrifice of a lamb to the same god at the beginning of the vintage. His services, however, were not confined to Jupiter, for we find him participating in rites that pertained to the worship of other gods; e.g., he took an important part in the expiatory ceremonies of February. It was from him that the *pontifices* received the materials which they used in the purification of the houses. He presided at the Lupercalia, and he officiated at the celebration of weddings by *confarreatio*. In short, he seems to have been not merely high priest of Jove, but, so far as actual participation in sacrificial and other rites is concerned, high priest of the whole national religion.

Like the *flamen Dialis*, the *flamen Martialis* was a patrician married by *confarreatio*, and the son of parents who had been wedded by the same ceremony. In the early period, when the power of Mars was not limited in men's thoughts to the operations of war, it is quite possible that the part of the *flamen Martialis* was an important one, but in historical times it seems relatively insignificant. He was not subject to the tabus which have been mentioned in connexion with the *flamen Dialis*, though originally some of them at least had applied to him. His comparative freedom from restrictions enabled him to hold political offices even in the provinces. Of his sacerdotal duties almost nothing is known. Curiously enough, he had very little to do with the numerous festivals of his god which were held in March.

In the case of the *flamen Quirinalis*, the requirements in regard to birth and marriage were the same as those of the other two *flamines maiores*. Though he ranked below the *flamen Martialis*, he is more frequently referred to as officiating at sacrifices. He sacrificed a dog to Robigus on the Robigalia (25th April); on 7th July and 21st Aug. he sacrificed at the subterranean altar of Consus in the Circus; on 23rd Dec. he made an offering at the tomb of Acca Larentina in the Velabrum. These functions are not so disconnected as at first sight they seem. Quirinus seems originally to have been a spirit of vegetation, and the ceremonies in which his *flamen* has just been described as taking part were connected with agriculture.

Of the other twelve *flamines* we know little

¹ The *flamen Dialis* Merula, before committing suicide, laid aside the insignia of his office, on the ground that it was technically inconceivable for a *flamen* to die in his costume.

² Aul. Gell. x. 15: 'nodum in apice, neque in cinctu, neque in alia parte ullum habet.'

more than their names. In some cases it is only a chance reference to the *flamen* that has preserved the name of the god.

The insignia of the *flamines*, besides the *toga praetexta*, were the *laena*, a short red cloak worn over the *toga*, and especially the *pileus* or *galerus*, a conical cap, on the top of which was a small spike-shaped piece of olive wood, covered with wool. This was the *apex*, though the term is sometimes applied to the whole cap. The cap was provided with strings so that it could be tied under the chin, and would be less likely to vibrate a ceremony by falling off. It was made from the hide of an animal killed in sacrifice, and in the case of the *flamen Dialis* was white (*albogalerus*). The *apex* was not confined to the *flamines*; it was sometimes worn by *pontifices* and other priests, but was most closely associated with the *flamines*, and especially the *flamen Dialis*.

The *flamines* of the deified emperors (*flamines divorum*) also were attached more or less loosely to the college of *pontifices*. Down to the 3rd cent. a *flamen* was appointed for every emperor enrolled among the gods.

There were other *flamines* in Rome, who were not connected with the college of *pontifices*—e.g., the *fratres Arvales* had a *flamen* (*flamen Arvalium*), and so too had each of the *curiae* of the city (*flamen curiae*).

The wife of the *flamen Dialis* (*flaminica Dialis* or merely *flaminica*) participated in the sacred duties of his office. She was not the priestess of Juno, as Plutarch supposed.¹ There is no evidence, for historical times at any rate, that the wives of the other *flamines* had sacerdotal functions.

(d) *Virgines Vestales*.—The Vestal virgins, six² in number, were attached to the public cult of Vesta. They were chosen by lot out of a list of twenty compiled by the *pontifex maximus*. At first they were drawn from patrician families, but later the daughters of plebeian houses were eligible, and under the Empire we hear of daughters of freedmen being admitted. Only those whose parents were both living were eligible. A candidate who had been chosen was formally accepted by the *pontifex maximus*.³ She was then conducted to the house of the Vestals (*atrium Vestæ*); her hair was cut off⁴ and hung on a lotus-tree, and she assumed the garb of the order. She was from six to ten years of age when she entered, and the term of service was thirty years. After its completion she was at liberty to leave the order and marry.⁵ The thirty years of service were divided into three decades, in the first of which the priestess learned her duties, in the second practised them, and in the third instructed the novices. The eldest Vestal was the head of the order (*virgo Vestalis maxima*).

Like many others, the cult of Vesta, goddess of the hearth-fire, had begun in the family, but had subsequently become a State-cult also.⁶ It was the duty of the priestesses to keep up the sacred fire. Once a year only was it allowed to go out and be rekindled (1st March). If it went out at any other time, the incident was regarded as a *prodigium*, and the Vestal on watch was liable to punishment. The fire could be rekindled only by the primitive method of the friction of sticks. The priestesses also brought water from a spring or running stream, with which they sprinkled the temple. They made daily offerings of simple food to the goddess, and each day prayed for the safety and prosperity of the people. Besides these daily duties the Vestals had others, some of them connected immediately with the cult of Vesta, but

¹ Quæst. Rom. 36.

² In the days of King Numa, according to the tradition, four, but increased to six before the end of the regal period.

³ Aul. Gell. i. xii. 14, 19; the words of the *pontifex maximus* were 'Te, Amata, capio.'

⁴ The hair was an offering. The cutting was not repeated. The Vestals whose statues we have had long hair.

⁵ The number of cases in which this happened is very small.

⁶ For an interesting account of the Vestals see *GH*, pt. I., *The Magic Art*, London, 1911, ii. 199 ff., where the author retracts the theory advocated by him in *JFA* xiv (1883) 154 ff.

some pertaining to ceremonies not primarily or definitely belonging to that goddess. Chief among the former was the festival of Vesta on 9th June (Vestalia). At this season (from 7th to 14th June) the *penus Vestæ*¹ was open to matrons, who with bare feet thronged to the temple to ask a blessing on their households; offerings of food were sent to the temple, offerings of sacred salt-cakes (*mola salsa*) were made by the Vestals; the millers and bakers had a holiday, and donkeys and mills were adorned with garlands. On 15th June the temple was cleaned. In regard to the activities of the Vestals that seem to be outside the cult of Vesta proper it may be pointed out that it was they who kept the blood of the October horse and the ashes of the unborn calves sacrificed at the Fordicidia, giving them to the people for use in the ceremonies of lustration held on the occasion of the Parilia (21st April). They were present at the sacrifice of the sheep to Jupiter on the ides of each month.² On 16th Feb. they provided the *mola salsa* used at the Lupercalia. On 1st May they offered prayers to the Bona Dea. On 15th May they took part in the ceremonies of the *Argei*. On 21st Aug. they participated in the Consualia; on 25th Aug. they, together with the *pontifex maximus*, attended the secret sacrifice to Ops Consivia in the *regia*. Fowler (*Roman Festivals*, p. 149 ff.) has pointed out the connexion between these ceremonies and the food-supply, with which the Vestals from the earliest times were closely associated.

The Vestals enjoyed many privileges. A *hactor* attended them when they went out on the street, and even the highest magistrates had to make way for them; on certain occasions they could use a carriage in the streets of the city; if a criminal on his way to execution caught a glimpse of them, he could not be put to death; places of special honour were reserved for them at the public games; they could be buried within the city. But, on the other hand, the life was an exacting one. They were subject to discipline at the hands of the *pontifex maximus*, who could have them beaten for any negligence in their religious duties. It was he too who, in case of violation of the vow of chastity by any member of the order, pronounced the sentence by which she was buried alive in a chamber-tomb on the Campus Sceleratus near the Porta Collina.³

2. *Augures*.—The derivation of *augur* is as uncertain as that of *pontifex*. Ancient etymologists connected it with *avis* and *garrere*,⁴ with *avis* and *gustus*,⁵ with *avis* and *gerere*,⁶ or with *augustus*.⁷ Nor do modern scholars agree on the question. The present drift, however, is to see *avis* in the first part of the word (cf. *auspex*=*avis*-*pex*, a derivation about which there is no doubt), whatever may be the significance of the latter part.⁸

The kind of divination which the Romans called *disciplina auguralis* seems to have existed in Italy prior to the foundation of Rome. Its purpose was a narrower one than that of reading the future; it was intended merely to determine the attitude of the gods towards some action that was contemplated or even in process. The *augures* were

authorities on the significance of the various signs by which the gods manifested their favour or disfavour.

The college of *augures* is attributed by some ancient writers to Romulus, by others to Numa—traditions that have no value except in the fact that they are indications of a general belief in the antiquity of the institution. From three the number of members was increased to six, afterwards to nine, and then by Sulla to fifteen.¹ Membership in the college was always highly esteemed, and the roll of members included many of Rome's most distinguished citizens. The presidency of the college was vested in the oldest *augur*, and the respect paid to seniority is attested by Cicero (himself an *augur* from 53 B.C.) in his *de Senectute*, xviii. (64).

The most weighty measures in Roman political life were undertaken only after the auspices indicated that the gods were favourable. The election of magistrates, their assumption of office, the beginning of a military campaign, the passing of laws by the assembly of the people, and other acts of a similar nature were all subject to this rule. The omission of the auspices or any irregularity in the procedure of the magistrate taking them nullified the act. The *augures* did not take the auspices, at any rate in the older period. That was the duty of the magistrates. But irregularities, on being reported to the senate, would be referred by that body to the college of *augures*. They, after investigation and discussion, drew up a reply (*responsum*, *decretum*) and sent it to the senate. If the reply established the presence of a flaw (*vitium*), the senate annulled the act. It should be noted that the response of the *augures* did not carry with it the annulment of the act. This took place only as the result of a *senatus consultum*, although the latter was based on the reply of the college. We do not know that the senate invariably followed the recommendation of the college, but it is certain that they generally did so.

A preliminary to the taking of the auspices was the marking off of the *templum* or place of observation. Then the magistrate, after announcing the *leges auspicii* (i.e. the rules that would govern his observation of the signs), stationed himself at that point of the *templum* prescribed by augural law, and, addressing Jupiter or other gods, asked for a certain, definitely specified sign or signs of the divine approval of the proposed action. Signs that were specifically asked for were called *auguria* or *signa impetrativa*, while signs that appeared without being asked for were known as *signa oblativa*. Quite apart from this classification, five different kinds of signs were recognized: from birds, from thunder and lightning, from animals (*signa ex quadrupedibus*), from the sacred chickens (*signa ex tripudiis*), and from incidental occurrences of evil omen (*divæ*). The birds were, in the language of augury, either *alites* or *oscines*. The former gave signs by their manner of flight, the latter by their songs or cries. Among the *alites* were the eagle and the vulture as well as the osprey (*avis sanguis* or *ossifraga*), the *buteo* (a kind of hawk), and the *immusulus*. In the list of *oscines* were the raven (*corvus*), the crow (*cornix*), and the owl (*noctua*).² Some birds were included in both lists, and we hear of some that as *oscines* were believed to give favourable, but as *alites* unfavourable, signs, and vice versa.

The *signa ex cælo* (thunder and lightning) belong to a very early stage in the development of augury.

¹ Dio Cass. xlii. 51 speaks of a sixteenth member added by Cæsar.

⁷ Ovid, *Fast.* i. 609.

⁸ See discussion by Wissowa, in Pauly-Wissowa, s.v.

Their precise interpretation involved a consideration not only of all the details connected with the appearance itself, but also of the nature of the occasion in regard to which the gods were being asked for a sign. The most favourable of the *signa ex caelo* was a flash of lightning passing from left to right of the observer. Yet even this sign, though generally auspicious, was unpropitious for a meeting of the *comitia*, and its appearance would prevent the holding of the meeting, or, if business had already begun, would result in its discontinuance. *Signa ex caelo* were used at a comparatively early date in the *auspicia* of the magistrates, not only as *signa oblativa* but also as *impetrativa*. By the end of the Republic they were practically the only *signa* that were used by the magistrates. It was not so much that they had crowded the others out as that in the general decay of the augural system they survived as the most convenient. Moreover, it was no longer regarded as essential that the magistrates themselves should take the auspices. A subordinate official, the *pullarius*, whose original function had been the care of the sacred chickens, could do so. The phrase 'servare ex caelo,' which we find used of this official's observation, is an indication of the kind of sign of which he was supposed to take cognizance. There is, however, abundant evidence that his announcement of a favourable sign had very little to do with any actual appearance. The auspices had become a mere form, and the nature of the announcement in regard to them was dictated by political exigency.

Of the other signs, the *signa ex quadrupedibus* never seem to have been very much used as *signa impetrativa*, though, when occurring as *oblativa*, they could not be left out of consideration. They had to do with the behaviour of animals appearing within the bounds of the *templum*.

The *signa ex tripudiis* were the signs derived from the sacred chickens. By the end of the Republic these were practically the only auguries that were observed by military authorities. They came to have in the camps a place similar to that which the *signa ex caelo* had in civil life. This was largely owing to the convenience of the method.

The chickens were brought in cages, and, after the general who was to take the auspices had placed himself at the door of the tent within the bounds of the *templum*, they were let out. He observed their manner of walking and especially the way in which they ate the food that was thrown to them. The most favourable omen that they could give (*auspicium solistinum*) was to let pieces of food fall from their beaks. When such an omen was wanted, it was easily obtained either by giving the chickens crumbly food or by starving them before they were liberated and so causing a degree of haste in eating that resulted in numerous manifestations of the kind desired.

The *dirae* were unexpected events of an untoward nature which occurred either during the taking of the auspices or afterwards during the action itself. The fall of some object, the sudden illness of some one present, the gnawing of a mouse, etc., belonged to the category of the *dirae*. All *dirae* were deterrent.

With all the possibilities involved in the numerous auguries mentioned above, it is easy to see that the magistrate taking the auspices would frequently find himself at a loss in regard to the proper interpretation. Moreover, till a comparatively late date the *augures* were not present to assist him. The statement made by some ancient authorities that he had assistants does not imply that these were members of the augural college. To be sure, the difficulties of his position were to a certain extent modified by his announcement of the signs for which he was watching. But *signa impetrativa*, which of course were always favourable, might be counteracted by the appearance of unfavourable *signa oblativa*, and the possibilities of conflict were endless. If he made a mistake or if he deliberately ignored manifest indications

of the disapproval of the divine powers, there was danger of the business transacted being subsequently annulled by a decree of the senate. It was on this account, doubtless, that during the last century of the Republic the custom grew up of having *augures* present to help the magistrate with their professional advice at the taking of the auspices before the holding of the *comitia*. Whether they ever actually took the auspices themselves is not certain.¹

The inauguration of persons and places was another important function of the *augures*. They themselves conducted this ceremony, and the evidence advanced in support of the theory that on the occasion of an inauguration they acted merely as assistants to the *pontifex maximus* is, as Wissowa has shown in his article in Pauly-Wissowa, wholly inadequate. After the expulsion of the kings the only persons who were inaugurated were priests. We have definite record of the inauguration of the *rex sacrorum*, of the *augures* themselves, and of the *flamines* of Jupiter, Mars, Quirinus, and the deified Julius. There is no record of the inauguration of *pontifices*, and probably the Vestals were not inaugurated. Livy (I. xviii.) describes the ceremony.

It took place on the *ars*. The *augur*, after indicating with his wand (*lituus*)² the regions of the sky within which he would make his observations, laid his right hand on the head of the candidate, and asked the god to show by a *signum ex caelo* whether the candidate was acceptable to him.

In regard to the places that had to be inaugurated, we find that the list includes all those intended for business which could be transacted only after the auspices had been taken. Among them we find many temples, and such places as the *rostra* and the *curia*. Moreover, the city itself was inaugurated as well as the land just outside the walls, as far perhaps as the first milestone. To this district the term *ager effatus* was applied. There were other *loca effata*, as we know from Varro (*de Ling. Lat.* v. 33), who gives the following list of five additional kinds of territory which were inaugurated so as to make possible the taking of auspices by magistrates absent from Rome: the *ager Romanus*, *Gabinus*, *peregrinus*, *hosticus*, *incertus*. The term *templum* in its technical sense is applicable only to an inaugurated place or building that is rectangular in shape. The city of Rome and the various territories referred to were not *templa*, strictly speaking, but *loca liberata et effata*,³ in which also auspices could be taken. We know very little about the ceremonies with which places were inaugurated, beyond the fact that a star-shaped piece of metal was brought in as a sign of the completion of the inauguration.

Other ceremonies in which we find the *augures* officiating independently of the magistrates are the *augurium salutis*, the *vernisera auguria*, and the *augurium canarium*. The last-mentioned took place every year in midsummer, and was intended to gain the protection of the gods against the action of the heat on the crops. The ceremony was accompanied by a sacrifice of red dogs. The *vernisera auguria* probably had to do with the agricultural operations of the spring. In regard to the *augurium salutis* there is a good deal of uncertainty. Apparently the purpose was to procure from the gods some assurance of a continuance of the safety and prosperity of the nation. It could be held only when there was no Roman army in the field. Tacitus⁴ speaks of its being celebrated in A.D. 47 after an interval of seventy-five years.

¹ Possibly they sometimes did in the last period of the Republic. Cicero (*de Leg.* ii. 20) apparently makes a claim to this effect.

² 'Baculum sine nodo aduncum' (Livy, I. xviii. 7).

³ I.e. freed by the formula spoken by the *augur* from all previously existing religious associations.

⁴ *Ann.* xii. 23.

The archives of the *augures*, which were kept in the *auguraculum* on the *arx*, consisted of *fasti* (a list of members past and present), *acta* (the record of the transactions of the college), and, most important of all, the *libri* or *commentarii* in which all the lore of the craft was contained. Both terms, *libri* and *commentarii*, are used indiscriminately of the traditional material and of the numerous accretions consisting of the responses given to questions submitted by the senate.

3. *Quindecimviri sacris faciundis*.—The third of the great priestly colleges is the *quindecimviri sacris faciundis*. Originally it was a commission of two members (*duoviri s.f.*), and it was not till 367 B.C. that it became a *collegium* of ten, of whom five were patrician and five plebeian. In Sulla's time the number was increased to fifteen. Cæsar made it sixteen, and under the Empire others were added *supra numerum*. In the time of Augustus the college was administered by a group of five *magistri*¹ (chosen annually by the college from its own membership), later by one.²

While the priesthood is less ancient than the *pontifices* and the *augures*, it goes back as far as the Tarquin dynasty, and its foundation is one of the indications of the foreign influences at work in Rome during that period. Its activity was confined to the Sibylline books, to the cults introduced in accordance with their oracles, and to the ceremonies performed, after consultation of the books, to avert the wrath of the gods. But, as the Sibylline books were Greek oracles, the cults introduced through them were Greek, except in such a case as that of the Great Mother, which came from Pessinus in Asia Minor. The result of this was that the *quindecimviri* bore to all cults which were conducted according to Greek forms of ritual (*ritus Grævus*) a relation analogous to that of the *pontifices* to the cults whose ceremonies adhered to Roman tradition (*ritus Romanus*).

The Sibylline books contained the oracles of the Sibyl of Cumæ, to which perhaps some others from different sources were added from time to time.³ When brought from Cumæ, they were placed in the temple of Jupiter on the Capitoline, where they remained till the year 83 B.C., when they perished in the fire that destroyed the temple. A commission was sent to Greece to make a new collection, and returned with 1000 verses, which were deposited in the new temple of Jupiter that had been built on the Capitol. They were left there till Augustus moved them to the temple of Apollo which he had erected on the Palatine. Augustus made a careful inspection of the oracles and rejected such as bore evidence of having been introduced into the collection for political reasons. Tiberius subjected them to a similar inspection, and there are other indications that the books were sometimes manipulated in the interests of political factions.

No one had access to the books but the *quindecimviri*, and even they could not consult them except when authorized by the senate. Moreover, it was only on the occurrence of prodigies which seemed to be of special importance that the senate gave the order for the inspection. When the *quindecimviri* had consulted the oracles, they made a report to the senate, stating by what sacrifices or ceremonies the gods could be appeased. The senate then decreed the performance of these rites under the supervision of the *quindecimviri*.

The clearest indication of the nature of the activity of the *quindecimviri* is furnished by the

list of divinities whose cults were introduced as the result of an inspection of the oracles. Among these are the cult of Apollo (with whom the oracles are most closely connected), Ceres, Liber and Libera (Demeter, Dionysus, and Kore), Mercury (Hermes), Neptune (Poseidon),¹ and Hercules.² At a later date came Æsculapius, Dis, and others. The *quindecimviri* did not themselves perform the sacrifices or rites, for the Greek cults had their own priests; but they supervised them. They had a similar supervision over *lectisternia*, *supplicationes*, and other ceremonies ordered by the books in expiation of prodigies. That Oriental cults were not regarded as lying outside the field of their activities is shown by the fact that they were in charge of the cult of the Great Mother (see art. MOTHER OF THE GODS), introduced in 204 B.C. in accordance with a Sibylline oracle. Their connexion with this cult was especially close. They actually participated in some of the rites,³ and from the latter half of the 1st cent. after Christ they were thought of in two capacities: priests of the Great Mother and custodians of the Sibylline books.

4. *Septemviri epulones*.—This priesthood was instituted in 196 B.C., and to it was assigned the administration of the sacred banquets of Jupiter on the ides of September in connexion with the *ludi Romani*, and on the ides of November on the occasion of the *ludi plebei*. The theory held by Marquardt⁴ and others, that at the time of the organization of the priesthood the only banquet to Jove was that held in connexion with the *ludi plebei*, and that the *epulum Iovi* at the *ludi Romani* was established much later, is highly improbable. The *epulum* of the *ludi Romani* is in all likelihood an old institution.⁵ These banquets, though they were wholly independent of the *lectisternia* in origin, were doubtless strongly influenced by them.

At the banquets a *triclinium* was set up in the temple of Jupiter on the Capitol. An image of Jupiter reclining and images of Juno and Minerva seated were placed at the table, and food was put before them. The senators attended the banquets as representatives of the State, and had places at *triclinia* set up in front of the temple. In a word, this *epulum Iovis* was not merely an offering to the god; it was a communion of the god with his people. The practice of holding sacred banquets increased in frequency. They were given not only on the ides of September and of November, but on the occasion of triumphs, dedications, games, etc. Not only the senators but also the people in general participated in them, being accommodated at tables that were set up throughout the entire length of the *forum*. The strictly religious element in the institution receded into the background. They became great public banquets, but remained under the supervision of the *epulones*.

Before the institution of the *epulones* the *pontifices* had had charge of the *epulum Iovis*. It was the burden of their other duties that compelled them to relinquish this function, and the *epulones*, though an independent college and forming one of the four great priesthoods, were always regarded as supplementary to the pontifical college and to a certain extent subject to its influence.

When first instituted, the college had three members (*treviri epulones*). This number was subsequently increased to seven (*septemviri epulones*) and still later (by Cæsar) to ten. But even after this increase the college was known as

² When this office was held by the emperor, a deputy (*pro-magister*) was also appointed.

³ There is no real evidence that the *Carmina Marciana* formed part of the collection.

the *septemviri epulones*. An individual member of the college was called *septemvir epulonum*.

5. *Sodales fetiales*.¹—The *fetiales* were the authorities on the *ius fetiale*, the sacred forms that should be observed in international relations. To them the senate or magistrates appealed in regard to questions pertaining to demands for redress, declaration of war, or conclusion of peace. It was they who served as the emissaries of the State to the country with which the negotiations were being carried on. In the discussion of problems submitted to them by the senate the whole *sodalitas*, which consisted of twenty members, took part. On the missions to foreign countries, however, a smaller number went. When the purpose of the embassy was the making of peace, the number of *fetiales* was two;² when redress was demanded, four were employed. That the *sodalitas* was a very ancient one is seen from the use of the stone (*silex*) in killing the victim. It was in fact an old Italic institution, for we hear of *fetiales* not only at other places in Latium but also among the *Aequans*, the *Faliscans*, and the *Samnites*. At Rome the priesthood ranked next to the four great colleges; and in A.D. 22 an effort, which, however, failed, was made to place it on an equality with them.³ Its members were men of distinction during both the Republic and the Empire. Augustus himself was a *fetialis*, as were later emperors.

In Livy, I. xxiv., we are given some details in regard to the appointment and procedure of a deputation of *fetiales* on a peace mission.

The *verbenarius*⁴ asks the king to authorize him definitely and specifically as the envoy of the Roman people.⁵ The king formally gives the authorization requested. Then the *verbenarius* asks for the sacred herbs (*herba pura, verbenae, sagmina*) and is instructed by the king to gather them on the *ars*. These herbs are the symbol of his office. The *verbenarius* then chooses another of the *fetiales* as *pater patratus*,⁶ touching his hair with the herbs. The *pater patratus* is the plenipotentiary and spokesman of the deputation, and it is he who carries the sacred stone and the sceptre. The treaty is made in the presence of the commanders and of the armies by the *patres patrati* of the two nations. After the terms have been read, the *pater patratus* of the Romans, holding his sceptre and calling to witness the people present as well as the gods Jupiter, Mars, and Quirinus, swears that his nation will keep the treaty.⁷ Then he kills a pig with the sacred stone, calling upon Jupiter, if the Roman people shall be the first to break the treaty, to treat them as he treats the victim. After the sacrifice he throws away the stone, saying: 'Si sciens fallo, tum me Diespiter salva urbe aereque bonis eviciat, ut ego hunc lapidem.'⁸ When the same ceremony has been performed by the other *pater patratus*, the treaty is signed by both.⁹ The fact that the stone is thrown away is distinctly favourable to the theory that it is nothing more than a primitive weapon that has survived from the stone age, and not, as W. Helbig¹⁰ has suggested, a symbol of the god of lightning.

In the case of injury at the hands of citizens of some foreign power, *fetiales* were sent to demand redress.¹¹

The *pater patratus* goes to the boundary of the enemy's territory and states his country's case, swearing to the justice of the claims which he makes.¹² Then, crossing the border, he repeats the claims to the first native of the country whom he meets. He repeats them again at the gate of the capital and in its forum. If the offenders are given up, he departs as a friend. If the nation addressed asks time for further consideration, he

grants thirty days, publicly repeating his claims at the end of each ten days. After the expiration of this time, if satisfaction is not given, he solemnly calls the gods to witness, and, returning to Rome, reports the circumstances to the senate. If the senate decides on war, the *pater patratus* is dispatched again to the boundary, and in the presence of three adults throws into the enemy's territory a spear smeared with blood and chaired at the end. Under the *fetial* law only a war declared in this way is *pium*.

Just as it was the duty of the *fetiales* to demand from another people those who had committed an offence against their nation, so also it was their duty to give up similar offenders among their own people.¹³

Octavian declared war against Cleopatra in 32 B.C. according to the *fetial* rite; the emperor Claudius concluded treaties (Suet. *Claud.* 25) as *pater patratus*; Marcus Aurelius declared war against the Marcomanni in this way. But it had long since become a symbolical act. In the war with Pyrrhus a piece of land near the Circus Flaminius at Rome had been legally conveyed to a captive. This was declared enemy territory, and into it the *pater patratus* flung the spear from the *columna bellica* near the temple of Bellona.

6. *Fratres Arvales*.—See art. ARVAL BROTHERS.

7. *Salii*.²—There were two groups of *Salii* in Rome, the *Salii Palatini* whose headquarters were in the *curia Saborum* on the Palatine, and the *Salii collini*, or *Agonenses*, of the Quirinal hill. The former were the dancing priests of Mars, the latter of Quirinus. Each organization consisted of twelve members and had a *magister*, a *praesul*, and a *vates*. The *magister* was in general charge, the *praesul* was the leader of the dance, and the *vates* of the singing.

The period of their greatest activity was the month of March, with its many festivals in honour of Mars. Although the calendars specifically record only three days of the month (the 1st, 9th, and 24th) on which the *Salii* took down the sacred shields,³ their processions seem to have taken place every day from the 1st to the 24th. Their dress consisted of *tunica picta* and *trabea*. On their left arm they carried the shield, which as they danced they struck with a spear or club held in the right hand. The dancing took place at certain sacred places in the city at which the procession paused. Each evening they halted at one of the *mansiones*, erected for the purpose, where the shields and other paraphernalia were kept till next morning. There also the priests dined together, their banquets being proverbial for their luxury. Next day the procession was resumed, and in the evening a halt was made at another *mansio*. After 24th March there was no procession of the *Salii* till 19th Oct., the *armilustrum*, when they danced on the Aventine. This ceremony corresponds to the *quinguatrus* of 19th March, which was originally a festival of lustration. After the *armilustrum* the shields were replaced in the *sacrum*, and were not moved again till 1st March. The significance of this institution of dancing priests is variously explained. Wissowa claims that Mars was from the beginning nothing but a god of war, and in the shields and other equipment of the *Salii* he sees merely an appropriate costume for the priests of the war-god. The dance, he thinks, was a war-dance, and it was given in March and October because these two months were most closely associated with the beginning and the end of the annual campaign. On the other hand, those⁴ who regard Mars as a spirit of vegetation classify the dance of the *Salii* among the warlike and noisy demonstrations which are frequently adopted by primitive peoples for the

¹ The Roman grammarians connected the word with *fides* (Varro), *foedus* (Servius), *ferire* (Paulus); Lange derives it from an old substantive *fetis* (cf. *fateri, fari, fas*); Weiss compares the cult-title of Jupiter Feretrius.

² Wissowa, *Religion und Kultus*, p. 551, thinks that the number was afterwards increased to four, but his reasons seem inadequate.

³ Tac. *Ann.* iii. 64.

⁴ I.e. the bearer of the sacred herbs (*verbenae*). How he was chosen is not known.

⁵ 'Iubense me, rex, cum patre patrato populi Albani foedus ferire?'

⁶ Wissowa plausibly derives this word from *patrare*, 'to make a father.' On this theory *pater patratus* is a father artificially created as opposed to a natural *pater familias*.

³ It is not certain whether the shields (*anachae*) were kept in the *curia* on the Palatine or in the *regia*.

⁴ Mannhardt, Roscher, Frazer, Fowler.

purpose of frightening away the evil spirits that might harm the sprouting crops or interfere with the transmission of the vegetative principle from year to year.

8. *Sodales Titii*.—Of this priesthood we know almost nothing. Tacitus (*Hist.* ii. 95) tells us that it was organized by Romulus for the worship of the Sabine king, Titus Tatius.¹ Dionysius (ii. 52) makes a similar statement. It seems to have been defunct at the end of the Republic, but was revived by Augustus and lasted till at least the end of the 2nd century. The members belonged to the senatorial order or to the imperial house. We have no information in regard to its activities.

9. *Luperci*.—In the case of the *Luperci* we have a priesthood whose activity was confined to a single day of the year, 15th Feb., the date of the celebration of the Lupercalia. There were *Luperci Quinctiales* and *Luperci Fabiani*.² In 44 B.C. a third group, *Luperci Iulii*, was added in honour of Julius Caesar, and of these Antony was *magister*. But this group did not last long, and it was omitted on the reorganization of the priesthood by Augustus. Membership in the order of the *Luperci* did not carry with it a distinction equal to that of the other priestly *sodalitates*. It was an equestrian, not a senatorial, priesthood. The festival lasted into Christian times, not being abolished till the pontificate of Gelasius (A.D. 494).

The meaning of the title *Luperci* has been the subject of a long discussion. Till recently the prevailing view was that the word meant simply 'wolves,' like *lurpi* (in the Sabine language 'wolves'), the name applied to the priests of the god (Soranus pater) worshipped on the top of Mt. Soracte; and it was claimed that we had here another manifestation of the vegetation-spirit, which often turns up in the shape of animals.³ But this theory seems too fantastic for serious consideration, and the author of the latest detailed investigation of the cult (Deubner, *ARW* xiii. 482 ff.)⁴ has returned to the old etymology (Serv. *Æn.* viii. 343) by which *Lupercus* is derived from *lupus* and *arceo* and means 'one who keeps off wolves.' Deubner's reconstruction of the festival is ingenious and in regard to many points very plausible.

The most important features of the celebration were as follows: (1) goats and a dog were sacrificed (perhaps to Faunus, though this is by no means certain), (2) two young men⁵ were smeared on the forehead with the blood of the sacrifice, which was then wiped off with wool dipped in milk, whereupon they laughed; (3) the *Luperci*, in two bands, naked except for goat-skins stripped from the victims about their loins, ran round the base of the Palatine hill, and as they ran struck with strips of the same goat-skins all those (mostly women) who threw themselves in their way.

We have in the Lupercalia traces of a pastoral festival (implied in the protective measures against wolves), of a lustration of the community (seen in the encircling of the hill), and of a rite for fertilization (for which the striking with the thongs of goat-skin furnishes the evidence). According to Deubner, the course around the hill goes back to the early days of the Palatine settlement, when it was actually necessary to protect the sheep-folds from wolves, and individuals from certain families were appointed *luperci*, 'those who keep off the wolves.'

¹ Tacitus' own information on the subject seems to have been somewhat vague, for in another passage (*Ann.* i. 54) he says that the priesthood was instituted by King Tatius for the purpose of keeping up the religious rites of the Sabines.

² It is generally assumed that the former represented the Palatine community, the latter the inhabitants of the Quirinal. But Fowler (*Roman Festivals*, p. 820) points out that this is inconsistent with the fact that the running of the *Luperci* was always around the Palatine only.

³ W. Mannhardt, *Antike Wald- und Feldkulte*, Berlin, 1905, p. 318 ff.; *GB*, pt. II., *Bilder der Beautiful*, London, 1913, II. 141.

⁴ See also Fowler, *Religious Experience*, p. 478 ff.

⁵ Perhaps the *magistri* of the *Luperci Quinctiales* and *Luperci Fabiani* respectively.

The practice was not at that time connected with the worship of any god, but later was brought into relation with Faunus. The other elements in the festival, the striking with thongs and the wiping off of the blood, were, according to Deubner, subsequent additions, the latter belonging to the period of Augustus' reforms. That this is a final solution of the *Luperci* cannot be positively asserted, but that it is a more plausible theory than any that has hitherto been advanced may be confidently affirmed.

10. *Sodales Augustales*.—When Augustus died (A.D. 14), he was deified by senatorial decree, and a priesthood (*sodales Augustales*) was founded to pay the honours due to him as a god (*divus*). The *sodalitas* was organized on the analogy of the *sodales Titii*. It consisted of twenty-one regular members from the senatorial order and four¹ honorary members from the imperial family. This number, however, does not seem to have been rigidly adhered to, for there are references which indicate that in later times the membership was as high as twenty-eight. The *sodalitas* was administered by three *magistri*. It had charge of the games held in honour of Divus Augustus and of the ceremonies conducted in the temple erected to him near the north-west corner of the Palatine. Moreover, it took over the ancestral shrine of the Julian *gens* at Bovillae and once a year held services and games there. At Bovillae also the archives of the priesthood were kept, and we may assume that its official headquarters were there. When the emperor Claudius was declared *divus* by the senate, his cult was assigned to the same *sodalitas*, which, however, was now called *sodales Augustales Claudiales*. The close relations between the Julian and Claudian *gentes* justified such an arrangement. But a new situation arose on the deification of Vespasian, who belonged to the *gens Flavia*, and another priesthood was accordingly organized, the *sodales Flaviales*. This *sodalitas* also took care of the cult of Vespasian's son Titus when he was deified. It is probable that there was no change in its title during Domitian's reign, and that it was only after his death, when there was a recrudescence of the popularity of Titus, that the designation *sodales Flaviales Titiales* was used.² A third *sodalitas* was founded on the deification of Hadrian (*sodales Hadrianales*) and a fourth on that of Antoninus Pius (*sodales Antoniniani*). To the last were assigned the cults of all the subsequent emperors who became *divi*. For the empresses and princesses who were deified (and the number, especially in the first 150 years of the Empire, was considerable) special *sodalitates* were not instituted. Their worship was for the most part conducted by the *sodalitas* pertaining to their *gens*—e.g., the cult of Livia by the *sodales Augustales*, that of Domitilla by the *sodales Flaviales*, and so forth. In addition to the *sodales* each *divus* had a *flamen*. It is probable that the *flamen* was not one of the *sodales*. Special priests were assigned also to some of the *divae*.

11. State priests of municipal cults. — There were also, in addition to the *collegia* and *sodalitates* that have been discussed, some minor State priesthoods. These were organized to take care of the sacred rites belonging to certain Latin communities that had been absorbed by Rome. The incumbents were Roman citizens. The ceremonies took place sometimes in Rome, sometimes at the original seat of the worship. The list consists of the following: *sacerdotes Cabenses* (Caba), *sacerdotes Cæninenses* (Cæcina), *Albani* (Alba Longa),

¹ Tiberius, Germanicus, Drusus, Claudius.

² This point seems established by a recent art., 'The Date of the Arch of Titus,' by D. McFadyen, in *Classical Journal*, xl. [1915] 140.

sacerdotes Lanuvini (Lanuvium), *sacerdotes Laurentes Lavinates* (Lavinium and Laurentum), *sacerdotes Suciniani* (Sucima?),¹ *sacerdotes Tusculani* (Tusculum).

In the municipalities throughout the Empire there were, besides the local priests, *sacerdotes publici* modelled on those in Rome: *pontifices*, *augures*, and for the imperial cult *flamines* as well as the organizations of the *seviri Augustales*. More important than any of these municipal priests was the provincial priest, *sacerdos*² *provinciae*, who was elected by the provincial assembly, generally for a year, and who was the chief priest of the imperial cult in the province or group of provinces to which he belonged.

12. *Haruspices*.—Although the *haruspices* never became State priests, they played a part of considerable importance in Roman religion from the time of the war with Hannibal.³ They were of Etruscan origin, and the field of their activities was threefold: (1) the scrutiny of the *exta* of sacrificial victims, (2) the explanation of portents, and (3) the interpretation of lightning. None of these was new in Roman religion. Examination of the *exta* of victims was made by members of the regular Roman priesthoods, portents were cared for by the *pontifices*, and the interpretation of lightning was included in the lore of the *augures*. But the *haruspices* supplemented the work of the Roman priesthoods, and along many lines showed a degree of specialization and an elaboration of detail which went far beyond that attained by the Roman priests; e.g., the examination of the *exta*⁴ by Roman priests was not intended to do more than to determine whether the god to whom the offering was made was propitious or not, but the *haruspices*, by means of a complicated system, one element in which was the charting of the liver in sixteen different parts,⁵ claimed to read not simply the mind of one god on the subject, but the secrets of the future. In dealing with a portent they undertook to show what its meaning was. Their science of lightning transcended in detail and complexity that of the *augures*. The division of the liver into sixteen parts is obviously to be connected with the division of the heavens into sixteen regions upon which their interpretation of lightning was largely based.

The science of the *haruspices* was traditional in the noble families of Etruria, and so important was it considered by the Romans that in the 2nd cent. before Christ they took measures to assure its continuance in the chief cities of that country. For the *haruspices* whom the senate consulted were regularly brought from Etruria. Distinct from them were the *haruspices* who resided in Rome, and who were of two classes: (1) those attached to the service of officials and forming the *ordo haruspicum LX*,⁶ and (2) private *haruspices* resorted to by citizens for advice on domestic problems. The status of these, especially the latter, was distinctly inferior to that of the *haruspices* summoned from Etruria.

Recent researches tend to show that the system practised by the *haruspices* in the examination of the *exta* is derived from Babylonia, and that its use in Rome constitutes an important channel of Oriental influence.

¹ This is a conjecture. No city of this name is known with certainty to have existed in Latium. See J. Toutain, in Daremberg-Saglio, iv. 948.

² In the East called ἀρχιερεύς, in the West *sacerdos* (in the three Gauls and elsewhere), or *flamen* (Spain, Gallia Narbonensis, Africa, etc.).

³ There is no satisfactory evidence of the Roman Government having called in *haruspices* at an earlier date.

⁴ While the term includes all the large internal organs, the science of the *haruspices* dealt chiefly with the liver.

⁵ A bronze liver, found at Piacenza, shows this division.

⁶ The earliest reference to this *ordo* is an inscription belonging to the end of the Republic (CIL vi. 32489).

GORDON J. LAING.

PRIEST, PRIESTHOOD (Ugro-Finnish).—

The priests among the Ugro-Finnish people did not form a separate social class. Their importance in the community, generally speaking, was evident only at the sacrificial feasts. The office of priest was regarded as an honour, and usually brought no remuneration. We can best study the observance of the pagan sacrifice in the home among the Votyaks, who retain the relics of a sacrificial feast observed in the old native hut (*kuala*). Here the father of the family was the natural sacrificial priest. That dignity descended to his eldest son, and, in the absence of male lawful issue, to the nearest male relative. Besides the family sacrifice, we find a tribal sacrifice held in common by several families in a tribal hut called a 'great hut' (*budzim kuala*). These sacrifices were performed by a descendant of the progenitor of the tribe—an eldest son, if possible. One and the same Votyak thus belongs to two *kuala*-families, a smaller and a larger.

Sacrifices were also offered in sacred groves. Groves were dedicated both to underground spirits—i.e. the great men, princes, etc., of a community—and to great nature-gods. If a family, for some reason or another—usually when a great misfortune had befallen them—dedicated a grove to some great man who was dead, it was deemed right that the sacrifices should be continued in that group by his posterity. When the priestly office did not pass by inheritance, a priest was chosen from among the members of the family or tribe concerned. Nature-gods might be worshipped in a grove set apart by one particular village community, or in a common sacrificial place belonging to a number of communities—sometimes as many as twenty-five. For both, sacrificial priests were chosen. As a condition of appointment, the priest was required to have the respect of the community and also to be skilled in prayer. Often the sacrificial priest remained in office all his life.

When several animals were to be sacrificed at the same time, as many priests took part in the service as there were animals offered. In the groves used by several communities the service was usually performed by the priests of the larger towns or villages of the district. When several priests took part in the service, the people occasionally called the oldest among them the 'great priest'; and his duty was to supervise the 'small priests' in the discharge of their functions. The most general appellation for a priest was 'old man.' He had always one or more colleagues, to whom special duties in connexion with the sacrifices were entrusted. When an individual wished to sacrifice in the grove of his village, he summoned the priest to hold a service for him. The seer could also sometimes appoint the priest to make the sacrifice.

In earlier times, when shamanism prevailed, it was the duty of the shaman to attend to the sacrifices. The shaman priest was held in very high esteem among his people. It was said, e.g., of the

Lapps that they always gave the shaman the best seat in the house, set before him the daintiest viands, and presented him with valuable gifts; indeed, sometimes they even paid tribute to him; and his opinion and advice were always highly esteemed.

It is uncertain whether the Ugro-Finnish priest wore a special sacrificial robe. It is known that he had to wash before every service, and to put on a new, or at least a perfectly clean and, if possible, white robe. Fasting before the sacrifice may also have been customary. Women, as a rule, could not take part in the sacrificial service, and were deemed unworthy of the priestly office.

PRIMITIVE METHODISTS.—See METHODISM.

PRIMOGENITURE.—See FIRST-BORN, INHERITANCE.

PRINCIPLE.—1. Philosophical.—The word 'principle,' reproducing the Latin *principium*, is a translation of the Greek philosophical term ἀρχή. This term designated two very different kinds of facts—principles of knowledge and principles of reality (cf. Aristotle, *Met.* 995^a7). This double application of the term runs through English philosophical literature. Not only the axioms of logic—e.g., the Law of Contradiction—to which Aristotle refers in the passage cited, but the fundamental truths of any body of doctrine are called its principles (cf. the title of the work *Principles of Mathematics*, by B. Russell). Sometimes by a redundancy of expression these are called 'first principles'—e.g., in Herbert Spencer's work of that name.

Again, anything fundamental in the nature of things may be called a principle. Thus, when T. H. Green talks of 'the spiritual principle in nature,' or B. Jowett, translating Plato (*Dialogues*², Oxford, 1875, iv. 229), mentions 'a principle which is above sensation,' they refer to a real existent.

A principle in the sense of a principle of reality may be conceived of either as a cause or as a constituent. It is in the latter sense that water is the principle of all things in the philosophy of Thales. But, even when a principle is conceived of as a constituent, other things are usually supposed to be in some way causally dependent on it.

To be fundamental is the essential notion of a principle, of whatever sort that be. If we ask, How fundamental?, the answer is, Logically; the principle is that which comes first in the order of explanation, whether we are explaining the nature of a demonstration or the nature of a concrete fact. Thus, if the principle of the universe is spiritual, it is the existence of spirit that explains all other facts. On the other hand, the principles of morality are the truths about moral relations on which depend all our explanations of particular moral phenomena (cf. T. Fowler, *The Principles of Morals*).

2. Popular.—'Principle' has various popular significations which are directly derivative from the different philosophical uses of the term.

(1) We constantly speak of the 'poisonous principle' or 'bitter principle' in substances, meaning by that something concrete which is the source or origin of the definite character which these things possess. These are not far removed from such more philosophical expressions as the 'vital principle' or the 'spiritual principle in nature.'

(2) On the other hand, when we talk about the 'principle' of the steam-engine or of the electric motor, we mean the truth which gives the explanation of their working. Principle is here the formal and not the material cause of a fact. At the same time, while in this case principle means a scientific premiss for logical explanation, the use of the term is not wholly dissimilar from that which it has in the previous instance. By a principle is here meant the ultimate and simple truth which stands at the beginning of our explanation. Again, the fact expressed in our ultimate premiss is held to be the actual cause of the phenomena explained.

(3) Principles of conduct stand on a somewhat different footing. They are generalized rules of good conduct which form the logical starting-point when we deliberate upon the rightness and wrongness of a particular action. A 'man of principle' (cf. Carlyle, *Cromwell*, speech iv.) is one whose conduct is regulated by the agreement of his projected acts with the general laws of moral action. By a 'man of good principle' we mean little more, for it is assumed that, when a man regulates his conduct by testing its agreement with general maxims, he employs maxims which are morally excellent. A 'man of no principle' is one whose conduct is not regulated by being compared by him with a moral law. Regard for principle in politics is strictly analogous to what it is in the case of morals. It means the regulation of action by noting its agreement with a general rule which has been established as a law of social well-being, without taking into account the immediate advantages which the infringement of that rule might bring.

G. R. T. ROSS.

PRISCILLIANISM.—The Priscillianists or Priscillians were a heretical sect charged with Manichæan and Gnostic opinions, which made its appearance under this name in Spain towards the end of the 4th cent., and, after exercising considerable influence in S. W. Europe, was confined within ever narrower limits until it disappeared after a history of about two centuries.

The sect took its name from Priscillian, its reputed founder, but it is very doubtful whether he is justly made responsible for the views which were held by his followers. The conditions of this problem have been altered since the discovery in 1885 and the publication by G. Schepss of the extant works of Priscillian. The other primary authorities are very scanty (a letter of Ambrose, a notice in Jerome, and a reference in Pacatus), but they support rather than contradict the evidence to be drawn from Priscillian himself, by which the witness of secondary authorities must be controlled.

Priscillian was a layman of good family, of fair education, and of considerable wealth, born probably at Merida, in Lusitania, shortly before the middle of the 4th century. He was attracted by that wide-spread movement of thought which found approval and safety when it went to the extreme of monasticism, but was exposed to the dangerous hostility of the ecclesiastical authorities when it gave itself to the cultivation of piety and an austere life apart from and not without criticism of the offices and officers of the Church. S. W. Europe had many groups of ascetically disposed Christians, known in some quarters as 'Abstinents,' who nourished their faith not only on the canonical Scriptures but also on 'apocryphal' writings, such as the *Acts of Andrew, of Thomas, and of John*. In these it is probable that Manich-

ean ideas and ascetic practices found a common root (see Babut, *Priscillien et Priscillianisme*, p. 231 ff.). One of the earliest works of Priscillian, the *Nonaginta Canones in Pauli Epistolas*, a series of contents-headings prefixed to groups of cognate sections of the Epistles, shows him in general sympathy with this movement, emphasizing those elements in St. Paul which look towards dualism and asceticism (canons 33 and 57), the 'carnal' character of the Law (can. 77), and the virtue of 'beata voluntaria paupertas' (can. 37). The first tendency of the movement was schismatic rather than heretical, and the fact that it captured several of the Spanish bishops—e.g., Salvianus and Instantius—alarmed Idacius, bishop of Merida, who, after consulting Pope Damasus on the matter, summoned a synod at Saragossa for its consideration (A.D. 380).¹ No individuals were condemned by this synod, nor do its decisions and anathemas contemplate errors in doctrine of any kind; they are concerned with practical matters such as fasting, the use of the Eucharist, and the frequenting of conventicles. Priscillian took up the challenge thrown down by this synod, and, by accepting the bishopric of Avila, at once put himself in the forefront of the movement, and entered the lists against Idacius. Idacius proceeded to obtain from the emperor Gratian a rescript condemning in general terms 'pseudo-episcopos et Manichæos,' and authorizing the expulsion of all heretics from Spain. This he then applied to Priscillian in a circular to other bishops in Spain, and also in a letter to Ambrose. Through the latter an unfavourable reception was provided for Priscillian when he proceeded to Italy in company with the bishops Salvianus and Instantius 'cum uxoribus,' to lay their case before Damasus and Ambrose in turn. His *Liber ad Damasum* contains his apology, in which he repudiates every kind of heresy, and especially that of the Manichæans. Damasus probably refused to interfere, but an appeal to the emperor met with better success: the rescript was cancelled, and Priscillian returned to his diocese in peace (382).

The next two years formed a period of great and successful activity for Priscillian. Most of his tracts (iv.-ix.) were now produced, and the important *de Fide et Apocryphis*, in which the note of independence is distinctly heard.

The quotations made by Priscillian supply valuable evidence as to the pre-Hieronymian text of the Latin Bible. 'Le texte biblique de Priscillien présente tous les caractères des textes "italiens": il semble former la transition entre ces textes du iv^e siècle et leur rejeton, le texte "africain de basse époque" que nous retrouvons régnant à la fin du v^e siècle dans l'empire des Vandales' (S. Berger, *Hist. de la Vulgate*, Paris, 1893, p. 8). The 'comma Johanneum' (1 Jn 57) has what is probably its earliest witness in Priscillian, tract. i. (ed. Schepss, p. 6). The *Canons* of Priscillian, often under the name of Paterius, and possibly modified in some respects by him, had a considerable vogue for several centuries in Provence and Spain (see Berger, p. 26 ff.).

The progress of the sect may be described in Babut's words:

'The government supported them, their adversary Ithacius was in flight, their influence was extending. The triumph of the spiritual and ascetic reform might well appear to them assured' (p. 167).

The swift disaster which overtook Priscillian and the whole movement was closely connected with the successful revolt of Maximus and the fall and death of Gratian. Ithacius (bishop of Ossunoba) had fled to Trèves, and there claimed the assistance of Maximus in suppressing the 'Manichæan' heresy in Spain. Maximus seized the opportunity of acquiring credit for orthodoxy. There was another possible motive in the wealth of the 'heretics,' reputed to be very great. The first step was to summon a synod at Bordeaux,

¹ See Mansi, *Sacrorum Conciliorum Collectio*, iii. 635; *Priscilliani*, ed. Schepss, p. 35: 'nemo e nostris reus factus tenetur, nemo accusatus'; Sulp. Sev. *Chron.* ii. 47. 1

before which Priscillian and Instantius were arraigned as prisoners. To the charge of heresy was added that of gross immorality and the practice of magic. According to Sulpicius, who is probably following the *Apology* of Ithacius, Priscillian refused to plead, and appealed to the emperor. Condemned by the synod, the accused were transferred to Trèves. There Priscillian, though still a bishop, was put to the torture, and the confessions so extorted from him were sufficient to condemn him then and ever since. Ambrose happened to be in Trèves on an embassy at the time, and was so indignant at the spectacle of bishops demanding the death of another bishop that he refused to communicate with Idacius and Ithacius, and was dismissed from Trèves in consequence (Ambrose, *Ep.* xxiv. 12). Having received from Maximus permission to proceed to a capital sentence, Evodius the prefect ordered Priscillian and his companions to be beheaded, and thus they perished—Priscillian, two of the clergy, Armenius and Felicissimus, Latronianus, a poet, and Euchrocia, the widow of Delphidius, the first heretics to be sent to the scaffold by the Church.

The execution of Priscillian was followed first by a reaction and then by a counter-reaction. The horror which was felt throughout the Church was marked by the indignant protests of St. Martin of Tours, the excommunication by a Spanish synod of Ithacius, the forced resignation of his bishopric by Idacius, and the sentence of exile pronounced upon both bishops by Theodosius. On the other hand, Latinus Pacatus pronounced a panegyric on the victims in the presence of the emperor; their remains were removed with all honour to Spain, and their names were inscribed on many sacramental lists there as martyrs. In Galicia the clergy and the people were almost wholly adherent to the movement.

Of the counter-reaction which followed we have no satisfactory record, beyond that which is indirectly given in the accounts of Priscillian and his followers which were circulated by Orosius and Turribius, and the judgment, probably based on Orosius, which was passed by Augustine. Councils held at Toledo (400 and 447) and at Braga (448 and 563) successively dealt with the Priscillianists. After the latter date they disappear. Isolated and persecuted, it is likely that they fell into heresy of the Manichæan or Gnostic type, but the evidence on which the movement in its early stage is labelled with either of these names is precarious. Much turns on the authenticity of a quotation from Priscillian given by Orosius (*Commonitorium*, 2 [CSEL xviii. 153]). Its genuineness has been taken for granted by most writers, and is maintained by Kunstle and Lezius; but the searching criticism to which it has been subjected by Babut (p. 279 ff.) lays it under serious suspicion. All the other evidence points in the other direction—the silence of the synod of Saragossa, the express and repeated statements of Priscillian himself, the cautious judgment of Jerome, the protest of Ambrose, and the championship of St. Martin. The case was soon found to be weak, and the evidence of Priscillian himself turned against him by the assertion that he held and taught the duty of perjuring oneself in order to conceal dangerous views. This Augustine believed of him on the authority of Dictinnus, which is the authority of one who, having left the Priscillianists and been reconciled to the Church, was seeking to demonstrate the completeness of his conversion.

C. A. SCOTT.

PRISONS.—The one essential quality of every prison, ancient, mediæval, and modern, for untried and for convicted prisoners, for those confined for a fixed period or for life, a dungeon of the Inquisition or a modern establishment conducted on the most humane and enlightened principles, is that it is a place of detention, where the inmates are deprived of that personal liberty and volition which men and women, civilized and uncivilized, have risked life itself, in all ages of the world, to secure.

The vital importance of this obvious fact is generally ignored even by experts. Edmund F. du Cane, chairman of the Prison Commissioners for England and Wales, an eminent authority on prison history and management, wrote in a description of Elmira Reformatory in New York State:

'The prisoners enjoy a luxurious dietary, and many indulgences are granted to induce them to work, so that the penal element of a sentence of imprisonment is entirely absent. If du Cane had opened the prison doors, he would have found that a cage is a cage, although the bars are gilded; not one inmate of luxurious Elmira, however miserable his circumstances outside, would have remained. To be under ocular inspection every hour of every day (door-knockers are unknown, but there are peep-holes in every cell door); to be compelled, in strict obedience to printed rules and verbal orders and on pain of punishment, day after day, month after month, year after year, to rise up and sit down, to eat, sleep, speak, listen, work, walk, read, write, and receive letters and visits, even from wife and children, at the will of another—such treatment, if long continued, permanently unfits a human being for membership of a free community; and all this in the most depressing surroundings—eating, day after day, the same kind of food, wearing the same clothes, seeing the same official or degraded people, and doing, without substantial remuneration and for the benefit of others, the same uninteresting tasks. It is more than difficult, it is impossible, for a free man to realize what it means to be distinguished not by a name but by a number; to be lost to the outside world, and its news and activities, nature's sights and sounds excluded with perverse ingenuity; to be deprived of all social intercourse or family life, receiving no acts of kindness and unable to do any.

A convict (the kind of man that the newspapers, the novelists, and the playwrights make copy of as 'a hardened ruffian') burst into tears when a prison visitor suddenly shook hands with him. 'I beg your pardon, sir,' said the man, 'but nobody has shaken hands with me for ten years.'

With initiative, self-respect, and self-reliance diminishing day by day, no wonder there come the prison look, sullen, apathetic, or furtive, like a hunted animal, and the prison manner, half abject and half defiant; no wonder that the released prisoner finds himself unfit to work, if indeed he can get anybody to employ him. Disqualified for re-absorption in the community, a useless machine, and a social alien, he turns to drink and vice to drown and divert his misery, and drifts through crime back again into prison.

John Howard's *State of Prisons in England and Wales, with an Account of some Foreign Prisons and Hospitals* was published at Warrington in 1777, but until early in the 19th cent. the treatment of criminals and the punishment of crime by Church and State had scarcely a point of contact with Christianity or civilization; it was not even consistent with the instincts of ordinary humanity.

The sentence pronounced in 1620 upon Archbishop Leighton's father, a physician and divine, for writing against Prelacy in terms no more extravagant and not less honest than those employed by his accusers against Presbytery, was an extreme instance, in degree, but not in kind. It ran as follows: (1) to be twice publicly whipped, (2) to be pilloried in Cheapside, (3) to have an ear cut off, (4) to have the nose slit, (5) to have both cheeks branded with the letters 'S.S.' ('Sower of Sedition'), (6) to pay £10,000, and (7) to be imprisoned for life.

How long old ideas survive may be inferred from the Children Act of 1908. By sections 102 and 103 of that great statute it is solemnly enacted that, in Great Britain and Ireland, no child (a child is defined as a person under the age of 14 years) shall be imprisoned or sent to penal servitude or the gallows. England obtained a Court of Criminal Appeal in 1907. But in Scotland, while a question of property of trifling value, tied in the civil courts, may be the subject of two, in some cases three, appeals, there is as yet, except in a case of conviction for habitual criminality, no appeal from the verdict of a jury, disposing, in the criminal courts, of a citizen's life or liberty.

For the system, the trail of which still impedes prison reform, a false theological view was partly responsible, along with an inadequate estimate of the sacredness of life and liberty. Lunacy and criminality were looked upon as works of the devil, to be exorcized by death, starvation, fetters, or the lash. That the State, by its own shameful neglect and its iniquitous laws, was itself largely responsible, along with the cynical indifference of the community, for both crime and lunacy was an idea as new as that insanitary conditions, permitted by the State, were the chief cause of disease. Original sin was an easy explanation of all abnormal conduct. So thought Mr. and Mrs. Squeers in *Nicholas Nickleby*.

"That young Pitcher has had a fever." "No," exclaimed Mr. Squeers, "damn that boy, he's always at something of that sort." "Never was such a boy I do believe," said Mrs. Squeers, "whatever he has is always catching too. I say it's obstinacy, and nothing shall ever convince me that it isn't. I'd beat it out of him" (ch. vii.).

Neither the pictures of Hogarth nor the arguments of Jeremy Bentham, neither the disclosures of John Howard, Mrs. Fry, and Thomas Fowell Buxton nor the eloquence of Samuel Romilly had much practical effect till the reform of Parliament in 1832. In the beginning of the 19th cent. Acts were passed abolishing gaol fees, ordering the appointment of chaplains, the erection of sanitary prison buildings, the classification of prisoners, the separation of the sexes, and the appointment of female warders for female prisoners. Yet, writing in 1812, James Neild, who followed in Howard's footsteps, said:

'The great reformation produced by Howard was merely temporary. . . . Prisons are relapsing into their former horrid state of privation, filthiness, severity and neglect' (*State of the Prisons in England, Scotland and Wales*, London, 1812).

The movements for the amendment of the criminal law and the reform of prisons dated from the American and French Revolutions; and they were both connected with the growth of democratic ideas and institutions.

The importance of the subject, its human interest, and the difficulties which it presents cannot be exaggerated. There is no more difficult question, unless it be the labour question, the housing of the people, or the liquor question, with all of which the subject of crime is vitally connected. Unfortunately, most critics of present methods are purely destructive. Some ignore the responsibility of the community, and others seem blind to the large share played by poverty and unemployment, drink, gambling, and vice in the production of crime. The index to du Cane's *Punishment and Prevention of Crime* (London, 1885) does not contain the word 'poverty' or the word 'drink'; and J. Devon's original and interesting

study, *The Criminal and the Community* (London, 1912), breathes a spirit of despair. The subject has been canvassed at national and international congresses; and, in the United Kingdom, it has been considered by Government Commissions, royal and departmental, whose reports have resulted in a large number of valuable Acts of Parliament and prison regulations, each one advancing more and more in the direction of the treatment of prisoners as human beings, and not as things. Under these statutes and regulations the penal side of prison life has been diminished, and the reformatory side increased, not, as sometimes ignorantly asserted, to gratify a sentimental humanitarianism, but in the best interests of the community, outside and inside the prison. Reformation is cheap at any price. It is a moderate estimate that a thief costs the community £150 a year, while at liberty. It is significant that in no single instance has there been any return to former less humane methods. Two hundred years ago, Montesquieu wrote:

'As freedom advances, the severity of the penal law decreases' (*Esprit des lois*, Paris, 1833, bk. vi. ch. ix.).

While prisons should not be beds of roses, neither should they be torture-chambers.

Experts have written on prisons and prison reform in every European language. Ex-convicts have described their experiences, with little value for the cause of prison reform, including aristocrats like Lord William Nevill, members of parliament like Michael Davitt, financiers like Jabez Balfour, ladies of fashion like Mrs. Maybrick, and literary men like Oscar Wilde. No subject is more in favour with the novel writer; it is staged by the playwright and discussed on the platform, in the pulpit, and in the press. Too often the case for reform is prejudiced by gross exaggeration. As in Oscar Wilde's powerful *Ballad of Reading Gaol* (London, 1898), pictures are drawn which depend for their point on hardships and cruelties no longer anywhere to be found. It is of little practical benefit to denounce present-day administrators. The question is one of system; it can be solved only by experiment on a large scale and over a prolonged period; and such experiments are being carried on by governments, by communities, and by individuals in the United Kingdom, the United States, and many European countries. Happily for the future, many prison problems will solve themselves, by the diminution and ultimate disappearance of persons requiring penal treatment, through the gradual removal of the chief causes of crime, namely, (a) unemployment and irregular employment, with attendant idleness, the formation of bad habits, lack of energy, and starvation; (b) drunkenness, one of the chief causes of poverty and crime, and likewise one of their most common and dehumanizing concomitants and effects; and (c) the failure to seclude the mentally deficient, the habitual drunkard, and the habitual criminal, so as to prevent the perpetuation of a degenerate race. It is no exaggeration to say that the greater portion of crime in this country is due to economic, rather than to directly moral, causes.

I. **PAST AND PRESENT-DAY PRISONS.**—Down to the beginning of the 19th cent. the time-honoured methods of dealing with criminals made the question of prisons and prison-management of small practical importance. Prisons were places in which the accused awaited trial and the condemned awaited execution. The old plan of getting rid of crime was to get rid of the criminal, as distinguished from the modern endeavour to reform him and to prevent crime by stopping the manufacture of criminals. This is obvious from a bare enumeration of the methods formerly in use: (a) capital punishment, (b) mutilation, (c) flogging, (d) the

pilory, the stocks, and branding, (e) compensation payable to the injured or fines payable to the State, and (f) compulsory exile. Under the Jews, Greeks, and Romans, as also among the Saxons and Germans, the chief and usual punishment of crime consisted in the enforcement of compensation to the injured. For this rational procedure the feudal barons and the Church of the Middle Ages substituted imprisonment, torture, mutilation, and death.

By degrees, partly through the writings of men like Cesare Beccaria in Italy and Jeremy Bentham in England, partly because a greater value came to be put on human life, and partly through the necessities of colonization, while the judges continued to pass capital sentences for trifling as well as serious offences, the executive, especially in the case of young offenders, frequently remitted the extreme penalty. People may be better than their creed; and legislators and administrators have often been more humane than the laws which they enacted and executed.

These causes led to the system of transportation, which was introduced in the reign of Charles II. Criminals whose death-sentences were commuted were sent to the American colonies, along with those who were directly sentenced to transportation.

The old system, thus modified by transportation, continued till the loss of the American colonies in 1776, when ships, called 'hulks,' were established for convicts in the Thames, and at Portsmouth and Chatham. The first hulk was opened in 1773, and the system was not finally abandoned till 1857. Concurrently with the hulks a fresh field for transportation was found, in 1787, in the Australian colonies. In 1834, 4920 convicts were transported to W. Australia. The system of transportation continued till 1867, when the last batch of convicts sent to any British colony was prevented by the colonists from landing in W. Australia. Both systems, transportation and the hulks, were attended with misery, cruelty, disease, and loss of life, avoidable and unavoidable. In the hulks 'the inmates were herded together in unchecked association.' Vice, profaneness, and demoralization prevailed (du Cane, *Chambers's Encyclopædia*, s.v. 'Prisons,' viii. 418). It appears that about a fourth of the deaths in the hulks were due to a deadly, but preventable, malady called 'hulk fever.' Transportation was condemned in a Government report of 1838 in these terms:

'The system of transportation is unequal, without terrors to the criminal class, corrupting to both convict and colonist, and very expensive' (quoted by du Cane, *The Punishment and Prevention of Crime*, London, 1886, p. 139).

Yet, in view of the importance of emigration for those in danger of falling into crime, it is important to remember that many transported convicts, in new surroundings, away from old companions and temptations, and freed from poverty and idleness, became industrious and respectable citizens, and that some of their descendants overseas now occupy responsible positions in Church and State.

The next phase, concurrent for a time with the maintenance of transportation and the hulks, was the cellular prison and convict settlement, with the accompaniment either of solitary confinement by night and day or of solitary confinement by night and association at work and at meals during the day, but in both cases with silence by day and by night. It is doubtful whether England, Italy, or the United States is entitled to the credit or discredit of the origination of the cellular system, which had been advocated by John Howard as early as 1776, always, however, with the accompaniment of work, instruction, and moral and religious influences.

The cellular system, so far as involving isolation at night and continuous silence while the prisoners are in association, still remains in almost universal use in all European countries. But in the United Kingdom the accompaniment of solitary confinement during the day, except as a punishment for offences committed in prison, was abandoned in 1899 for prisoners with short sentences; it has also been abandoned in Scotland in the case of convicts, and reduced in England in 1910 to one month. So far as the present buildings and surrounding ground will allow, the prisoners work, eat, and exercise in association, but in silence.

1. *Kinds of modern prisons.*—The various kinds of prisons which, in the United Kingdom, have superseded the single prison of the past may be divided into seven classes; but it is not meant that there is any hard and fast distinction, so far as buildings are concerned.

(a) *Local prisons*, for those sentenced to not more than two years' confinement, are vested in and managed by three bodies of Prison Commissioners for England, Scotland, and Ireland respectively, created by the Act of 1878. There had been great waste of money, and also, except in a few cases of exceptional local interest and intelligence, great abuses, due to want of any uniform system of treatment, to inhumane or incompetent officials, to antiquated and inadequate buildings, and to the existence of a large number of small and unnecessary prisons. The differences in prison treatment were so great that criminals were known to select for their operations the locality of the gaol with soft beds, generous diet, and lax rules. The Prison Commissioners have always been hampered by want of funds in introducing humane and reformatory methods; they have done much to minimize the disastrous effects of prison life, and their annual reports do not disguise their dissatisfaction with much that is done, and much that is left undone, under their administration. These reports show a progressive realization of the compatibility of humane and reformatory treatment with good discipline.

(b) *Convict settlements*, for prisoners sentenced to what is called 'penal servitude' (first introduced in Great Britain by the Penal Servitude Act of 1853), that is to say, any period of imprisonment from three years up to a life sentence. There are three periods in a convict's sentence: (1) the first month, when he works alone in his cell, (2) the remainder of his period of detention, during which he works in association with other convicts, but in silence, and (3) the balance of his sentence, when he is outside on a ticket-of-leave, liable to be re-apprehended if he fails to report himself or breaks any of the other conditions of his licence. Penal servitude involves so much more food and so much more open-air work, in association with others and not in solitary confinement, that many 'old hands' prefer a sentence of three years' penal servitude (to be served in a convict settlement, such as Dartmoor in England, where the convicts are employed reclaiming ground and in farm-work, or at Peterhead in Scotland, where they quarry granite and build a harbour) to one of imprisonment for two years in an ordinary prison.

Comparative statistics of criminal offences and criminals require to be dealt with cautiously, and with intimate knowledge of the whole field, if one age or one country is to be fairly and accurately compared with another. The comparison between transportation and the hulks, on the one hand, and penal servitude, on the other, is not a complete one; but, subject to all deductions, it is encouraging that, whereas in the days of transportation there were, in 1837 (when the population of England and Wales was some 15,000,000), about

50,000 convicts, in the colonies or at home in the hulks, in 1869 the total number of convicts under sentence of penal servitude was only 11,660, of whom 9900 were men and 1760 women. This number under penal servitude was reduced in 1891 to 4978 (4654 men and 324 women), and in 1903 to 2799 (2669 men and 130 women). Taking local prisons and convict settlements together, it seems to be established that of first offenders about three-fourths never return, while of those convicted for the third time about three-fourths re-appear as prisoners in local prisons or convict settlements.

(c) *Preventive detention prisons*, or departments of prisons, established under the Prevention of Crimes Act of 1908 for convicts who have received a sentence of penal servitude, and who have also been proved to have been 'habitual criminals' at the time the offence was committed, engaged in no occupation except that of crime. These are the 'recidivistes' of France, the 'revolvers' of the United States. The period of preventive detention, which begins when the sentence of penal servitude ends, instead of being unlimited, as it ought to be and as was proposed in the original bill, is limited to a maximum of ten years. In the discretion of the Prison Commissioners the convict may have to serve the full period of preventive detention named in the sentence or he may be liberated at any time on probation. This useful Act requires amendment, because the 'old hands,' when out of prison, even while truly pursuing a life of crime, take care to do just as much work as will make it impossible to convict them, under the definition in the statute, of being 'habitual criminals.'

(d) *Criminal inebriate prisons*, established under the Criminal Inebriates Act of 1898, to which habitual drunkards, falling into crime, may be sent for lengthened periods. It was recognized that the short sentences usually inflicted on the habitual drunkard were worse than useless, and that to send a man or a woman to gaol for a day, a week, or a month on, say, their 200th appearance is to make a laughing-stock of legal procedure. Such short sentences, while long enough to rehabilitate the drunkard for further excess, are too short to afford any opportunity for his or her permanent reform. Hitherto the results of the treatment in criminal inebriate prisons as a reforming agency have been disappointing. Legislation is wanted to enable these institutions to deal with criminals whose offences are directly connected with drink, but whose moral sense is not so obliterated as to make reform practically impossible. The unreformable habitual drunkard must be shut up for life.

(e) *Criminal lunatic prisons*, where prisoners convicted of crime, who were insane at the time the offence was committed, or when they were tried, or who become insane in prison, are confined 'during His Majesty's pleasure.' When deemed advisable by the Home Office or Secretary for Scotland, an inmate may be transferred to an ordinary lunatic asylum. On complete recovery from insanity, he may be handed over to his relatives, under proper precautions and guarantees.

(f) *'Borstal' institutions*, established under the Prevention of Crimes Act of 1908, pt. i., for persons between 16 and 23. Du Cane says that most habitual criminals have begun their malpractices before 20 years of age, and 60 per cent under 15 (see art. JUVENILE CRIMINALS).

(g) *Reformatories* for boys and girls under 16, convicted of crime, to be detained for not less than three or more than five years, of which there are 38 in England, 7 in Scotland, and 2 in Ireland (see art. JUVENILE CRIMINALS).

2. *Differences between the prisons of the past and the prisons of the present in the United King*

dom.—(a) *Ownership and administration of prisons.*—The possession, or assumption, of judicial powers, and the use of dungeons attached to their castles and monasteries, formed one of the chief sources of the power of the landed classes, titled and untitled, and of the Church in the Middle Ages. After imprisonment by private persons was rendered illegal, there came the system of small prisons, which, while inadequately inspected by Government officials, belonged to, and were maintained and managed by, local bodies. In 1818, in 59 of the 518 prisons in the United Kingdom women were not divided from men, and in 445 there was no work of any kind for the prisoners to do. Some of these prisons were described as scenes of abandoned wickedness. In 1813 Mrs. Fry, on her first visit to Newgate, found 300 women, tried and untried, with their children, crowded together, in rags and dirt, and with nothing but the floor, without bedding, to sleep on. The Act of 1878 already referred to, which vested all prisons in Prison Commissioners appointed by the Crown, effected large savings in cost as well as improvement in the buildings and treatment, without sacrificing the benefit of local inspection.

(b) *Prison management.*—A writer (M. F. Johnston) in the *Fortnightly Review*, new ser., lxix. [1901] 560, says:

'The improvements which have been effected in recent years in prison management are of so radical a nature that they practically amount to a change of attitude towards the offender. . . . It has come to be recognised that hardships imposed for the sake of the suffering they entail do not act as a cure. They rather tend to brutalise the subject, and serve to intensify the anti-social instincts which led him, in the first instance, to raise his hand against his fellow-men.'

The old class of official and prison administrator not unnaturally, in view of his training, considered only what would maintain perfect prison discipline, and was not influenced by the fact that, while flogging and 'the black hole' undoubtedly crushed the prisoner into sullen and revengeful submission, these methods rendered him unfit, on release, to be re-absorbed into the decent part of the community. From every relaxation of the last century the old-time official has prophesied disasters, which have in no case occurred. He did so when it was proposed that the use of 'the black hole' should cease, with the crank (denounced by Charles Reade in *It is Never too Late to Mend*) and the treadmill; that windows should be increased in size and dim glass removed so that at least the sky, if not the earth, might be visible; when an effort was made to substitute for oakum-picking interesting and educative work; when flogging ceased, except for mutiny or gross violence on warders, and then only when authorized by a visiting magistrate or a Prison Commissioner; when work in association was introduced; when libraries were started; when, instead of everything being done to weaken the family tie (perhaps the only remaining motive for reform), prisoners were allowed to have their children's photographs in their cells; when a little bit of mirror, to promote tidiness, was fastened into the walls of their cells; when it was proposed to lay wooden floors over the miserably cold cement of which cell floors are constructed; when Swedish drill for women and ordinary drill for men were introduced, instead of, or in supplement to, the weary pacing round a circle in the prison-yard; when work in the fields was tried in connexion with local prisons; when a variety of food was substituted for the eternal 'skilly'; when good conduct marks, carrying a money value, were introduced; when magic-lantern lectures, which have been found a valuable aid to discipline, were first started. It is only fair to say that he has, in most cases, admitted that his fears were unfounded; to his amazement he has found that discipline can

be maintained better by the stimulus of moderate rewards, judiciously given, than by the deterrence of the most severe punishment. In 1803, in English prisons, there were 61,000 ordinary punishments; in 1884, under the so-called 'humanitarian' methods, the numbers had fallen to 37,000—a figure which has been since steadily reduced. Convicts on whom the terrors of the lash or the dark cell produce no effect will stop their bad behaviour if they know that perseverance will deprive them of the magic-lantern lecture or cut off the right, recently conferred upon them, of spending a small portion of their earnings on margarine or confectionery. The old class of official still clings to the stereotyped prison in or near towns and within high walls, although he has to admit that reformatories for juvenile and Borstals for juvenile-adult criminals, not to speak of such startlingly successful experiments as George Montagu's Little Commonwealth in England, are conducted successfully in the country, without high walls, and with only a manageable number of attempts to escape.

Prison management is in the hands of the following officials:

(1) *Governor and matron.*—Prison rules are uniform all over the country; but the humanity and reasonableness of their execution depend on the head of the prison; the executive staff take their tone from him or her more than from the Prison Commissioners or from the chaplain or medical officer. No absolute rule can be laid down for the selection of governors and matrons. Admirable appointments have been made by promotion from the rank of warders; in other cases conspicuous success has been achieved by governors who have been in the army or in civil life, and by matrons who have had experience and acquired fitness in other employments, such as nursing. The modern governor and matron are as efficient in the routine part of their work, and they are more ready to make allowances for special weakness, mental and physical, and more anxious to secure the prisoners a fair chance for well-doing after their release. For the difficult duties of a governor or matron there are wanted a keen intelligence, shrewd judgment of character, a personal knowledge of the social conditions of the masses of the people, and a sympathetic heart.

(2) *Chaplain.*—In 1814 the legislature made the appointment of prison chaplains compulsory. Previously, and for some time after 1814, their chief work consisted in ministering to the prisoners under sentence of death and attending them to the scaffold. Till 1868 that spectacle continued to be a public disgrace, denounced by Dickens, but successfully upheld by Samuel Johnson.

'Tyburn itself,' Johnson said, 'is not safe from the fury of innovation. . . . The old method was most satisfactory to all parties. The public was gratified by a procession; and the criminal was supported by it. Why is it all to be swept away?' (quoted by du Cane, *Punishment and Prevention of Crime*, p. 22).

Nowadays the right kind of chaplain becomes the prisoners' friend, and keeps in touch with them after their release. Realizing acutely the share of responsibility of the community for their undoing and misdoing, he is at the same time fully alive to the prisoners' own share of blame. The present writer knows a convict settlement where nominally Protestant convicts have entered themselves as Roman Catholics in order to have the services of a particularly friendly priest. The chaplain, Protestant or Catholic, is not readily gullible, as the public believe. His disappointments do not arise from the prisoner's insincerity, but from his weakness of will, his want of friends, and the temptations which the State licenses or permits. Prison-effected reformation may be quite

genuine at the time; but it is generally too tender a plant to stand the storm of temptation. Chaplains used to be appointed for life; short terms, which may be renewed, undertaken by local clergymen, are now found to secure greater freshness. The chaplain has in many cases the supervision of the educational work of the prison and of the library, and he organizes prison lectures. More money is spent on education and the prison library than formerly. Education does not make men and women moral or religious, but it prevents them from becoming criminal. In prisons persons of good education are almost as unknown as total abstainers. The library is one of the few things in a prison which preserve a prisoner's individuality. In Mountjoy Prison in Dublin the writer was told that Dickens is the favourite author among the men, and Annie Swan among the women.

(3) *Medical officer.*—The prison doctor's most important duty used to be to certify, in cases of hanging, that life was extinct, and, in cases of flogging, to see that death did not ensue. Now his observations of the mental condition of a man charged with murder may determine whether the accused is fully responsible and can be held to account as a normal human being, or whether, as to a certain extent mentally defective, he may have his crime, if proved, treated as one of manslaughter or culpable homicide and not of murder, or whether he is in such a mental condition that he is incapable of instructing a defence and must be committed to a criminal lunatic asylum. Every prisoner is seen at short intervals by the doctor, inside or outside the prison hospital; the doctor, particularly under Scotch administration, has a free hand in the increase or decrease of the prisoner's diet and in regulating his work; moreover, he soon acquires marvellous skill in detecting malingerers. Prison doctors have opportunities of studying medico-legal questions of scientific and practical importance, including the proportion of prisoners who have been from birth, or whose habits have made them, mentally and morally defective—a question which has an obvious bearing on punitive as well as reformatory treatment.

(4) *Warders, male and female.*—

'The officer who has charge of prisoners has such power, for good or evil, over his fellow-men, that I do not think there are many positions more responsible. Nor are there many in which the officer is exposed to more temptation to neglect his duty, or abuse his trust' (du Cane, quoted by W. Tallack, *Penological and Preventive Principles*, London, 1896, p. 278).

The warders' daily routine, spent in an atmosphere of repression and degradation, is not favourable to the development of human sympathy; but in the general case no complaint can be made of the fairness of their treatment of prisoners. Instances of favouritism are due rather to the good conduct of the prisoners favoured than to any improper preference. As in lunatic asylums, cruel treatment by prison officers, which cannot be entirely prevented even under the best system of selection and supervision, is associated almost invariably with grievous provocation. Attempts in prison to commit suicide, which are seldom successful, are the fault of the system, not of those who administer it.

(5) *Prison visitors.*—It was not till the Act of 1899 that lady visitors were ordered for all local prisons where there are female prisoners. Religious and philanthropic visitors, who ought in all cases to have a special knowledge of the conditions of the classes from which prisoners come, are now welcomed to local prisons, under suitable regulations.

The English Prison Commissioners' report for 1915 'heartily endorses the praise bestowed on ministers of religion, lady visitors, aid societies, workers, secular and religious, who work day by day with patience and undiminished hope, for the rescue and reinstatement of the criminal of both sexes, and of all ages.

. . . It is to this organized effort of charity and goodwill, which has been specially directed with increasing force during recent years to the visitation and after care of prisoners, that the yearly improvement of our criminal records, especially with regard to the young offender, is due' (p. 21).

Devon writes:

'The visits to prisoners on the part of people from outside are of great benefit; anything is that helps to break the monotony of the day, and give opportunity for conversation. They must have preserved many from desperation, and even insanity. They do something to keep up self-respect and to show the prisoner that he is not considered an outcast, impossible of redemption' (p. 237). As to prison lectures, 'anything that prevents prisoners from sinking into apathy, from brooding on the petty incidents that go to make up their lives in prison, from beating against the bars of their cage, is beneficial' (p. 241).

(6) *Prison work.*—The provision of work in prisons, which is a cardinal principle in the Prisons Act of 1898, is attended with great difficulties, if it is to be (1) sufficiently interesting to preserve the prisoner's humanity, (2) educative, (3) remunerative, or at least not productive of loss, (4) not competitive with philanthropic institutions, like blind asylums, and (5) not hostile to trade union rules and the legitimate interests of free labour. In connexion with the present European War, the writer has noticed with what increased industry, and even enthusiasm, work of a patriotic kind has been done by prisoners, toiling extra hours without remuneration other than the much-esteemed privilege of having the war news of the day read to them.

In connexion with prisoners working in association, the question of classification presents great difficulties. An effort is made to keep so-called 'first offenders' separate from so-called 'hardened criminals.' But in many cases the 'first offender's' act of fraud, or assault, is not his first offence, but only the first case which has been reported to the police or in which there was evidence to convict; and there are so-called 'hardened criminals,' more sinned against than sinning, whose moral nature is by no means totally depraved. It is a widespread and pernicious delusion that an assault implies normal quarrelsomeness or brutality, and that an indecent attack implies normally ungovernable lust; in both cases, apart from any question of provocation, the disgraceful conduct which has converted a respectable citizen into a felon may be the direct result of drink taken to such an extent (which may be far short of 'drunkenness') as to destroy self-respect and respect for the rights of others.

The difficult question of the universal enforcement of silence among ordinary prisoners in our local prisons and convict settlements remains for consideration. The difficulty consists in reconciling in practice the two principles, 'It is not good for man to be alone,' and 'Evil communications corrupt good manners.' In this important respect our prisons and convict settlements are more dehumanizing than transportation and the hulks in old days or than modern Siberian and Turkish prisons. But, then, it is said that suppression and not supervision is necessary, because conversation, however carefully regulated, is unavoidably subversive of discipline, and prisoners would abuse the privilege, if not for the concoction of plans of escape, at all events for corrupting communications about past and future villainies expressed in blasphemous and obscene language. The difficulties are admitted, but the rule might be relaxed in the case of well-conducted prisoners, furnished with the ordinary material for carrying on decent conversation, by access to newspapers as well as books after the day's work is over, as is done with good results at Borstals, among female convicts in England, and among male convicts undergoing preventive detention. The hardships as well as the pernicious effects of the present system are

so much felt that the writer knows at least one governor who, when dealing with prisoners' marks, does not count those bad marks which have been caused by a prisoner passing a harmless observation to his neighbour.

It is right to add, in regard to prison management generally, that no prison administrators, unless the most old-fashioned, are satisfied with the present system and its results. Therein lies the hope of the future.

(7) *Discharged Prisoners' Aid Societies.*—If efforts to reform are to be of permanent avail, the prisoner must, before release, be gradually prepared for approaching freedom, and must also, on leaving the prison, have work found for him and be otherwise befriended. More might be done in both directions, even under the present system. It is not enough to allow the prisoners to grow their hair of a normal length for a few weeks before their release. Additional relaxations would not be abused, because abuse would mean forfeiture of gratuity and of the period of remission. Opportunity is needed to overcome the shyness and nervousness and the reluctance to face the world which prolonged seclusion produces.

An Act of 1792, enlarged by the Gaol Act of 1823, made provision for discharged prisoners out of public funds. In 1802 the first Discharged Prisoners' Aid Society, 'The Hampshire Society,' was founded. Others followed; but it was not till 1862 that these societies obtained statutory recognition. Since 1887 every prison of any size has had a Discharged Prisoners' Aid Society working in connexion with it. In 1898 the Prison Commissioners issued schemes for the guidance of these societies, containing provisions as to grants in aid to their funds; and when, in 1899, lady visitors were appointed to all local prisons containing female prisoners, this was stated to be with the special object of aiding in the reformation of the prisoners and finding employment for them. In 1900, 39,413 discharged prisoners passed through the hands of 62 Aid Societies, of whom 2000 were found unworthy and 1100 refused assistance. These societies are doing admirable work despite inadequate funds and an insufficient number of voluntary helpers.

(c) *Prisoners with special privileges.*—The modern prison contains two classes of inmates who should not be confined in the same building as those convicted of actual crime, namely (1) untried prisoners, who are entitled to furnish their own rooms, wear their own clothes, provide their own food, carry on correspondence with persons outside, and receive visits from their friends, and (2) debtors (now, happily, under modern legislation, few in number), who have somewhat similar privileges. In the case of convicted prisoners in good health there is little respect of persons, in either accommodation, food, dress, or work. It was not so in former days. Just as, in mediæval warfare, all officers were, if possible, captured alive, that they might be made a source of profit to the captors, so imprisonment was then used as a means of obtaining what would now be called blackmail but was then known as ransom. In old days the wind was tempered in many ways to the woolly lamb, clerical and secular. The so-called 'benefit of clergy' was greatly abused; but, on the whole, like the right of sanctuary, it acted beneficially for the community, for it preserved the only cultured class from the brutal treatment to which secular persons were exposed. But for the benefit of clergy and the right of sanctuary, both history and literature would be poorer. The mediæval Church rivalled the State's brutal treatment of all prisoners, lay or clerical, charged with heresy; but its treatment of non-heretical prisoners was, on the whole, much

more humane. Sometimes it was more than humane, if we can judge from Archbishop Bliss's *Constitutions* (dated in 1357):

'They are so deliciously fed in prison that the prison, intended for a punishment for their crimes, is turned into a refreshment and delicious solace, and they are pampered in their vices by ease and such inducements.'

(d) *Prisoners in modern prisons who were absent from old prisons.*—These are long-sentence prisoners. Long sentences were originally the outcome of the false theological view of sin already referred to. But it does not follow that prolonged imprisonments must cease. Under totally different conditions, they will continue in the case of the reformatable, until the offender has shown that he may be released with safety to the interests of his fellow-citizens. In the case of those who have been proved, by repeated and prolonged trials, to be unreformable imprisonment for life will be substituted for the present absurd system, under which a prisoner, who has shown after a short period that he may safely be released, has to be maintained in prison, and his family in the poor-house, at the public expense to the end of a fixed sentence; and a prisoner is released at the end of a fixed sentence, even although he openly boasts that he means, on liberation, to resume his Ishmaelitic trade, his hand against every man.

(e) *Prisoners in old prisons who are not to be found in modern prisons.*—(1) Children convicted or untried. For centuries prisons were nurseries of crime. Children, some of them born and brought up in prison, were sent, for trifling offences, to the gallows, to Botany Bay, or to prison. In prison they became accustomed to the prison atmosphere and indifferent to it, and they left it 'gaol-birds,' with the prison-brand on them figuratively, and in some cases literally. The establishment of industrial schools for children under 14 in danger of falling into crime, and of reformatories for children under 16 who had been convicted of crime, and the marked success of these establishments had gradually reduced the number of children in our prisons. But, as already pointed out, it was not till the passing of the Children Act in 1908 that it was declared illegal to send any boy or girl under 14 in any circumstances to prison; and it was provided by the same statute that no sentence of imprisonment, except in a very limited class of cases, could be imposed on any offender under 16.

(2) Debtors. Literature has made great use of the abuses connected in old days with debtors' prisons, especially in England. The whole iniquitous system was terminated by the Abolition of Imprisonment for Debt Act, 1880. The number now imprisoned for debt is negligible. They consist, in England, of debtors who are able to pay, but will not, and, in Scotland, of debtors for Crown taxes and for alimony, these cases forming exceptions in the English and Scottish statutes abolishing imprisonment for debt in the two countries.

(3) Prisoners waiting for trial. In England it used to happen that the king's judges would not visit the place of trial for several years, during which prisoners languished in prisons, usually of the most insanitary kind, and their families, being deprived of their bread-winners, starved. Now, if a prisoner is not tried within a short time after apprehension, he is entitled to release.

(4) Prisoners acquitted of the offences for which they had been apprehended, but unable to pay the gaoler's fees, which were always extortionate, and often illegal. Now all gaolers' fees are abolished, and instant and unconditional liberation follows a verdict of acquittal.

(f) *Security of modern as distinguished from old prisons.*—In former times the facility of escape

from prison helped to explain some of the practices mistakenly quoted in evidence of our ancestors' brutality. Nowadays the safety of the community can be attained without taking away the criminal's life or mutilating him by blinding or by cutting off a limb, and, at the same time, punishment can be inflicted by imprisonment in place of the old sentences of flogging, the pillory, the stocks, or branding—either on the hand or on the face, as the statute of William III., passed in 1699, ordered. It was attempted to attain security by confinement in subterranean chambers, like the pits of Jeremiah and Joseph, and Daniel's den, or by thick walls, small and heavily-stanchioned windows, high above the ground, ponderous doors, and weighted fetters. It is now achieved by properly constructed buildings, constant personal supervision, and reliable warders. Our ancestors should not be blamed for practices which were forced upon them by necessity.

(g) *Hygienic conditions*.—Until the 19th cent. these were bad, beyond our power to realize. The inmates were starved, housed in a manner inconsistent with health and with decency, and they were in the absolute power, constantly abused, of keepers of brutal habits. In Henry Brinklow's *Complaynt of Roderyck Mors*, written about 1542, the monastic author says:

'I see also a pytyful abuse for presoners. Oh Lord God, their lodging is too bad for hoggyes, and as for their meate, it is evyl enough for doggyes, and yet, the Lord knoweth, they have not enough thereof!' (ed. J. M. Cowper, Early English Text Society, London, 1874, p. 27).

In the third edition of his great book, published in 1784, John Howard says:

'Many, who went in healthy, are in a few months changed to emaciated dejected objects. Some are seen pining under diseases, 'sick, and in prison,' expiring on the floors, in loathsome cells, of pestilential fevers and the confluent smallpox' (p. 4).

Gaol fever was one of the commonest as well as most deadly maladies.

Lord Bacon (quoted by du Cane, p. 43) spoke of 'the smell of the gaol the most pernicious infection next to the plague. When prisoners have been long and close and nastily kept, whereof we have had in our times experience twice or thrice, both judges that sat upon the trial, and numbers of them that attended the business, or were present, sickened upon it or died.'

Nowadays gaols are models of sanitation; prisoners are well fed; the death-rate is below that of the outside population; and the old moral evils, arising from the absence of separation between the sexes, are unknown. The outward reforms for which John Howard and Elizabeth Fry and their coadjutors worked have been thoroughly accomplished, and the crying abuses, physical and moral, which they denounced have been removed. Great attention has been paid to the cleansing of the outside of the cup and platter. But whether the proportion of prisoners who leave our prisons more inclined and better fitted to lead law-abiding lives than when they entered is greater or smaller than under the brutal systems of the past is by no means so clear. Dickens exaggerated the disastrous effects of the separate cell, and, since his day, it has been ameliorated by good libraries, the friendly visits of the chaplains and prison visitors, and in other ways, but it still remains true that in their dehumanizing effect modern prisons, with all their vast cost, their perfect discipline, and the good intentions and endeavours of the Prison Commissioners and the officials who manage them, are little better than whitened sepulchres.

(h) *Reformatory methods*.—The modern definition of punishment by imprisonment is founded on the idea (1) of discipline so severe as to act as a deterrent, and (2) of such reformatory influences as religious and moral teaching, and good example and training in self-control, promoted by offering advantages to industry and good conduct, as well

as punishment for the reverse. However inadequate this conception may be, it is at least a great advance on old ideas and methods. At first employed only for detention, imprisonment became one of many methods of punishment, and, ultimately, the only method of punishment, except hanging, flogging, and fining. What is said by F. Pollock and F. W. Maitland applies to the usages of all European countries:

'Imprisonment occurs in the Anglo-Saxon laws only as a means of temporary security. . . . Imprisonment would have been regarded in these old times as a useless punishment; it does not satisfy revenge, it keeps the criminal idle, and, do what we may, it is costly' (*Hist. of English Law before Edward I.*, Cambridge, 1898, i. 49).

H. de Bracton, who wrote in 1268, expressly states that prisons were to confine and not to punish:

'Carcer ad continendos et non ad puniendos haberi debet' (*de Legibus et Consuetudinibus Angliæ*, London, 1569, fol. 105).

Persons were often kept in prisons for lengthened periods and even for life, not as a punishment, but as a means of avoiding the prisoner's right to trial or in order to compel payment of fines or ransom, or to elicit testimony.

It must not be supposed that the idea of deterrence, which, along with expiation, is at the root of our modern system, was unknown in former times. Indeed, the principle of deterrence must have a place, large or small, in every criminal system and in all schemes of prison management. But its importance is usually exaggerated. Tested by the criminal records of all ages and in all countries, even the most savage punishments are conclusively proved inadequate either to stop the supply of offenders or to turn criminals into law-abiding citizens. On crimes of passion deterrence has not time to operate; in cases of deliberate crime the fear of detection and punishment only makes the criminal more wary. The question in the end must be, Are the results worth the expenditure, as our prisons, even the best of them, are at present carried on, that is to say, under a system so identified with exploded theories of punishment that the reformatory elements which have been engrafted on to it do not have a fair chance of success? No doubt, persons who would be dangerous to the State if at large are withdrawn for periods more or less extended. On the other hand, thousands are housed, fed, clothed, and doctored by the State who, if at large, would be supporting themselves and their families, and adding by their work to the productiveness and wealth of the State. Some are benefited by good influences under which they come in prison, but, for one of these, there are scores who are brutalized by prison life and who come out worse than they went in. There are cases where, in their results, notwithstanding the best endeavours of their managers, our prisons may come under the condemnation pronounced by Mirabeau on the Old Bicêtre, which he called 'a prison to propagate crime and a hospital to propagate disease.'

It may be said that these are grave statements to be made by an administrator of the present system; but they are in accord with a growing section of expert opinion.

'It must be at once admitted,' writes A. G. F. Griffiths, H.M. Inspector of Prisons, 'that the system of isolation has produced no remarkable results. Solitary confinement has neither conquered nor appreciably diminished crime. . . . Cloistered seclusion is an artificial condition quite at variance with human instincts and habits, and the treatment, long continued, has proved injurious to health, inducing mental breakdown. A slow death may be defended indeed on moral grounds if regeneration has been compassed, but it is only another form of capital punishment' (*EEB*, s.v. 'Prison,' xxii. 363).

In 1895 a Departmental Committee reported:

'The great, and, as we consider, the proved danger of this highly centralized system has been, and is, that, while much attention has been given to organization, finance, order, health of the prisoners, and prison statistics, the prisoners have been

treated too much as a hopeless, or worthless, element of the community, and the moral, as well as the legal, responsibility of the prison authorities has been held to cease, when they passed outside the prison gates. The satisfactory sanitary conditions, the unbroken orderliness of prison life, economy, and high organization are held and justly held to prove good administration. But the moral condition, in which a large number of prisoners leave the prison, and the serious number of recommitments have led us to think that there is ampler cause for a searching enquiry into the main features of prison life' (p. 7).

II. *THE PRISON OF THE FUTURE*.—The word 'prison' is used in this title. But in the criminal institutions of the future many of the features associated with the word will be eliminated. In the Children Act of 1908 'places of detention' (not 'prisons') are, by sections 102, 106, and 108, to be provided for certain classes of juvenile offenders. The criminal institutions of the future will be places of detention and reformation for the reformable, and places of detention for the unreformable. But this can be done only by the reconstruction, generally on new sites, of existing prisons, which were built to carry out erroneous ideas by methods now discredited. Instead of being situated in the country, with ample ground inside the bounds for the erection of workshops as occasion may demand, and ample ground outside for farm work and for exercise, existing prisons are generally situated in or near towns; the ground, originally insufficient, has been gradually encroached upon for the erection of workshops and other buildings to meet in some small measure the demands of prison reformers; and the only exercise possible is in Indian file, round and round a circle marked by stones on the ground—a ghastly travesty, euphemistically referred to in an English prison report as 'the prisoners enjoying exercise in the open air.'

It is true that there are important respects in which the prison of the future cannot hope to excel the prison of to-day. The large areas of ground that will be required and the ampler buildings will make the initial expense greater than the continuance of the present system; but thereafter, when the reformatory methods get a fair chance to tell, the expense will rapidly lessen, until the premises are used only to detain those who, after repeated trials, have proved themselves hopelessly unable to be at large with safety to the community. The future prison will be less rather than more secure against escape, although the motives prompting escape will be materially lessened. No ingenious devices will be employed to prevent the inmates catching even a passing glimpse of earth and sky and sea; but in cleanliness, heating, and ventilation its buildings cannot improve on those at present in use. The prisoners of the future will not work for the benefit of the State, but for those whom they have defrauded and for the support of their own wives and children. There will be greater variety in food, but there can be no possible advance on the quality of the excellent, but unvarying, diet which at present prevails. The prisoners' clothes may be rougher than the present uniform, but they will not be such as to prevent any man with a shadow of self-respect from allowing his wife and children to visit him. The discipline may be less mechanically perfect, but it will not prevent such conversation as is necessary to keep the inmates human, nor will it be thought essential, in every ordinary interview between husband and wife, to interpose two sets of iron bars between the visitor and the visited, with a warder sitting in the intervening space. The discipline will not be lax, but it will allow some opportunity for the exercise of volition and initiative, the complete stifling of which under the present system renders prisoners on release unfit to stand alone and fight their own battles.

Generally speaking, discipline will be maintained by just treatment and human kindness. 'Even a donkey will go farther after a carrot than when driven by a stick.'

The essential difference between the present prison and the prison of the future may be thus stated: in the prison of to-day the system is not wholly directed to detention and punishment, as it was immediately before Howard's time, yet it is primarily punitive and hardening, and only secondarily and remotely reformatory, whereas, in the prison of the future, the whole effort will be directed to secure that, when the offender is released (if he ever is released), he shall be at least so far reformed as to make it safe that he should return, under friendly supervision and help, to be a free member of the community. Whatever be the precise system, it must be based on the comparatively modern discovery that a healthy open-air life, interesting and educative work, and wholesome moral and religious influences are the chief panaceas for human maladies—physical, mental, and moral. A Dutch proverb was a favourite of John Howard, 'Make men diligent, and you will make them honest.' Giffiths' well-known epigram is subject to the qualifications to which all epigrams and generalizations are exposed; yet there is some foundation for his statement that half the inmates of our prisons should never be let out and the other half should never have been let in.

There are certain classes of persons at present forming part of our prison population who will not be found in the prisons of the future, but in separate establishments:

(a) Persons accused of crime who have been either refused, or who have been unable to find, bail.

(b) Persons for whose offences fines are deemed sufficient, and who are, under the present system, sent to prison in default of payment. By recent legislation time is now given for payment of fines, and part payment of fines can be made, thereby reducing *pro tanto* the period of imprisonment. The result has been to lessen greatly the number of prisoners of this class. Such prisoners, whose offences, generally speaking, are not crimes, but only breaches of social discipline, are really detained for non-payment of debt; and, so far as it is necessary to deprive them of liberty, they ought not to be kept in an ordinary prison, but in an institution in which they could earn, by their work, the balance of the fine imposed upon them, without being branded for life as criminals.

(c) Mental defectives. These are now sent to prison because judges have to deal with all criminals, except lunatics and imbeciles, on the false basis (1) that they are normal, physically, mentally, and morally; (2) that they have had, and have made, a deliberate choice between good and evil; and (3) that they were in a normal condition when the act was done, the fact generally being that they were more or less under the influence of drink, which, like other drugs, can, during the time of its operation, completely transform the most law-abiding disposition. These persons are unable, with the facilities and temptations authorized for them by the State at their doors, and with their wretched surroundings, to refrain from drink, and they are unfit to earn an honest livelihood. The report of the Departmental Committee of 1895 says:

'Weak-minded persons spend their lives in circulating between the prison, the asylum and the workhouse' (p. 84).

When there is risk of injury to themselves or others, they ought to be confined in asylums; when there is neither homicidal nor suicidal tendency, their proper place is in farm colonies,

where, while prevented from committing crime and from perpetrating their degenerate stock, they will be saved the needlessly rigorous treatment to which they are at present subjected. Much in our present system contravenes the maxim that 'all unnecessary pain is cruelty.'

(d) Those whose cases can be met by placing them on probation under the supervision of probation officers, in accordance with the Probation of Offenders Act, 1907. This is known as 'conditional liberty, on probation,' first introduced in Massachusetts, as distinguished from the 'conditional liberation' accorded to prisoners after serving part of their sentences, but without any adequate provision for looking after them. Although the system has as yet been worked only imperfectly, it has already saved this country large sums of money, which would have been spent in maintaining offenders in prison and their families in poor-houses, and the country has had the benefit of the offenders' continued labour. The probation system is capable of great developments; and sooner or later the State will find it economical to employ, and adequately remunerate, probation officers. If people can be got to take charge of lunatics, it should be possible, for adequate remuneration, to provide for the guardianship, outside of prisons, of criminals who are sane. In England, among those who are known as juvenile-adults—those between 16 and 21—the commitments fell from 12,178 in 1900 to 3663 in 1915. Before long all committals to prison of persons under 21, when the offence is trivial and the antecedents of the offender are good, will be avoided by the extension of the system of supervision.

(e) Those who receive short sentences. The Borstal Committee for Wakefield Prison, reporting in 1915, state:

'There is not a single redeeming feature in a short sentence. It carries with it all the social stigma and industrial penalties of imprisonment, with no commensurate gain to the offender, or to the community. If there still survives in the minds of administrators of justice the obsolete and exploded theory that prison is essentially a place for punishment—and for punishment alone—for the expiation of offences in dehumanizing, senseless tasks, and arbitrary discipline, truly there could be devised no more diabolical form of punishment than the short sentence oft repeated' (*English Prison Commissioners' Report for 1915*, p. 13).

Yet, in spite of such views, which represent the opinion of all criminologists, there were in England, in 1914, 1106 sentences of one day.

Whatever improvements may be effected in the future in the system and methods employed to deal with crime in prison and to reform the criminal during detention there, to the extent at least of making him on his release a safe member of society, it must never be forgotten that these are merely palliatives to reduce the effects of a disease. It is an undoubted fact that the present system and the present methods have failed, and are failing, to rid the country of crime. If it is also true that no effective system of reformation is compatible with the conditions necessarily involved in imprisonment—because effectual reformation, to be permanent, requires retention of individuality, and retention of individuality involves innocent and wholesome social intercourse, which is practically impossible in prisons—then the claim for preventive, in preference to curative, measures becomes all the more manifest and urgent.

There is much to be said for that view, and, if it is sound, the main effort of the statesman and the philanthropist must evidently be to go to the fountain-head and to cut off the supply.

'Adopt, so far as possible, other means than imprisonment for the repression of crime. . . . The best economy of preventive and repressive effort must be that which reduces incarceration to the lowest extent compatible with public security, and which seeks its objects chiefly through influences to be applied outside the gates of jails, rather than within them. . . . Even the best

prisons are in a certain sense evils. One of the chief aims of a wise Penology is to devise means for advantageously and safely dispensing with them' (Tallack, p. 290).

Every movement calculated to improve the social well-being of the people is a step to empty prisons and convict settlements and to reduce and extinguish crime. So far as trivial offences go, it is better not to punish at all than to send to prison. If prisons are to be emptied and crime is to be prevented, it must be done by the State securing (1) that no citizen shall, without fault or physical or mental feebleness on his part, be unable to earn a continuous living wage for himself and his family; (2) that every citizen shall be able to obtain such housing and surroundings as shall make it possible for him and his family to live decent law-abiding lives; (3) that every child capable of education shall receive an efficient physical, mental, and moral training; and (4) that, whether or not, in the interests of personal, social, and national efficiency, the sale of alcohol, like the sale of opium, should be prohibited except for medicinal use, the existing temptations to use alcohol either in moderation or in excess—such temptations being often found at the maximum where the power of resistance is at the minimum—shall be ended.

An eminent criminologist has said:

'The immense majority of cases that pass through our Courts arise out of sheer need, or wretched education and surroundings, and would disappear with the establishment of decent social conditions' (Edward Carpenter, *Prisons, Police, and Punishment*, London, 1906, p. 6).

Judges have often declared, as the result of long and varied experience in dealing with criminal cases coming from all parts of the United Kingdom, urban and rural, that but for the use of alcohol (although not necessarily to excess in the ordinary sense of the word) certain classes of crime would cease to exist, and all classes of crime would be greatly reduced.

If the State does its duty in these essential particulars, the Christian Church will not be slow to avail itself of the opportunity, which it has never yet had, of bringing to bear the power of the gospel of Christ, without the hindrances and pitfalls which at present, to so large an extent, render nugatory the best efforts of religion and philanthropy. The present generation will not see it; but the day will come when no member of any civilized community will be able to say to any judge what a criminal, young in years but old in crime, once truthfully said, before sentence, to the writer of this article, 'My lord, I never had a chance!'

LITERATURE.—See the works cited throughout the article.

CHARLES J. GUTHRIE.

PRIVATE JUDGMENT.—'Justification by faith' and 'the right of private judgment' are the two watchwords of the Reformation. Neither, of course, was new, but each expressed an old truth in a new way. And what gave them their power to open a new chapter in man's history came through the personality of Luther, from whose fiery soul faith burst forth as the destroyer of hierarchical religion. Paul and Augustine had felt before him the same urgency towards the assertion of the ultimate autonomy of the individual, but it remained for Luther to reap where they had sown. Pfeleiderer¹ has expressed the relationship of the three in the remark that Augustine was a Romanized and Luther a Teutonized Paul. But Paul, in his turn, was a Christian individualist partly Judaized and partly Hellenized.

The two tyrannies which pressed on the religious man of the 16th cent. were those of the practical system of religion controlled by the hierarchy and of the scholasticism (*q.v.*) which had

¹ *Philosophy of Religion*, iii. 229.

been adapted from Aristotle to serve the theoretical ends of the Church's dogmatic system. The weight of these became more and more intolerable when the civil power allied itself with the hierarchy against all who claimed liberty to judge for themselves in matters of religion. It is true that in no century were there wanting men and groups of men who to some extent sought to think and speak with freedom. The names of Abelard (*q.v.*), Wyclif (*q.v.*), Roger Bacon, John of Goch, John of Wesel, John Hus (see *HUSSITES*), Jerome of Prague, and the Brethren of the Common Life (*q.v.*) will at once come to mind. Moreover, the protagonists of another movement, mysticism (*q.v.*), contributed perhaps even more than all others to the formation of a deep subconscious belief in the inherent right of the individual to formulate his religion for himself. Of the predecessors of the Reformation men like Hus and Savonarola assailed current ecclesiastical practice; John of Goch, Gerson, and John of Wesel devoted themselves to theological thought, while mystics such as Ruysbroek, Eckhart, Tauler, and Suso aimed directly at transcending in individual experience all the externals of religion, while treating these as convenient expressions of the independent life that they lived immediately with God.

In Martin Luther (*q.v.*) these three streams ran into one. A student of St. Paul and Augustine, he early became aware of the cleft between their doctrine and the scholasticism which had trained him. As an Augustinian he knew and practised the austerities associated with the monastic life; in Rome he performed all the exercises appropriate to pious pilgrims; Tetzel with his indulgences set the match to his latent zeal for reform. And Tauler and the *Theologia Germanica* taught him what spiritual power mysticism could exercise. The result of the three influences thus brought to bear on him was the assertion of the Christian principle of 'justification by faith'—a phrase which was but a theological variant of the philosophic principle of 'the right of private judgment' (see *ERE* vii. 619).

It is not in the realm of physics alone that the law of the equality of action and reaction holds good. In the forces which constitute history it also asserts itself. A powerful hierarchy and an authoritative dogmatic system had set themselves in the Middle Ages to crush all spontaneity of individual thought and practice which might seem dangerous to the ecclesiastical system. Luther thereupon did but give expression through his forceful personality to the inevitable reaction for which the minds of all in different degrees were ready. And in doing this he builded more wisely than he knew. The three factors which had gone to make him what he was again separated when his work was done. One gave the principle that lies explicitly or implicitly at the heart of all the Churches of the West which are out of communion with the pope, and is the source of the idea of the democratic State. The second has been the fruitful mother of all later science and philosophy, and has profoundly influenced theology. The third reappears in the lives and writings of all subsequent Christian mystics. But it is one and the same principle that appears in all three—the right of private judgment.¹ A few words will suffice to set out the filiation.

1. *Social polity.*—The chief difference in the conceptions of the basis of all social order which ruled before and after Luther is that in the former the individual was the passive recipient of rights at the hand of the authority which ruled him *jure divino* in Church and State alike, while in the latter he is their active creator. Nor is the distinction more than obscured by the fact that to

establish his rights he must co-operate with his fellows, for such co-operation is only a means to an end, and that end is the establishment of the principle that through the right of private judgment alone man attains his proper good. In all Protestant Churches and in all liberal States this principle has now 'stormed out into reality.' It is true that it did not triumph all at once; that Luther himself did not always give it its dominant position; that the substitution of the authority of the Bible as the written Word of God has for three centuries been every whit as tyrannical in its application as the older Inquisition (*q.v.*); that autocratic empires are but now being got rid of at the hands of democratic peoples; that the ideal of a free Church in a free State is not fully actualized; and that democracy is yet on its trial. But in spite of these short-comings the principle has so far triumphed that a return to the mediæval ideal is to the modern mind unthinkable, and survives only in relatively obscure coteries which are of the nature of atavistic survivals in bodies under the otherwise undisputed sway of the principle of the right of private judgment. 'A people's bible, then, a reading people, a preaching ministry'—these are characteristic of the modern Church.² 'One man, one vote,' and 'manhood suffrage' form their civic equivalent. Robert Browne's *Treatise of Reformation without turying for anie* (Middelburg, 1582) is an early land-mark of the principle in English religion (see *BROWNIISM*). The hanging of two men at Bury St. Edmunds in 1583 for circulating it was the counter-blow of the civil government, which had assumed the opposite principle of the papal court. The doctrine of the 'Manchester school'—the theory of *laissez faire, laissez passer*, in economics and politics which from 1845 to 1875 dominated political thought—shows the extent to which the principle of private judgment has swayed the minds of men.

2. *Modern thought.*—Though the free thought of to-day was prepared for by events prior to Luther, such as the invention of the printing-press, the rediscovery of Greek, and the opening up of the New World, yet to Luther still falls the credit of bringing to its support the forces of religion. The survival of mediæval dogmatism in the churches of the New Learning only serves to show how much harder would have been the progress of thought towards freedom had not Protestant Churches appeared to counteract the Catholic reaction known as Jesuitry. Milton states the case fairly when he says that it is a general maxim of the Protestant religion that 'no man, no synod, no session of men, though called the church, can judge definitively the sense of scripture to another man's conscience.'³ Hence, where the right of private judgment is explicitly maintained, heresy is impossible, and a trial for so-called heresy is at bottom merely an action for breach of contract. In the room of the inquisitor now sits the school-master.

Erasmus, in his controversy with Luther on the question of free will, asserted caustically that 'where Lutheranism flourishes the sciences perish.'³ This could hardly be maintained to-day, especially of Luther's fatherland. Rather should we have to say that where Luther's principle of private judgment obtains there is the door opened for the full life of science and philosophy. Not that thought was inactive through the earlier period. The great Schoolmen were no mean thinkers, but they thought in blinkers. The end of their journey was prescribed at the start, and hence free thought was denied them. And thought

¹ T. H. Green, *Works*, li. 285.

³ *Diatrybe*, p. 4.

which is not free runs the risk at least of not being thought at all. It may under the guise of thought deliver us over to the 'double truth'—that of philosophy and that of theology—or rest in a delimitation of boundaries which is made by the assertion that dogma is not contrary to reason, but above reason. But the principle of the right of private judgment cannot stop short of the demand that 'faith and reason,' 'religion and science,' shall resolve their antinomies at the bar of reason and extend the right of reason to autonomous judgment over the whole domain of faith.

How far we have travelled along the road of private judgment, and with what difficulty, may be conveniently seen by comparing a declaration of 1633 with another of 1900. The Congregation of Prelates and Cardinals ruled in the case of Galilei that 'the doctrine that the earth is not the centre of the universe, and is not immobile, but is moved with a motion that is daily, is not only an absurd proposition but false in philosophy, and theologically considered at least erroneous in faith.'¹ On the other hand, Karl Pearson makes the assertion (*Grammar of Science*², London, 1900, p. 366), while deprecating its one-sidedness and exaggeration, that 'the chief motor of modern life with all its really great achievements has been sought—and perhaps not unreasonably sought—in the individualistic instinct.' And, though this instinct may need to be balanced by those of socialism and humanism, yet each of these, even while striving to promote individual or national co-operation in the place of competition, does so avowedly in the interest of the highest good of the individual, of all individuals.

It must not be assumed, however, that the right of private judgment, when asserted, triumphed at once or even in a short time. At first the civil power stepped into the place of the papal, and adopted its spirit. 'Where the individual appealed to the powerful (individual) spirit within him, Luther would have none of it. Further, in politics nothing was heard of save the good of the State, or the general weal.'³ The National Church sought to clothe itself with the autocracy of the rejected Roman Church; little respect was paid at first to the rights of individual persons or individual communities. This transition spirit persisted in philosophy until Descartes (*q.v.*), by rejecting all authority and starting *de novo* from the thinking Ego as the basis of all philosophy, became the founder of all philosophy that is entitled to call itself modern. While philosophies are in conflict from generation to generation, they are agreed on one point, and that is, that the appeal of all philosophy is in the end to reason speaking through the individual thinker. In philosophy the right of private judgment is irrefragable. The most striking proof of this is given indirectly by the long sway of the political theories of Bentham and by his maxim that the end of government is to ensure the greatest good of the greatest number. Society exists to perfect the individual, and, if the individual is called on from time to time to sacrifice himself to society, it is only that he may find his life enriched by losing it.

3. Mysticism.—This third element has not enjoyed in modern times the same popular vogue as empiricism or rationalism, and indeed it may be questioned whether it ought not to be regarded as the inspirer of thought rather than as an independent and co-ordinate factor. In philosophy indeed it has its definite exponents in More and Cudworth. In religion it underlay Quakerism and the Wesleyan and Evangelical movements. It

emerges in literature in poets such as Wordsworth and Shelley, and in writers such as Novalis, Amiel, Emerson, Walt Whitman, and Coventry Patmore. It inspires the pre-Raphaelites, and art-symbolists of every sort, and Henri Bergson and the pragmatist schools of thought. It is paramount in thinkers like Schlegel (alike in his 'ironic' stage and in his later, where he treats the individual as insufficient to himself, but progressing towards divinity), in Schelling (especially in his 'fourth period'), in the 'Scottish school,' which identified philosophy with the observation of the facts of consciousness, in Rousseau, in the *Wolfenbützel Fragments* of Reinmarus, in Jacobi, and in Jacob Boehme.

Finally, it should be observed that private judgment is properly or directly concerned not with matter of fact but with values. The discussion of matter of fact belongs to science, where private judgment has no legitimate place, but the values of things, whether partial or ultimate, are values for the individual. Interest in them is personal, and hence private judgment must in them assert itself. A good, to be a good to me, must be a good for me. But this is not to say that my private judgment is self-originated or self-sufficient. The social whole and the activities of nature play a large part in supplying the content of that self-consciousness of which private judgment is an inevitable expression. The perfect correlation, however, of the individual and the society remains one of the gravest problems which man has yet to solve.

PROBABILIORISM. — Probabiliorism is a form of probabilism (*q.v.*). The principle may be stated thus: the *opinio minus tuta quæ libertati favet* may be followed to the detriment of the *opinio tuta quæ legi favet* when the former is more probable than the latter although it is not quite certain, i.e. when the reasons and the scholars militating in its favour have more weight than those militating in favour of the *opinio tuta*. There have always been probabiliorist casuists, but probabiliorism was peculiarly in favour during the first half of the 19th century. Among its defenders may be mentioned Thiels and Billuart. Thiels wrote a treatise in which he refutes the so-called reflex arguments upon which mainly the partisans of simple probabilism rest, viz. (1) 'lex dubia non obligat,' (2) 'lex dubia invincibiliter ignoratur,' (3) 'melior est conditio possidentis.' Billuart, after severely condemning simple probabilism and equiprobabilism (*q.v.*), declared himself in favour of probabiliorism with the help of arguments drawn from reason and from Pope Alexander VIII.'s condemnation of the following proposition: 'non licet sequi opinionem probabilissimam.' If we can follow the *opinio probabilissima*, which always implies a minimum of doubt, it follows, according to him, that we can also follow the simply *probabilior opinio* without the doubt which it leaves in existence sufficing to render it suspect. He demands, however, that the reasons for probabiliority should be very genuine. The resolutions of the assembly of the French clergy in 1900 also seem to him favourable to

² Erdmann, *Hist. of Philosophy*, II. § 264, p. 6.

probabiliorism. In the matter of the sacraments he leans towards tutiorism. During the second half of the 19th cent. probabiliorism was gradually forsaken. Gousset is inclined towards it, although he does not debar probabilism.

We cannot include in the number of probabiliorists the theologians who demand probability only in certain cases—*e.g.*, when the doubtful law is a natural law, or a very important one—or those who, like Gury, demand it only '*ubi de solo honesto agitur*,' *i.e.* in order that an action may be thought honourable, not when it is simply a question of '*licito vel illicito*,' *i.e.* whether it is permissible or not. The only purpose of this distinction between the *honestum* and the *licitum* is to limit simple probabilism in appearance, by leaving consciences in reality free to adopt it.

The probabiliorists apply this principle only to the question of law, not to that of fact. In theory, we may follow the *opinio minus tuta* because it is more probable than the *opinio tuta*, but in order to make sure whether the concrete conditions, under which alone the surplus of probability exists, are realized or not, more than probability is needed, *viz.* certainty; *e.g.*, the law forbids the eating of meat during Lent; nevertheless the contrary is more probable, *viz.* that in certain circumstances I can eat meat even then; from that time I can admit in principle that in these circumstances I can eat meat during Lent; I cannot, however, do it in a given case unless I am absolutely sure that I am in these circumstances.

LITERATURE.—Thiels, *De reflexu probabilismi principis discussio*, Malines, 1844; C. R. Billuart, *Summa S. Thomæ hodiernis Academicarum moribus accommodata, seu cursus theologiæ juxta mentem divi Thomæ*, new ed., Paris and Lyons, 1887, vii. 407 ff.; T. M. J. Gousset, *Théologie morale*¹², Paris, 1867; L. Pottin, *La Théorie du probabilisme*, do. 1874; J. P. Gury, *Compendium theologiæ moralis*¹³, Paris and Lyons, 1885, i. 130 ff. E. EHRHARDT.

PROBABILISM.—By probabilism is signified the moral system according to which, when there are divergent views as to the lawfulness of an action, for each of which solid arguments may be advanced, then, provided the lawfulness be alone in question, we are under no obligation to follow the more probable of the two views, but are equally free to adopt either course.

It is the teaching of all theologians that no one may do any action which he is not sure is right. If a man acts with a doubtful conscience—not knowing whether the thing he is doing is right or wrong—that alone suffices to make his action sinful; for it proves that he is willing to do it even though it should be wrong. He is deliberately exposing himself to the risk of committing a sin. And to expose oneself to the risk of sinning mortally is by common consent a mortal sin. Yet in the conduct of life cases are constantly arising in which we are uncertain whether a given course is forbidden or not. The problem, then, is to determine the conditions in which, notwithstanding this uncertainty, a man may act as though no prohibition existed, with full assurance that his action is morally right. The various moral systems, tutiorism (or rigorism), probabiliorism, equiprobabilism (*q.q.v.*), probabilism, and laxism give the different answers to the question. Since immediate and direct certainty as to the lawfulness of the act is not to be had, each system appeals to some principle of morals to provide the required assurance. In this connexion these are termed principles of reflex certainty or, occasionally, 'reflex principles.'

In all the cases which we are considering there is said to be, on the one hand, a probable opinion in favour of the law, and, on the other, a probable opinion in favour of liberty, the respective proba-

bility of the opinions being determined according to the weight of the reasons which can be advanced on either side. In order to avoid misconceptions it seems desirable here to call attention to the fact that the meaning of the word 'probable' in theology differs somewhat from that now commonly attached to it. In the present sense of the term a thing is said to be probable only when it can claim a greater likelihood than the other alternatives. These are not said to be probable at all. Moreover, the idea suggested is in many minds linked up with the mathematical theory of probabilities (*i.e.* chance-happenings). In theology, on the other hand, the word is used in its etymological sense. An opinion is probable which commends itself to the mind by weighty reasons as being very possibly true. The idea of chance is altogether absent. Confining our attention, then, to the three systems which alone can be said to have had any actual importance in the theological schools, the probabiliorist theologians hold that we are free to follow the opinion in favour of liberty when and only when it is the more probable of the two. According to the equiprobabilists, in order that we may take this course it is necessary that the two opinions should have at least an equal degree of probability. The probabilist system teaches that, should there be a solid reason to suppose the action not prohibited, then we are free to follow that opinion, even though the reasons on the other side are more weighty, provided that the difference is not such as to render the existence of the law not merely probable, but morally certain.

Before giving the arguments on which the system is based, it will be well briefly to explain two points of importance: (1) what constitutes solid probability, and (2) the limits within which the system of probabilism is applicable.

(1) An opinion is said to possess *intrinsic* probability when the grounds on which it is based are such as to have serious weight with men of competent judgment. Moreover, the grounds must be such as to retain their value even in face of the reasons which can be adduced on the other side. By this it is not meant that they must be equally cogent. But they must be such that the opponent arguments do not render them nugatory. When the arguments on the two sides are drawn from different, and even from disparate, considerations, it will often be the case that those advanced for the less probable cause are in no sense invalidated by those which support the more probable. *Extrinsic* probability is that which belongs to an opinion by reason of the authorities who can be cited for it. Ordinarily speaking, it is held that, if five or six writers of recognized weight in the theological school can be reckoned as independently supporting a view, that view may be safely followed. The condition that the authorities quoted must be theologians of real weight is to be noted. An opinion does not acquire extrinsic probability because it is found in a few works which at one time or another have enjoyed some popularity.

(2) There are certain well-defined spheres of human activity in which probabilism has no place. If we are under obligation to ensure the validity of some act, it would be altogether unlawful to adopt means which will only probably be efficacious, should a safer course be open to us. In such a case we are bound to take the surest means at our disposal. Thus, probabilism is excluded (save in a few exceptional cases) in regard to the administration of the sacraments. If, *e.g.*, a man had some doubt as to whether there was not an ecclesiastical impediment of affinity to the marriage he was intending to contract, he would be bound to procure the necessary dispensation to proceed. The mere fact that there was a sound probability

against the existence of the impediment, and that the question would certainly never be raised, would constitute no justification for neglecting to take the precaution. So, also, probabilism is inapplicable where the rights of another person are concerned. We are under strict obligation not to wrong our neighbour, and it is unlawful to put ourselves in danger of so doing. There may be excellent reasons for thinking that a match thrown at random over the hedge will not fire the haystack on the other side. But a man would be acting wrongfully if on the strength of those reasons he should take the chance of causing the damage. Finally, probabilism may not be employed when there is question of some end that one is absolutely bound to attain. No man may use merely probable means to ensure his eternal salvation; he is bound to take measures which he knows to be sufficient. It would be erroneous to speak of these as exceptions to probabilism. Probabilism is applicable only where the obligation itself is dubious. In all these cases, although there is a doubtful element in the situation, the obligation is certain.

The argument for probabilism can be stated very briefly. Whenever there is a solid reason for questioning the existence of a law, that law is *ipso facto* doubtful. But a doubtful law imposes no obligation on the conscience ('lex dubia non obligat'), and may therefore be treated as non-existent. This principle, that a doubtful law has no binding force on the conscience, seems scarcely to require proof. But two considerations may be advanced in its support. In the first place, a law binds only in so far as it is known. If, therefore, after taking all reasonable means to make certain, a man still does not know whether a given law exists, he is not yet under any moral obligation in its regard. For practical purposes, he is in the same position as a man who has never heard of it ('lex dubia invincibiliter ignoratur'). Secondly, it is urged that an obligation is always to be viewed as a restriction on a previous state of liberty. Liberty is in possession till the obligation is imposed. Since this is so, and since 'melior est conditio possidentis,' unless the obligation is absolutely certain, a man remains free. But in the cases which we are considering the obligation is not certain but dubious.

These reasons, it is urged, are conclusive, and put the validity of probabilism as a moral system beyond question. Hence, whenever there is a reason for doubt as to the law, a man may adopt the opinion in favour of liberty with absolute assurance that he is justified in doing so, even though there be greater probability on the opposite side.

Probabilism, it is manifest, is concerned solely with what is of obligation, not with what is the most perfect course of action. In other words, it belongs to moral, not to ascetical, theology. It is of no little importance to avoid confusing the two issues. A man is not bound to adopt the more perfect course in all his actions, and the attempt to impose what is most perfect as a matter of obligation always results at last in the total rejection of the moral law, as being too burdensome for flesh and blood. It seems necessary to call attention to this point, as probabilism has often been attacked on the ground that it proposes a low standard of perfection. The fact is that it is in no way concerned with perfection. The study of Christian perfection belongs to ascetical theology.

The first to enunciate clearly and to defend the principles of probabilism was the Dominican, Bartholomew de Medina, in his *Expositio in 1am 2am D. Thomæ* (Salamanca, 1577). The rules given by previous moralists—e.g., Navarrus—to enable a man to form a safe conscience for himself in doubt-

ful cases were somewhat more stringent; but all were agreed that a confessor was bound to absolve penitents who should announce their intention of following a probable opinion, even though he himself should be aware that this opinion was the less probable of the two. In such a case the confessor had no right to tell the penitent that he was guilty of sin in not following the more probable view. Medina carried the principle to its logical issue in maintaining that a man is always free to adopt a probable opinion as a basis of action. His teaching found general acceptance in the schools, as being in full accordance with admitted principles; and from 1600 to 1640 it was, with a very few exceptions, the universal doctrine of moral theologians. Towards the middle of the century a change took place. The leading Jansenists were advocates of tutiorism in its extreme form, maintaining that in all cases of doubt a man was bound to put himself on the safe side by acting as though the law actually existed. They attacked probabilism as immoral; and, inasmuch as the Jesuit theologians had been extremely active in opposing their doctrinal novelties, they held the order up to obloquy because of the support accorded by its writers to this system. In 1657 Pascal, at the instance of Antoine Arnauld, composed his *Lettres provinciales* in the interests of Jansenism. The mordant caricature of probabilism contained in this work, remote though it was from the truth, was a controversial success of the first magnitude. It brought the system into disrepute for many decades, and, among those who know little of the points at issue, still passes current as a satisfactory account. From 1650 to 1750 the majority, perhaps, of theologians inclined to some form of probabilism, though there was always a succession of moralists of real eminence who were faithful to the probabilist solution. From the beginning of the 19th cent. nearly every name of real note may be reckoned among the probabilists—e.g., Génicot, Ballerini, Lehmkuhl, Ojetti, and Slater. A few authors still defend a mitigated equiprobabilism; but there is little practical difference between the two standpoints.

LITERATURE.—A. Lehmkuhl, *Probabilismus Vindicatus*, Freiburg, 1906, *Theologia Moralis*, do. 1910; F. Ter Haar, *De Systemate Morali Antiquorum Probabilistarum*, Paderborn, 1894; A. Ballerini, *Opus Theologicum Morale*³, Prato, 1893-99; J. M. Harty, *CE*, s.v. 'Probabilism'; T. Slater, *Short Hist. of Moral Theology*, New York, 1909. G. H. JOYCE.

PROBABILITY.—There are certain phenomena of such a nature that their antecedents, being extremely complex, cannot be adequately comprehended by observation, however searching it may be; nor can they be subjected to any analysis that will disclose the causal elements to which the effect in question is due.

In the throwing of dice, e.g., the antecedent shaking of the box and tossing the dice upon the table is about the same each time—at least the difference cannot be determined—and yet the results vary with each successive throw. The causal determination in each case is so complex as to be beyond computation; the initial position of the dice, the force of their ejection from the box, the height of the box above the table when they leave it, the inequalities of the table itself, a variation between the physical and geometrical centres of gravity of the dice, etc.—all make the antecedent so complex that a slight variation in any one of these conditions will affect the result. We find, therefore, double sixes at one time, a three and a four at another, and so on indefinitely.

Again, it sometimes happens that with perfect sanitary conditions an infectious disease will appear that has always been regarded, and that correctly, as due to imperfect sanitation, whereas an entire disregard of sanitary requirements and of all the laws of health may yet give rise to no disease of special moment. Certain conditions of temperature, atmospheric pressure, velocity and direction of the wind, may one day bring storm and rain, and, as far as observation can detect, similar conditions may again bring fair weather. So also the rise and fall in stock and money markets is extremely susceptible to the varying conditions of indefinitely complex forces wholly beyond all powers of determination or of prediction.

Such phenomena present a problem with which the methods of inductive inquiry cannot deal. Observation is not far-reaching enough to provide the data for the solution of the problem, and, even if it were, our methods of computation and determination are not adequate to solve problems of so many terms and of so complex a nature.

The causal connexion may be established beyond all reasonable doubt, and yet the cause obtains in the midst of so complex a setting that the problem is really this—to determine whether a cause, whose exact nature may be known or unknown, will prove operative or inoperative. The cause may be always present and even its exact nature may be known, and yet the complex circumstances attending it may be of such a character that one alone, or two or more combining, may neutralize the operation of the cause, and, on the other hand, a slight variation of the combined circumstances may promote and even accelerate the operation of the cause in question. The problem then is to determine how often the event happens, and how often it fails of happening, the complex and indeterminate antecedent being present in all the instances examined.

When we begin to count instances, we are reminded that we must be in the neighbourhood of the sphere of enumerative induction. Enumerative induction treats instances by noting the number of observed coincident happenings of the antecedent and consequent under investigation, no attempt being made to analyze their respective contents or to determine a causal connexion more definitely by means of any one or more of the inductive methods of research and verification. The result of such an investigation may be formulated in a proposition of the form, 'Every A is B.' This, strictly interpreted, has the force of 'Every A that has been observed is B.' There are cases, however, in which observation leads to a twofold result—a set of instances in which it is observed that the A's are B's, and another set of instances in which the A's are not B's. These instances are of such a nature that the observed A is an antecedent so extremely complex that the element within it, which is a cause capable of producing B, either may be absent without producing an appreciable change in the general nature of A or, being present, may be neutralized by some other element of A itself. The result gives a basis for a probable inference only; and the nature of that inference will depend upon the preponderance of the observed happenings or of the failure of the event under investigation.

The probability attached to such an inference, however, is different from the probability which characterizes the nature of enumerative induction. In the latter, when the observation has been widely extended and no exceptions noted, it is usual to say that the result expressed in the proposition, 'Every A is B,' has the force of a high degree of probability. But in the instances whose investigation shows the result that some A's are B's, and some not, and yet where the former far outnumber the latter cases, it may be inferred that the A's which in future we may meet will probably be B's; and the degree of probability expressed in such a proposition is commensurate with the preponderance of the number of observed affirmative instances over the negative. Here the probability refers to the validity of an inference concerning certain *particular* instances, be they many or be they few, which lie beyond the sphere of our present knowledge; in enumerative induction the probability is attached to the *universality* of the proposition affirmed as a result of observation that has not so far detected an exception. In the

former case the question of the universality of the result is conclusively answered in the negative; there can be no universal proposition possible, as some instances give A and B together, others give A with the absence of B; and the question of probability that here arises, therefore, refers to individual cases not yet examined, as to whether they severally will more likely correspond to the set of affirmative or to that of the negative instances already noted.

The comparison of the number of happenings with that of the failures of an event affords a basis for several kinds of inference, all of them in the sphere of probability.

We find in such a comparison a basis for the calculation of the probability of a particular event happening when there is a repetition of the circumstances which, in former cases, have sometimes produced the event and sometimes failed to produce it. If, according to former observation, the event has happened, let us say, seven times, and failed three, the probability, expressed numerically, of its happening again is $\frac{7}{10}$. The rule is: to express the probability of an event, take as numerator the number of times which the event has been observed to occur, and as denominator the total number observed, both of happening and failure; the fraction thus expressed will represent the probability of the event happening. The counter-probability may be represented by the number of observed failures of the event divided by the total number of cases observed. The counter-probability *plus* the probability evidently is equal to unity. If, therefore, the probability is unity, the counter-probability will equal zero; i.e., the probability in that case has merged into certainty. Zero, therefore, represents absolute impossibility. All fractions between the limits zero and one represent varying degrees of probability, from impossibility at one extreme to certainty at the other.

Not only may there be this inductive basis for the calculation of probability, arising from actually observed instances; there may be also a deductive calculation of probability based upon the known structure or nature of the phenomena themselves in advance of any observation as to their actual behaviour.

We say, e.g., that the probability of a penny turning up heads is $\frac{1}{2}$. Knowing the form of the penny and that there are but two possibilities, heads or tails, and there being no reason why one is more likely to turn up than the other, we say that there is one chance favourable to heads against the two chances which represent the total number of possibilities under the existing circumstances. With a die, in the form of a perfect cube, we say there is one chance of its turning up the face marked 1 against the six chances represented by the six faces—the total number; here the probability is $\frac{1}{6}$. Thus the basis for the calculation of probability may be a theoretical as well as an empirical one.

In the estimate of the probability of an event in the actual conduct of affairs we seldom express that probability numerically; we express a degree of probability adverbially rather than numerically; i.e., we say an event is *quite* probable, *very* probable, or *extremely* probable. The fact is that, as regards most phenomena, we do not keep an exact or even approximate memorandum of the number of happenings compared with that of the failures. We rather classify our observations in terms of more or less. Certain circumstances that we observe produce about as many failures as happenings of an event, other circumstances produce far more happenings than failures, others far less, and so on. Consequently we receive certain psychological impressions of varying degrees of intensity according to the preponderance of happening over failure, or *vice versa*; this impression becomes the basis for estimating the probability in question, and the degree of that probability is commensurate

with the intensity of the original psychological impression arising from concepts of more or of less. In such a sphere, however, as that devoted to the interests of betting, gambling, pool-selling, book-making, etc., probabilities are estimated according to observations and theoretical considerations whose conditions are expressed numerically; and the amount risked in each case is strictly estimated according to the exact ratio of probability to counter-probability under the existing circumstances.

The estimation of probability in terms of a greater or less degree is, however, more usual, and applicable to the conduct of human life generally (for the theory of probability as the guide of life see art. BUTLER). It has special force and utility as a mode of inference when the observed instances so far outnumber the exceptions as to create an impression of such a high degree of probability as to approximate practical if not theoretical certainty.

It has been noted over a wide field of observation that a second attack of scarlet fever is extremely rare. Exceptions have occurred and, therefore, by enumerative induction it is impossible to generalize the universal proposition that a second attack will never occur. It is, however, possible to assert with somewhat positive assurance that it is highly probable that a person will be exempt from a second attack.

The comparison of failure and happening of events based upon observation or theoretical considerations of structure and nature leads also to inferences concerning large numbers of instances considered together. If a memorandum is kept of the number of times an event has happened and of the number of times it has failed, and the total number of instances examined be sufficiently great, then the resulting ratio of favourable instances to the total number will be found approximately repeated if a second set of an equal number of instances be likewise examined. There is a law of tendency whereby Nature seems to repeat herself even when the attendant circumstances of an event are most complex and beyond all powers of accurate determination.

As the result of observations extending over thousands and thousands of instances, it is affirmed that about $\frac{1}{2}$ of the children born in the world die before the age of sixteen. In a group of 10 children the ratio would perhaps be deviated from very materially; in a group of 100 the deviation is apt to be less, in a group of 1000, still less; and in a group of 100,000 the ratio as above given would be substantially realized. The approximation would be so near that the error would be insignificant as compared with total number of cases.

The following law, therefore, expresses this tendency—that, while in a small number of instances there is irregularity in the observed ratio between the number of times a given event has happened and its failures, still in a large number of instances this ratio tends towards a constant limit.

This is clearly seen in the pitching of a penny: 10 throws might very possibly result in 7 heads and 3 tails; in 100 throws, however, the ratio expressing the result as to heads and tails observed will be much nearer $\frac{1}{2}$ than in the former case; while, if 1000 or 10,000 throws be observed, the result will approximate the ratio $\frac{1}{2}$.

The comparison of observed cases with the number given by the calculation of the probabilities in question has been made by Quételet, and also by Jevons. Their results are most significant and interesting.

Quételet made 4096 drawings from an urn containing 20 black balls and 20 white. Theoretically, he should have drawn as many white as black balls, 2048 each; the actual drawings resulted in 2068 white balls and 2030 black. Jevons made 20,480 throws of a penny; the theoretical result should have been 10,240 heads; the actual result was 10,353 heads.

The tendency towards a constant ratio in aggregates containing a considerable number of instances is strikingly illustrated in the record of baptisms taken from an old parish register in England. The number of male baptisms registered to every 1000 females ran as follows for the respective years from 1821 to 1830: 1048, 1047, 1047, 1041, 1040, 1046, 1047, 1043, 1043, 1034. We see with what surprising accuracy the constant ratio was repeated substantially year after year.

A like regularity seems to pervade every depart-

ment of life. The total number of crimes is approximately the same, year after year; the annual death-rate, the apportionment of deaths, moreover, to the several diseases as their evident causes, the number of missive letters each year, the annual number of suicides, of divorces—all these diverse events indicate a regularity in the long run, as regards their numerical estimate.

The results which are thus attained regarding aggregates cannot be stated as probable results. If a sufficiently large number of instances are taken, the result will be certain within a very small, and in many cases an insignificant, margin. In estimating the probability of a single event the question is whether it will happen or not happen, and the element of uncertainty is therefore prominent. In dealing with aggregates, however, no such element of uncertainty enters; the question is not whether or not there will be certain results, but concerns rather the degree of exactness with which the results will approximate a definite ratio. And the law of tendency is that the larger the number of instances, the greater will be the approximation of an accurate and definite result.

This is especially illustrated in the numerous insurance companies whose business is conducted upon the basis of an approximately constant death-rate. The general procedure is somewhat as follows:

Suppose 10,000 persons insure their lives at £200 per individual, and the annual death-rate observed over a wide extent of territory, and including a very large number of instances, amounts to 200 persons out of 10,000. The losses then to the insurance company will amount annually to £40,000 on such a basis. These losses, distributed among the 10,000 insuring in the company, would amount to £4 apiece. The company, therefore, has a numerical basis for calculating the amount which each person must pay in order to cover the annual losses and to provide an assured revenue for the company.

The problem has been stated in round numbers merely to illustrate in general the principle involved; the actual calculation is more complicated, because, in each particular case, the age of the individual and the varying death-rate for different years must be taken into account. The substantial standing of the innumerable insurance companies in our country bears witness to the fact that these enterprises are based upon a practical certainty regarding death-rates when applied to large aggregates. Chance is thus eliminated almost entirely; that which would be a serious risk as regards an individual is substantially void of all risk when large numbers are concerned.

Moreover, phenomena indicate a marked departure from the ratio of frequency as determined by prior observation or by theoretical considerations; then it is ordinarily inferred that a new cause has become operative, not before existent, or, if present, with its effect neutralized.

We would naturally expect a die to show the face 3, on an average, about once in six throws. But, if it repeatedly turns up 3 in succession, and if no other number appears, or appears but rarely, we are warranted in inferring that the die is loaded. The number of homicides in the United States in 1894 far exceeded the annual number observed for the several years preceding. This discrepancy is easily accounted for by the fact that the natural number was swollen by the deaths caused by the strikers and rioters in the month of July of that year. So also a marked departure from the annual death-rate of a large city is at once an urgent suggestion to the public health authority to start investigations that will unearth the hidden cause that one is constrained to believe must be present. Such causes as defective drains, prevalence of epidemics, etc., are again and again found to accompany an increase of the average death-rate.

Under such circumstances the method of investigation which should be pursued, when practicable, is to endeavour to break up the total into smaller groups of a specific nature. Thus, if the death-rate for the year is appreciably increased, examine the death-rate per month. See if any month shows a marked departure from the average. If so, this will suggest a careful investigation of the circum-

stances and characteristics of the month in question. Or it may be possible to make a geographical distribution of the total over different sections of the city under investigation. Some special locality may indicate an unusually large death-rate. Investigation, therefore, at that point may reveal a lurking cause of disease, otherwise unnoticed.

By similar considerations it is often possible to distinguish between a chance coincidence and a determinate cause which has produced the event in question. For, if the possibility of some one definite cause is considered out of the question, and if the origin of the event is found among complex phenomena of such a number and variety that they may form an indefinite number of combinations only one of which can possibly produce the event in question, then the probability that the event has actually been produced by such a chance combination is extremely small. We are then thrown back upon the other hypothesis, that, instead of one out of many possible combinations, there is some one determinate cause operative in the case. Its nature may not be definitely indicated, but at least the possibility of its presence is suggested.

This line of reasoning is illustrated in the following account of the discovery of the existence of iron in the sun, in the researches of Bunsen and Kirchhoff:

'On comparing the spectra of sunlight and of the light proceeding from the incandescent vapour of iron, it became apparent that at least sixty bright lines in the spectrum of iron coincided with dark lines in the sun's spectrum. Such coincidences could never be observed with certainty, because, even if the lines only closely approached, the instrumental imperfections of the spectroscopes would make them apparently coincident, and if one line came within half a millimetre of another, on the map of the spectra, they could not be pronounced distinct. Now the average distance of the solar lines on Kirchhoff's map is two millimetres, and if we throw down a line, as it were by pure chance, on such a map, the probability is about $\frac{1}{2}$ that the new line will fall within one-half millimetre on one side or the other of some one of the solar lines. To put it in another way, we may suppose that each solar line, either on account of its real breadth, or the defects of the instrument, possesses a breadth of one-half millimetre, and that each line in the iron spectrum has a like breadth. The probability, then, is just $\frac{1}{2}$ that the centre of each iron line will come by chance within one millimetre of the centre of a solar line, so as to appear to coincide with it. The probability of casual coincidence of each iron line with a solar line is in like manner $\frac{1}{2}$. Coincidence in the case of each of the sixty iron lines is a very unlikely event if it arises casually, for it would have a probability of only $(\frac{1}{2})^{60}$ or less than one in a trillion. The odds, in short, are more than a million million millions to unity against such a casual coincidence. But on the other hypothesis, that iron exists in the sun, it is highly probable that such coincidences would be observed; it is immensely more probable that sixty coincidences would be observed if iron existed in the sun, than that they should arise from chance. Hence, by our principle, it is immensely probable that iron does exist in the sun.'¹

This principle is also illustrated in instances of circumstantial evidence. In such cases the observed combination of so many diverse circumstances, even as regards an indefinite number of minor details, precludes the hypothesis of casual coincidences, and suggests some one definite cause that will prove a unifying principle of explanation of all the attendant circumstances. As Bullen says:

'A presumption is very often more convincing and more satisfactory than any other kind of evidence. It is not within the reach and compass of human abilities to invent a train of circumstances which shall be so connected together as to amount to a proof of guilt without affording opportunities to contradict a great part, if not all of these circumstances.'²

In the various illustrations which have been given we find that the theory of probability provides a method of dealing with phenomena which cannot be subjected to the ordinary inductive methods. The phenomena are so complex that a specific cause cannot be determined, for the real

cause in question is a correlation of many diverse forces, and, if only a few instances are examined, no causal connexion will be disclosed; it is necessary, therefore, to deal with large numbers, statistical averages, etc., in order to detect an emerging relation of a causal character, expressed by a constant ratio. This ratio once determined, it becomes a further test, as we have already seen, when the results widely depart from it, to suggest the presence of a new force outside of the combinations to which the effect would be naturally referred according to the indications of the probability-ratio. The latter mode of inference is akin to the method of residues, for the inference in question is based upon the fact that the probability-ratio will account for only a certain frequency of occurrence of the event under investigation; a marked excess must be accounted for by positing a definitely operative cause. And, if an antecedent of such a nature is known to be present, the suggestion at once arises in our thought that this in all probability is the cause producing this excess in the results.

JOHN GRIER HIBBEN.

PROBATION.—One of the most obvious and striking aspects of experience, one which forces itself upon a man's mind as soon as he begins to reflect at all, is its incomplete and fragmentary character. In the pursuit of truth he finds himself confronted sooner or later with unanswerable questions, face to face with insoluble mysteries. Knowledge may be real as far as it goes, but finality is not to be found. In the pursuit of the good, again, there is a perpetual discrepancy between the actual and the ideal, a constant failure of achievement. And the passion for the beautiful is never really satisfied, though its hunger may be partially stayed. In all these directions neither the mind nor the heart of man ever finds absolute satisfaction; his capacity finds neither limit nor adequate response.

The questions, then, are inevitably thrust upon us: Why is aspiration so far in advance of attainment? Has it always been so? Will it always remain so? The incomplete, the inadequate, the fragmentary, is abhorrent to us, æsthetically and spiritually, and we cannot 'sadly and soberly acquiesce' without at least attempting to find some explanation of this character of the given.

The theory of probation is an attempted answer to the above questions. We have seen that experience does not satisfy, that this world is not adequate to the complete realization of our desires. There is no doubt about that. But how if it was not meant to satisfy? How if its incompleteness and fragmentariness and apparent illusion were not errors and defects in the character of the world, as we are first inclined to think, but just those very qualities which give it such value as it

has? The world, as we perceive it, may be only a part of a larger universe; our temporal existence may be but a phase in an experience that is not to be numbered by years; in a word, this present world may be but a period of probation, a period, that is, whose explanation and justification lie beyond itself in the idea of an end to which it may serve as means, of a purpose of which all 'the change and chances of this mortal life' may be so many ways of fulfilment.

Now the probation of which this life is the scene is to be conceived not as a process that goes on impersonally, as it were, but as the direct work of the God and Father of mankind. The theory presupposes, then, that there has already been formed the conception of a personal God, with whom the spirit of man is in immediate contact. For probation is a teleological concept, and a purpose or end is the expression of the will of a person, and cannot have its source in a mere 'tendency, not ourselves, that makes for righteousness.' Hence it is an idea that seems very closely bound up with the belief in a personal God. Probation is a distinctively religious, not only a moral or philosophical, theory.

The ideas of discipline and purification are to be found in any religion which has any ethical quality at all, but that of probation does not seem to have been fully developed except among the Jews, of whose theology it is an important element, and whose history is interpreted by the prophets in the light of it. The history of the Jews, broadly speaking, is the history of a people whose high calling, to be in a special sense the medium of Divine revelation and blessing to the world, was equalled only by their failure, as a nation, to discern its import and to rise to its fulfilment. For this fulfilment all the vicissitudes of their history, as that of a 'chosen people' *par excellence*, were meant to fit them; all was meant, in Scripture language, to humble them, and to prove them, whether they would keep God's commandments or no (cf. Dt 8³). 'Elect peoples,' it has been said, 'have tragic careers,'¹ and the tragedy is never more deep and complete than when the nation is spiritually blind to the meaning of its destiny, which is throughout recognized, by those who have eyes to see, to be of Divine appointment and plan. It was the unique relation of the nation to a personal God, known as such, that is, as a Being of moral nature, that gave their failure the further character of sin.

To regard this world as the scene of probation is to regard it from a point of view that throws light on much that is otherwise hopelessly obscure and inexplicable in experience; for instance, some such conception as probation, that is, of life as a time of testing and training the will rather than of complete moral achievement, seems the only possible direction whence the nearest approach to a solution of the problem of evil could come; it is along these lines only that we can justify the twofold deliverance of the religious consciousness, that evil and sin are temporally real, and yet that God is good and that He is almighty. The only justification for even the temporary existence of evil would lie in its being an essential condition of the attainment of an end which is of supreme value. If we may attempt to define the end for which this world was called into being as the realization of the conscious communion of every soul with the God and Father of that soul, then it at once becomes plain that from the beginning the possibility of evil must have been recognized, and recognized as worth while. For man can attain the Divine likeness and become

in the fullest sense partaker of the Divine nature only by a process of probation, in which temptation plays an essential part. Character is an acquired product; no virtue or goodness is assured which has not been put to the test in some way or another, and such trial or probation is accomplished through an experience in which the necessity of a choice between good and evil is constantly presented. One of the most profound truths embodied in the OT narrative of the Fall is that man, though originally innocent, *i.e.* ignorant of the distinction between good and evil, can attain holiness only through such a process of probation and temptation.

'Goodness as a moral experience is for us the overcoming of experienced evil. . . . So, in the good act I experience the good as my evil lost in goodness, as a rebellion against the good conquered in the moment of its birth, as a peace that arises in the midst of this triumphant conflict, as a satisfaction that lives in this restless activity of inner warfare. This child of inner strife is the good, and the only moral good, we know. . . . No genuine moral goodness is possible save in the midst of such inner warfare. The absence of the evil impulse leaves naught but innocence or instinct, morally insipid and colourless. Goodness is this organism of struggling elements' (J. Royce, *The Religious Aspect of Philosophy*, Boston, 1886, pp. 452, 456, 459).

Goodness is not forced upon us; we make it our own by willing identification of our will with the good. Hence probation implies freedom, power to 'choose the good and refuse the evil.' This is not the place for a discussion of the interminable Free Will *versus* Determinism controversy. It is enough to point out what will be denied by none, that those who regard this life as a period of probation make the implicit assumption that man is free—an assumption which receives most emphatic confirmation from the witness of the moral consciousness. It would be futile to speak of the 'probation' of a being who could not be otherwise than unfailingly regular in the performance of duty; in fact, such an one could scarcely attach any meaning to the word. Freedom, as Kant pointed out once for all, is a fundamental presupposition of morality, and the belief in probation lays great stress on this side of truth. Hence probation is not consistent with determinism, Calvinistic or otherwise. This world is no scene of probation for *Johannes Agricola in Meditation*.¹

If this life is a period of probation, it makes a constant appeal to the will to 'take sides with a cause not yet won'—that is the testimony of the moral consciousness, while yet the religious consciousness possesses the fundamental assurance that the victory is already accomplished. God's will shall be done; that cannot fail. But then arises the question as to the attitude of the individual, whether he will co-operate in its fulfilment or not. The constant pressure of this question is his probation.

And, just because the probation to which man is subject is an appeal to his willing spirit, it is no merely theoretic experiment to see what he will or can do, but is essentially practical, leading to definite issues for conduct, which can then be dealt with by way either of correction or of confirmation. It is a test or experiment not simply to increase the knowledge of the one who makes it, but continually carried on to affect the nature of the subject. This leading to a definite issue, whether for good or for evil, is an important aspect of probation. Indifference, neutrality, lukewarmness calls for the remedy of 'a piercing pain.'² Acts may be forgiven, but not even God Himself can forgive the hanger-back. 'At every instant, at every step in life, the point has to be decided, our soul has to be saved, heaven has to be gained or lost.'³ Hence probation, even though it may

result for the time in the choice of evil, is the first step of the way that leads through purification towards perfection.

The belief that this is the divinely appointed way for man finds its classic expression in the words of Job: 'He knoweth the way that I take: when he hath tried me, I shall come forth as gold.'¹ It may be objected that, in the case of Job at any rate, we see an instance of probation for purely theoretic interests. The drama represents Job's trials as being sent to supply an answer to the cynical question, 'Doth Job fear God for nought?' Here mere knowledge seems the end in view. But this is not really so. Two things must be remembered. First, Job's real devotion to, and trust in, God were practically tested, and the issue of his probation was a far higher, more deeply rooted, type of goodness than was possible to the merely prosperous, God-fearing man who is first depicted. His choice of the good becomes a perfect passion for right. Besides, 'the more righteous the man, the more urgent the demand for a testing experience.'² And, secondly, even if the testing had been unnecessary for Job himself, the results are never limited to the individual. 'Piety and prosperity must sometimes be dissociated, if it were only to let piety have an opportunity for evincing its sincerity,' and to 'silence doubt as to the reality of goodness.'³ And the effects go even further than this, as the language of St. Paul makes abundantly clear.⁴

We have seen, then, that this life is meant to be a stage in the progress towards perfection, through probation and purification of the will and character.

'It looks as if this strange life of ours were made only for character . . . For all other purposes—the making of fortune, the enjoyment of pleasure, the securing of worldly wealth or position or fame—this is a life ill-adapted. The flux of things, the uncertainties of fate, the varied unforeseen combinations of circumstances adverse to or destructive of health or wealth or happiness—all these make life a place obviously not formed primarily for these ends, the attempt to gain which is so easily and often thwarted, and which, even when gained, are held on so uncertain a tenure. This is really not the world for worldliness. But . . . all these conditions—this flux, this risk, this uncertainty—are the very conditions that help to form character. They make just the discipline by which a man may become tender and spiritual, patient and humble, unselfish and loving. The circumstances of life may defeat all other ends, but they cannot defeat, and they even must contribute towards, this end' (P. Carnegie Simpson, *The Fact of Christ*, London, 1900, p. 82 f.).

But we do not yet see probation taking effect in the complete purification of character, much less in its perfection. 'Life, as we know it, does not give full scope for the working out of individuality, ethical or intellectual.'⁵ The gradual perception that this is so leads to two alternatives: either to a form of pessimism which stops short with the conviction that

'All my life seems meant for fails,'

or to a belief in immortality—a belief that is due not to a selfish desire to 'call into being a new world to redress the balance of the old,' or to a mere craving for continuance, but a belief that is seen to be not so much a postulate as a positive implication of morality. A spiritual being cannot be a mere temporary phenomenon. And probation, taken in its deepest implication, seems essentially a process that demands a sphere of completion. We can scarcely conceive that it should stop short with the bare judgment that the subject of the testing, having failed to discern its true meaning, is useless and unfit for the purpose it was meant to serve, and is therefore to be left as a 'castaway.' It is possible, of

course, that the probation of a nation does stop short at such a point. But the case of the individual is scarcely parallel; here we do not judge that his value consists only in his capacity to be an instrument, and that, if at a given point he is a failure in this respect, no further effort will be made by his Creator. The relation of man to God is not exhausted by the category of the clay and the potter. Each individual is in himself of inestimable worth to God, at least from the Christian point of view. Probation, then, demands a future life for its completion, both for those in whose case the results are already evident and for those who as yet are still blind to spiritual issues. But, even with regard to such, 'life beyond death holds hope, the hope that under other conditions, through other experiences, the awakening may come, evil be renounced, and good chosen.'¹

Such speculations, such deepest hopes, only serve to emphasize the supreme significance of that probation which is the key to temporal experience. After all, it is first for its illumination of the present that the theory has value. The belief is a marked characteristic of Browning's philosophy of life. A brief analysis of the argument of a poem, *Eastern Day*, which is typical in this respect may help to throw some light on the doctrine itself.

'How very hard it is to be
A Christian!'

is the exclamation which opens the dialogue. In the admitted hardness lies the test; were it easy to be a Christian, easy to the flesh, to the mind, or to the spirit, it would be comparatively valueless. The difficulty is to see vividly and acutely, to grasp once for all, the relation between the finite and the infinite. Hence the need for faith. Now faith demands, not proof, but probability; it is satisfied

'So long as there be just enough
To pin my faith to, though it hap
Only at points: from gap to gap
One hangs up a huge curtain so,
Grandly, nor seeks to have it go
Foldless and flat along the wall.'

But the 'faith' that is a mere balancing of probabilities and choice of that which in the long run may prove to be the most profitable is by no means the true faith consisting in that strenuous attitude of will which is demanded by the facts of life as we find it. It is not to elicit a merely intellectual and cold selection of 'the safe side' that we are set in the midst of all that the world has to offer. To one who can penetrate beneath 'the shows of things' issues the most profound disclose themselves. To the purged eyesight it becomes a marvel

'why we grugged
Our labour here, and idly judged
Of heaven, we might have gained, but lose!'

Such an one recognizes, in a moment of sudden, intense illumination, that the failure to choose heaven means choice of the world, that the refusal to renounce the finite and transitory is the rejection of the Infinite and Eternal, of which they are the shows and symbols.

'This world,
This finite life, thou hast preferred,
In disbelief of God's plain word,
To heaven and to infinity.
Here the probation was for thee,
To show thy soul the earthly mixed
With heavenly, it must choose betwixt.'

He finds that neither nature, nor art, nor culture, nor even love itself, taken as complete in itself, is enough to satisfy the spirit's hunger. The infinite hunger of a soul cannot be satisfied with the things of sense.² God alone is great enough to satisfy the heart of man. As St. Augustine says, 'Tu fecisti nos ad Te, Domine, et inquietum est cor nostrum donec requiescat in Te.' But God does not force this truth on any one; He sets us here to learn it for ourselves, through a manifold experience, upheld by the confidence that He is dealing with us as with sons.³

'And so I live, you see,
Go through the world, try, prove, reject,
Prefer, still struggling to effect
My warfare; happy that I can
Be crossed and thwarted as a man,

¹ Caillard, p. 82.

⁵ E. M. Caillard, *Individual Immortality*, London, 1903, p. 65.

Not left in God's contempt apart,
With ghastly smooth life, dead at heart,
Tame in earth's paddock as her prize.'

This constant silent process of insight, of judgment, of appreciation and choice, is our probation. To be alive to its reality and significance is to interpret experience from the point of view of the man who judges the finite 'sub specie eternitatis.'

LITERATURE.—This has been cited throughout the article.

R. R. SHIELDS.

PROCESSIONS AND DANCES.—I. **PROCESSIONS.**—In the history of social ritual the procession occupies an important place. The most cultured and the most primitive society known to us alike lay stress on what is in the first instance merely the act of moving a body of the people from one place to another—a social mobilization or route-march, conducted with solemnity or in accordance with the emotions expressed by the purpose of the movement. Similarly, the return home is of a ceremonial character—a recession. Using the term 'worship' in the wide sense of all solemn social action, we may regard procession as being in itself an act of worship.

Besides the primary use of procession as a means to an end—the celebration of a particular ceremony—procession may have virtue in itself, and express a particular emotion or idea, or produce a particular effect. Again, it may serve to do honour to a person or thing carried in procession, or to exhibit to society the actual persons engaged. But these purposes cannot always be distinguished, and in many cases they are combined.

1. **Types of procession.**—Procession being employed for practically all social ceremonial, it is unnecessary to enumerate every ceremony served by it, but some types may be mentioned in which procession as such is emphasized.

Ceremonies which bind the individual life to the social, by making solemn the various physical crises, usually accompany in all cultures circumcision, marriage, burial, and the like. The lowest cultures, however, such as that of the Central Australians, do not celebrate these to any considerable extent, if at all. But at the stages represented by the ancient Hebrews, Greeks, and Italians, medieval Europe, and modern Egypt, these and other occasions are emphatically celebrated, and the procession is an important feature. Some of these peoples may be said to live processionally. Very complete examples may be seen among the Chinese and the modern Egyptians.¹ Among funeral processions that of the ancient Roman *nobiles* is remarkable. The dead man was accompanied by all his ancestors, represented by persons resembling them in form and stature and wearing wax portrait masks (*imagines*). In Western civilization the funeral and the wedding processions survive in some completeness, while those celebrating other life-crises are more or less obsolete.

As social organization develops, the solemnity of the procession is applied (1) to the economic operations on which the existence of man depends—agriculture, owing to its sedentary character, being conspicuous for this feature of celebration—and (2), as social operations are gradually differentiated, to the various subdivisions of activity—religious, legal, social, royal, and even athletic.

2. **Earlier processional forms.**—The earlier forms of these applications throw light upon the meaning and purpose of procession. To expel the demon of cholera, a Chinese population marches in procession, with music and dances.² In such a case the idea is probably that of a demonstration

in force, to show the strength of the community. In a more elaborate form we have the procession of the Roman *Salii*. The priests of this college were armed with peculiar helmets, shields, and staves, and their processional ritual was obviously a military pantomime, intended to overawe the demons of blight and infertility.³ The processions of the *Perchten* in Austria were of a similar character.⁴ It is possible that, besides their minatory aspect, such mobilizations of the people were intended to disseminate the virtue of vegetation-spirits, who may have been represented by certain of the performers.⁵ Many processional rites have the object of exhibiting sacred things and distributing their potency.

Thus, in the ancient Greek world, the 'gardens of Adonis,' a vegetation-charm, were carried in procession.⁶ In Egypt at the festivals of Osiris women carried in procession phallic images of the god, perhaps as 'a charm to ensure the growth of the crops.'⁷ Greece and India have similar phallic processions.

But the meaning of the symbol may be simply minatory.

The human sacrifice of the Khonds of Orissa, the *meriah*, is clearly an agricultural charm, and his virtue was distributed to the inhabitants in solemn procession.⁸ What Frazer terms 'the form of communion in which the sacred animal is taken from house to house, that all may enjoy a share of its divine influence,' is well illustrated by the rite of the Gilyaks. The sacred bear is taken in procession 'into every house in the village, where fish, brandy, and so forth are offered to him. . . . His entrance into a house is supposed to bring a blessing.'⁹ The Hebrew Ark of the Covenant carried in procession served both as a protection and as a blessing.

The carrying of sacred sheaves, trees, and other innumerable symbols of corn and wine is a regular practice of agricultural ritual, which Frazer has abundantly illustrated.

3. **Civic and religious processions.**—The processional 'beating of the bounds' seems to have had primarily a purificatory intention. Processions of a disciplinary character, to inspire respect for law and custom, and so forth, are frequently combined with pantomime and mask-performance—e.g., by such 'societies' as the Duk-duk and Mumbo-jumbo. In such cases as the fall of Jericho in early Hebrew story there seems to be implied a belief that procession round an object not only hems it in but also dominates it. The converse idea, illustrated by some uses of the magical circle (*q.v.*), is that procession round an object protects it. This idea may perhaps exist in the customs of beating the bounds and of civic processions round the city area. Of this character are mayoral shows, though originally derived from gild-processions, celebrating both the gild and its patron, and the Panathenaic procession of ancient Athens, in which the sacred *peplus* of Athene served as the sail of the ship carried or drawn on rollers through the city, perhaps symbolizing the maritime power of the Athenian empire. Magnificent processions of athletes, horses, and chariots introduced the performance of the great 'games' of Hellas; and the modern revival of Olympic games includes the procession. When crime was still expiated in public, a procession attended the malefactor to the place of punishment and execution. In this case there was a striking contrast between the outlying rabble and the procession itself, which should be 'an organized body of people advancing in a formal or ceremonial manner.'¹⁰ In modern times the procession is retained to dignify the law, royalty, parliament, civic and municipal functions, and is a special

instrument of public appeal by bodies with a grievance or desirous of demonstrating this or that political view. Friendly Societies and similar bodies make great use of it, and it is one of the chief instruments of the Salvation Army.

Procession is a simple means either of honouring or of degrading a person. The triumphal entry of Jesus balances the procession to Calvary. The 'triumph' of Roman generals was a very elaborate procession, including captives and spoils. It was remarkable for some peculiarities, which, in the opinion of Frazer, constitute an impersonation by the victor of the Jupiter Capitolinus to whose temple he was borne in procession. He wore the robes of the god, and his face was painted with vermilion. The custom survived the regal period into the republican.¹

4. The procession in Roman Catholic ritual.—The procession and the recession, as modes of proceeding to and receding from a ceremony, and also as acts of worship in themselves, have always been of great importance in the organized religions. An exception is the Churches of the Reformation, which practically abolished, along with other ritual, every procession but the funeral,² and this is more or less extempore, and not arranged by the clergy. Ever since Christianity, as early as the 4th cent., adopted the procession from the existing religions, pagan rather than Jewish, and primarily for the funeral, the Roman Catholic Church has exploited it thoroughly. *Litanies, rogationes, and supplicationes* were processional functions.³ After the time of Gregory the Great the processional entry of the celebrant and the procession to the station became regular. In processions to the stations of the Cross the Saviour's route to Calvary is represented and symbolized. The procession of the blessed sacrament is an old Roman Catholic function.⁴ The rulings of the *Rituale Romanum* (tit. ix.) must be noted, as showing the continuity of processional ideas.

There are: (1) *processiones generales*, in which the whole body of the clergy takes part; (2) *processiones ordinariae* on yearly festivals, such as the Feast of the Ascension of the Virgin, the procession on Palm Sunday, the *litanies majores* and *minores*, the Feast of Corpus Christi, and on other days according to the custom of the churches; (3) *processiones extraordinariae*, or processions ordered on special occasions—e.g., to pray for rain or fine weather, in time of storm, famine, plague, war, or in *quacunque tribulatione*—procession of thanksgiving, translation of relics, the dedication of a church or cemetery. There are also processions of honour—e.g., to meet a royal personage, or the bishop on his first entry into his diocese.⁵

5. The 'pardon' of Brittany.—Processions of a special character or unusual interest are numerous. Purificatory processions through fire, or in which the people walk upon fire, occur in agricultural ritual.⁶ To the same sphere belong the processions of giant figures, carried to the burning, processions to the midsummer bonfires, and those in which torches are waved over the gardens and fields.⁶ The carnival processions of France and the pardons of Brittany are remarkably developed. The latter play an important part in the religious and social life of the people.⁷ In Normandy such festivals are rare; in Flanders they survive partially in the *Kermesse*, e.g., of Brussels. It has been suggested that the Breton pardon is a survival of pagan feasts of the dead. But in the most famous, that of Notre Dame de Bon Secours at Guingamp, held about midsummer, there is certainly a connexion with the agricultural ritual of fire, the central act of the night procession being the lighting of a huge

fire in the chief place of the town.¹ The pardon aptly links together pilgrimage and procession. It illustrates equally well the early connexion of religion with all spheres of social life. Fairs of all kinds are held during the pardon, and merry-making is interpolated between solemn functions.

'From far and wide the people crowd to this festival' (the Pardon of Guingamp). The chief procession is by night; 'down every dark street flowed a double file of lights, each casting a bright reflexion on the face of the person who bore it. Thus, most of the pilgrims being in black and their bodies not distinguishable from the darkness, it seemed a procession of white-capped white-winged cherubs of various ages, floating in mid-air, while in their midst appeared rich banners, reliquaries, statues of favourite saints, and finally Madame Marie de Bon Secours herself, in embroidered satin and sparkling jewelled crown.'²

Each parish procession is accompanied by its clergy, who lead the singing of ancient canticles. The several processions, as many as can be accommodated in the available space, halt round the great wood-pile, which is solemnly set alight by the priests.³ The Godiva procession and the Bezan procession of mediæval England seem to be developments of the 'ridings' or 'watches' connected with agricultural worship.⁴

6. Procession and the drama.—Before referring to the accessories of procession and its development by aid of the drama into such complex forms as the pageant or *trionfo*, some details of method may be noted. The most elementary forms of ceremonial procession perhaps are supplied by the performers in the *altherta* (corroborees) and *intichiuma* dramas of the natives of Central Australia. They march in single file, chanting. On certain occasions they trot, using a curious high action of the knee.⁵ Perhaps the most artistically dignified of processions were those in which the *καρυόφοροι* maidens of Hellas figured as bearers of sacred things.⁶ Such processions as those of the Greek *Mænads* and *Thyiades* may be regarded as among the most emotional.⁷ The chorus of the Greek theatre came on the stage in procession (*πάροδος*), and left it in recession (*ἐξόδος*). Mediæval village festivals have been divided, as regards method, into two classes: (1) the processional dance (e.g., in beating the bounds—this is the 'country dance'), and (2) the 'ronde,' or round movement round a worshipped object, such as the Maypole. Variation in the latter method was produced by moving either with or against the sun or clock, *deasil* or *wither-shins*.⁸ The term of 'limping dance,' or halting rhythm, mentioned in the OT, was characteristic of Hebrew procession; hence the term *hajj* applied to pilgrimage,⁹ which in essence is a prolonged procession.

A typical order is supplied by the *Rituale Romanum* (tit. ix.):

'Those taking part in procession are to walk bareheaded (weather permitting), two and two, in decent costume, and with reverent mien; clergy and laity, men and women, are to walk separately. The Cross is carried at the head of the procession, and banners embroidered with sacred figures—these banners must not be of military or triangular shape. Violet is the colour prescribed for processions, except on the Feast of Corpus Christi. The officiating priest wears a cope, or at least a surplice with a violet stole.'

It was probably the lack of great theatres capable of accommodating the whole population, such as those of ancient Greece, that led the mediæval peoples to make the 'mysteries' processional through the streets. The scenes were staged on moving platforms.¹⁰ Another reason was the

natural tendency to make processions dramatic. Two converse causes thus helped to unite the procession and the stage. The 'ridings' on St. George's Day and other occasions were 'glorified' by these pantomimic representations or dumb-show pageants.¹ These culminated, or rather reached an artificial climax, losing their folk-interest, when Elizabethan artists elaborated the pageant and the Italians the *trionfo*. A conspicuous example of such processional exhibitions, though the scenes were not apparently always acted, is the dance of death, *danse macabre*, *Todtentanz*, *trionfo della morte*. Cars, draped in black and white, were drawn through the streets. On these were the Angel blowing the last trump and Death with his scythe. Before and behind marched men robed in black and white, and wearing 'death masks.' Choirs chanted the *Miserere*.² This dance of death, and the possible origin of the Breton *pardon* in the funeral, taken with the fact that the earliest Christian procession was funeral, while it is to-day the latest to survive, show the funeral procession to be the most constant expression of the religious march.

II. *DANCES*.—Dancing and procession are sometimes confused terminologically—a result partly due to the existence of processional dances, or the enlivening of the procession by the dance. The heretic Albigenses called dancing the procession of the devil.³ The bear dance (*ápkrela*) of Athenian girls was probably processional rather than choric.⁴ The 'dances' of the old Roman *collegia*, such as that of the *Salii*, were dignified processions with some variety of movement.⁵

I. *Physical and psychical aspects*.—Dancing⁶ is an instinctive mode of muscular expression of feeling, in man and many animals, especially birds. In the social life of the human race it has played a part which touches every activity of the individual and society. Dancing may be described as 'play' in its absolute form. Rhythm is inseparable from its movements, as it is from any bodily function, and therefore belongs to it without saying. It is in the middle stages of culture that dancing is seen at its highest development. Here it is much more, and also less, than a 'poetry of motion,' or the 'silent poetry' of Simonides. It is rather life expressed in muscular movement. The human instinct of play is closely connected with the human love of excitement. The dance satisfies both, and its rhythmical character also makes it suitable for the expression of the most solemn and controlled emotions. It is at once the servant of Apollo and of Dionysus.

Dancing, in the proper sense, consists in rhythmical movement of any part or all parts of the body in accordance with some scheme of individual or concerted action. As Aristotle remarked, dancing is imitative; and in all its forms it is an artistic imitation of physical movement expressive of emotions or ideas.

In its simplest terms it has been described as 'merely the voluntary application of the rhythmic principle, when excitement has induced an abnormally rapid oxidation of brain tissue, to the physical exertion by which the overcharged brain is relieved.'⁷

The social importance of dancing depends on its instinctive causation and its results. It has been noted that the physiological effects of dancing

are identical with the physiological results of pleasure.¹

'Muscular movement, of which the dance is the most complex expression, is undoubtedly a method of auto-intoxication of the very greatest potency.'² 'A girl who has waltzed for a quarter of an hour is in the same condition as if she had drunk champagne.'³

With regard to the muscular movements involved, the following has been observed of Kaffir dancing:

'The perfection of the art or science consists in their being able to put every part of the body into motion at the same time.'⁴

Sergi notes that it 'touches every vital organ.'⁵ Of the Marquesan girls Melville writes:

'They dance all over, as it were; not only do their feet dance, but their arms, hands, fingers, ay, their very eyes seem to dance in their heads. In good sooth, they so sway their floating forms, arch their necks, toss aloft their naked arms, and glide and swim and whirl.'⁶

'Primitive dancing . . . embraces all movements of the limbs and body expressive of joy or grief, all pantomimic representations of incidents in the lives of the dancers, all performances in which movements of the body are employed to excite the passions of hatred or love, pity or revenge, or to arouse the warlike instincts, and all ceremonies in which such movements express homage or worship, or are used as religious exercises.'⁷

Groos speaks of the 'self-created world of the dance,'⁸ in which the dancer realizes himself in a physical improvisation. 'The sensation of motion,' says Kline, is 'a pleasure-giving sensation,' and Aristippus defined pleasure as a 'gentle motion.'⁹ On the physiological side dancing develops energy and releases it; it promotes tumescence and effects detumescence.

'I have seen a young fellow's muscles quiver from head to foot and his jaws tremble, without any apparent ability on his part to control them, until foaming at the mouth, and with his eyes rolling, he falls in a paroxysm upon the ground.'¹⁰

In both individual and social functioning the dance is thus a transulative engine of emotional energy. Philosophy has noted this, and Pythagorean mysticism found in it a replica of the movements of the stars in their courses, 'when the morning stars danced together.' Folk-lore has it that the sun dances on Easter Day. John Davies elaborated such fancies in his poem *Orchestra* (London, 1596).¹¹

The dance is thus a natural method of celebrating anything, and of expressing individual or social emotions or ideas. Primarily mere physical play, it has developed in many spheres, gymnastic and artistic, as a pastime, and as a sexual stimulus; but in social evolution its main applications are the ceremonial and the dramatic, which of course may include various other functions of the dance. Thus, in the mimetic dances of the simpler cultures there are combined worship, drama, exercise, excitement, pastime, play, art.

2. *Range of movements*.—The range of movements in dancing is naturally very considerable, connecting on the one side with marching steps, 'parades,' and on the other with the gestures of the hands used in conversation. Metrical terms in versification are frequently derived from choric steps. In modern dancing as a pastime, movement is practically confined to the legs. But in earlier stages the rest of the body and especially the hands are employed.

⁷ *EB* vii. 795a.

The typical Malay movements are shuffling of the feet and swaying of the hands.¹ An old Roman writer speaks of the 'eloquent hands' of a pantomime dancer.² The funeral dancing in ancient Egypt included a curious outward twisting of the hands raised above the head.³ The dancing of the Indians of Guiana 'consists chiefly in stamping on the ground, and staggering in different attitudes as if intoxicated'.⁴

Movements of the trunk are conspicuous in ancient and primitive dancing. National and racial differences in method are not fundamental, and the use of music and of paraphernalia, such as weapons and scarves, is an obvious aid to physical expression.

Most of the ancient Greek ball-games were dances. In a Malay dance the performers carry sheaves of areca-palm flowers, to which their movements give the appearance of being alive.⁵

In some of its aspects artistic dancing borders on the acrobatic and the juggling arts. The majority of social religious dances, on the other hand, are more akin to the procession, and consist largely of processional dancing, evolution, or pantomime.

That dancing is a development of physical play is shown by the familiar fact that some animals, especially birds, dance, not only as a method of courting, but at other times, as an individual expression of play, often combined into social dancing.⁶ The dance of the argus pheasant, the 'waltz' of the ostrich, the bowing and scraping of the penguin, are well known. It has been observed that animal dancing is very human-like in appearance.⁷ Insects and birds perform air-dances, and fishes water-dances. Dancing on skates is man's use of another element.

A dance of the Timagami Algonquins will typify the ordinary pastime dance of the simpler peoples and of peasantry generally.

The common Round Dance is an outdoor performance generally performed at the camp. One man sings any one of a set of tunes, which seem to be mostly improvisations in which humorous passages are often introduced, accompanying himself upon a drum which is suspended from the branches of a tree. The dancers form a circle, generally with the men at the head of the line, some carrying rattles. Then they begin trotting around to the left quite close together, in time to the music. There is very little room to the dance. It seems to be for the most part merely a form of amusement in which women and children join for the sake of excitement. At irregular intervals the dancers may face right about and circle in the opposite direction a few turns.⁸

This and other dances of the Timagami were still being performed in the ordinary course at the time of writing.

3. Auto-intoxication and ecstasy.—The powerful neuro-muscular and emotional influence, leading to auto-intoxication, is the key both to the popularity of dancing in itself and to its employment for special purposes, such as the production of cerebral excitement, vertigo, and various epileptoid results, in the case of medicine-men, shamans, dervishes, prophets, oracle-givers, visionaries, and sectaries even in modern culture. The similar results attainable by the normal person indicate that the dance with its power of producing tumescence was the 'fundamental and primitive form of the orgy'.⁹ The effect of dancing 'among the spinning Dervishes or in the ecstatic worship of Bacchus and Cybele amounted to something like madness'.¹⁰ It is probably due to some instinctive appreciation of these effects, as well as to the similar desire to retain self-possession and dignity, which is one of the chief causes of aversion from intoxication generally, that the ancient Greeks and Romans and many Oriental peoples confined dancing to professionals. Socrates danced

for exercise only. Cicero observes that no gentleman dances unless intoxicated or mad: 'Nemo fere saltat sobrius nisi forte insanit'.¹¹

The Bororo medicine-man, by dancing and singing for several hours and by incessant smoking, works himself up into a state of ecstasy.¹² In European folk-lore it was believed that witches danced unholy dances.¹³ The Hebrew prophets often availed themselves of this method of inducing inspiration.¹⁴ The spinning of the dancing dervish is paralleled by the 'dancing mamas' of the Middle Ages and the performances of the Shakers in more recent times. The howling dervish would cut himself with knives and eat live coals. He was 'unconscious of the acts of his body'.¹⁵ Russian sectaries, such as the Khlysti, produce religious excitement by wild dancing.¹⁶ To induce possession it is a favourite method among all classes of shaman; and it was practised for this purpose by African kings.¹⁷

4. Courtship and dancing.—Just as the male bird of several species parades and dances before the female, with the object of producing tumescence both in himself and in her, so to the savage dancing is the chief means of courting a woman, and for the same reason. In both bird and man the 'intention' is unconscious; it is prompted and engineered by instinct. The 'showing off' of modern youth is equally instinctive. The dancing of the modern ball-room is of course one of the recognized means of bringing young people together. It is a refined form of stimulus, though, when the waltz was introduced into England about a century ago, it caused much popular indignation,¹⁸ due mostly to the detail of mutual clasping by the dancers, practically unknown till then in social dancing. It is stated that the waltz was originally the closing act of a dramatic dance representing the 'romance of love, the seeking, and the fleeing'.¹⁹

In New Guinea courtship no words are spoken. The suitor, on convenient occasions, dances before the girl, making athletic bounds, and going through the movements of spearing and the like.²⁰ Conversely, the Minnetaree girl dances and then taps on the shoulder the man of her choice.²¹ In Torres Straits, as elsewhere, a good dancer is admired by the women.²² Here, as in masculine admiration for women-dancers, may be seen an example of how art and sex interact. The Australian natives, like many primitive peoples, celebrate with dancing various social ceremonies and solemn meetings.²³ This is often in group-formation, men and women *vis-à-vis*. Licence generally follows. Many peoples perform such dances at ceremonies celebrating sexual crises—e.g., the Kaffirs at circumcision and marriage.²⁴ It is significant that intercourse of the sexes also follows group-dancing in Australian celebrations of peace.²⁵ In pastime dances for purposes of courtship or artistic dances for the excitement of spectators appropriate movements are naturally employed in the earlier societies. The Nias women emphasize the curves of the body, and undulate the flanks. A sarong is wound and unwound over the face and breast.²⁶ This is a typical basis for many such dances among various peoples. The *hula-hula* of Tahiti and the *danse de ventre* of N. Africa are well-known examples.

5. The war-dance.—The primary aim of the war-dance seems to be the development of physical excitement, and consequently courage, in the dancing warriors, and, secondarily, as magical ideas attach themselves, the aim of frightening the enemy by a demonstration of violence is added. But, throughout, the practical but unconscious result for the savage regiments is drill and a rehearsal of attack. The latter meaning also takes on the notions of imitative magic. In the same way a modern peasant soldier, rehearsing an

attack or practising with the bayonet, may imagine that he is actually fighting the spiritual forms of the enemy or some vague ghostly foe. There can be little doubt that the war-dances of barbarous peoples and even those of the ancient Spartans were, unconsciously, rehearsals of battle.¹

War-dances are performed also for the purpose of combating supernatural influences of any kind.

The Arunta of Australia, after returning from an expedition of vengeance, dance an excited war-dance, by way of repelling the ghost of the man whom they have executed.²

In agricultural ritual the evil influences of blight, bad weather, and general infertility with its various causes are often assailed by a war-dance or similar demonstration.

Thus, in ancient Italy, 'the dancing priests of the god [Mars] derived their name of Salii from the leaps or dances which they were bound to execute as a solemn religious ceremony every year in the Comitum . . . Similar colleges of dancing priests are known to have existed in many towns of ancient Italy'.³ But their dancing was a war-dance with curious weapons (see above), more potent, doubtless, for expelling demons of infertility⁴ than their high leaps were for making the corn grow high. The natives of French Guinea prepare the fields for sowing, thus: 'Fifty or sixty blacks in a line, with bent backs, are smiting the earth simultaneously with their little iron tools, which gleam in the sun. Ten paces in front of them, marching backwards, the women sing a well marked air, clapping their hands as for a dance, and the hoes keep time to the song. Between the workers and the singers a man runs and dances, crouching on his hams like a clown, while he whirls about his musket and performs other manoeuvres with it. Two others dance, also pirouetting and smiting the earth here and there with their little hoe. All that is necessary for exorcising the spirits and causing the grain to sprout.'⁵

A remarkable Greek parallel to this is the agricultural ceremony of the ancient Magnes and Ænians termed *kapraia*. Men ploughed and sowed, but acted as on the alert against robbers. The drama ended in a conflict and the repulse of the enemy.⁶ The old English morris-dancers wore bells fastened to their legs to frighten away evil spirits.⁷

6. Agricultural dances.—In many such ceremonies at the operations of agriculture the movements of the performers may be supposed to stimulate, by the action of imitative magic, the growth of the crops, or the performers may be supposed themselves to represent the spirits of vegetation, and by their presence to disseminate virtue and fertility. It is not impossible that such ideas should have been combined. Many European cases are thus explained by Frazer:

They are 'intended both to stimulate the growth of vegetation in spring and to expel the demoniac or other evil influences . . . and these two motives of stimulation and expulsion, blended and perhaps confused together, appear to explain the quaint costumes of the mummers, the multitudinous noises which they make, and the blows which they direct either at invisible foes or at the visible and tangible persons of their fellows.'⁸

Where, however, the operations of agriculture are ceremonially imitated, the stimulation is probably not so much from the supposed presence of the corn-spirits or from any precise action of imitative magic as from the actual, practical result of a rehearsal, the instinct to which comes naturally from the human tendency to imitate and dramatize—in simpler terms, to play. Among the later developments of this instinct into 'magical' applications the most important seems to be the production of movement (or growth) in nature, following upon the movements of man. Many 'sympathetic' rites are explained by this idea, which is derived straight from the psychology of the dance.

⁷ *GB*, pt. vi., *The Scapegoat*, p. 250 f. On morris-dancers see E. K. Chambers, i. 195, where the most probable derivation of 'morris' is given, from Morisco, a Moor, in reference to the blackened faces of the mummers.

⁸ *GB*, pt. vi., *The Scapegoat*, p. 251 f.

Thus, appointed, though ceremonial, overseers may very practically inspire the workers and instruct them in the details of their work. In modern slang, they cause not only nature but the workers also to 'get a move on' by themselves moving.

The Cora Indians of Mexico at their sowing-festival depute two old women to represent the goddesses of sowing; they imitate in dancing the operations of digging and placing the seed.¹

This kind of description may fairly represent the belief of the informants at the time, but, in view of the previous considerations and of others to be stated, it is probably one of the late sophistications of which folk-lore is full, and which obscure the natural origin of many social customs and ceremonies.

The Motu of New Guinea dance that 'there may be a large harvest. If the dancing is not given, there will be an end to the good growth'. These people hold that every dance has some material result; 'no dances are useless'.² The Kayans of Borneo dance in order to bring to the fields from its distant home 'the soul of the rice'.³

Simple folk have not always a reason to give for their instinctive acts, nor is it possible always to assign a reason except instinctive reaction to this or that desire. But the cases just cited fall in with others, which may be described as merely persuasive in intention. The dancer seems to be saying, 'I am energetic and am proving it; I pray thee, do likewise.' The idea that to be busy oneself will inspire other persons or things to be the same is the psychological explanation of many of these 'magical' processes, especially the 'sympathetic.'

In Scotland the farmer's wife danced at the harvest festival with 'the sheaf' on her back.⁴ In the Danzig district the people dance round 'the Old Man' (the last sheaf), or the woman who bound it dances with 'the Old Man'.⁵

Dancing at agricultural festivals round a sheaf, tree, or pole, the May tree and the like,⁶ is the commonest of those folk-dances which combine ritual with pastime. Dancing round an object may apparently have an honorific intention. The following is a type of a large number of agricultural dances:

To ensure a tall crop of hemp, it is the custom among the peasants of Franche Comté, Transylvanian Saxony, Baden, and Suabia to dance with high leaps. So in the case of flax and various cereals.⁷ In such customs as this the notion that the higher the jumping the taller will be the crop is probably an after-thought.

There are numerous rites in which the sexual activity of human beings is supposed to assist the fecundity of nature. Sexual processes are often imitated in the dance, and may lead to magical ideas.

Thus, the natives of N.W. Brazil imitate in dance the act of procreation and 'are believed to stimulate the growth of plants'.⁸

Such dances seem to be in origin rather celebrations of the season or its work than magical charms, and, when the magical meaning is added, it is probably only half-serious. The permanent and original element is the vigour and movement of the dancers, representing the workers.

At the Matabel festival of the new fruits the soldiers danced round the king, who sometimes joined in. 'When he did so, the medicine-men and their satellites, armed with thorn-bushes, rushed about among the dancers and incited them to fresh efforts by a vigorous application of the thorns to the bodies of such as seemed to flag. The king's wives also sang and danced before him in long lines, holding the marriage-ring in their right hands and green boughs in their left'. Similarly at the Kafir corn-festivals generally; in one of these the king dances 'in a mantle of grass' or 'of herbs and corn-leaves. This mantle is

afterwards burnt and its ashes are scattered and trodden into the ground by cattle.¹ Here the king acts as master of the ceremonies in a celebration of harvest. It is unnecessary to suppose that he definitely represents a corn-spirit; his costume is naturally adapted to the occasion.

7. Magical dancing.—The notion that dancing by reason of its vigorous movement can induce movement in the environment is illustrated by curious customs employed for rain-making.

In Morocco ball-games of the hockey type are played for this purpose; the rapid movements of the ball and the players are supposed to induce movement in the clouds.² Another case of ceremonial movement (which is of the essence of magical dancing) is that of the rain-maker of the Australian Arunta. To produce a shower of rain, he goes through a curious process of quivering in his body and legs, while his assistants chant in time with his movements. At day-break he makes a final and exhaustive effort.³

It has been suggested that the crane-dance (*yépanos*) of Greek mythology records a magical dance for assisting the progress of the sun. This case is complicated.

When Theseus landed with Ariadne in Delos on his return from Crete, he and the young companions whom he had rescued from the Minotaur are said to have danced a mazy dance in imitation of the intricate windings of the labyrinth; on account of its sinuous turns the dance was called "the Crane."

In various parts of the world, pantomimic dances have imitated the flight of birds. This may be the case here. A similar dance was practised by the Romans, as 'the Game of Troy.' The maze-scheme for dancing evolutions, however, is quite common, and would easily attach to itself famous names and exploits. Frazer suggests that the intention of both was to imitate, and so to assist, the sun's progress through the sky.⁴

The data are insufficient to analyze such cases as that of the king of Onitsha, on the Niger, who danced annually before his people, possibly to show his physical fitness.⁵ But, certainly, throughout what may be called the positive applications of dancing, personal vigour is demonstrated and invites attention. In many customs it may be said both to compel attention and to invite imitation.

Some applications of the dance are 'sympathetic' in the natural sense, without being necessarily magical.

Thus, it is recorded of old Madagascar that, 'while the men are at the wars, and until their return, the women and girls cease not day and night to dance. . . . They believe that by dancing they impart strength, courage, and good fortune to their husbands.'⁶ So Yuki women danced continuously that their men might not be weary.⁷ These very natural practices, such as children would instinctively develop, are not primarily magical. On the Gold Coast, when a battle is expected, the women at home have a kind of sham fight, in which they cut to pieces green gourds, as if they were the enemy.⁸ The wives of soldiers, in all ages, have shown a fundamental desire to be fighting by the side of their husbands.

Dancing very frequently accompanies the funeral, and no less frequently is performed at or round the death-bed. These customs are still found to-day among the peasantry of Spain, France, and Ireland, as well as among such natives as those of the E. Indian islands, and N. and S. America.⁹ Various beliefs attach to this application of the dance.

The Gauchos dance to celebrate the dead person's entrance into heaven.¹⁰ In 1879 the congregation of a coloured church in Arkansas danced for three nights round the grave of their dead pastor, trying to bring him back to life.¹¹

8. The religious dance.—Dancing as a form of part of religious worship is a natural phenomenon, whatever may be the precise meaning or application of the particular occasion. In early Christianity bishops led the faithful in the sacred dances both in the churches and before the tombs of the martyrs. The practice was forbidden by the Council of 692, but the prohibition was ineffectual. Centuries later the Liturgy of Paris included the rubric, *le chanoine ballera au premier psaume*. As late as the 18th cent. dancing by the priests on saints' days was practised in French provinces.¹

The various ideas connected with dancing will be found latent in the religious dance. When David danced before the Ark, the act no doubt meant something more than the desire to honour the sacred object. In some cases where the intention is certainly to 'move' the deity, the vigorous movements of the dancer make the dance a real form of prayer. The following example is suggestive:

The Tarahumara Indians of Mexico hold that 'the favour of the gods may be won by what for want of a better term may be called dancing, but what in reality is a series of monotonous movements, a kind of rhythmical exercise, kept up sometimes for two nights. By dint of such hard work they think to prevail upon the gods to grant their prayers. . . . The Tarahumares assert that the dances have been taught them by the animals. . . . Dance with these people is a very serious and ceremonious matter, a kind of worship and incantation rather than amusement.'²

The honorific element pervades many customs. In some cases it is direct.

Thus, among the Timagami Indians the feast-dance is 'a celebration in honour of someone who has provided a feast for the camp. The guests are invited in the afternoon, and the food is shared from a common place where it has been spread upon the ground, each guest being provided with his eating utensils. Tobacco is distributed after the feast. When evening comes on, the chief performs the feast-dance in honour of the donor. He wears some extra apparel and carries a drum in his hand to accompany his singing. . . . While singing the feast-song, inserting a few words at times in honour of the feast-maker, and drumming, he dances before the assembly. Soon he threads his way in and out amongst the people, continuing his song, and when he has gone through the ranks of the spectators he dances back to the feast-ground and ends his dance.'³

9. Pantomimic dancing.—From the point of view of æsthetics dancing may be described as muscular music. Like music, it expresses primarily itself; secondarily it expresses whatever is within the scope and material of the art. In this secondary function dancing is pantomimic.

The pantomimic has the longest history of all forms of dancing. It is highly developed in the lowest cultures, such as the Australian, and it is popular in the highest civilizations of to-day. Like other forms, it is applied to various purposes and on various differing occasions. Many other forms (see examples cited above) are pantomimic. Practically all the ceremonial of the Arunta and other Australians is pantomimic, and special ornamentation and dress are usual accessories.⁴

A good deal of mysticism is attached to the masked dances or pantomimes which have had so remarkable a development among the natives of N.W. America. They represent incidents in the lives of the guardian spirits of the tribe.

'The gift' of a dance 'means that the protégé of the spirit is to perform the same dances which have been shown to him. In these dances he personates the spirit. . . . The obtaining of the magical gifts [e.g., the 'death-bringer,' and the water of life, as well as the dance itself] from these spirits is called *lokakala*, while the person who has obtained them becomes *navalak*, supernatural, which is also the quality of the spirit himself. The ornaments of all these spirits are described as made of cedar bark, which is dyed red in the juice of alder bark. They appear to their devotees only in winter.'⁵

In so far as any worship is connected with such animal-dances, they will involve various religious emotions.

Thus, if no reason is given, we assume that, when the Yuchi Indians in some of their dances imitate the movements and cries of their totem-animals, they are doing them honour.¹ The Zuni dance before sacred tortoises may be 'to intercede with the ancestral spirits, incarnate in the animals'.²

The secret societies of the Nass River Indians possess as heir-looms ceremonial dances in one of which the performers practise cannibalism, in another they eat dogs, in a third they break objects with a long club, paying for the destroyed property with property of higher value.³ The last detail is akin to the system of potlatch.

In the bear-dance of the Timagami Indians the men and women form a large circle, with a leader to direct operations. The circle of dancers led by the chief, who carries a drum and sings the bear-dance song, then starts around counter-clockwise. The leader sometimes dances backwards, turns around, stoops, and in other ways imitates the bear. . . . The crouching keeps up until the song is finished. The idea of this dance seems to be to honour the bear by imitating him.⁴ In another dance of the same people, the duck-dance, the movements of a flock of ducks and drakes are represented by the evolutions of the dancers, in swerving chain-figures. It is curious to note that such a dance is interlarded with European steps—a modern waltz turn or two is introduced between the movements. At the close the performers quack two or three times. 'This is purely a pleasure dance.'⁵

Pantomime is recognized as an educative process in elementary schools to-day, simple operations, such as sowing and reaping, being represented by appropriate movements.⁶

A good illustration of the pantomimic dance as fine art with a touch of superstition remaining, or revived for artistic effect, is found among the Malays. In their monkey-dance pantomime represents the spirit of a monkey entering the girl-dancer as she is rocked in a cot. Then she imitates the behaviour of a monkey, and performs some remarkable tree-climbing.⁷

In pantomime itself the drama is more important than in pantomimic dancing, as it is, e.g., in the ceremonial dances of the Australians and American Indians. The representation of a dramatic story in dumb show, with more or less of dancing movement, is the ballet of Europe and the pantomime of ancient Rome. Under the Roman Empire this form of dancing attained extraordinary popularity, superseding other shows, and with it remarkable artistic excellence. The *fabulae salticae* used plots from old mythology, a love-motive being the favourite. The best poets of the day were commissioned to write the scenarios, which seem at times to have been drawn from contemporary life. The modern cinema picture-drama is a close parallel, but in the *fabulae salticae* an explanatory recitative was sung by a chorus accompanied by an orchestra.⁸

In another form, parallel to modern skirt-dancing, the dancer represented all the action of the various characters by the movements of his body and the manipulation of a long cloak.⁹

The modern ballet, in common with artistic dancing generally, dates from the 15th century. The great Renaissance included a new birth of dancing. Probably the tradition of the Roman *pantomimi* assisted the institution. From Italy the ballet passed to France, where it was perfected as the *ballet d'action*.¹⁰

⁹ Purser, *loc. cit.*

¹⁰ EB¹¹, s.v. 'Ballet', iii. 289 f. It is there defined as 'a theatrical representation in which a story is told only by gesture, accompanied by music, which should be characterized by stronger emphasis than would be employed with the voice'. The etymology of *ballet*, *ballad*, *ball*, etc., is doubtful. Skeat and the OED refer them to L. Lat. *ballare*, 'to dance'; the former favours a connexion with the Sicilian Gr. *βαλλίζειν*, 'to dance', but the origin of *βαλλίζειν* (? *βάλλειν*) is uncertain. Some derive from *balla* (ball) 'on the alleged ground that in the Middle Ages tennis was accompanied with dancing and song' (OED). Neither of the classic authorities on tennis (Julian Marshall, in *The Annals of Tennis*, London, 1878; J. J. Jussier and, *Les Sports et jeux d'exercice dans l'ancienne France*, Paris, 1901) corroborates the musical accompaniment of tennis. E. B. Tylor thought that these words came from the Græco-Roman ball-dance.

10. Dancing as a social pastime.—Artistic and dramatic dancing has frequently and among various peoples been placed under a social ban, in the same way and for the same reasons as the drama. More rarely this has been the case with dancing as a social pastime. Apart from ceremonial dancing in religious worship, Greeks and Romans and most Eastern peoples, while encouraging dancing as a form of entertainment—e.g., at banquets—have refused to admit it as a social pastime. There is thus a professional class. The Malays never dance themselves, but will pay well for good professional dancing.¹ Roman dancers were *infames*.² But as a professional class they had an important though unofficial status, like that of the *bayaderes* of India, the *geshas* of Japan, or the *almehs* of Egypt. Even religious dancing developed a professional class, if the *q'dheshoth*, e.g., of Hebrew sanctuaries may be so described.³

In the history of the world's art the great dancing geniuses, such as Taghioni and Pavlova, are entitled to a position only second to that of great singers and musical composers.

The use of dancing as a social pastime is comparatively modern. Plato was in favour of boys and girls dancing together. The only approximation to this was the *δῶρος*, in which boys and girls danced in counter-formation.⁴ The 15th cent. renaissance of dancing in Italy passed to France, which has been termed 'the school' of the art of dancing, and Spain its 'true home'.⁵ It is outside the scope of this article to discuss the development of this form of dancing, which belongs to the sphere of pastime. But it may be noted that the evolution of the art throws much light on the evolution of society and the individual, and in a more clear-cut manner than the evolution of music. For, in the case of dancing, the whole system is involved. As in music, so in dancing, stages of evolution, 'schools,' have developed a method, to be superseded by another. Among typical movements may be mentioned the *pavane*; its character was processional. The minuet has been described as the 'fine flower of the art'.⁶ But actually it expresses merely an artificial code of courtesy. The type of pair-dancing is the waltz, a dance of uncertain origin.⁷

When in contact with European culture, native peoples throughout the world soon assimilate European dances; e.g., the people of Ceram (E. Indies) have adopted the waltz.⁸ Conversely, the higher cultures assimilate the dances of the simpler peoples, and the ephemeral popularity of the tango and 'ragtime' serves to illustrate the continuity of human physical evolution.

LITERATURE.—The authorities quoted in the article supply satisfactory data, but there are no treatises written on any scientifically comprehensive lines.

A. E. CRAWLEY.

PRODIGES AND PORTENTS.—I. INTRODUCTORY.—1. Interpretation of prodigies.—What fortune or misfortune the prodigy portends is determined for the individual by the culture to which he belongs. Its origin in the culture is properly matter of historical research, for the same interpretation may have had different origins, and different interpretations may have the same objective cause, the respective similarity and difference representing the varied reactions of the cultures in question. Were the interpretations given by differ-

ent cultures wholly arbitrary, they would not present such thoroughgoing, or even such partial, resemblance. Some of the resemblances may be attributed to cultural diffusion, where the phenomenon is really continuous in development, overflowing, as it were, the cultural bounds within which it originates. The classical cultures are good instances, for here we have historical proof of the diffusion, such proof, in the nature of the case, being very difficult to obtain in primitive society, where tribal tradition is an unsafe guide. The spontaneous effect of the phenomena upon the mind is, however, in some cases such as, if not to rule out diffusion, at least to make this supposition superfluous. The eclipse and the earthquake, e.g., never portend good. The reason is not far to seek: earthquakes never effect any good, and frequently leave disaster in their train; the completion of what the eclipse partly effects, in bringing about a diminution of light, would be the culmination of disasters; darkness has ever been the harbinger of evils which the garish light of day dissipates.¹

In many other instances the prodigy points its own moral, though one largely determined by the predisposition of the people who interpret it (as, e.g., Napoleon's 'sun of Austerlitz'). Whether or not the inference made is historically true, the following passage shows that the suggestion of the interpretation grows out of the nature of the event:

'At the time of the amplification and enlarging [of the village from which Milan grew] by Bellonesus there happened a very strange accident, which gave occasion of the denomination. For when it was new building, a certaine wilde Sow that came forth of an olde ruinous house very early in the morning, hapned to meet some of those that were set aworke about the building of the city. This Sow had halfe her body covered with hard bristly haire as other Piggies are, and the other halfe with very soft and white wool: which portentum, Bellonesus took for a very happy and ominous token, so that he caused the city to be called Mediolanum from the halfe-wooled Sow. What his reason was why he should esteem this strange spectacle for such a luckie token I know not but I conjecture it might be this: perhaps he supposed that the bristly haire might presage strength and puissance in his subjects, and the wooll plenty of necessary meanes that might tend to the clothing of their bodies.'²

2. The realm of the unknown.—The unknown is highly charged with mystic power. Many peoples, like the Thonga, have added faith in foreign medicines just because they come from a distant land.³ For this reason the Bakongo seldom engage the medicine-man of their own village.

'They know too much about him to waste their money on him. They flout him and send for the medicine-man of another village of whom they know little or nothing.'⁴

In the skill with which iron is worked there is something mystical. Among the Bakongo, as among many of the tribes of Africa and of India, the blacksmith holds an honourable position, or is despised and feared. Similarly, the forge is often regarded as a sacred place, and respect is shown towards the anvil and the fire.⁵

In the Middle Ages this superstitious fear and dread attached to the higher learning and superior skill.

A good instance of this tendency is the attitude taken towards Michael Scot, an Irishman of the 13th cent. who narrowly escaped being an archbishop over the see of Cashel. 'He was so widely renowned for his varied and extensive learning that he was credited with supernatural powers; a number of legends grew up around his name which hid his real merit, and transformed the man of science into a magician. In the Border country traditions of his magical power are common. Boccaccio alludes to "a great master in necromancy, called Michael Scot," while Dante places him in the eighth circle of

Hell"—all because his learning was beyond the comprehension of his fellows. In the 14th cent. similar magic powers were attributed to Gerald, the fourth earl of Desmond, solely on account of his learning.¹ In Ireland, during the witchcraft superstition, many women were put to death on the charge of using black magic solely because of their skill in simples and their knowledge of the medicinal value of herbs—just such skill and knowledge as have given rise to our present pharmacopœia.

The realm of the unknown is peopled by many monstrous beings. This is especially true of the celestial regions and what are, for the people in question, the remoter parts of the earth. In the moon and on parts of the earth, say the Eskimos, are manlike creatures without head or neck, but having a broad mouth, armed with sharp teeth, 'across the chest.'² Many tribes in Africa have similar beliefs. They prevailed in Europe until a century ago.³ In fact, the disposition to make monsters out of the distant and poorly-known is as old as history. The early Babylonians reported an attack by a strange people who had the bodies of birds and the faces of ravens, whose dwelling-place was in the mountains to the north of Mesopotamia.

3. The psychology of prodigies.—(n) *Recognition of events as prodigious*.—What phenomena are recognized as prodigies and what importance attaches to them depends upon the state of mind, social and individual. The wise man, as Seneca⁴ has expressed it, is not moved with the utmost violences of fortune, nor with the extremities of fire and sword, whereas a fool is afraid of his own shadow, and surprised at all accidents, as if they were all levelled at him. As Pliny⁵ says, the Romans could not be sure of anything, not even that a person was dead; there are, in fact, many examples of the dead returning to life, in some cases after the funeral pyre had been lighted and the flames had proceeded too far to permit rescue. There are critical moments when the mind, group and individual, is especially liable to harbour hallucinations and to magnify the ordinary into something prodigious. Intense expectancy gives exaggerated proportions to every event which is extraordinary, and heightened anticipation leaps forward into supposititious realization. The politico-religious fervour of the down-trodden Jews affords many illustrations.

Prior to the revolt in Judæa which broke out in A.D. 66 this expectancy gave life and permanency to a host of terrifying rumours, which, in turn, fanned the fervour into greater vagaries. 'Men dreamed only of signs and omens: the apocalyptic hue of Jewish fancy stained everything with a bloody halo. Comets, swords in the sky, battles in the clouds, light breaking forth of itself from the depth of the sanctuary, victims at the moment of sacrifice bringing forth a monstrous progeny,—these were the tales told with horror from mouth to mouth. One day the vast brazen gates of the Temple had flown open of themselves and refused to close. At the Passover of A.D. 65, about 3 a.m., the Temple was for half an hour lighted as bright as day, some thought that it was on fire. Again, at Pentecost, the priests heard a sound as of many persons in the interior, making hasty preparations as if for flight, and saying to one another, "Let us depart hence!" The great disturbance of mind was itself the best of signs that something extraordinary was about to happen.'⁶

The devil you know is better than the devil you don't know, and the latter always excels in power and malignity.

An observer of the Iroquois has declared that no Iroquois lives who would not in the night-time quail at seeing a bright light the nature of which he did not understand.⁷ The Jesuits who visited the Huron in 1653 found them entertaining 'a superstitious regard for everything which savoured a little of the uncommon. If, for instance, in their hunt they had difficulty in killing a bear or a stag, and on opening it they found in its head or in the entrails a bone, or a stone, or a serpent, etc.,

they said that such object was an *oki*, that is, an enchantment which gave strength and vigor to the animal, so that it could not be killed, and they used it as the superstitious do reliquaries, in order to be always prosperous.¹

In many parts of England and of America a crowing hen is considered very unlucky and can by no means be permitted to strut and fret with impunity:

* A whistling woman and a crowing hen
Always come to some bad end

The Australian is somewhat afraid of the unique and weird 'Ha! ha!' and 'Hoo! hoo!' of the laughing jackass.² The Ainu find it wise not to imitate the cry of any unknown bird, for strange birds are often sent by the devil and carry about the seeds of disease.³ Double fruits in bananas, nuts, etc., being somewhat out of the ordinary, are believed in N. Queensland to be made by certain invisible beings. The Romans were similarly impressed with the presence of a double 'head' of the liver of a victim, as also by the absence of a 'head'.⁴

When the devout Brahman ascetic heard the elephant talking to a tree, he exclaimed in amazement, 'Ha! what is this wonder, that an elephant should speak with an intelligible voice, and that I should understand him?'⁵

Those trees are regarded as sinister and are considered inauspicious which are never propagated from seed, and bear no fruit.⁶ It portends evil when the cultivated olive changes into the wild, and the white grape or fig becomes wild. It was an evil portent when, upon the arrival of Xerxes at Laodicea, a plane-tree was transformed into an olive and sank into the earth shortly before the civil wars of Pompeius Magnus began, leaving only a few of the branches protruding from the ground. The Sibylline Books were consulted, and it was found that a war of extermination was impending, which would be attended with greater carnage the nearer it approached the city of Rome. Another kind of prodigy is the springing up of a tree in some extraordinary and unusual place—e.g., the head of a statue, an altar, or another tree. A fig-tree shot forth from a laurel at Cyzicus, just before the siege of that city; in like manner, at Tralles, a palm issued from the pedestal of the statue of the dictator Caesar, at the period of his civil wars. So, too, at Rome, in the Capitol, in the time of Perseus, a palm-tree grew from the head of the statue of Jupiter—a presage of impending victory and triumph. This palm having been destroyed by a tempest, a fig-tree sprang up in the very same place, at the period of lustration made at a time at which, according to Piso, 'an author of high authority,'⁷ all sense of shame had been utterly banished. 'Above all the prodigies that have ever been heard of, however, we ought to place the one that was seen in our own time, at the period of the fall of the Emperor Nero, in the territory of Marrucium; a plantation of olives, belonging to Vectius Marcellus, one of the principal members of the Equestrian order, bodily crossed the highway, while the fields that lay on the opposite side of the road passed over to supply the place which had been thus vacated by the olive-yard.'⁸

The fear of ghosts is universal.

When the supposedly dead Geraint, hero of the *Mabinogion*, rose up and slew one of the assembled company, 'all left the board and fled away. And this was not so much through fear of the living as through the dread they felt at seeing the dead man rise up to slay them.'⁹ It was natural for Teigue O'Neill, the Irish blacksmith, when he discovered that the rider of the horse was a ghost, to 'recoil with a terrified prayer.'¹⁰

This fear is not a fear of physical injury, but a fear far transcending this. In this territory all natural restraint breaks down.

Horror was on the faces of the friends of a certain John Browne of Durlay when, as he lay dying in the year 1654, they saw a great iron triple-locked chest, which stood at the foot of the bed, 'begin to open, lock by lock, without the aid of any visible hand, until at length the lid stood upright.'¹¹

Horror would be on our faces too, if we accepted the fact that there was no natural explanation. There is no other attitude to take in the presence of events that shatter our every-day working categories.¹²

(b) *Religious aspect.*—The concepts and emotions that harbour prodigies, and find in them a wealth of mystic meaning, have much in common with the religious attitude. Disasters of all kinds are recognized as the inflictions of an angry god. Pindar's remark, 'I ween there is no marvel impos-

sible if gods have wrought thereto,'¹ is profoundly true. The divine nature of the ruler himself was, from the time of Alexander the Great to that of the Roman emperors of the 1st cent. and even longer, evidenced by oracles, portents, and supernatural displays of various sorts.

The Christian army of Ferdinand of Spain, when besieging the Moors in the stronghold of Mochling, near Granada, discharged from their guns inextinguishable combustibles. 'One of these, which passed high through the air like a meteor, sending out sparks and crackling as it went, entered the window of a tower which was used as a magazine of gunpowder. The tower blew up with a tremendous explosion. . . . The Moors, who had never witnessed an explosion of the kind, ascribed the destruction of the tower to a miracle. Some who had seen the descent of the flaming ball, imagined that fire had fallen from heaven to punish them for their pertinacity. The pious Agapida, himself, believes that this fiery missile was conducted by divine agency to confound the infidels, an opinion in which he is supported by other Catholic historians.'² Thus each interpreted the event in a way that fitted in with his intellectual background, while both parties found in its superhuman and, for them, supernatural character something of the divine. When, later, the Spanish forces had suffered a year of discouraging reverses with scarcely a bright spot in all their campaigns against the Moors, the unusually severe storms which swept the land seemed to have a sinister meaning, and suggested visitations from on high. High winds prevailed and rains deluged the land, overflowing the valleys, undermining the houses, and drowning the flocks. 'A vast black cloud moved over the land, accompanied by a hurricane and a trembling of the earth. Houses were unroofed, the walls and battlements of fortresses shaken, and lofty towers rocked to their foundations. Ships, riding at anchor, were either stranded or swallowed up; others, under sail, were tossed to and fro upon mountain waves, and cast upon the land, where the whirlwind rent them in pieces and scattered them in fragments in the air. . . . Some of the faint-hearted,' adds Antonio Agapida [the Spanish chronicler], 'looked upon this torment of the elements as a prodigious event, out of the course of nature. In the weakness of their fears, they connected it with those troubles which occurred in various places, considering it a portent of some great calamity, about to be wrought by the violence of the bloody-handed El Zagal and his fierce adherents.'³

A like interpretation was given by the inhabitants of Constance, in Switzerland, of a terrific storm of rain and hail which came upon some encamped soldiers, on a Sunday night (8th May 1642), when 'all the tents were in a thrice blown over. It was not possible for any match to keep fire, or any sojour to handle his musket or yet to stand. . . . Our sojors, and some of our officers too (who suppose that no thing which is more than ordinarie can be the product of nature) attributed this hurrikane to the devilish skill of some Irish witches.'⁴

The catastrophic drives men to their wits' end, and even beyond the bounds of reason. He who is deterred by no clearly apprehended danger becomes panic-stricken in the face of mysterious forces. The feeling of human inability to cope with the situation intensifies the individual's helplessness. There is nothing to do but cunge and hope.

'For what can one believe quite safe,' asks Seneca, 'if the world itself is shaken, and its most solid parts totter to their fall? Where, indeed, can our fears have limit if the one thing immovably fixed, which upholds all other things in dependence on it, begins to rock, and the earth lose its chief characteristic, stability? What refuge can our weak bodies find? Whither shall anxious ones flee when fear springs from the ground and is drawn up from the earth's foundations? If roofs at any time begin to crack and premonitions of fall are given, there is general panic: all hurry pell-mell out of doors, they abandon their household treasures, and trust for safety to the public street. But if the earth itself stir up destruction what refuge or help can we look for? If this solid globe which upholds and defends us, upon which our cities are built, which has been called by some the world's foundation, stagger and remove, whither are we to turn?'⁵

When there is public alarm through fall of cities, burying of whole nations, and shaking of earth's foundations, what wonder that minds in the distraction of suffering and terror should wander forth bereft of sense? Indeed, on no occasion will one find more instances of raving prophets than when mingled terror and superstition have struck men's hearts. The Malakand tribes that attacked the British in 1897, under the leadership

of the Mad Mullah, are one of many examples of a people assailed by supernatural terrors and doubts, lured by hopes of celestial glory, and taught to expect prodigious events.¹

II. HISTORY.—I. The Greek view of prodigies.—According to Empedocles, the various parts of animals had a separate existence. Heads grew supported by no necks, arms wandered about detached from shoulders, and disembodied eyes pierced the solitudes. These several parts united, forming in some cases normal creatures, but, because of their vagarious juxtaposition, in some cases monstrosities, such as man-headed oxen. The normal ones, being better adapted to the conditions of life, survived, while the monsters perished because of their maladjustment.

The stress of the times always heightened the interest in prodigies. Thus, during the Peloponnesian War there were earthquakes unparalleled in their extent and fury, and eclipses of the sun more numerous than are recorded to have happened in any former age, if we are to believe Thucydides.² Again, while Xerxes was leading his army into Greece, prodigies of his defeat were not wanting: a mare gave birth to a hare, signifying, says Herodotus, that Xerxes would return fleeing for his life, and a mule brought forth a colt with the organs of both sexes.³ Again, when the Persian army approached the temple at Delphi, numerous prodigies appeared: the sacred arms transported themselves outside the temple; thunder struck two crags above the heads of the barbarian force and brought them down upon the foe with considerable mortality.⁴ Two days after the olive-tree in the Erechtheum had been burned down, a shoot a cubit long had sprung up from the stump.⁵ Salt fish that were being fried leaped from the pan; this signified that the deceased Protesilaus would leap from the dead and avenge himself on the one who had wronged him.⁶

By reading the horoscope Greek astrologers were able to predict the birth of monstrosities. If there was disjunction (*δισυνδρα*) between all or most of the recognized proper positions of the planets, a monstrous birth might be expected. It would not be of human birth if the planets in question were in the sign of one of the animals.⁷

2. The Roman view.—The speculations of Empedocles found place in the philosophy of the Romans. The earth in the beginning produced various monsters that sprang up with wonderful faces and limbs. But these 'prodigies and portents' were generated to no purpose, for nature abhorred and prevented their increase.⁸ Pliny⁹ speaks of races having but one eye, and that in the middle of the forehead—veritable Polyphemoi. Some had their feet turned backwards; they could proceed with wonderful velocity, and wandered about indiscriminately with the wild beasts. Some peoples were partly male and partly female. Some had only one leg, but with a foot so large that they could lie down in the shade of it. Some had no noses, some no mouths, subsisting upon odours, and needing neither meat nor drink. Some lived to be 400 years old.

Livy relates three prodigious births: at Frusino, a lamb with a sow's head; at Sinuessa, a pig with a human head; among the Lucani, a foal with five feet.¹⁰ Women gave birth to elephants, to serpents, to hippocentaurs.¹¹ The birth of more than three children at one birth was looked upon by the

Romans as portentous. During the reign of Augustus the birth of four children at one birth was quickly followed by a famine.

In the troublous times following immediately upon Nero's reign, and inaugurated by it, there appeared through the Roman world loathsome spectres, monsters born of slime, and prodigies of every sort. Prominent among these were monstrous births, especially cases where several heads were possessed by the progeny. To the Roman mind each of these represented an emperor. Real or pretended hybrids were given a similar interpretation. A hog with claws like a hawk's was accepted as a perfect image of Nero.¹

Bright lights sometimes proceeded from the heavens during the night-time, as though the day had suddenly ventured to intrude; a burning shield was seen to dart across the sky at sunset, from west to east, scintillating. In one case a spark fell from a star, increasing in size as it approached the earth, until it attained the magnitude of the moon, shining as through a cloud. It afterwards returned into the heavens and was converted into a *lampas*. Stars moved about in various directions.² A bow, or a circle of red, might suddenly appear about the sun.

In ancient Rome it rained milk, blood, a flesh which did not putrefy, wool, iron, and baked tiles. During the war with the Cimbri, and at other times, the air was filled with the rattling of arms and the sound of trumpets. Armies were seen marching, countermarching, and fighting, and the heavens themselves were seen in flames.³ In the district of Mutina two mountains rushed together, falling upon each other with a very loud crash, and then receding; in the daytime flame and smoke issued from them. There was the usual great crowd of witnesses. All the farmhouses were thrown down by the shock, and many of the animals in them were killed. This heralded the Social War, which was even more disastrous for Italy. Near Harpasa, in Asia, was a large rock which could be moved by the finger, but not if the entire body was applied to it. Near the river Indus a certain mountain had such attraction for iron that, if shoes containing iron were placed on it, they could not be withdrawn, while another repelled iron to such an extent that the foot within a shoe containing iron could not rest upon it. In several places things pushed into the ground could not be pulled out.

Prodigies might appear at any time, but they were especially frequent in time of political or national danger or disaster. In the year in which Fabius Maximus was for the third time elected to the consulship the sea appeared on fire; at Sinuessa a cow brought forth a colt; the statues in the temple of Juno Sospita, Lanuvium, sweated blood, and a shower of stones fell in the neighbourhood of that temple.

¹ On account of this shower the nine days' sacred rite was celebrated, as is usual on such occasions, and the other prodigies were carefully expiated.⁴

Prodigies announced from many places while Hannibal was threatening Rome augmented the terror. In Sicily several darts of the soldiers had taken fire; in Sardinia the staff of a horseman who was going his rounds upon a wall took fire as he held it in his hand; the shores were frequently ablaze; at Præneste two shields sweated blood; at Arpi red-hot stones fell from the heavens; at Capena shields appeared in the heavens, and the sun fought with the moon; two moons rose during one day; the fountain of Hercules flowed with spots of blood; in Antium bloody ears of grain fell into the basket as the people were reaping; at

⁴ Livy, xxiii. 81.

Falerii the heavens appeared cleft as if with a great chasm, and from the cleft came a vast light; the prophetic tables suddenly diminished in size, and one fell out, on which appeared the inscription, 'Mars shakes his spear.' The statue of Mars at Rome, on the Appian Way, sweated at the sight of images of wolves; at Capua the heavens seemed to be on fire, and the moon appeared to be falling amid the rain. This must, indeed, have been good preparation for smaller wonders.

'After these,' says Livy, 'credit was given to prodigies of less magnitude: that the goats of certain persons had borne wool; that a hen had changed herself into a cock; and a cock into a hen; these things having been laid before the senate, as reported, the authors being conducted into the senate-house, the consul took the sense of the fathers on religious affairs. It was decreed that these prodigies should be expiated, partly with full-grown, partly with sucking, victims.'¹

Later, in the Punic War, another flood of prodigies aroused new fear to supplement the old. Crows had torn some gold in the Capitol with their beaks and had eaten it; at Antium mice gnawed a golden crown; an immense quantity of locusts, coming apparently from nowhere, filled the whole country around Capua; at Reate a foal with five feet was born; at Anagnia scattered fires appeared in the sky and were followed by a meteor; at Arpinum the earth sank into an immense gulf, in a place where the ground was level; the 'head' of the liver was absent from the first victim immolated by one of the consuls. These prodigies were expiated by offerings and sacrifices.²

A circle of stars near the moon was visible when Augustus entered Rome, after the death of his father, to assume the name by which he was afterwards known.³ Shakespeare is following ample precedent in announcing the ominous appearance of five moons immediately after the death of Prince Arthur.⁴

3. The early Christian view.—The spirit of evil, typified by the Roman power or by the violent party of Jerusalem, as the case may be, is a dragon which pours out a flood of water to sweep away the Church (Rev 12¹³⁻¹⁵). The concept is possibly of Babylonian or Egyptian origin,⁵ though it is found also in Mazdæism.⁶ The false prophet or Antichrist is especially liable to representation as some prodigy. The 'false prophet' whom the writer of the Apocalypse represents as an ally of Nero is a wonder-worker who causes fire to fall from the sky, graven images to live and speak, and who puts the 'mark of the beast' upon men (13¹⁴⁻¹⁷ 16 19). Elsewhere (13¹¹) the false prophet is a monster, speaks like a dragon, and has 'two horns like a lamb.' Nor are there lacking elements of the prodigious in that hated Antichrist, the emperor Nero, whose life has been likened to the discordant cries of a grotesque witches' revel.

In the bloody troublous days of Nero meteors and celestial signs received heightened attention.

'Comets, eclipses, mock-suns, northern lights, in which appear crowns, swords, and streaks of blood, fantastic forms of clouds in time of heat, with traces of battles or strange beasts,—drew eager attention and seemed never to have been so vivid as in these tragic years. All the talk was of showers of blood, of wonderful thunder-bolts, of rivers flowing up-stream, or of bloody torrents. A thousand things never noticed in ordinary times came to have a high importance in the feverish excitement of the public mind.'⁷

Christ Himself had prophesied that nation would rise against nation, kingdom against kingdom; there would be earthquakes, terrors, famines, pestilences on all sides, and great signs in the sky (Mt 24⁸⁻⁹, Mk 13⁷⁻⁸, Lk 21⁹⁻¹¹). The prophecy had

its ample fulfilment in the near future. The famine came in the year 68; inundation from the Tiber in 69 and from the sea along the coast of Lycia; the pestilence visited Rome in 65, carrying off 30,000 inhabitants; Lyons was swept in the same year by a devastating conflagration, and the Campania by scarcely less destructive cyclones and tornadoes; tempests spread terror broadcast, and nature seemed everywhere perverse. It was a prevalent belief that portents, hiding of the sun and moon in darkness, brandishing of swords in the sky, were to usher in the Messianic kingdom.¹ This view—that calamities were signs of the Messiah's approach—was in vogue among the Jews for many centuries after the time of Christ.²

Similar interpretations, inherited no doubt from Rome, were rife as late as the 9th cent., and persisted through the Middle Ages. It was during a wild storm that Cromwell passed away; for had not the devil come to carry off his soul? Numerous and more terrible were the omens heralding the death of Charlemagne, recounted by his contemporary and biographer, Eginhard:

There were frequent eclipses, both solar and lunar, and a black spot appeared for seven days on the sun, during the last three years of his life; the gallery between the basilica and the palace fell suddenly in ruin; accidental fire consumed the wooden bridge over the Rhine at Mayence—both gallery and bridge had been constructed by Charlemagne, during his last campaign into Saxony a ball of fire fell suddenly from the heavens with a great light. 'It rushed across the clear sky from right to left, and everybody was wondering what was the meaning of the sign, when the horse which he was riding gave a sudden plunge, head foremost, and fell.' His javelin was struck from his hand with a violence that sent it twenty feet away. The palace at Aix-la-Chapelle frequently trembled, the roofs of whatever buildings he tarried in kept up a continual crackling noise, the basilica was struck by lightning, and the gilded ball that adorned the pinnacle of the roof was shattered by the thunder-bolt and hurled upon the bishop's house adjoining.³

III. ANIMALS.—1. Divination.—Divination is by no means confined to the classical cultures.

It is practised by means of lizards in the Torres Straits, and on the island of Mer is a divinatory shrine where omens are taken from the movements of insects, lizards, and other animals.⁴ The Kirghiz divine by means of the shoulder-blade of a sheep; the Burats use the shoulder-blade of a sheep or a goat in divining the cause of disease or for the discovery of a thief. A written law was given by God to the chief tribal ancestor of the Burats, who, on his way home to his own people, fell asleep under a haystack. A ewe came to the stack and ate up all the law as well as the hay, but the law remained engraved on the ewe's shoulder-blade.⁵ The Kayans of Borneo cast bears' teeth as dice by way of divination, and the Igorot resort to divination with chickens. Before going to battle the Samoans observe the movements of a lizard in a bundle of spears. If it runs about the points of the spears and the outside of the bundle, it is a good omen, if it works its way into the centre for concealment, it is a bad omen. If a lizard comes down on the bare post rather than on the matting which partly covers it, this is a bad portent, similarly if it crosses the path of a man going to battle.⁶ The Thonga preserve, as useful for divinatory purposes, the astragalus of a smaller animal found in the skulls of a hyena—a most uncommon discovery.⁷

See, further, artt. DIVINATION.

2. Omens.—Omens likewise are common among primitive people.

The flocking of vultures denotes impending war, it being the habit of these birds to prey upon the bodies of the slain.⁸ The snake portends death to a Bushman.⁹ Among the Thonga it is a bad omen for a mole to cross one's path.¹⁰ The screech of the eagle informed the Takelma that some one would be killed

⁷ Renan, ch. xiv.

by an arrow. When a snake crosses a person's path, it is a sign that one of his relatives will die; if a rattlesnake bites a person's shadow, it is a sign that he will vomit.¹ The Yana declare it a bad sign if a fox 'talks' before daybreak.² If the rail-bird flies before a Samoan war party, it is a good omen; if it is a bad omen if seen to fly in any other direction. If a certain fish swims rapidly, the Samoans go to battle cheerfully; but, if it turns round now and then on its back, the party would not dare to proceed.³ The flight of the owl is a good or a bad omen according to the direction taken. If the cuttle-fish is close to shore when the party is about to set out, it is a good sign; if far away, a bad sign. Evil is portended when the sea-eel is driven upon the shore—as often happens after a gale—and the event creates a commotion throughout that locality. If the heron flies before the war party, it is a good sign, but, if it flies across the path, this is a bad omen. The appearance of the creeper-bird in the morning or in the evening means that one's prayers are accepted, while its failure to appear means that the god is angry. If the teeth of the sperm-whale, after being placed in position, lie east and west, it is a good omen; while, if they point towards the north or south, it is a bad omen. A war party will return if a lizard is seen crossing its path.⁴

In Borneo an expedition, prepared by months of labour, will turn homeward if bad omens are observed—e.g., if a particular bird calls on a certain side or flies across the river in some particular fashion; and a newly-married pair will separate if on the wedding day the cry of a deer is heard near the house. Similar beliefs prevail among the Todas.⁵

In Holland, as early as 1811, the presence of a stork upon a house was looked upon as a good omen, and its leave-taking as a bad omen.⁶

3. The crow and the raven.—The English rustic who pronounces a curse on the ill-betiding croak of the crow might well be considered the inheritor of the Roman belief that the crow is a bird of ill-omened garulity and especially inauspicious at the time of incubation, i.e. just after the summer solstice. In the Shetlands the raven is believed to keep close to a house in which there is a corpse, and in Northumberland the cry of the raven is an omen of ill-luck. In rustic England the raven has generally been considered a bird of ill omen. A similar belief is current on the west coast of Africa, where the white-breasted raven is called a man-eater, and magic medicine is manufactured from it. No rain falls when it lays its eggs—the exact contrary of the belief prevailing in the western part of the United States. Its flocking portends impending war.⁷ Pliny declares that ravens are most direfully ominous when they swallow their voice, as if being choked. They are unique among birds in having a comprehension of the meaning of their auspices. When the guests of Medus were assassinated, all the ravens departed from the vicinity of Attica and the Peloponnesus. Both Alexander and Cicero were warned of approaching death by the raven. In some instances, however, the presence of the raven betokened divine favour.⁸

4. The owl.—In *Hiranyakesin Ghyasutra* the owl that flies to the abode of the gods is addressed with the words:

'Flying round the village from left to right, portend us luck by thy cry, O owl!'

Striges, 'screech-owls,' was the Roman appellation for witches. The horned owl was especially funereal and greatly abhorred in all auspices of a public nature. Its appearance in the city was a dire omen, though its perching on a private house portended no ill. During the consulship of S. Palpeliu Hister and L. Pedanius one entered the very sanctuary of the Capitol, in consequence of which the city was purified on the nones of March in that year, as also again in the consulship of L. Cassius and C. Marius (A.U.C. 647).¹⁰ The note of an owl heard on the left annuls the auspicious note of other birds.¹¹ The note of the *strix* and

the presence or cry of the *bubo* bode ill.¹ The Ainus say that the owl can bewitch people by its hoot, and its cry must not be imitated. The eagle owl is especially respected. To imitate its cry would be nothing short of blasphemy, though the bird is regarded as benevolent. Among the titles given it are 'divine little bird,' 'servant of the world,' 'mediator of the world.' When about to sacrifice one of them, the Ainus offer the following prayer:

'Beloved deity, we have brought you up because we loved you, and now we are about to send you to your father. We herewith offer you food, *Inao*, wine, and cakes; take them to your parent, and he will be very pleased. When you come to him say, "I have lived a long time among the Ainu, where an Ainu father and an Ainu mother reared me. I now come to thee. My father, hear me, and hasten to look upon the Ainu and help them."'

In one Samoan village the god was said to be incarnate in the owl. If an owl flew ahead of a party going to fight, it was regarded as favourable; but, if it flew across the road or towards the rear, it was unfavourable.² Among the Yao the owl was a favourite companion of the witch, and Thesalian women used its feathers as a magic ingredient. In Shetland the old women say that a cow will give bloody milk if it is frightened by an owl, and will fall sick and die if touched by it. Screech-owls are ghosts among the Arapaho, and in many American tribes the owl is regarded as a bird of ill omen or of magic power, as, notably, in the south-west area. With the Navaho it is a sort of bugaboo used to frighten children into submission.

IV. NATURAL PHENOMENA. — 1. Aurora borealis.—The Mandans say that the northern lights are occasioned by a large assembly of medicine-men and distinguished warriors of several northern nations who boil their prisoners and slain enemies in huge cauldrons. The Eskimos say that they are the ghosts of the dead playing football with a walrus skull.⁴ To the Malecite they represented blood and portended war. The Tingit share with the Eskimos the belief that the northern lights are the spirits of the dead at play,⁵ while the Saulteaux say they are the spirits of the dead dancing.⁶ The *aurora borealis* heralded the defeat at sea of the Lacedaemonians and the loss of their influence in Greece. This 'flame of a bloody appearance (and nothing is more dreaded by mortals) which falls down upon the earth'⁷ appeared again when King Philip was harassing Greece. Pliny is inclined to interpret it as due to natural causes, but does not deny its association with untoward events:

'They have indeed been the precursors of great events, but I conceive that the evils occurred not because the prodigies took place, but that these took place because the evils were appointed to occur at that period. Their cause is obscure in consequence of their rarity.'

2. Earthquakes. — According to Pliny,⁸ the Babylonians attributed earthquakes to the influence of the stars when in a certain conjunction with the sun or with one another. The Greeks attributed thunder and earthquakes to one and the same cause, the former to agitation of the air above the earth, the latter to disturbances in the air beneath the earth. Yet, in spite of the scientific theories, such as we find in Aristotle¹⁰ or Herodotus,¹¹ an earthquake was a portent by which

the deity intimated to men the evils that were about to befall them. During the 2nd cent. of our era, when earthquakes were both frequent and frightful in their destruction of cities, the Stoic philosophers, feeling the old explanation insufficient to account for such disasters, attributed them to the displeasure of the gods—a view which later Christian theology welcomed and made popular. The earthquakes which were so prevalent in the region of the Bay of Naples in the 1st cent. A.D. were interpreted by Christians as signs of divine wrath visiting deserved punishment upon the wicked and licentious Romans; and the latter also regarded them as supernatural. Lucretius, following Epicurus, Democritus (water and air), and Anaxagoras (fire and air), ascribes earthquakes to the fall of great substances beneath the earth as well as to air escaping from subterranean caverns. Seneca attributes them to escaping air.¹

Earthquakes occurring during the day or a little after sunset are heralded by a long thin cloud extending over the clear sky. The water in wells is more turbid than usual and emits a disagreeable odour. Birds settle upon vessels at sea and give the alarm. Yet so ominous are earthquakes that Pliny, who is inclined to find their cause in subterranean winds, declares that the city of Rome never experienced a shock which was not the forerunner of some great calamity.²

The Japanese once held that the magnet loses its power during an earthquake or even immediately prior to one. They attributed earthquakes to movements of a tortoise, on which the earth rests, or to the flapping of a large subterranean fish, which, when it wakes, wriggles about and causes the vibrations. During a severe earthquake masses of people can be seen, robed in white, some of them on their knees, attempting to appease the wrath of the gods or demons who are responsible for the disturbance.³ The Indians of the southwestern part of the United States have a similar belief. They say that the shaking of the earth is caused by the wriggling of a large subterranean serpent or dragon. The Tingit attribute them to Old-woman-underneath.⁴ This is almost identical with the belief prevalent in Melanesia and Polynesia. The Arabs regard an earthquake as the will of Allah and resign themselves to it calmly, not anticipating any greater calamity. The Caribs attribute earthquakes to a subterranean people.⁵ The natives of Bali and of the Pagi Islands attribute them to evil spirits, as do the Mao Naga. With these peoples, as also among the ancient Hindus and in ancient Rome, a tabu was placed on all ordinary occupations; a Brahman might not read the Veda. Earthquakes were so common in Rome in the year 193 B.C. that all public business was blocked, and during the following year shocks lasting thirty-eight days called for a total cessation of business. As late as the time of the emperor Claudius an earthquake was always followed by the appointment of a holiday for the performance of sacred rites.⁶ After the occurrence of an earthquake during a battle Earth would be appeased.⁷ In the first centuries A.D. the pagan Romans usually attributed them to displeasure towards the Christians.⁸ In the 8th cent., Bede⁹ attributes earthquakes to the leviathan in his subterranean prison, who, in his indignation, shakes the earth. Aristotle's view

was generally championed by the later mediæval theologians (as by Cardinal d'Ailly, *Concordia astronomice veritatis cum theologia*, Paris, 1483); yet in 1580, during the reign of Queen Elizabeth, earthquakes were generally considered by the clergy as evidence of God's wrath—a view popular in the New England States as late as the last half of the 18th cent., and revived on the Pacific coast after the earthquake of 1906 which destroyed San Francisco.

3. Eclipses.—The Chaldeans explained eclipses on the supposition that one half of the moon was bright, the other half dark. When she suddenly turned the bright side away from men and presented to them her dark visage, they had evidence of her displeasure. Some event of importance—a pestilence, a famine, a war, an earthquake—followed hard upon each eclipse. For the Greeks, similarly, an eclipse boded no good. It signified the turning aside of the face of the god and the approach of a dire crisis. The moon hid the sun, and the sun fell into a swoon, or *ἐκλειψις* (*défaillance*). The moon, assisted by the other planets, then provided the energy which the sun temporarily could not supply.

Xerxes [remarking an eclipse of the sun] was seized with alarm, and, sending at once for the Magians, inquired of them the meaning of the portent. They replied: "God is foreshowing to the Greeks the destruction of their cities, for the sun foretells for them and the moon for us." So Xerxes, thus instructed, proceeded on his way with great gladness of heart.¹

An eclipse caused Cleombrotus to bring his army home.

"For while he was offering sacrifice to know if he should march out against the Persian, the sun was suddenly darkened in mid sky."²

In 585 B.C. a sudden eclipse of the sun caused the fighting Medes and Lydians to lay down their arms and hastily make peace; and the Athenian expedition which was about to depart from Syracuse in 413 B.C., after ignominious defeat, was delayed by an eclipse of the moon which filled the soldiers with fear. Thales was reputed able to predict an eclipse of the sun and to account satisfactorily for the phenomenon. Pythagoras likewise explained eclipses as natural phenomena, as did Aristotle and Pliny. The Egyptians also attempted to explain them as part of normal celestial occurrences and to predict them.³ Lucretius explains eclipses of the sun and moon in the modern way,⁴ as do Seneca⁵ and Livy.⁶ Livy says that Caius Sulpicius Gallus, military tribune, 'lest they should any of them consider the matter a prodigy,' foretold to the army an eclipse of the moon on the following night. He refers also to the custom of making a din during an eclipse of the moon, presumably to frighten away the beast that is devouring it.⁷ Pliny admits, with his prevalent inconsistency of reason and superstition, that many eclipses are portentous, especially such as are unusually long. This was the case when Cæsar was slain, as in the war against Antony, when the sun remained dim for almost an entire year. Driving away an eclipse by beating drums and cymbals is referred to by Tacitus.⁸ The inhabitants of Turin long continued this practice.⁹

The Armenians believed eclipses of the moon to be caused by the interposition of a dark body between it and the earth during the earth's revolution about the moon.¹⁰ Orthodox Hindus look upon an eclipse as the arrest of the sun by his creditors, Rāhu and Ketu. They accordingly

give alms and observe a fast during the eclipse. There is another belief to the effect that it is caused by a demon, called Svarbhann.¹ This is similar to the Chinese belief that the sun or moon is being swallowed by a dog or other beast. They accordingly beat gongs to rescue it by frightening away the devourer.² Since an eclipse of the sun portends some awful and mysterious event, the natives of Ceylon observe a fast on that day.³ The Todas fire off guns and send up rockets to frighten away the snake that is trying to eat the hare in the moon, and accompany these demonstrations with shouts. They observe a fast also.⁴ Shintō religion ordained that, at the time of an eclipse, certain jewels, regarded as amulets, should be suspended from the highest branches of the sacred *cleyera*, their brilliance being suggestive of the light of the sun which it was desired to restore.⁵ The lighting of fires, doubtless for the same reason, will dispel an eclipse, and so will the crowing of cocks, as they are the usual heralds of the sun's return. The penultimate *sūrah* of the Qur'an contains a spell designed to ward off the evil influences that normally accompany an eclipse.

Pierre Bayle argues in some detail that comets and eclipses do not presage ill. He refutes the doctrine of the ancients and that of his contemporaries, by showing that no more misfortunes came after the appearance of certain comets of his day (17th cent.) than before them.⁶

On the west coast of Africa an eclipse of the moon is attributed to the shadow of the sun, which is constantly in pursuit. The natives throng the streets, shrieking and shouting, 'Leave her! Be off! Go away!' But Junod⁷ declares that the Thonga are not much impressed with eclipses, being more struck with wonder at the supernatural knowledge of the white people than with fear of the phenomenon itself.

For the Maori an eclipse of the moon presages the fall of the enemy's fortress.⁸ The Tahitians it filled with dismay. They supposed it under the influence of some evil spirit which was about to destroy it. They accordingly repaired to the temple and offered prayers for the release of the moon. Some said that the sun or moon, as the case might be, was swallowed by a god whom, through neglect, the celestial body had offended. Liberal presents were offered to induce the god to abate his anger and eject the luminaries of day and night from his stomach. The Tonga Islanders are content to explain the eclipse of the moon as due to a thick cloud passing over it.¹⁰ The N. Queensland natives attribute an eclipse to the anger of spirits;¹¹ and the Sandwich Islander says that the moon is bitten, pinched, or swallowed.¹²

The Bella Coola believe that during an eclipse the moon paints her face black. At this time the moon performs one of the most sacred ceremonies of the *Isusuit*, which are thought to be very dangerous to the performers. The black paint

with which her face is covered is supposed to be a protection against these dangers. Aiallaaya, the guardian of the moon, restores her to her full size, and cleans her face after an eclipse.¹ The Dakota discharge their rifles in the air to drive away the demon or evil spirit that is causing the eclipse.² The Eskimos of the Lower Yukon believe that a subtle essence or unclean influence descends to the earth during an eclipse. If any of it should be caught in utensils, it would produce sickness. To avert this, at the commencement of an eclipse every woman turns all her pots, wooden buckets, and dishes upside down.³ The Navahos say that an eclipse is caused by the death of the orb, which is revived by the immortal bearers of the sun and moon. During an eclipse of the moon the family is awakened to await its recovery. Similarly, a journey is interrupted and work ceases during an eclipse of the sun. Songs referring to the *hozhoji*, or rite of blessing, are chanted by any one knowing them; otherwise the passing of an eclipse is awaited in silence. It is not considered auspicious to have a ceremony in progress during an eclipse of the sun or moon, and a ceremony is often deferred on this account. The rising generation, however, pays little or no attention to this custom.⁴ The Tlingit say that the sun and moon are hiding their faces during eclipse, and they blow their breath towards them in order to blow away the sickness which the eclipse is bringing.⁵

4. Hail.—Hail was formed by the freezing of an entire cloud (Posidonius). At Cleonæ, according to Seneca,⁶ were hail-guards appointed by the State to notify the people of the approach of hail. Upon such notification the people offered sacrifices, some a chicken, some a lamb. If these were not to be had, they pricked the finger with a well-sharpened stile and made atonement with their own blood.

Aristotle considered hail and snow the same in formation, differing only in size and shape.⁷ For Pliny it was merely frozen rain, probably caused by the winds; but the star Arcturus scarcely ever rises without accompanying storms of hail.⁸ Lucretius leans towards a similar interpretation, but his views of its formation are not clearly expressed.⁹ Hail is the result of frozen rain-drops, said Bede;¹⁰ but the *Lex Visigothorum*, the earliest Teutonic code, provides a penalty for those who, by incantations, bring hail-storms upon the fields and vineyards.¹¹

Hail is often personified in N. American mythology, but the phenomenon is seldom regarded as of any special significance. Among the Nandi no work was permitted during the twenty-four hours following a hail-storm.¹² The Kafirs permitted no field work on the day following a hail-storm, for this would bring down more hail.¹³

5. Lightning and thunder.—Thunder, especially on a cloudless day, was the great omen of Zeus.

If heard on the right, it was favourable, and therefore unfavourable to the foe, who would hear it on the left. The thunderbolt was cast by Zeus.

'All night Zeus the counsellor meditated evil against them, thundering terribly. And pale fear seized them and they poured wine from their cups upon the ground, nor did any one dare to drink before he had poured a libation to the exalted son of Kronos.'¹

The Pythagoreans believed that lightning was intended to terrify the damned in Tartarus. The Persians considered it a missile of divine wrath.

Said Artabanus, the adviser of Xerxes, 'Thou seest how the Deity strikes with thunderbolt those beasts that tower above their fellows, but the little ones worry him not; and thou seest also how his missiles always smite the largest buildings and trees of such kind, for God loves to truncate all those things that rise too high. Thus, too, a large army may be ruined by a small one, when God in his jealousy hurls a panic or a thunderbolt, through which they are shockingly destroyed; for God permits none but himself to entertain grand ideas.'²

For the Romans thunder predicted the good or evil fortune attendant upon an undertaking, and might itself be compelled or invoked. According to an Etrurian legend, thunder was invoked when the territory of Volsinium was laid waste by the monster Volta. To perform the ceremonies improperly was to court death from the lightning—a punishment visited upon Tullus Hostilius for such shortcomings. Thunder on the left was propitious, for the not very enlightening reason that the east is on the side of the heavens. It is very propitious if the thunder proceeds from the north to the east and then returns to the north. The remaining quarters of the heavens are neither so propitious nor so much to be dreaded. When Marcellus was about to enter upon the duties of consul, it thundered. The augurs were summoned and declared the election invalid, whereupon the fathers spread abroad the report that the gods were displeased because of the election of two plebeians as consuls.³ Seneca finds marvellous effects in lightning, which leave no doubt that a subtle divine power is inherent in it. But he discountenances the prevailing view that lightning has the sovereign power of destroying the force of other portents, and also the view of Cæcina that, when something is simmering in one's mind, the lightning-stroke either urges it or deters from it. The truth is, if one has a design, then the lightning that occurs counsels; but, if one has no such design, it warns. Nor does he agree that the bolt which occurs first after entrance on an inheritance, or when a city or an individual has entered upon a new phase of existence, embraces in its prognostication the series of events through the whole subsequent life. Sometimes it portends nothing, or at least nothing that we can discover—e.g., if it strike in the sea or in the desert.⁴ The Stoic Attalus, according to Seneca,⁵ recognized a class of lightning portending nothing that concerns us, and a class intimating what does concern us. Of the significant lightning there are several varieties—a favourable, an unfavourable, and a neutral. The unfavourable portents may be (a) unavoidable, (b) avoidable, (c) such as may be mitigated, or (d) such as may be delayed. If benefits be foretold, they may be (a) abiding or (b) transient.

In violent storms at sea stars seem to settle on the sails. This is accepted as aid from Castor and Pollux. It is, says Seneca,⁶ really a sign that the storm is breaking and the wind subsiding; otherwise the stars would flit about without settling. When Glyppus was on the voyage to Syracuse, a star appeared resting on the very tip of his lance. At other times stars rested on the points of the Roman spears.⁷

The Mission Indians of California personify ball-lightning, which they generally regard as possessing malign power.

In the belief of the Saxons thunder on Sunday of a certain year betokens great bloodshed in some nation; on Monday, that a royal child shall be put to death; on Tuesday, failure of crops; on Wednesday, the death of the field labourers; on Thursday, the death of the women; on Friday, the death of sea animals; on Saturday, the death of judges and bed-fellows.¹

The thunderbolt, according to mediæval belief, was of diabolical origin and eccentric in its workings. It would strike the sword in its sheath, gold in the purse, the foot in the shoe, leaving the respective coverings unharmed; it would consume a human being internally and leave the skin unscathed; it would destroy nets in the water, but not on land. This is in keeping with the belief that the thunderbolts with which the leaders of the Iapygians were stricken down were for a long time afterwards visible.²

The belief in thunder-stones, usually the stone implements of previous and forgotten peoples, is almost world-wide.³ Bushman philosophy declares that it is the rain that lightens. The Bakongo say that thunder is the voice of a great fetish and the lightning the fetish itself.⁴

On the north-west Pacific coast of N. America the thunder-bird, which is associated with the thunder, plays an important part in mythology, in art, and in initiation ceremonies.

The Tlingit say that 'the thunder bird causes thunder by flapping its wings or by moving even a single quill. When it winks, lightning flashes. Upon its back is a large lake, which accounts for the great quantity of rain falling during a thunder-shower. . . . The thunder bird keeps on thundering and the sky continues cloudy until the bird catches a whale.'⁵

The Tewa say that 'lightning is produced by 'ōk'uwa, who throw it from the clouds'⁶—a view prevailing throughout the Plains area, as also in Guiana.⁷ The Mewan of S. California say that thunder is caused by two personages who entered the heavens in the form of birds. Another account attributes its origin to Mother Deer and Coyoteman, who made thunder by shaking the dry skin of the bear, while lightning was made from the eyes of boy fawns. To the northern Mewuk thunder is a prototype of the valley bluejay living down below to the west, in the San Joaquin valley, where the clouds are. The rumblings that come from him when he is angry are called thunder by human beings.⁸ The Takelma caused thunder to cease rumbling by pinching dogs until they barked. Probably the dog's bark was supposed to frighten away the racoon-like animal whose drumming was the source of the thunder.⁹ The Mandans attribute thunder to the flapping of the wings of a huge bird. When the bird flies softly, as is usually the case, it is not heard; but, when it flaps its wings violently, it occasions a roaring noise. It has two toes on each foot, one pointing ahead, the other behind. It dwells on the mountains, and builds nests there as large as one of the forts. It preys upon deer and other large animals, the horns of which are heaped up around the nest. The Hidatsa, similarly, attribute thunder to the flapping of the wings of a large bird which causes rain,

the glance of its eye when seeking prey giving rise to the lightning.¹

The Australian native alleges that thunder causes tortoises to come out of the water and lay their eggs.²

6. **Meteors, meteoric stones, and comets.**—Meteors were generally portentous among the Greeks and Romans, and meteoric stones were venerated by them. In the Gynnasium at Abydos was a meteoric stone which Anaxagoras was said to have predicted would fall in the middle of the earth. Another was at Cassandria, formerly Potidæa, 'which from this circumstance was built in this place.'³ Pliny reports seeing one which had been brought from the fields only a short time before, in the country of the Vocontii (modern Dauphine). He regards meteors as stars which are visible only when falling.⁴ Alexander, in Lemaire,⁵ gives the following definition:

'Meteora ista, super cervices nostras transeuntia, diversaque a stellis labentibus, modo aerolithis ascribenda sunt, modo vaporibus incensis aut electrica vi prognata videntur, et quamvis frequentissime recurrent, explicatione adhuc incerta indigent.'

The Aleuts and the Eskimos use meteoric stones as amulets, and the Dakota consider them imbued with mystic power. In Pechili and Manchuria they are worshipped because they come from heaven. In some parts of China they are supposed to originate from thunderbolts, and the fall of one is an evil omen.⁶ In Japan meteorites were given over to the priest and were kept in the temple. They were offered annually to Shokujo on her festival, the seventh day of the seventh month. They were said to have fallen from the shores of the Silver River, Heavenly River, or Milky Way, after being used by the goddess as weights to steady her loom.⁷

It is not stars but fire that falls from heaven, declares Bede:

'It springeth off the heavenly bodies as sparks do from fire. In fact there are as many stars still in heaven as there were at the beginning when God created them.'⁸

The Chaldeans explained comets as special thunderbolts, flaming torches hurled by the thunder-gods. The Greeks held, among other views, that they were rockets formed of particles thrown off by the earth and set on fire in the higher regions of the sublunary world. Here they were consumed, and afterwards fell back to earth.⁹ Aristotle held the much more advanced view that they were the result of a certain juxtaposition of the stars.¹⁰ Pliny adopts in large part the classification of comets inherited from the Greeks:

There are the Crinitæ, 'as if shaggy with bloody locks, and surrounded with bristles like hair; the Pogonia, having a mane hanging down from their lower part, suggestive of a beard,' etc. 'There is also a white comet, with silver hair, so brilliant that it can scarcely be looked at, exhibiting, as it were, the aspect of the Deity in a human form. There are also some that are shaggy, having the appearance of a fleece, surrounded by a kind of crown.'¹¹

The rising of a comet does not convey a threat of wind and rain in the immediate future, as Aristotle says, but casts suspicion over the whole year. Hence it is plain that the comet has not derived prognostications from its immediate surroundings to reveal them for the immediate future, but has them stored up and buried deep within by the laws of the universe. The comet which appeared in the consulship of Paternulus and Vopiscus fulfilled the anticipations of this kind

entertained by Aristotle, and, for that matter, by Theophrastus; for there were everywhere prolonged storms, while in Achaia and Macedonia cities were overturned by earthquakes.¹ A meteor as big as the moon appeared when Paulus was waging war against Perseus. A similar portent appeared about the time of the death of Augustus, when Sejanus was executed, and before the death of Germanicus.² For the Roman sailor many shooting stars were the sign of a storm.

Shooting stars are the embers thrown down from the fires kept by spirits of the dead.³ They are usually unpropitious. The Spartan ephors might depose a king at the end of eight years, if, during their vigil on a clear and moonless night, they saw a meteor or shooting star. Frequently they portend some important event:

'When beggars die, there are no comets seen;
The heavens themselves blaze forth the death of princes'
(Shakespeare, *Julius Caesar*, act II. sc. ii.).⁴

7. **The Milky Way.**—The Jews thought of the Milky Way as a river flowing through the heavens, proceeding from the throne of God—an idea derived in its general conception from Babylonia.⁵ The Japanese say that the River of Heaven or the Milky Way is a vast river in the sky, whose overflow is represented by the Yangtse. Across this river is neither bridge nor ferry, but once a year, on the seventh day of the seventh month, Kasapagi, an immense jay, comes to it and spreads its wings across. Over this bridge meet Kengin, the weaver, who presides over arms, and Shokujo, the weaver, who presides over weaving and other feminine arts.⁶

A tradition current among the Micmacs states that the Milky Way was formed when the Virgin Mary, returning across the heavens with a pail of milk, stumbled and fell. The Tlingit say that the Milky Way was made by the culture hero Lq'ayak when journeying across the heavens.⁷ The Tewa call it the backbone of the Universe Man.⁸

8. **Perihelion.**—The perihelion was explained by Aristotle as due to refraction from the sun,⁹ and by Seneca as the reflexion of the sun in the heavens.¹⁰ To the Romans it portended rain, and often some considerable misfortune. The Tlingit say that, if a mock sun goes down with the sun, good weather is portended; if it goes away before sunset, bad weather.¹¹

Bishop Latimer in 1552 speaks of rings about the sun as signs of the approaching end of the world.¹²

9. **Rainbow.**—The Catawba (as also the Tlingit) call the rainbow the 'dead people's road.'¹³ The Teton Dakota will not point at the rainbow with the index-finger, though they can point at it with the lips or elbow. Should one forget and point at it with the fore-finger, the bystanders laugh at him, saying, 'By-and-by, O friend, when your finger becomes large and round, let us have it for a ball bat.'¹⁴ The Hopi and the Thompson Indians of British Columbia have a similar tabu. The Hidatsa call the rainbow 'the cap of the water' or 'the cap of the rain,' and attribute its formation to the claws of a red bird. The Mandans say that it is a spirit accompanying the sun.

The 'great snake of the underneath' is the rainbow-god of the Yoruba. It comes up at times to

drink water from the sky. A variety of the python is the messenger of this god.¹

Pliny gives a purely naturalistic explanation of the rainbow, denying that it is either wonderful or ominous, yet he admits that it means either war or a fierce winter which will make an end of men's work and injure the sheep.² Seneca tells us that a rainbow in the south portends a heavy fall of rain; one in the west, a dew or light rain.³

To the Arawaks the rainbow heralds the approach of white people from that quarter in which it appears. When the Caribs see it at sea, they accept it as a good omen, but, if it appears while they are on land, they hide in their homes, considering it a strange and masterless spirit which is seeking to kill somebody.⁴

10. Volcanic activity.—For the Romans volcanic activity presaged dire calamities.⁵ Avernus, in Italy, was commonly thought the entrance into the infernal regions.

The old crater in Ceylon contained salt water which was considered the residue of the tears of Adam and Eve, who retreated here after their expulsion from paradise and for one hundred years copiously bewailed their sin.⁶ Gregory the Great⁷ saw the soul of Theodoric going down a volcano on the island of Lipari.

11. Waterspout.—The waterspout took the form of a great animal and was much dreaded by the Roman sailor.⁸

12. Will o' the wisp.—The Yorkshireman can elude a will o' the wisp by putting a steel knife into the ground, handle upwards. It will run round this until the knife is consumed, thus providing the pursued an opportunity to escape. The mysterious power of attraction which it possesses can be escaped by twining one's apron. In 16th cent. England many superstitions were associated with this phenomenon.⁹

Among the Micmac, as also among the Dakota, the word for will o' the wisp means also ghost. Both tribes believe that it will pursue one. The Dakota have a medicine which will protect the wearer from such pursuit. The Micmac elude it by putting a pin point upwards in their tracks; this the *skedegamutch* will not go past.¹⁰ In Maryland the superstitious Whites believe that it is the evil eye pursuing them.¹¹

V. PHYSIOLOGICAL AND PSYCHIC PHENOMENA.

1. Albinos.—The albino person or animal is often the object of religious reverence. The sudden and mysterious appearance of the white buffalo was the 'sign' for which the Fox Indians waited.¹² For many of the American tribes the white buffalo or the white deer portended some extraordinary fortune. The skin of the white buffalo cow was an eminent fetish with the Mandan and Hidatsa, worn on rare occasions and sometimes used as a sacrifice. The Crow have a superstitious fear of the white buffalo cow. When they meet one, they address the sun with these words: 'I will give her to you.' They then attempt to kill the animal, but leave the flesh untouched, saying to the sun, 'Take her; she is yours.' They never make use of the hide of such a cow.¹³

Throughout the Lower Congo an albino or the hair of an albino person is necessary to supply the needed magical power for the Ndembo society.¹ On the West Coast the albino is regarded as a sacred person, and is *ipso facto* a candidate for the priesthood.²

The white dog was sacred among the Iroquois and was sacrificed. In Siam the white elephant or white monkey was sacred and might not be killed—an inconvenient restriction to those who 'had a white elephant on their hands.' A white horse, a white pig, and a white cock were among the offerings at harvest-time prescribed by Shintō ritual. By virtue of such gifts the diviners obtained from the god of harvest the secret of a magical process which enabled them to save the imperilled crop. The white horse also served to establish the ruling house:

'As this white horse plants firmly his fore-hoofs and his hind-hoofs, so will the pillars of the Great Palace be set firmly on the upper rocks and frozen firmly on the lower rocks; the pricking up of his ears is a sign that your Majesty will, with ears ever more erect, rule the Under Heaven.'³

In the book of *Enoch*⁴ the Messiah, at the conclusion of the world drama, appears under the figure of a white bull, and in this guise secures the respect and fear of all the heathen, who, thanks to this apparition, are converted to righteousness. He is feared by all the beasts. When all the other animals have become white, He changes into a buffalo with black horns.⁵

Xerxes sacrificed white horses and young men that the gods might give him victory.

2. Birth.—(a) *Supernatural birth*.—To assure the divine nature of the ruler, and as a logical result of his alleged divinity, his origin was attributed to some other than natural birth.

'It seems to me that a hero totally unlike any other human being could not have been born without the agency of the deity,' said the biographer Arrian, when discussing the parentage of Alexander the Great.⁶ 'He to whom the gods themselves reveal the future, who impose their will even on kings and peoples, cannot be fashioned by the same womb which bore us ignorant men,' said the Augustan writer Aulus Gellius in his discussion of astrologers.⁷

In N. America the concept of a supernatural origin is frequently held with regard to the culture hero or heroine, who often originates from a blood-clot or from menstrual blood.⁸

(b) *Twins*.—The Navaho accept twins as a divine gift, though the advent of twin colts is viewed as an evil omen and both mare and colts are killed. Many primitive peoples, however, consider twins uncanny and may kill one or both of them. Most of them regard triplets unfavourably, though in some instances they are welcomed.

3. Dreams.—The prophetic nature of dreams and their use as auguries are familiar themes to the student of Greek and Roman culture.⁹ Prometheus, says Æschylus,¹⁰ was the first to teach men what sort of dreams were destined to prove realities. In obedience to dreams the great emperor Augustus went through the streets of Rome begging.¹¹ Incubation was practised there as in the temples of China at the present time.¹² Pliny doubted the mind's knowledge of the future, when in sleep,

but in spite of his amazing credulity he was an advanced sceptic¹

Muhammad, according to tradition, said:

'A good dream is of God's favor, and a bad dream is of the devil's; therefore, when any of you dream a dream which is such as he is pleased with, then he must not tell it to any but a beloved friend; and when he dreams a bad dream, then let him seek protection from God both from its evil and from the wickedness of Satan; and let him spit three times over his left shoulder, and not mention the dream to any one; then, verily, no evil shall come nigh him.' 'The truest dream is the one which you have about daybreak.'²

Specific and conventional interpretations are often given to dreams.

In Persia 'seeing bees in a dream indicates riches. To dream of eating grapes presages sorrow and flowing tears. To dream of buffaloes fighting means that the angels will come for the soul of some member of the family.'³

In Northumberland to dream of a hare means that you have an enemy; if one crosses your path, it is an omen of ill-luck. To see many eagles is to be warned of plots and intended assaults. If it be bees carrying honey, you will earn money from wealthy people. If the bees sting you, your mind will be tormented by foreigners. If bees fly into the house, the house will be destroyed. To dream of many fowls together is a sign of jealousy and chiding.⁴ Any dream on the first night of the moon's age is a good omen, while the second and third nights are neutral. The following two nights betoken good. The dream of the sixth night should not be forgotten. That of the seventh is sure to be fulfilled. Whatever is dreamed on the eighth and ninth nights will become public. If it is unpleasant, turn the head towards the east and pray for mercy. Similarly, birth has its fortune embodied in the days of the lunar calendar, and each month, from the first to the thirteenth, has its particular portent.⁵

Dreams play an important part in the lives of most primitive peoples, and usually betoken something in harmony with their content. Among the Dakota to dream of the moon is unlucky. It is lucky to dream of hawks, but unlucky to dream of bears, for the latter are slow and easily wounded. A dream about snakes will be the result of killing one, and no good comes from snakes, they say (the Menominee have the same beliefs). As among all the Plains tribes, in the dance associations of the Eastern Dakota dreams play a prominent part. In the Buffalo society of the Santee only those who had had visions of the buffalo, or the sons of such, were entitled to membership.

'One man might dream that he was a buffalo and had been shot with an arrow so that he could barely get home. The arrow continued to whirl round in his body. He dreamt that the only way to recover was to go into a sweat-lodge. First he asked for one of four different kinds of earth to mix with water, drank the mixture inside a sweat-lodge, and then recovered. Such a man painted himself vermilion to represent the trickling down of blood. Another man dreamt of being shot with a gun. Such a one would act out his dream during a Buffalo dance. A third man dreamt that a bullet pierced his eye and came out at the back of his head. He announced his dream, and shortly afterwards was actually shot in that way. Still another man announced a dream to the effect that he was shot through his temples, and this also came true. While dancing, dreamers would call on outsiders to bear witness to the truth of their statements about such experiences. Once a *heyoka* (a Clown) challenged a dreamer's account, saying that no man could recover from a wound of the kind described. Straightway the dreamer offered to be shot by the Clown, who sent a bullet through him. The wounded man staggered off, went to a sweat-lodge, and actually recovered within a few days.'⁶

Among the Arapaho dreams were revelations. To the Omaha the moon would appear, having in one hand a burden strap, in the other a bow and arrows, and the man would be bidden to make a

choice. If he reached for the bow, the moon would cross its hands and attempt to force the strap on him. If he should wake before taking the strap, or if he should succeed in capturing the bow, he would succeed in escaping the penalty attached to the dream. If he failed and the strap was taken, he would become like a woman, follow her vocations, and adopt her dress. Instances are reported in which the unfortunate dreamer, unable to ward off the evil influence, has resorted to suicide as the only means of escape. To the Menominee a dream about the moon brings long life, but a life that will end in misery. Such people are strong when the moon is full, weak and sickly when it is on the wane.¹ To the Huron the dream gives voice to the soul's desires.² Among the Hidatsa only those dreams that follow prayer, sacrifice, or fasting are portentous;³ while for the Mandan dreams are always prophetic or ominous. A Mandan dreamt of fire-arms, and soon after ward the Whites arrived with them. They dreamt of horses in similar manner before they obtained any. For the fasting youth to dream of a piece of cherry-wood, or of any animal, is a good omen. The Thonga profess to be disgusted when any dream is fulfilled,⁴ but this must depend somewhat on the nature of the fulfilment. The Kafir medicine-man acquires his powers through dreams, and the expectant mother learns by this medium the sex of her unborn child.⁵ Similar predictions were made from dreams by the Maoris, by whom much attention was paid to the dreams of the war-chief or of the principal priest, especially on the night before an engagement. They were guided by the omens of which the dream was an index.⁶

The Japanese recognize a creature by the name of *baku*, whose particular function is the eating of dreams. The male *baku* has the body of a horse, the face of a lion, the trunk and tusks of an elephant, the forelock of a rhinoceros, the tail of a cow, and the feet of a tiger. The picture of the *baku* hung up in the house will secure the protection of the animal. The Chinese character representing its name used to be put in the lacquered wooden pillows of lords and princes. By virtue of this character on the pillow the sleeper was protected from evil dreams. When a man awakes from a nightmare, or from any unlucky dream, he should quickly repeat three times the invocation, 'Devour, O *baku*, devour my evil dream!' The *baku* will then eat the dream and change the misfortune into good fortune and rejoicing.⁷ The Vedic texts direct one who has had an evil dream to wipe his face in order to get rid of its malign influence.⁸ This is more simple than the Navaho remedy, which may call for a 'renewal' ceremony.

4. Epilepsy.—Many peoples attribute epilepsy to possession by a demon. This was the view held by the Hindus, and in the Vedic texts a ritual ceremony is prescribed for its exorcism. Its uncanny nature has generally been recognized. From the time of Edward the Confessor to that of Queen Anne epilepsy was considered curable by royal touch.⁹

5. Liver.—The liver has long been considered an unusual organ of the human body, and unusual qualities have been attributed to it.¹⁰ In ancient Greece goose liver was used as being efficacious in medical

treatment;¹ the liver of the lizard would impart peculiar powers to the eater.² The Lushais eat the witch's liver in order to destroy the witchcraft,³ and the Cochinchinese express their deepest hatred of a person by saying, 'I wish I could eat his liver.'⁴ In ancient Arabia Hind, the wife of al-Fakih, inspired by similar motives, gnawed the liver of her arch-enemy Hamza,⁵ while a modern Arab will eat the liver or heart of a snake in order to acquire an understanding of the language of birds. In N. Morocco the Jbala bride and bridegroom partake at the wedding ceremony of the liver of a sheep, to make them 'dear to one another'; and in Andjra the bridegroom, though not the bride (for no woman may eat of it), partakes of the liver of the bullock.⁶ Arabian influence may be reflected in the Apocryphal account of the evil spirit who loved Sarah and was exorcized by flames arising from the heart and liver of a fish which Tobit, by the instruction of the angel, burned on the evening of his wedding.⁷

Similar attribution of unusual powers to the liver of a person or an animal is wide-spread. The Veddas of Ceylon chew the dried liver of a man in order to imbibe his virtue, and the Sinhalese have a tradition to the effect that they formerly followed the same practice.⁸ In Erub (Torres Straits) the liver, 'presumably of a deceased male,' was cut up and distributed among the young male members of the family to make them plucky.⁹ The Koita of British New Guinea allowed only girls to partake of the liver of the wallaby, the virtues of this animal affording no enhancement to males.¹⁰ In Australia the virtue elsewhere usually attributed to the heart or the liver resided in the fat around the kidneys.¹¹ The Maoris gave the liver of the *kulawi*-fish to a nursing child as a cure for flatulence. The liver is the seat of the affections, as also among the Greeks; and a piece of the liver of the first man slain must be offered, along with a piece of the heart and the scalp, to the goblin god, Whuro. So acute is the power of the liver that the Maoris call one of their implements for cutting wood the *kottate*, 'liver cutter.'¹² The Tonga Islanders believe that turtle has a peculiar effect upon the liver and they will not eat it, fearing the enlargement of the liver which indulgence in this food will produce. The liver is the seat of courage, and therefore the largest livers pertain to the largest men. They have found also that in left-handed people it tends to shift to the left side, and in the ambidextrous it is in the median line of the body.¹³ The Kayans of Borneo knew that the omen was bad if the under side of the liver of the pig was dark, good if it was pale.¹⁴ So general was haruspication among the Borneans that W. Warde Fowler is convinced that its origin is common with

that derived by the Romans from the Etruscans.¹ But, as the phenomenon is so common to savage culture, any theory of the connexion of the divination rites of the natives of Borneo and those of ancient Rome will have to take account of this fairly wide distribution of similar and related things in the larger world of savagery. The supposed uniqueness of the phenomenon does not exist, and the historical hiatus must be bridged by data that show the probability of actual contact between the two in the past.² Geographical proximity as well as early historical contact makes Africa a much more probable land of origin for Etruscan influence, especially since the ancient Arabians entertained such beliefs, and they are common among African tribes. Leo Frobenius³ has attempted to establish the African origin of Etruscan culture, but the argument remains unconvincing to those who feel the need of historical demonstration.

Several tribes of Central Africa attribute special virtue to the liver—in some cases to the liver of the alligator.⁴ It is the seat of the soul, and to eat of it is to enhance one's own spiritual being, though, as often happens, this beneficence is denied to women.⁵ Accordingly, the Bakongo drink the blood and eat the liver of those killed in a fight.⁶ For similar reasons the Kagoio (of Nigeria) evil-wisher will catch one's soul or take one's liver.⁷ The pottery-makers of the Thonga (at least those dwelling near Morakwen) may not eat the liver of any animal. In the ceremonies and superstitions of this region the gall-bladder plays an important part, as does also the liver of the ox. When two parties not within the permitted relationship wish to marry, they must break the tabu by a ceremonial eating of the raw liver of this animal. They must first tear it out with their teeth, for it is tabu to cut it with a knife, and then eat it. 'You have acted with strong *shibindji*,' they say to those who are eating their way to matrimony, 'Eat the liver now!' (*shibindji* means both 'liver' and 'determination,' a history of the interdependence of the two).⁸ When an ox is killed by the headman of the village for distribution among the villagers, the liver is given to the 'grandfather' and the old people, 'because it is soft and they have no teeth to gnaw the bones,' but doubtless, also, because it imparts, more than does any other portion, the strength of the animal.⁹ The Ovaherero, of Damaraland, attribute their black complexion to the eating by their ancestors of the black liver of an ox killed when the first people emerged from the tree that gave them birth.¹⁰ A Matabeleland native who wished to learn sorcery paid a big price to one of the recognized medicine-men in order to induce him to accompany the candidate to the grave of a recently buried person, unearth the body, cut it open, remove the liver, and, by its help, inculcate the desired instruction.¹¹ The Bechuana find effective, in their prescription designed to defeat the enemy, the gall of a black bull whose eyelids have been sewed up, the animal then being allowed to wander for three days. If they find little gall in the gall-bladder of an animal, they say that some ancestral spirit has previously sucked it out. A man often cleanses himself with the gall of an ox, and a chief will

drink it to acquire strength to withstand his enemies. During the initiation ceremonies the boys eat a portion of the liver of an ox killed for that purpose, and thereby acquire courage and intelligence. Yet any one who eats a certain tongue-shaped lobe of the liver (the *lobus Spigelii*) will forget the past, and this is given only to the old women, who thus enter into forgetfulness of their sorrows.¹

The liver—sometimes the heart—is spoken of by the Kafir as the seat of courage, the gall being the fluid that contains its very essence.

Arbousset declares that the Basuto consider the gall to represent the anguish of death; but it seems problematical whether the natives have any conception of such an abstract thing as the anguish of death. The gall is regarded in most tribes as the seat of courage and boldness. When the natives wish to describe the bravery of a great man they say that he has a large liver. Perseverance, that elemental faculty in human nature, is coupled in the native mind with perspiration; and, as the first place this is seen in on the skin of the forehead, they frequently consider that its seat or "centre" (as physiologists would say) is there. Intelligence or enlightenment is also sometimes considered to reside in the liver; but I fancy the sort of intelligence that is referred to is that which is displayed in battle . . . The man who is capable of enduring hardness is said to have a hard liver.²

The Chukchis of Siberia, in order to bring sickness upon a murdered man's kindred, eat the liver of the corpse, and the Eskimo practised a similar rite that the dead man's relatives might not possess the courage to avenge his death.³ Moreover, by eating the liver of the murdered man, they deprive the ghost of the power that he would otherwise have of rushing upon them.⁴ A story given by Rink shows the importance attaching to the liver:

'At last there was silence; and during this, one of the two brothers stood forth, and, taking a bit of dried liver (this being exceedingly hard), raised his voice, saying, "I have been told that I have an enemy in Niakunguak." At the same time he tried to crush the piece of liver he held in his hand; but failing to do so, he again put it by. Silence still prevailed, when Niakunguak's son advanced, and, taking up the same bit, crushed it to atoms with his fingers, so that it fell like dust upon the floor. All were utterly amazed, and not a word was spoken.'⁵

Here some special significance seems attached to this crushing of the liver in the manner portrayed. It seems probable that liver was associated with magic power.

'They thus entered, and saw all the brothers stretched out at full length on the ledge, only their feet visible on its outer edge (a sign of wrath). They were treated to some frozen liver in an oblong dish; but when they had got only half through with it, the frozen roof fell in and covered the dish with turf-dust.'⁶ 'When she had ended, Habakuk went closer to them, saying, "Well, take the skin of my seal with blubber and all, and the liver besides."⁷

An *angakok* gave the liver of a seal caught by a lucky hunter to one who was unlucky, and the latter acquired the desired luck by slowly chewing and swallowing the flesh. In Greenland the mother giving birth to her first child might not eat the liver of any animal; in Labrador she might partake of a portion of it.⁸

The *chenoo* of Micmac mythology, an ogre, representing, not improbably, Eskimo influence, showed a special liking for the liver of a conquered foe.⁹ The Chippewas were long ago admonished by the Crows to leave them the liver of the animal as part of their portion, and this custom is followed to-day.¹⁰ The Siouan tribes of the Plains area attach great importance to the liver of the buffalo and, in some instances, to that of the dog. The Omaha eat the liver of the buffalo raw. It gives

a man a clear voice and imparts courage.¹ Accordingly, the youth who has shot his first buffalo eats the liver with the gall over it as a potent dressing.² The Plains Cree warriors also, when they killed a bison, ate its liver raw.³ The Northern Shoshone imparted additional power, and, in this case, malign power, to the liver by placing rattlesnake heads on hot coals in a hole in the ground. The liver was that of a wild animal and was covered with the gall. The liver absorbed the poison from the fangs and was then carefully preserved in a little buckskin bag carried by the owner.⁴

A society of 'Liver Eaters' is found among the Crow,⁵ and members of the Bear clan of the Teton Dakota (Oglala division) sometimes eat the liver of the dog raw. A male must not eat the liver of a female dog, nor a female that of a male dog. Sores will break out on the face of an offender.⁶

The 'Dog-Liver-Eaters' Dance Association' is one peculiar to the Eastern Dakota.

It takes its name from the fact that the raw liver of the dog is eaten by the performers. It is not often performed, and only on some extraordinary occasion. The performers are usually the bravest warriors of the tribe, and those having stomachs strong enough to digest raw food.

When a dog-dance is to be given, the warriors who are to take part in it, and all others who desire to witness it, assemble at some stated time and place. After talking and smoking for a while, the dance commences. A dog, with its legs pinioned, is thrown into the group of dancers, by any one of the spectators. This is dispatched by one of the medicine-men, or jugglers, with a war-club or tomahawk. The side of the animal is then cut open and the liver taken out. This is then cut into strips and hung on a pole about four or five feet in length. The performers then commence dancing around it; smacking their lips and making all sorts of grimaces; showing a great desire to get a taste of the delicious morsel. After performing these antics for a while, some one of them will make a grab at the liver, biting off a piece, and then hopping off, chewing and swallowing it as he goes. His example is followed by each and all the other warriors, until every morsel of the liver is eaten. Should any particle of it fall to the ground, it is collected by the medicine-man in the palm of his hand, who carries it around to the dancers to be eaten and his hands well licked.

After disposing of the first dog, they all sit down in a circle, and chat and smoke a while until another dog is thrown in, when the same ceremonies are repeated, and continued so long as any one is disposed to present them with a dog. They are required to eat the liver, raw and warm, of every dog that is presented to them; and while they are eating it, none but the medicine-men must touch it with their hands. Women do not join in this dance.

The object of this ceremony is, they say, that those who eat the liver of the dog while it is raw and warm, will become possessed of the sagacity and bravery of the dog.⁷

The Ainu have the custom of cutting up the liver of the bear, which is one of their sacred animals, and of eating it raw. If a Pima woman ate liver, her child would be disfigured by birth-marks.⁸ The Zuñi hunter takes the liver from his captured game, and, while eating it, exclaims, 'Thanks!'⁹ The Aztecs practised a well-developed system of haruspication, reading omens from the liver or other organs of the slaughtered animal, and the Araucanians of Chile were given to related practices. They dissected the body of a person of distinction in order to examine the liver. If it was found to be in a healthy state, the death was attributed to natural causes; if inflamed, malign magic had caused the death. The gall is extracted, placed in a magic drum, and, after various incantations, taken out and put over the fire in a carefully covered vessel. If, after sufficient roasting, a stone is found in the bottom of the pot, it is known to have been the cause of death.¹⁰

Roman ideas have persisted to the present day. Vesalius recognized a natural spirit emanating from the liver, as a vital spirit came from the heart and an animal spirit from the brain. Mediæval belief attributed to the eating of the liver of a goat good sight after dark, for the goat could see as well during the night as during the day. In *Macbeth* the liver of a 'blaspheming Jew' is one of the concoctions used by the witches.¹ There was a curious belief to the effect that the liver of the mouse increased and decreased with the waxing and waning of the moon. The Saxons attributed many complaints, and some of them rightly enough, to disorders in the liver. Blood that was thick and saturated was spoken of as 'livery,' i.e. such as flows through the liver. They cured stomach and intestinal troubles by the application of a burned goat's liver 'rubbed somewhat small and laid on the womb,' or stomach.² In Italy at the present day a fresh human liver, especially that of a woman, is believed to confer magical powers upon the one who eats it.³ This may be directly related to the belief recorded by Pliny that the liver of the weasel will cure pains in one's own liver.⁴

6. Sneezing.—From time immemorial the sneeze has been deemed worthy of notice and has usually elicited some form of salutation from bystanders or some expression from the agents. The phrase, 'not to be sneezed at,' has behind it an importance attaching to the act of sneezing to which the whole human race bears witness. Even children notice it as something peculiar and have sayings of their own, such as 'Scat!' or 'Shoo!' The origin of the importance attaching to sneezing is thus a question of psychological import as well as one of culture diffusion.

'It is,' as W. R. Halliday has remarked, 'per se a startling phenomenon to find the body, which in normal action is the slave and instrument of its owner's will and intention, behaving in a way independent of his desire or volition. Simply because it is involuntary, the twitching of the eyelid or the tingling of the ear must be miraculous. And primitive man finds a significance in everything which attracts his notice, particularly in cases where there is no obvious cause.'⁵

This is good psychology, and ample facts could be adduced to support it. The superstitions connected with sneezing and the omens drawn from it are noticed in art. NOSE, vol. ix. p. 398, and need not be repeated here.

7. Miscellaneous.—Many of the American Indian tribes attach some significance to belching, crackling of the joints, ringing in the ears, twitching of the eye-lid or arm or leg. Thus the Navahos frequently omit or postpone a journey if the one intending it belches or has a ringing in the ears; a Micmac, however, considers belching a sign of good luck in hunting—the hunter will soon find game. European peoples, likewise, often attach some prophetic meaning to such bodily involuntary disturbances.

W. D. WALLIS.

PRODUCTION (of wealth).—The contact of ethics and economics is more directly at the distribution (*q.v.*) and the consumption (*q.v.*) of wealth than at its production. Because it put

production before them, the classical or formal economics has often been called soulless. But it was natural at that time to put stress on the increase of capital, and on the great merit of saving. And it was easy for readers to slip wrong meanings into the terms 'productive' and 'unproductive spending' and 'productive' and 'unproductive labour.' Nor did economists wrong the actual system; it, too, made production the measure of prosperity, regarded wages as the means of keeping labour efficient, and saw in high interest and profit the best guarantee for the upkeep of capital. Neither the economists nor the system were without good reason; for, whatever the best use and distribution of wealth, these are limited by the amount of it, and by the efficiency that can be given to the three agents that produce it—nature, capital, and labour.

It is through labour that the efficiency of nature and capital is discovered and made real. Capital is its product; and, while nature does all the work, it needs directing. One has only to compare the unimproved value of nature in land and beast, plant and mineral, heat and electricity, with the value that only minds can give. Hence two ethical topics are traditional in the text-books, when they are dealing with labour as producer. One concerns its quantity, the other its quality. The first is connected with the doctrine of Malthus (see MALTHUSIANISM), the second with education, and not merely technical education, but even more with its product in grit and conscientiousness. The two questions have now a unanimous answer from ethics and economics.

When, however, we ask about the fitness not of the labourer for the economic system, but of the system for the labourer, the question becomes critical. The division of labour that is essential in the system may mean to the man monotony, ill-health, and loss of the market for his skill. All the books, since the *Wealth of Nations*, discuss the advantages and disadvantages, but the only practical question now is how to meet the disadvantage from the gain. This has been the work of factory and other labour legislation. At first the argument for higher wages, for shorter hours, and for better health was their economy as measured by the work done. Labour, however, does not rely on this argument; it claims a better share on the ground of justice; it refuses to abide by the open market measure of its price. And it is still true, though less than before, that the harder and more debasing the labour, the worse it is paid. The reason is that the lower the grade, the greater the competition. There are two ways of reducing the competition: one by combination, the other by moving some of the stress from lower to higher grades. The latter is the perfect way. It has been universal in economics since the death of the iron law of wages; the doctrine that cheap labour is necessary has come so near its end that it has disappeared from press and platform; and the right way tends to make itself permanent and easier. But progress on it must be slow, and its results are mainly enjoyed by the next generation. And so, though it would be even more necessary in a socialistic system than in the present one, there is nothing like a militant spirit on behalf of it, as there is for the other way.

Here too the quarrel between ethics and economics has been settled. But one far more serious has opened between them, on the one side, and the actual working of the industrial system. It did not appear in the early days of capitalism, when competition was unchecked. This made for the greatest production of wealth, and to ethics it seemed that the rude justice of the market could be made more and more equitable by equalizing

opportunity. Thus it was both the moral and the economic policy of the 19th cent. to keep the course open and see fair play. It was a new policy in that it deserted regulation for competition. But competition has become more and more regulated from within. The advantage of one large over many small units of production has led to aggregations of capital that give virtual monopolies; and the advantage of collective bargaining has brought an aggregation of labour, and another of employers to meet it. The original notion was that competition would give the best form of co-operation; it was a child-like faith that one hates to surrender. But the competition has come to a state of war in which the morals of war play havoc; and they do it without remorse, because a class conscience has made itself superior to private scruples and regret.

The concentration of capital has not in itself been prejudicial to production, for it seeks to regulate rather than limit the output; it obviates the waste and dislocation of too many plants and shops, and the advertising and other costs of commercial rivalry; and there is plenty of scope for competition within. The evils have been notorious: in company promoting, in crushing rivals, in controlling prices as buyer and as seller. And mere size may prevent the coming of a competition that would be healthy. But the best course is to accept the natural development from competition to amalgamation, and to meet the evils by developing regulation, from which, indeed, monopoly was never made exempt. Co-operation is always the final word. Competition is only a means, and a better means the less it is a jostle, and the more it is a directed course, where there is no loss in the struggle.

Unlike the concentration of capital, the concentration of labour easily becomes prejudicial to production. To over-time, piece-work, all speeding-up and labour-saving, there is opposition; and no measures are taken, as by the old guilds, to prevent fraud and incompetence. This is only another instance of the division of function, and nothing to condemn. But, again, it is a competition that has broken away from co-operation. The hostile relation of master and man is thought to be not incidental, but inevitable and permanent. The men see that it is the interest of the management to use as little labour as possible, and they think that the owners are an incubus, and dividends a tax on their wages. As well, therefore, try to instruct a nation at war in the arts of peace as point to the injury they do and the loss they suffer; they think the injury to be deserved, and the loss to be a sacrifice for their class. To many of them the crimes of syndicalism are no more criminal than machine-breaking was at an older day. There are several things that keep the war civilized; but the main consideration is failure or success; and in either event the damage to the oppressor is always a pleasure. In times of peace a union is always preparing for war; men who are not members are denied the right to work; and others of the old natural rights and duties are made subordinate. It has been futile to insist on them, for an unnatural system is thought to make right wrong.

The contentions against the system are often ignorant, but, as a rule, they are honestly urged; and so, as in the days of slavery, it is the system itself that holds the centre in an ethical view of industrial life. It is a late system, and the forces within it have always prevented it from resting where it is. But they may be directed, and it may grow, in either of two ways that have a very different moral value. The root of the system, and the directions in which it grows, may best be seen from its origin, and as a stage in the history

of industry. The older forms are never quite superseded, and they may all be seen to-day.

In the earliest system the family was an industrial unit supplying nearly all its wants; there was a division of labour according to sex and capacity; with slaves and officials the unit grew large, but kept its unity even when the slaves were hired out, or were employed in producing for a market. When a family became too large for its land, it was natural for some members to learn skill in a trade, and to confine their labour to it, working for other families, often living with them till the job was finished, or having the work brought to their forge, oven, or loom. Thus came the formation of artisan families; and tools, skill, and custom passed down like the land. So far the payment is almost all for labour. At a later stage, when the workman began to keep a stock of raw materials, his profit included interest as well as wages; and he had apprentices and hired labour. The first great split in the industrial system was complete—the separation of the workman from the soil. Industrial capital increased, but there was not yet capitalism, for the owner took little risk of producing on the chance of a market; the customer was still the employer. Capitalism came when the risk was definitely undertaken. The *entrepreneur* was sometimes the manufacturer, oftener the merchant; but the work of those two—the work of making, moving, and selling the product—can be distinguished from the more invisible work of ordering it and finding a market. This is the work of the *entrepreneur* or business man. In the art. DISTRIBUTION it is explained how the business man is the pivot of the system, guarantees to all the other agents of production their share in the price, and pays himself from the residue.

Thus the second great separation of labour from the other agents was the separation from capital. It is often held that both separations were by dis- possession, and that they were an evil. But no one looks for peace by undoing either—by replacing men on the land, or by giving them the capital that employs them, that each may employ himself. Nothing would give greater stability than for workmen to be shareholders in the enterprise that employs them, or in others; and it would be the best kind of revolution if unions tried to establish themselves in business. But the great majority of owners must always lend their capital instead of using it themselves. And, if we look from the owner to the real user, we find that the emphasis is on him, the acting capitalist, and not on the capital. Just so it is on the sculptor and the inventor, though nature does all the work that is done by the invention, and though the statue is all in the marble.

The process of production has become more and more roundabout; an ever greater distance has separated producer from consumer. The workman is bewildered by the number of intervening agencies; and to his divorce from land and capital he adds, for a general source of inequity, that the system allows many parasites to live on his product. He has been taught that the real value of a product comes from the labour spent on it, and he sees that, besides rent and interest—the extortions of the idle ownership of land and capital—money and middlemen lay hold on his work, and make a better living out of it than he does. He does not see that the production of a commodity is not complete—its value is not produced—till it is in the hands of the consumer. If advertising, drumming, and commissions do not help to sell it, they will not be employed. Useless measures of commerce are no more secure than labour that is made useless by a machine. It is through economy in

marketing, no less than in manufacturing, that large capital has its advantage. Everything useless and predatory tends to be expelled; for everything must be demanded by an employer, if it is to get its price; and, provided there is publicity and knowledge enough, he pays no more for it than he must. It is natural for those whom he employs to think his profit an extortion from them, and that 'what is somewhere gotten is somewhere lost.' But the profit of an enterprise is like the royalty from an invention, which gives more than it gets. Interest is different; it is like the royalty paid for mere ownership, and simply a burden. W. Smart thought that 'the community gets its employing done for it more cheaply than it gets any other service' (*Distribution of Income*², London, 1912, p. 159 f.).

If a system of production were more moral and progressive the more it crushed incompetence, again the present system could well defend itself. Its path of progress is by curtailing cost, and employers are driven on it by the competition of one with another, or with the consumer, who is the final employer. It is a precarious position for a working man, and the thing that really threatens the life of the system. He cannot but want to be a civil servant, and have his future a charge on the community instead of at the necessity or the mercy of competing employers. He is in the majority; and, however little we like it that the lives of men should centre on his livelihood, he has been given the power to bring that about. Wages-boards and courts of arbitration are useful, but they add evils of their own; animosity remains and preparation for war. To co-partnership and often to co-operation (*q.v.*) the war-spirit is actively hostile. The moral situation on the other side is no better; there it is thought that socialism must come, but that everything should be done to resist and postpone it. And both sides think that they are acting in the highest human interest, and that this consists in giving the freest scope that can be given to our spirit.

It is something that they make the same appeal, for so far the dispute becomes a question of means. The question breaks into two, one about the best management of the forces of production, the other about their ownership. The best management of an enterprise is from within; the bane that weakens a public enterprise is interference from without. Democracy has kept some of its self-denying ordinances fairly well, but it is far easier to refrain from interfering with the bench or the navy, where there are no profits and the voters are few, than with the conduct of a railway, and with industries that are less subject to mechanical regulation. If there were as little interference as that of the shareholders in a going concern, and if the same price were paid for ability, the efficiency and even the enterprise might be as great. Assuming the best in regard to management, would it be well to pool the stocks of every enterprise, and pay the owners a uniform rate of interest? This is what socialism recommends, because it assumes that there must be an annual surplus for the ordinary shareholder, the tax-payer.

A rapid change to such a system would intensify the moral chaos of the present; if it has any chance of working well, it must come gradually and through a long apprenticeship in the joint-stock system. And then, no doubt, the single amalgamation of socialism would lose its attraction. But the demand for it will persist in embittering the present relations of owners and workmen unless the number of owners is greatly increased. The best way to retain the freedom and efficiency of the present system is by such increase. It is a form of co-operation like that of the co-operative

distributing societies, and, like them, would be far more effective than co-partnership and the co-operative ownership by workmen in the same enterprise; and it would give these a fairer field. If the thing were easy, it would have come long ago; but it was never less difficult than now; and it could be made easier. It would offer a stronger impulse to thrift than the fear of a rainy day has proved. The forecast of such a development is at least as historical as that of a single amalgamation, which is the hope and the fear now confounding every effort at amelioration; but it will not come of its own accord.

LITERATURE.—The general text-books on economics all devote a main division to production, and P. H. Gastberg, *Production*, London, 1907, shows that nearly the whole subject may be seen from this point of view. The earlier books dealt mainly with the three agents of production, the later with their organization. This is naturally approached through its history, and C. Gide, *Political Economy*, tr. C. H. M. Archbald, New York, 1914, well illustrates the closing of the old division between deductive and historical economics. The history of production from the point of view of organization can be read in C. Bucher, *Industrial Evolution*, tr. S. M. Wickett, New York, 1907, and can best be studied in the increasing literature of economic history which deals with particular periods, and publishes contemporary records. Recent collections are *Economic Annals of the Nineteenth Century*, 1801-20, ed. W. Smart, London, 1910, and *English Economic History, Select Documents*, compiled and ed. A. E. Bland, P. A. Brown, and R. H. Tawney, do. 1914.

W. MITCHELL.

PROFANITY.—1. Meaning and use of the term.—In popular usage the term 'profanity' is frequently limited to a verbal reference and identified with 'profane swearing.' It is perhaps unnecessary to say that such a limitation cannot be justified by historical and etymological investigation. It is undoubtedly true that an unfitting and frivolous use of certain verbal symbols has been almost universally included in the class of practices condemned as profane. The names of the gods in primitive religions and the name of the one God in more advanced religions have been considered as too sacred to be ordinarily employed, and even the sacred usage has been restricted to certain privileged persons. 'Thou shalt not take the name of the Lord thy God in vain' is one of the commandments, and the OT writers constantly warn the people against 'profaning the holy name' of Jahweh. Sacred formulæ have been, in all religions, rigorously safeguarded, and the employment of them by other than authorized persons at the proper time and place has been regarded as constituting the sin of profanity. It is true also that, by investigating those prohibitions having a verbal reference, we may approach an understanding of the ideas underlying the disapproval of the profane. The words which must not be carelessly used refer to a world which is separated by a wide and deep gulf from the world of the ordinary, and the fact that verbal formulæ are of a somewhat artificial origin indicates that the separation is to be maintained not so much by a recognition of rational distinction between the two worlds or an appreciation of the inherent superiority of the sacred as by elaborated and external regulations. Yet, notwithstanding all this, the term 'profanity' includes far more than mere indifference to the distinction in verbal matters, and the wider meaning must be clearly kept in view.

The etymology of the word 'profane' (lit. 'before or in front of the shrine') may give us a certain amount of guidance because of its spatial suggestiveness. There immediately arises in our minds the idea of a walled or fenced enclosure within which only peculiarly precious objects and specially privileged persons may remain, and outside of which there is a world of rigorously excluded persons and things having lesser assigned worth than those within. The same kind of suggestion comes to us from a consideration of the Greek

words, *βεβηλος* and *βεβηλῶς*, which are used to indicate profanity in the NT, and which introduce the idea of 'threshold'—a threshold strictly guarded, which should not be crossed, but yet which is crossed by those to whom the epithet 'profane' applies. Such persons properly belong to the world outside the sacred edifice, but they illegitimately enter in.

2. The idea of artificiality.—As we consider these spatial implications, we arrive, first of all, at the idea of artificiality. There is no intrinsic reason why one particular place should be more sacred than another. If the temple had been founded a few yards away from its actual position, the ground which is now profane would have been rendered sacred, and that which is now sacred would have retained its common or profane character. In primitive religions the location of the sacred and, contrariwise, of the profane depends very frequently upon chance. The importation of reason for the distinction comes entirely from the outside. We are thus not surprised to find that, *e.g.*, in certain Australian religions the totemic animal or thing which is worshipped has no intrinsic value entitling it to special reverence. Profanity lies in a failure to recognize an imposed rather than an actual value. The sacred object has not such a position in a universal scheme as will entitle it to permanent reverence. It has not within itself a power of protection sufficient to guard its sacredness. It follows, more generally, that the religions which most commonly avail themselves of the distinction between the sacred and the profane are not those which have attained to the highest level of security. They are still at the stage of struggle. Their gods have still to compete with the gods of other tribes, and the people who worship the particular gods, and who thus acquire something of their sacredness, have to be preserved by external means from the infiltration and pollution of other tribes. Even in the OT the disapproval of profanity is closely connected with the giving of worship to other gods, as, *e.g.*, participation in the rites of Molech (cf. Lv 20⁹). The house of Israel is profaned among the heathen because the people have disregarded the restrictions upon which the exclusiveness of the nation depended (cf. Ezk 36^{20, 23}). The stage has not yet been reached at which it is recognized that all people may be sacred, and that there are no other gods who can come into rivalry with the God of Israel. It is therefore easily intelligible that the distinction between the sacred and the profane is based originally, for the most part, upon definite injunction and prohibition. The religion or the body of sacred things has to be zealously guarded by law, and the profane person is the man who transgresses the law protecting the sacred ideas and rites. Of course, in the more advanced religions these ideas and rites acquire a greater degree of intrinsic value, but within the region of thought, where the distinction between sacred and profane is most intensely regarded, such value either has not yet been recognized or has been forgotten, and we may use the word 'artificiality' in order to draw attention to this dependence of the distinction upon external support.

Perhaps the most striking illustrations of artificiality are to be found in connexion with the verbal formulae, prescriptive of rite or expressive of doctrine, to which we have already referred. The connexion between the sacred character which they now possess and their inherent meaning is exceedingly weak, and it is just where this meaning is most completely overlooked or forgotten that the disapproval of an unauthorized use of the formulae is most intense. The more elaborate a system of ceremonies is, and the more clearly it

bears upon it the marks of artificiality, the more numerous are the injunctions against profanity. The more complex the rite, the stricter is the priestly monopoly regarding it. The danger of profanity seems to be regarded as in inverse proportion to the degree of intelligibility possessed by that which is liable to desecration.

Among the Australian tribes it is an act of profanity to speak the names of some of the totems, and even the men of certain tribes have a sacred name besides their ordinary name which must not be made known to women and children, and must not be used in every-day life. In Vedic times in India we find the doctrine of 'secret names' of the gods, and these names were so sacred that it would have been considered profanity to reveal them to the vulgar. In the same land also, even at the present day, it is considered a disgraceful thing for a wife to utter the name of her husband, and ceremonies of initiation are accompanied by the giving of a sacred formula, or *mantra*, which has value rather as given by the priest than as understood by the initiate, and which the initiate is forbidden to reveal to others if he wishes to escape the sin of profanation of sacred things.

3. The idea of separation.—Another idea, related to the foregoing and also suggested by the spatial etymology of the word 'profane,' is that of absolute, abrupt, and rigorous separation between the sacred and the profane. The sacred enclosure is definitely separated by wall or some other effective protection from the profane world, and access from the one world to the other is only through a rigorously-guarded portal. The dominant characteristic of the two worlds is their heterogeneity. The close connexion between the ideas of artificiality and separateness is obvious. It is the fortresses without natural strength that require the broadest and deepest moats. Risks of contact between the sacred and the profane must be avoided at all costs, and the mind of the worshipper must be kept constantly alive to the dangers of the profane.

(a) *Place*.—An exceedingly large class of prohibitions against the profane have reference to separateness of place. In many of the primitive religions we find emphasis upon the profanity of entering the place where the sacred emblems of totem-worship are deposited, and all ordinary work within the sacred enclosure is forbidden. We find the same attitude also in connexion with OT worship. Ezekiel, *e.g.*, prescribes elaborate measurements in order 'to make a separation between the sanctuary and the profane place' (42²⁰), and by the same prophet a certain portion of the city land is called 'profane' to distinguish it from the portion assigned to priests and Levites. One of the chief arguments brought against St. Paul by later Jewish orthodoxy seems to have been that he had profaned the Temple by bringing into it men of an alien or unprivileged race.

(b) *Time*.—Very commonly also profanity is held to consist in disregard of a strict division of time. The ordinary world is so separate from the sacred that the occupations of the former have to be altogether given up when the latter is entered. The time which is assigned to the sacred must be characterized by rest from the regular forms of labour. If at such a time work has to be carried on at all, this work must have an essentially religious character and be freed from connexion with utilitarian considerations. If it bears any resemblance to ordinary work, it can be redeemed from profanity only by the fact that it is performed by privileged persons. In Mt 12⁵ the priests are said to be without blame when they profane the Temple, because, though performing on the Sabbath actions similar to those of ordinary life, they are yet absolved by reason of their sacred office from the sin of Sabbath desecration. This failure to observe the sacredness of the Sabbath and of other special times and seasons is, in the Jewish religion generally, one of the most frequent grounds for the accusation of profanity (cf. Neh 13¹⁷, Ezk 22^{8, 23³⁸}).

(c) *Tabu*.—An intense desire to keep the profane

at a distance is clearly seen in connexion with tabu (*q.v.*) and the religions in which this conception is important. The word connotes exclusiveness (being derived from a root *ta*, 'mark,' and *pu*, an adverb of intensity). It is opposed to *noa*, the general or the common. It is from this idea of tabu that the distinction between sacred and profane arises in many communities, and the rigour of the distinction owes much to the awe which the tabu inspires. Profanity is a grievous sin and at the same time more frequently possible where the transition from the ordinary world to the profane is made as difficult as possible. The constant demand is that all actions and interests belonging to the ordinary world must be left behind by the would-be initiate. Literal contact is of course forbidden, and the prohibition extends to the contact involved in the taking of food. The food of the profane must not be eaten by the initiated, and, contrariwise, the food of the priests must not be eaten by the profane. The latter must not even have the degree of contact which is implied in the sight of the sacred objects. In some communities certain instruments of worship are profaned if, *e.g.*, women catch the faintest glimpse of them. The whole idea of asceticism has originally a very close connexion with this idea of absolute separation. Everywhere also elaborate ritual is accompanied by the most zealous care for the separation of the priestly class from the ordinary community. Many of the uses of the word 'profane' in the OT have reference to this withdrawal. The priests are to symbolize their separateness by changes of garments 'when they enter into the inner court.' They are to avoid ordinary food and the ordinary forms of family relationship, and in many other ways prepare themselves to teach the people 'the difference between the holy and profane' (cf. Ezk 44¹⁷⁻²⁶). The erring priests are those who have themselves 'put no difference' (22²⁸).

4. *Profanation of sacred doctrine.*—The danger of profanity also attaches itself to an incautious use of the body of sacred doctrine. This is often regarded as the exclusive property of certain privileged classes. The ancient sacred scriptures of India, *e.g.*, are profaned if they are read or taught to people outside the prescribed classes. In various parts of the literature terrible penalties are announced for those who venture to teach the doctrines of the Vedas to a Sūdra.

'The ears of the Sūdra who hears the Veda are to be filled with molten lead and lac' (Sahkarāchārya, Commentary on *Vedānta-Sūtras*, 1. iii. 38 [SBE xxxiv. 223]), and, if he dares pronounce them, 'his tongue is to be slit.'

Occasionally the idea is that the sacred doctrine is also to be kept strictly separate from other truths or opinions which are of lesser value. To mingle sacred and other knowledge is in itself profanity. Perhaps there is a lingering trace of this idea in the use of the word 'profane' in the First Epistle to Timothy. Timothy is urged to 'refuse profane and old wives' fables' and to avoid 'profane and vain babblings, and oppositions of science falsely so called' (1 Ti 4⁷ 6²⁰). The idea of a strict line of demarcation certainly persists in the mediaeval distinction of sacred and profane learning.

5. *Reasons for distinction between sacred and profane.*—So far we have been content with noticing the character and the breadth of the distinction between the sacred and the profane. If we go farther and ask for reasons for the distinction—reasons which lie deeper than mere artifice—we shall find these partly in belief in a divine revelation and partly in tradition and the social custom and pressure enshrined in such tradition. Though we have emphasized the artificial character of many of the defences of the sacred, it does not follow

that these may not have previously involved a clearer consciousness of the inherent value of what is regarded as sacred. The original reason for the consecration of certain experiences and disapproval of unauthorized incursions into the sphere which they occupy may have been a sense of a divine revelation, even though that reason may now have been forgotten. The sanctuary at Bethel may have, in later times, become a home of priestcraft, but none the less it was the vision of the angels of God ascending and descending that gave it originally a sacred character. Even in religions where a divine revelation is not recognized the artificial character of the interdictions against profanity is not the whole of the matter. These interdictions are not of recent growth; they enshrine tradition, and in this tradition we may perceive the embodiment of a social consciousness. The totem-animal is protected from profanity because it symbolizes the spirit of the clan and represents a social pressure which the individual recognizes as superior and authoritative. Among men more religiously-minded or more enlightened this law of the community is regarded as the law of God, and the profane person is one who transgresses the ordinance of God and deserves, like the prince of Tyre, to be 'cast as profane out of the mountain of God' (Ezk 28¹⁸). But whether the divine origin of the law and its reference to an all-comprehensive divine community be recognized or not, the anti-social character of profanity seems to be an unmistakable reason for disapproval of it. The profane person is the anti-social person who refuses to recognize the code of the community, and therefore one upon whom the law falls. Esau is called a 'profane person' seemingly for the reason that he sold his birthright or despoiled his connexion with the community (He 12¹⁶). In India the person who has broken through caste regulations becomes at once profane and a source of pollution for those who remain within the caste. The anti-social character of profanity is also illustrated by the frequency with which accusations of profanity are brought against those who indulge in magical practices. It is no doubt possible to speak of profaning a magical rite in the sense of doing it in an unaccustomed and ineffective manner, but, for the most part, magic as a whole is itself condemned as profane just because it indicates a separatist procedure and a contravention of the regularized and socially approved worship of the community. Otherwise it is difficult to see why magic rites, which have a considerable resemblance to religious rites, should be regarded with such horror as profane in those communities, at least, where a social worship has been firmly established.

6. *An inadequate differentiation.*—We have emphasized certain inadequacies in the distinction between the sacred and the profane, arising from the artificial and abrupt character of the distinction. But this must not blind us to the elements of enduring value associated with these conceptions. Among primitive peoples the idea of tabu has often been the foundation of morality, and in the more advanced communities the rigorous protection of the priests from possible profanation may indicate a regard for personal purity as well as for privilege. The development of the social consciousness which underlies the abhorrence of profanity has been an ethical asset, and the asceticism by which the heterogeneity of the sacred and profane worlds may be transcended has often been a first step towards personal holiness.

Yet it must be admitted that the distinction between sacred and profane, as it is usually applied, does not belong to the highest level of thought. It still betrays the dominance of merely spatial categories; it is still influenced by the idea

that the divine is limited in the sphere of its operation, that God sets a seal upon certain persons, places, and times, relating them with special closeness to Himself, and leaving the rest of the world to be reckoned as common and profane. We must transform the distinction if we are to retain its underlying value. We must be permitted to honour as sacred the whole of the world which God has made, and encouraged to condemn as profane, not certain specified places, things, or persons, but the spirit of the dweller, whether in the temple or in the street, whose

vision is narrow and whose aim is low, who fails to recognize that the way to the Holy of Holies lies along the path of the good citizen, and that even in the lonely wilderness he may find 'the very gate of heaven.' See, further, artt. HOLINESS.

PROPHECY.

American (L. SPENCE), p. 381.

Christian (E. K. MITCHELL), p. 382.

PROPHECY (American).—Among both the semi-civilized and the savage aboriginal peoples of the American continent prophets were held in peculiar veneration, and on many occasions they have moulded the destinies of tribes and nations. The advent of the white man in America, we are informed by many authorities, was heralded by numerous prophecies, but in most cases the authentic character of these is open to the gravest doubt. The vision of Papantzin, sister of Moctezuma, Tlatoani of Tenochtitlan (Mexico), is a case in point. This princess, it is said, fell into a death-like trance, on emerging from which she said that she had been led by a spirit through a field littered with dead men's bones to a place where she had seen strange, bearded, white men approach the coast of Mexico in large vessels. Another prophecy appears to have been current in Mexico in pre-Columbian times, to the effect that Quetzalcoatl (a god whose worship differed in certain of its characteristics from that of the other native cults, and who had come from the Land of the Sun and had been driven from Mexico by hostile deities) would one day return. The coming of Cortes and his comrades was regarded by the Mexicans as a fulfilment of the prophecy, and the title of Teule ('godlike being'), conferred by them upon the Spaniards, is proof that the tradition really existed.

Among the Maya of Central America prophecies were delivered by the priests at stated intervals. Writings which profess to incorporate some of these are to be found in the so-called books of Chilán Balam (g.v.), and these also deal with the advent of Europeans. There are not wanting statements to the effect that in Incan Peru prophecies were current about the coming of white strangers, but the events alluded to in at least one of them are not in accordance with known facts.

In modern times numerous prophets have arisen among the N. American Indians, usually in periods of crisis in the history of the tribe. In 1675 Popé, a medicine-man of the Tewa (Pueblo Indians) near San Juan, New Mexico, was charged along with others with the crime of witchcraft. He preached the doctrine of independence from Spanish rule and the restoration of Indian customs, and instigated a wide-spread conspiracy to drive the Spanish colonists from the country. Popé, along with his disciples, Catiti, Tapatú, and Jaca, set apart 13th Aug. 1680 as the day of massacre. Extraordinary precautions were taken to ensure that no European should learn of the intended revolt, but the news leaked out, and Popé had perforce to strike three days before the time. Four hundred Spaniards were massacred and Santa Fé was besieged, but a successful sortie ended in the rout and discomfi-

Hebrew (E. KONIG), p. 384.

ture of the Indians. The Spaniards were, however, forced to abandon the town and to retreat to El Paso. Popé washed with a native preparation those of his followers who had been baptized into the Christian Church, burned the churches, and obliterated every remaining mark of Christianity. But his rule became so despotic and was followed by such misfortunes that he was finally deposed. He was re-elected, however, in 1688, and died in 1692.

Tenskwatawa ('open door') was a famous prophet of the Shawnees and a twin brother of Tecumseh. An ignorant and drunken youth, he was one day engaged in lighting his pipe when he fell back in a state of trance. His friends, believing him dead, were preparing for his funeral when he revived and stated that he had paid a visit to the spirit-world. In 1805 he assembled his tribesmen and their allies at Wapakonita, now in Ohio, and announced himself as the bearer of a new revelation from the Master of Life. He declared that, whilst in the spirit-world, it had been granted to him to lift the veil of the future and behold the blessedness of those who followed the precepts of the Indian god and the punishments of such as had strayed from his path. He vehemently denounced witchcraft and medicine practices, the drinking of 'fire-water,' the intermarriage of Indian women with white men, the wearing of European clothing, and all White customs and institutions. If these things were eschewed, the Master would receive the Indians into favour once again. He further announced that he had been granted the power to cure all diseases.

These statements caused great excitement among the people of his tribe, and those who dealt in witchcraft were boycotted. From time to time Tenskwatawa announced further wonderful revelations to his followers from his abode near Greenville, Ohio. He predicted an eclipse of the sun which took place in the summer of 1806, and this greatly enhanced his reputation as a prophet. His apostles travelled from tribe to tribe disseminating his doctrines, and a belief arose that within four years all those who did not credit his predictions would be overwhelmed in a great catastrophe. Shortly before the war of 1812 a confederacy was entered into for the purpose of driving out the Whites, but Harrison's victory near Tippecanoe destroyed both the faith and the movement connected with it. Tenskwatawa received a pension from the British Government. Although of somewhat forbidding appearance and blind of an eye, he had great gifts of fervour and personal magnetism.

Kanakuk, the prophet of the Kickapoos, received inspiration from the career of Tenskwatawa. In 1819 the Kickapoos ceded their extensive territory

in Illinois to the United States, and were assigned a reservation in Missouri. This region, however, was occupied by the unfriendly Osages, so that the Kickapoos were unable to take possession of it. Kanakuk exhorted his people not to abandon their territory and preached a moral code which forbade superstition, the use of alcohol, and internecine quarrels, promising them that, if they recognized it faithfully, they would in time inherit a land of plenty. He became chief of that remnant of them which remained in Illinois. He was in the habit of displaying a map or chart of the true path through which the virtuous must proceed, beset with fire and water, did they desire to attain the happy hunting-grounds, and he furnished his disciples with prayer-sticks engraved with holy symbols. Ultimately the tribe was removed to Kansas, but Kanakuk remained its chief until his death from smallpox in 1852.

Tavibo ('white man'), a Paiute chief and medicine-man, when his tribe was forced to retreat before the Whites, went into the mountains to receive a revelation, and prophesied on his return that the earth would swallow the Whites and that their possessions would be given to the Indians. But his followers were unable to entertain the idea of an earthquake that would discriminate between the Red Man and his enemies. He therefore sought a second vision, which revealed to him that, although the Indians would be engulfed along with the Whites, they would rise again and would enjoy for ever an abundance of game and provisions. Followers flocked around him and, when they became sceptical, he had a further revelation, which told him that only those who believed in his prophecies would be resurrected. He died in Nevada about 1870.

Wovoka, the son of Tavibo, was responsible for the 'Ghost-dance' religion and prophecies, perhaps the most important from a political point of view in the history of the relations of the Whites and Indians. This creed he nurtured among the Paviotso of Nevada about 1888. It spread rapidly until it embraced all the tribes from the Missouri to the Rockies and even beyond them. Wovoka (who was known to the Whites as Jack Wilson), like other native prophets, declared that he had been taken into the spirit-world, where he had received a revelation from the god of the Indians to the effect that they would be restored to their inheritance and united with their departed friends. They were to prepare for this event by practising song-and-dance ceremonies given them by the prophet. During these dances many of the Indians fell into a condition of hypnotic trance, and intense excitement usually prevailed. The movement led to an outbreak in the winter of 1890-91. It has now degenerated into a mere social function.

Smohalla was the originator of a religion current among the tribes of the Upper Columbian River and the adjacent region. The name (Shinoqula) means 'preacher,' and was conferred upon him after he had attained celebrity. In his boyhood (he was born about 1815 or 1820) he frequented a Roman Catholic mission, from which he appears to have derived certain of his religious ideas. Beginning to preach about 1850, he quarrelled with a rival chief, left his tribe, and wandered south as far as Mexico. On returning, he declared that he had visited the spirit-world, whence he had been sent back to deliver a message to the Indians. The substance of this was that they must return to their aboriginal mode of life and eschew the Whites, their teachings, and their customs. Smohalla found many adherents, and the sect which he instituted, known as 'The Dreamers,' and possessing an elaborate ceremonial, has maintained its religious organization.

The mysterious sect or secret society known in Central America as Nagualists, which had for its object the destruction of Christianity, numbered several prophets among its priests and adherents. Jacinto Can-Ek, who led a Maya revolt at Valladolid, Yucatan, in 1761, prophesied the destruction of the Spaniards. Maria Candelaria, an Indian girl, headed a similar and previous revolt, and likewise falsely prophesied the Spanish downfall.

LEWIS SPENCE.

PROPHECY (Christian).—1. Primitive form.—The opening of the Christian era was signalized by a remarkable awakening of the spirit of prophecy, and this was accepted by all believers as the fulfilment of Jl 2²⁸. (Ac 2¹⁷). Moreover, our Lord Himself had seen in His own equipment and ministry the fulfilment of the promise of the Spirit (Is 61¹, Lk 4¹⁷). And 'to the people he was a prophet, strong in action and in utterance' (Lk 24¹⁹; cf. 13³² 7¹⁶, Mt 13⁵⁷ etc.). Earlier still John the Baptist had attracted the multitude by the declaration that the baptism of the Spirit was at hand (Mk 1⁸). And Zacharias and Simeon, Elisabeth, Mary, Anna, and many others who were 'looking for the consolation of Israel' had borne witness a generation earlier to the presence of the Spirit and His fuller advent as heralding a new era of divine grace (Lk 1⁵⁵, 2²⁵). Furthermore, the whole Jewish Apocalyptic literature of the period testifies to the general expectation of the dawning of 'the last days' and the bestowal of the spirit of prophecy.

The demonstration of the Day of Pentecost was the opening of a new era in the religious history of mankind (Ac 2¹⁶). Tongues were loosened, and the impulse to prophesy spread like wild-fire among the converts to the new faith. This was natural and indeed inevitable under the circumstances. Believers were at once impelled and compelled to account for to themselves and to explain to others the things that were happening among them and what was about to come to pass. For the Day of the Lord had dawned, and they were all eager to know what it meant to themselves and to the world. Looking back over the history of Israel, they sought to trace the purposes of God, and they then projected them into the future in the light of the fresh dispensation of grace. This was Christian prophecy in its primitive form, and the apostles were its first exponents. But other voices were soon heard explaining the ways of God and expounding the gospel of salvation. Stephen arraigned the Jewish leaders for resisting the Holy Spirit, killing the prophets, and murdering the Son of man (Ac 7⁵¹).

2. Spiritual gifts differentiated.—The persecution which followed the stoning of Stephen scattered the disciples widely and multiplied the number of those who sought to interpret 'the signs of the times.' It thus came about that each little community of believers had those among them who 'spoke as the Spirit gave them utterance' and were accounted as prophets of the Lord. Many were no doubt often overwrought and distraught and promised things that failed of fulfilment; but the fittest survived and held high rank among those who set themselves 'to minister unto the saints.' The freedom that prevailed everywhere in public assembly encouraged each disciple to exercise whatever gift the Spirit had bestowed upon him for the upbuilding of the brotherhood.

As time went on, these gifts became distinguished from one another and more sharply outlined (1 Co 12^{28f.}).

It is St. Paul who gives us the first clear classification of 'spiritual gifts' and announces that they have been bestowed for the common good. 'God has set people within the Church,' he says, 'to be first of all apostles, secondly prophets, thirdly teachers, then workers of miracles, then healers, helpers, administrators and speakers in tongues of various kinds' (1 Co 12^{28f.}; cf. 12^{1f.}, 1 Th 5²⁰, Ro 12⁶⁻⁸, Eph 2²⁰ 4^{11f.}, 1 Ti 1¹⁸ 4¹⁴, 2 Ti 1⁶). And yet these gifts were not bestowed singly and to the exclusion of all the others. For the apostles prophesied, taught, governed, and exercised their manifold ministry. And the prophets also taught and sometimes spoke in a tongue, wrought miracles, and healed. But the individual became classified by his most conspicuous gift, and each little community of believers looked to this one or that for the performance of his chosen function. Certain gifts, however, from their very nature, were unstable and intermittent—e.g., speaking in a tongue, working miracles, healing, and even prophesying. On the other hand, there were gifts that were naturally stable and continuous—e.g., teaching, administering, and governing. The intermittent, unstable gifts were liable to lapse in any given community. There were not enough accredited prophets, healers, or speakers in a tongue to go round; and, where genuine inspiration failed, the pretender often came to the front. St. Paul found it necessary to advise restraint and moderation in speaking in a tongue (1 Co 14^{2f.}); and he also warns against unrestrained prophecy: 'Let only two or three prophets speak, while the rest exercise their judgment upon what is said. Should a revelation come to one who is seated, the first speaker must be quiet. . . . Prophets can control their own prophetic spirits' (1 Co 14^{29f.}).

3. The Church and 'false prophets.'—The freedom of the early years gradually came under the restraint of the general judgment of the Christian communities and their accredited leaders. The stable continuous functions in the life of the Church grew in influence and power. The apostles themselves saw to it that the churches were supplied with permanent leaders, such as presbyters and deacons, who should direct the affairs of the brotherhood and guard the purity of its life and teachings (Ac 6¹⁻³, 11²⁷, 14²³, 15²¹, 21^{10f.}, 1 Th 5^{20f.}, Gal 2^{2f.}, 1 Co 14^{27f.}, Eph 2²⁰, Col 2¹⁸, 1 Ti 1¹⁸). They were careful, however, not to put the ban on the exercise of any God-given power or to restrain any genuine effort to minister in the name of the Master. For every disciple was a member of the 'body of Christ' and under obligation to contribute to the welfare of all; to his own Lord he stood or fell. And yet abuses of freedom were sure to arise, and did occur. Not all saints were sanctified, and impostors and pretenders appeared here and there. The apostles began to recall that Jesus had warned them against false prophets (Mt 7^{15f.} 24^{4f.}). And His forecast was soon fulfilled (Ac 20^{29f.}, 2 Th 2^{2f.}, Col 2^{4, 18}, 1 Ti 1^{18f.}, 2 Ti 2^{18f.} 3^{1f.}, Rev 2²⁰ and often, 1 Jn 4^{1f.}). The appearance of these false prophets, pretending superior wisdom, ere long created distrust and aroused the churches and their leaders to the dangers that threatened their welfare. But as yet there was no recognized 'form of discipline' adequate for the suppression of those would-be spokesmen and pretentious revealers of the secret counsels of God. There were no specific standards by which to test and try those 'spirits.' Standards, however, were sure to be found, and, if not found, then created, by the churches for their protection from vagaries in doctrine and aberrations in life. The apostles, whether in common councils or as

individuals, were the first court of appeal. They based their judgments on the words of the Lord and the mind of Christ. Then the appointment of bishops (i.e. elders or presbyters) and deacons supplied the place of an apostle when he was absent. Letters were a substitute for personal presence. The disappearance of the apostles and the first disciples tended to leave the churches, now widely scattered, open to the invasion of presumptuous claimants to leadership, and the words of the Lord were not often specific enough to meet the case. And who could claim to have the 'mind of Christ'?

4. Warnings of the early fathers.—The rise and development of the monarchical episcopate was here and there favoured and fostered in the interests of sound doctrine and as a restraint against new-fangled notions, foreign to the faith. Hermas, *Pastor* (Mund. xi. and xii.), and Ignatius (Eph. vii., ix., and xvi., Mag. viii., Tral. vi., Phil. ii., iii., Smyr. iv., vii., ad Pol. iii.) are full of warnings and admonitions against false prophets and teachers; and Ignatius especially exhorts to obedience of the bishop. This was his hope for the maintenance of sound doctrine. Clement likewise relies upon the bishops (i.e. presbyters) for the preservation of the unity and purity of the Church (1 ad Cor. xlii.-xlv.). Prophecy, however, was not yet suppressed, but only repressed and somewhat regulated by the rising officials in the Churches. The *Didache* informs us that prophecy was still free and in good repute in Syria (or Egypt), although often counterfeited and condemned (xi. 7-12). Its days, however, were numbered, for it was soon to share the general distrust and opposition towards all extravagant claims to divine wisdom. The Gnostics and Marcion had prophets as well as the churches, and they were sometimes indistinguishable from each other (see artt. GNOSTICISM, MARCIONISM). Then the rise of Montanism (q.v.) was in some respects but a resurgence of prophetism. It was an effort to revive primitive Christian conditions where each believer was free to exercise his God-given gift.

5. Disappearance of the prophetic office.—The churches were now put on the defensive and they soon sought to co-operate in the maintenance of their apostolic heritage. Joint action in councils was the most effective means at hand. This brought the bishops together and greatly increased their prestige and power. The appeal to the words of Christ was enlarged to include an appeal to the teaching and writings of the apostles, and the use of the OT as a book of discipline and standard of doctrine grew in favour. The Law and the Prophets had sufficed for Israel, and the Old Covenant needed only to be supplemented by the New with its apostolic guarantees. Prophecy was thus placed under the restraint of written records, and it was considered more important to interpret the old prophecies than to utter new ones. All the unstable, intermittent spiritual gifts shared the fate of the prophetic. Tongues, miracles, healings waned; and by the end of the 2nd cent. they were all, including prophecy, under the restraint of the regular officials of the respective churches and subordinated to them. Prophecy as well as the rest was not denied its theoretic claims, but it must keep within the bounds of Holy Scripture and the standards of discipline. The pressing primitive need of interpreting the 'signs of the times,' however, seemed to have passed away. Men were now trying to adjust Christianity to its place in the world. There were sporadic efforts to reinstate prophecy as a special function in the life of the Church, but it had served its day (Iren. *adv. Har.* ii. 32; Eus. *HE* v. 7). Its most important and essential element was absorbed by

the teachers and preachers, and the office practically disappeared.

PROPHECY (Hebrew).—1. Soothsaying and prophecy.—According to Cicero (*de Div.* i. 18), there were, traditionally, two kinds of divination, the one based upon an art or theory (*ars*), the other lacking such basis. The former consisted in the application of certain rules which earlier generations believed to have been drawn from the observation of occasional coincidences between certain appearances and certain subsequent occurrences; thus the Greeks (looking to the north) regarded a bird appearing on the left as of evil omen, and one seen on the right as a harbinger of good fortune (cf. *Hom. Od.* xv. 159, 173 f.; so 524, as contrasted with xx. 242), while the Romans, looking towards the south, saw a favourable sign in an *avis sinistra*. Those, again, who cultivated the second main type of divination are described by Cicero as perceiving the future beforehand by means of a certain agitation (*conciatio*), or unconstrained and free movement of the mind. The two modes of seeking to foretell the future are now usually distinguished as divination and prophecy. Now the historical writers of the OT, who have of late been frequently accused of suppressing the truth, do not conceal the fact that in almost every age the first type of prediction had a considerable vogue in Israel.

Thus (a) *ōnēm* is forbidden in *Lv* 19²⁶, *Dt* 18¹⁰, *2 K* 21⁶, *Mic* 5¹², *Jer* 27⁹, *Is* 57³; the term seems to have denoted the observing of cloud-formations and of the weather in general, and certainly the practice of observing the configuration and colouring of the clouds played an important rôle among the Babylonians and Assyrians (cf. C. Bezold, *Ninive und Babylon*, Bielefeld, 1903, p. 85). Again, (b) the practice of rhabdomancy is deplored in *Hos* 4¹²; this form of divination, according to Herodotus (*iv* 67), was found among the Scythians, and Tacitus (*German.* x.) describes the way in which it was practised among the Germans (see *ERE* iv. 827^a). Further, (c) there were people in Israel who believed that they had a connexion with an *ōb*, most probably 'one who returns' (cf. *Fr. revenant*), i.e. a spirit that could not rest in the grave, and might bring tidings from the under world; the pl. *ōbōth* is used in *Is* 8¹⁹ as a parallel of *mēthēm*, 'the dead,' and the word may be derived from Arab. *āba*, 'father' (cf. the form *ghn* instead of the regular *ghm* [*2 K* 18⁷]; the *ō* may have been used also to distinguish the word from *āb*, 'father'). Those who were believed to be connected with such a spirit imitated its supposed weak voice by hollow tones (*Is* 29⁴), like those of the ventriloquist, whence *LXX* sometimes gives ἐγγαστροπύθοι.

This whole species of prediction, working with objects or persons as its media, was called *gesem*, the agent being the *qōsēm* (*Is* 3³ etc.). The term is connected with Arab. *qāsama*, lit. 'to cut in pieces,' then 'to part,' and *gesem* would thus be what gives a decision regarding the future. The representatives of the lawful religion, however, were convinced of their superiority to the *qōsēm* in every respect (*1 S* 28⁸, *Is* 3³, *Jer* 14¹⁴, *Zec* 10² etc.); and it was a principle of that religion that there was no *gesem* in Israel (*Nu* 23²³), i.e. among those who were faithful to the lawful religion. The true religion of Israel nevertheless countenanced the second type of divination noted by Cicero, and actually traced its origin to those who bore the title *nābī*—the meaning and history of which we must now investigate.

2. The vocation of the Hebrew prophet.—The nature of the prophetic calling can best be studied by starting from the name *nābī*, pl. *nēbī'im*.

The word means 'speaker,' being formed from the verb נָבַא, *nābā'*, which corresponds to the Arab. *nabā'a*, signifying 'to announce'; so, too, the Assyrian *nabū*, 'to call,' 'inform,' 'command'; cf. *Nabū=Nebo* (*Is* 46¹), identified with Έρμης (*Ac* 14¹²), and the Eth. *nabāba*, 'to speak.' It is true that many scholars

(e.g., Kuenen, Wellhausen, Stade) connect *nābī* with נָבַא, *nābā'*, 'to well forth,' 'to bubble up,' but this theory ignores the difference between the final gutturals, and severs *nābū* from its Semitic cognates; moreover, if *nābī* meant 'bubbling up,' a 'prophet' would hardly have been blamed for 'boiling over' (*paḥitzuth*, *Jer* 23²², cf. *Zeph* 3⁴); while Kuenen's assertion (*De Propheten*, i. 50) that the sense of 'bubbling up' may have developed into that of 'speaker' still leaves it open that the *nēbī'im* were 'speakers' from the outset. The rendering 'speaker' is supported also by the fact that one's *nābī* is sometimes styled his 'mouth' (*Ex* 41⁶ 7¹, *Is* 50², *Jer* 15¹⁰, *2 Ch* 6⁴), and that a *nābī* of God is also called His *mēlīq*, 'interpreter,' 'ambassador' (*Is* 48²⁷). Cornill's interpretation of the word is but relatively different from that maintained here; from the Arab. *nabā'a* he infers that *nābī* means 'authorized speaker'—wrongly, as the present writer thinks, since *nabā'a* signifies, not simply 'to speak,' but 'to inform,' 'to announce.' J. A. Bewer (*ASL* xviii. [1901] no. 2) proposes to connect *nābī* with Assyrian *naḫi*, 'to carry off,' and to give it the sense of 'one who is carried away,' 'transported' (by a supernatural power), but Babylonian-Assyrian usage does not give the slightest hint of such a derivation; the divine name *Nabū* points rather to the derivation from the Bab.-Assyr. *nabū*, 'to name,' 'to call.'

While the *nēbī'im*, accordingly, were 'speakers,' we must of course understand that they were such in a unique sense, i.e., that they were heralds or messengers in the highest sphere of human interests, viz. religion. They were not, e.g., legal counsel or advocates, as is asserted by H. Winckler (*Religions-geschichtlicher und geschichtlicher Orient*, Leipzig, 1906, p. 23 f.); for the preparation of 'written contracts,' to which he refers, required not a speaker but a writer, and, while 'writers' are mentioned, as in the admittedly ancient Song of Deborah (*Jg* 5¹⁴), we never hear of a *nābī* as spokesman or counsel in any record of judicial proceedings (*Ex* 18¹⁸, *Jos* 7¹⁸, *1 S* 22²², *Ru* 4¹⁸; cf. *2 S* 15³²). In the Code of Hammurabi, moreover, we find the *sibu*, 'elder,' 'assessor' (cf. *zekēnīm*, *Ru* 4¹⁸), and the *daḫnu*, 'judge,' but there is no mention of the *nabū*. We infer therefore that the Hebrew *nābī* was the 'speaker' in the religious sphere, thus corresponding to the Greek *προφήτης*, originally 'the interpreter of the oracle,' and thus 'the expounder of divine revelation,' so that neither term at first connoted the idea of prediction.

If the Hebrew prophets, accordingly, were 'speakers' in the religious sphere, it is obvious that they were neither priests (*kōhānīm*) nor 'judges' (*shōphētim*). It may not be quite so clear, however, whether they were poets, as they have recently been often called. The present writer would here refer to the conclusion at which he arrived in his *Stilistik, Rhetorik, Poetik in Bezug auf die bibl. Litteratur* (Leipzig, 1900, p. 308 ff.), viz. that, while the Hebrew prophets occasionally introduce lyrics (cf. *Is* 51⁶ 23¹⁶), and often involuntarily break into the rhythm of the dirge (e.g., *Am* 5²), they were otherwise speakers or orators. Further, the author of *Ps* 74, writing in the Maccabean period (cf. *1 Mac* 4⁴⁶ 9²⁷ 14⁴¹), could never have said (v. 9) 'There is no more any *nābī*,' had he—a poet—regarded himself as one; while, again, the poetic books of the OT are, in the Hebrew arrangement, kept quite apart from the prophetic writings. For similar reasons the *nēbī'im* cannot be classed as philosophers. The Hebrews too had their philosophers, the *hākhamīm*, or 'wise,' whose literary productions are found, e.g., in Proverbs, Job, and Ecclesiastes; but no prophet of the OT ever calls himself a *hākham*—Isaiah (29¹⁴) indeed positively differentiates himself from the class—and in the Hebrew order of the OT books the *nēbī'im* and the *hākhamīm* appear in different divisions.

3. The rise of Hebrew prophecy.—The present writer would begin here by giving the conclusion to which his own investigations have led him, viz. that prophecy was from the first, so to speak, the heart-throb of the lawful religion of Israel. This is just what we might expect, and, besides, it agrees with the testimony of the Pentateuchal

source E, which, while some scholars regard it as at least second in point of age, the present writer and others believe to be the oldest of all (cf. E. König, *Einführung in das AT*, Bonn, 1893, pp. 200, 203 f.); thus E in Gn 20⁷ calls Abraham a *nābī* (as in Ps 105¹⁵ the name is given to the patriarchs generally, and in Dt 18¹⁵, Hos 12¹³ to Moses). And, if other religions found a voice in some form of prophecy, why should this not have been the case from the first with the lawful religion of Israel?

A somewhat different view is taken by Cornill, who inclines to think that Arabia was the native soil of *nābī*-ism (*Die israelitische Propheten*, p. 12). He seeks to support this theory by pointing to the fact that the basal form of the verb corresponding to *nābī* is not found in Hebrew. But Hebrew has many nouns that have no corresponding verb at all, as, e.g., *dām*, 'blood', *yaphā*, 'dung', and these words certainly did not denote foreign or imported concepts. Moreover, while *kāhēn*, 'to act as priest', the verb corresponding to *kōhēn*, is as much a mere *verbum denominativum* as *nābī* or *hithnabbē*, 'to prophesy' (from *nābī*), no one would ever deny that the priesthood was an ancient and indigenous institution among the Hebrews. Yet some scholars go even farther than Cornill, thus Wellhausen (*Die israel.-jud. Religion*, Leipzig, 1906, p. 20) asserts that prophecy arose in Israel in the agitated period before the outbreak of the Philistine war. At first sight this view seems to find support in 1 S 9^{9b}; 'the prophet (*nābī*) of to-day was formerly called the seer' (*ro'eh*). The present writer is of opinion, however, that in the exposition of this passage certain points have not been fully taken account of.

(1) Samuel bears both titles—*ro'eh* in 1 S 9¹¹ 18⁷ (cf. 1 Ch 9²² 26²⁸ 29²⁹), *nābī* in 3²⁰, and we need not attach much importance to Cornill's statement (p. 13) that he is always called 'seer' in the earliest source, for he is there also styled 'man of God' (9⁸ 10). Moreover, Hanani (Asa's reign, c. 900 B.C.) is still called a seer in 2 Ch 18⁷ 10, and there, accordingly, it is not implied that the two terms belonged to different periods. In point of fact, the man of God might be described either as one who perceived, or as one who proclaimed, religious truth, so that the *nābī* was subsequently also called *ro'eh* (Is 30¹⁰); and the prophet's act of reception or perception is always (from Am 7¹ onwards) denoted by the verb *ro'eh*, of which the *ro'eh* of 1 S 9^{9b} is the active participle. Hence Wellhausen's idea of an absolute distinction between 'prophet' and 'seer' is unfounded.

(2) We must take into account the purpose of 1 S 9^{9b}, that purpose being to explain why Saul chose the term *ro'eh* (v. 11), which is not used of Samuel in the previous part of the chapter. It seems very probable, therefore, that the LXX has here preserved the true reading (ὅτι τὸν προφήτην ἐκάλεσεν ὁ βασιλεὺς ἑμπεροσθεν, ὁ Βασιλεὺς); for (a) the Hebrew here presents a difficulty, and, even if we read *linebī* *hayyōm*, this would mean 'the prophet of to-day'; (b) the adjunct *hayyōm* is never found in the many other references to changes of designation (cf., e.g., Gn 17⁹); *hayyōm* might easily arise from *ha'am*, 'the people', which is precisely the reading of the LXX, and certainly other passages (e.g. 1 K 8²) seem to speak of 'the people' in the special sense of 'the multitude.' Thus the statement that the *nēbī'im* appeared in Israel shortly before the Philistine wars finds but frail support in 1 S 9^{9b}.

That statement, moreover, is confronted by the fact that in the historical consciousness of Israel there had been *nēbī'im* long before the period indicated, as may be inferred from Gn 20⁷ (already noted as belonging to E), from Nu 11²⁴ 29 (J), from reminiscences of the prophetic function of Moses (Dt 18¹⁵, Hos 12¹³), and from Jeremiah's utterance regarding the unbroken prophetic sequence from the Exodus (Jer 7²⁵). Notwithstanding all this, however, the statement in question has been amplified by the assertion that prophecy in Israel was derived from the Canaanite religion. It was Kuenen (*De Profeten*, II, 227 f.) who formulated the theory that in the closing period of the Judges the Canaanite phenomena of *geest-verrukking* ('ecstasy') passed over to the worshippers of Jahweh, and that Samuel placed himself at the head of the movement. This theory won the approval of Wellhausen and others, including W. R. Harper (*ICC*, 'Amos and Hosea', Edinburgh, 1905, p. 1v). (a) It is to be noted, however, that Harper himself (p. 1iv) does not deny that prophecy was indigenous to other Semitic religions, and it would be strange that Israel should be an exception. (b) It is extremely unlikely that the Israelites should borrow an institution from a religion which they despised and to whose gods and organic practices they were bitterly hostile (Ex 20³ 23¹³ 34¹², Dt 28¹⁸ etc.). (c) Had the Israelites, in the period of the Judges, not possessed the institution which constitutes the deepest source of their religious power, then the Canaanites, with their superior external culture and an alluring form of religion, would almost certainly have absorbed them. (d) The statement of Wellhausen and his successors, viz. that prior to Samuel's time there was a whole host of *nēbī'im* in Israel, and that Samuel simply put himself at their head, finds no support in the sources. We read of no religious movement before Samuel's day, for we can hardly think of Samson in this connexion, while in Eli's time the Ark itself was not guarded against capture by the enemy (1 S 4¹¹). Far from there having been a multitude of prophets before Samuel's day, we read that 'the word of the Lord was rare in those days; vision was not widely spread' (8¹).

VOL. X.—25

The actual situation, as it appeared to the historical consciousness of Israel, was, in contrast to the foregoing views, rather as follows. The fervour of faith in Jahweh as supreme among the gods (Ex 15¹¹ 18¹¹), which had been kindled by the deliverance from Egypt, never wholly died out (Jos 24¹, Jg 2¹⁰); on the contrary, clear-sighted representatives of the true religion, such as Deborah (Jg 4⁴), and God-fearing men like Gideon (8³) had striven to maintain it. Nevertheless, the national and religious life sank to a very low level, and, in particular, the nation seemed about to be overwhelmed by the Philistines, who were constantly being reinforced from Crete (A. Noordtzijs, *De Filistijnen*, Kampen, 1905, pp. 39, 123 f.). Even the high-priestly family fell into a state of complete degeneracy in Eli's sons, Hophni and Phinehas; the ancient symbol of the divine covenant was captured by the enemy; and a daughter-in-law of Eli, heart-broken at her people's calamity, gave her child the name Ichabod, 'dishonour', 'ignominy' (1 S 4¹⁹⁻²²). It was in this extremity that Samuel stood forth on behalf of his people; speaking as a messenger of his God, he brought them to repent, and to turn to Jahweh (7⁸⁻¹²). It was Samuel who once more raised the standard of religion and nationality, and this standard was then seized and carried far and wide by others. It is only after his great victory, which he commemorated by setting up the stone called Eben-ezer ('stone of [Jahweh's] help,' 7¹²), that we find traces of the 'prophetic companies' (10⁵).

4. The development of Hebrew prophecy.—(a) *Companies of the prophets*.—We would note here, to begin with, the operation of the general law according to which the great figures in the prophetic field draw round them numbers of emulative disciples. Thus Moses has satellites in Miriam, the prophetess, who led the women in their chant of victory at the Red Sea (Ex 15²⁰), and the elders who received a portion of his spirit (Nu 11²⁵ [J]).¹ In a similar way those who had been moved by the religious and patriotic spirit of Samuel drew round him as their leader. Such prophetic bands—often, though less correctly, called 'schools of the prophets'—come once more into special prominence in the struggle between Ba'al and Jahweh, when Elijah and Elisha stood forth as champions of the legitimate religion of their people. Even Amos (c. 760 B.C.) makes reference to 'sons of the prophets,' as such disciples or scholars could be called in the Hebrew idiom (Am 7¹⁴; cf. 1 K 20³⁵). The status of the prophets Samuel, Elijah, Elisha, and Amos, in relation to the members of the prophetic companies, may to some extent be made out from the following references: the latter prophesied before Samuel (1 S 19²⁴), or sat before Elisha (2 K 4³⁸), and, as this mode of expression finds a parallel in the well-known affirmation of Elijah, 'the Lord, . . . before whom I stand' (1 K 17¹ etc.), we infer that they were the agents or pupils of the greater men; moreover, they addressed Elisha as 'man of God' (2 K 4³⁰); and Elisha treats one of them as his servant (6¹⁵⁻¹⁷; cf. also 9¹). In Samuel's time, again, we see the bands of prophets marching in procession to the sound of harp and timbrel, and from this fact, as from other references in the sources, we infer that the part which they played in the religious development was of a threefold kind: (1) they disseminated the ideas of men like Samuel, Elijah, and Elisha among the people (in 2 K 8⁸ Gehazi recounts the great deeds of Elisha); (2) in chants expressing the great historic memories of their people they sounded forth the praise of God to the accompaniment of musical instruments; (3) in all probability they recorded the history of

¹ On the trustworthiness of the earlier strata of the Hebrew historical record cf. E. König, *Gesch. des Reiches Gottes*, p. 12 ff.

Israel in the spirit of the prophetic religion; and accordingly it would doubtless be in their circle that the book of Jashar (Jos 10¹³, 2 S 1¹⁸), the book of the wars of the Lord (Nu 21¹⁴), and especially the many other prophetic writings mentioned as sources (1 Ch 29²⁸ etc.) were composed. As regards the inner relationship between men like Samuel and these prophetic societies, we may say that, while the former were vehicles of revelation, the members of the latter were derivative or reproductive prophets. But a more important mark of distinction is the fact that, while these derivative prophets caught the excitement of the times and in their vehement movements would throw themselves half-naked (*ārōm*, Is 58⁷ etc.) upon the ground (1 S 19²⁴), such enthusiastic and ecstatic behaviour is never ascribed to Samuel, Elijah, or Elisha; hence Stade, in attributing such action to the leading prophetic figures as well (*Bibl. Theologie des AT*, Tübingen, 1905, § 64), is speaking entirely without authority. Thus, to sum up what the sources tell us regarding a possible first step in the development of genuine Hebrew prophecy, we may say that the leading representatives became centres of groups or circles of emulative disciples who sought—sometimes, doubtless, in ways not wholly commendable—to spread the true light. This view contrasts with the genetic theory advanced, e.g., by Wellhausen. This scholar speaks of the members of these prophetic unions (1 S 10⁵ etc.), somewhat disparagingly, as ‘swarms of prophets’ (*Prophetenschwärme* [p. 20, etc.]), compares them to the modern dervishes of the East and to the Thracian Bacchantes of Greece, and regards them as having provided the raw materials from which the prophetic function of a Samuel or a Nathan was developed by a process of refinement. This now widely accepted theory (propounded also by K. Marti, *Gesch. der israelit. Religion*, Strassburg, 1907, p. 139), however, stands opposed to the statements of the sources. For (i.), as was shown above, Abraham and Moses were thought of as having been prophets, and Samuel is expressly called a *nabî* (1 S 3²⁰). (ii.) None of the later prophets who occupied an independent position is ever described as having been previously a member of a prophetic society; thus Elisha was called from the plough (1 K 19¹⁹), and Amos plainly declares that he was not the son (i.e. disciple) of a prophet, but a herdsman and a dresser of sycamore trees, the Lord having called him from following the flock (7¹⁴). (iii.) It seems probable that the members of the prophetic companies, by reason of their national and more material points of view, became the popular prophets referred to in the passage of Amos just cited and in Is 3² etc. Thus the theory of Wellhausen conflicts with the actual data, and in point of fact it rests upon the evolutionary hypothesis, which so many scholars of the present day treat as an axiom.

(b) *False prophets*.—A further distinction among those who claimed to speak for Jahweh was that between true and false prophets. A concrete illustration of this distinction will be found in the scene in which Ahab and his ally Jehoshaphat seek to ascertain the possibilities of an attack upon the Syrians (1 K 22²⁸). Four hundred prophets assured them of victory, but another, Micaiah the son of Imlah, predicted a different issue, and went to prison rather than keep silence regarding the defeat which his prophetic consciousness divined. Here, then, we find a cleavage which affected not merely the rank but also the spirit of the prophets. Other representatives of the class to which the four hundred belonged are those with whom Amos contrasted himself (Am 7¹⁴), those whose removal was predicted by Isaiah (Is 3² etc.), and those who were denounced by Micah (Mic 3²⁷); cf. also the

collision between Hananiah and Jeremiah (Jer 28¹⁷).

How are we to explain the rise of this inferior type of prophet? It is not adequately accounted for by the desire of court favour or of material gain (cf. Am 3²⁷). The true explanation lies rather in the fact that the conception of God set forth by Samuel, Nathan, Elijah, Amos, etc., was unwelcome to many in Israel. Thus, while these greater prophets represent God as the stern patron of justice and the avenger of wrong-doing, and therefore as one who must often threaten retribution, others ventured to regard the Deity as a weakly indulgent being. These, accordingly, fawned upon the rulers and upon all who were inclined to violate justice within the State (cf. Is 28⁷ ‘they reel in wine . . . they stumble in judgment’). From the period of the Assyrian invasion of Palestine (c. 733 B.C.), again, there emerged a fresh element of differentiation among the prophets of Jahweh. About that time the prophet Isaiah arrived at the conviction that it was not the task of those who had received the true religion to emulate worldly states in political undertakings or in amassing munitions of war. But, while Isaiah accordingly denounced alliances with Egypt and other countries (30¹⁷) and reprimanded the boastful display of military stores (39²⁷), there were other prophets who sided with king and people and whom the people called their ‘wise ones’ (29¹⁴ et. seq.). It was the habit of these counsellors to paint the horizon of external politics in the brightest colours (cf. Jer 6¹⁴ ‘saying, Peace, peace; when there is no peace’).

Now it can scarcely be doubted which of these classes represented the true Israel. For, while Harper (p. cx) says that the adversaries of the OT prophets should not be called ‘false prophets,’ this was precisely the designation applied to them by the characteristic representatives of the nation, who found the true prophets of Jahweh, e.g., in Moses, not in Balaam; in Micaiah, not in the four hundred partisans of Ahab; in Isaiah, not in those who joined the wealthy in their dissipations (Is 28⁷); in Jeremiah rather than in Hananiah (Jer 28¹⁷). That Moses and his successors were given the pre-eminence appears from the fact that their words were preserved among the treasures of the national literature, and this procedure finds absolute justification in the circumstance that in the face of the people (who were acquainted with both classes) Isaiah stigmatized his opponents as drunken, and Micah (3¹¹) his as diviners ‘for money’ (cf. § 9). Our conclusion, accordingly, is that the prophets whose writings appear in the OT represent the true type of Hebrew prophecy, while their opponents were a degenerate species.

(c) *Idolatrous prophets*.—Not a few prophets among the Hebrews rendered homage to the cults of Baal and Astarte, personifications respectively of the sun and the moon; such were those who enjoyed the patronage of Jezebel (1 K 18^{19, 28}, 2 K 10¹⁹, Jer 23¹³). Other phases of the development are of less moment, and are discussed below.

5. The aim of the true prophets.—(a) The aim of the true prophets was not, as has recently been asserted (Wellhausen, p. 15; E. Meyer, *Die Israeliten und ihre Nachbarstämme*, Halle, 1906, pp. 82, 84, 136), the realization of the so-called ‘Bedawi ideal.’ The hypothesis is all the more inconceivable because there was in Palestine a non-Israelite clan, viz. the Rechabites (*q.v.*), whose great object it was to maintain the Bedawi mode of life, and who sought to honour their ancestral tradition by not building houses or planting vineyards (Jer 35⁶). But none of the Hebrew prophets adopted this principle, and even Elijah did not always live in the desert or in caves (1 K 17²⁷);

on the contrary, the genuine prophets appreciated the efforts and achievements of human culture, and accordingly we read in the OT that man is to subdue the powers of nature (Gn 1²⁶), and that he is permitted to enjoy the products of the land (Ex 3⁸ etc.), as well as the gratifications of adornment (Gn 24²² etc.) and of the arts (Ex 15²⁰ etc.). The 'Bedawi ideal' is surely something very different from the prophetic hope that in the coming age 'they shall sit every man under his vine and under his fig tree' (Mic 4⁴). Nor did the prophets stand aloof from the common life of their fellows, or from their duties to the nation. As a matter of fact, their patriotism was one of their most characteristic qualities, as is shown by what we read of Abraham (Gn 14), Moses, Deborah, and Samuel. Isaiah identified himself so closely with his people that it wrung his heart to have to prophesy calamity (Is 6¹¹), and how sorely, with other prophets, did he mourn the political disruption of the nation (Is 11¹⁸, Jer 3¹⁸, Ezk 37¹⁸, Hos 1¹¹ 3⁸)! Jeremiah in particular was second to none in the intensity of his patriotic feeling (cf. Jer 4¹⁹ 9¹ etc.).

(b) The real aim of the true Hebrew prophecy was to uphold the religion of Jahweh as the Eternal God, and to supply spiritual guidance to the nation which had been chosen to be the earliest focus of that religion. The function of the prophets, accordingly, was to perform a task in the highest sense religious, and to work for the loftiest ideals of human civilization.

6. The means employed.—(a) *Actions*.—It was natural that the Hebrew prophets, especially in the earliest times, should seek to reinforce their words by actions. In point of fact, Abraham, the herald of what became the recognized religion of Israel, championed it almost exclusively by his conduct, and his greatest service to it was his obedience to the impulse that led him to abandon his polytheistic neighbours (Gn 12¹, Jos 24²) and to found a new home for his faith in a strange land. Moses himself was a man of deeds rather than a 'man of words' (Ex 4¹⁰), and we note a similar energy of action in prophetic personalities like Deborah (Jg 4⁴) and Samuel. The prophetic work of Elijah and Elisha (1 K 17-2 K 13¹⁴) likewise consists almost entirely of actions. Now, while many features in the records of these actions may be regarded as later embellishments—for Hebrew history cannot claim to be free from what is a characteristic of all human tradition (cf. König, *Gesch. des Reiches Gottes*, pp. 7 ff., 37 ff.)—yet, before rejecting the marvellous deeds ascribed to the prophets, we should bear in mind the following points: (1) the Hebrew historical books contain many remarkable indications of trustworthiness (*ib.* p. 15 ff.); (2) the narratives regarding the patriarchs are free from the miraculous element; (3) we find Isaiah offering to King Ahaz an evidential sign from the upper or the under world (Is 7¹¹)—here, therefore, a man of most discerning mind (cf. 5¹⁰ etc.) thinks it not impossible that the Supreme Spirit should overcome other cosmic powers; (4) it is easier to accept the theory that the marvellous deeds have been embellished than to reject the substratum of the records relating to these deeds; there can be no husk without a kernel. The kernel in question here, however, consists in the deepest convictions of a whole people—a people, moreover, that stands at a relatively high stage in the development of human culture and was compelled by a destiny of the sternest character to test the objective validity of its religious position.

A link between deed and speech as media of the prophet's work is found in the symbolic action. Moses, during a battle with Amalek, holds up his rod towards the sky, thus pointing to the true

source of help (Ex 17¹¹). Samuel pours oil upon the head of Saul (1 S 10¹), and so indicates the lamp of the sanctuary, which was fed with oil and symbolized the knowledge that streams from God. The prophet Ahijah, in meeting Jeroboam, rends his garment in twelve pieces in order to show that God is about to divide the kingdom (1 K 11³⁰). In 1 K 20³⁵ we read that one of the sons of the prophets asked one of his fellows to strike him, so that by his wounds he might concretely depict the punishment which Ahab had incurred. Another action of a symbolic character is mentioned in 22¹¹, and still another perhaps in Am 9¹.

A peculiar group of such actions is furnished by the following passages from the Prophets: Hos 1. 3, Is 20³⁻⁴, Jer 13¹⁻¹¹ 18¹⁻⁶ 19. 25¹⁸⁻²¹ etc., Ezk 4¹ 5¹ 12¹ 21⁶ 14. 19-23 24⁸ 37¹⁸, Zec 11⁴. A key to the solution of the problem presented by these passages may perhaps be found in the narrative of Jer 25¹⁵. Here the prophet is commanded to make a whole group of nations drink from the cup of God's fury—a command which could not of course be literally carried out, although the story runs as if it had been. Jeremiah's words would therefore simply imply that he had been prompted by his divine monitor to perform the action indicated, and that he performed it in his own consciousness; and the real aim of the narrative is to depict the corresponding determination of God in the clearest way (full discussion in *HDB* v. 174-176).

Another type of symbolic action brings us closer still to the distinctively prophetic media. This is found in the instances in which a symbolic name is given to a person or thing, as, e.g., when Isaiah calls one of his sons She'ar-jashub, 'a remnant shall return,' in order that, when this son should pass through the streets of Jerusalem, he should be a silent yet eloquent witness to the hope that at least a minority of Israel would return to their God (Is 7³; cf. 8² 7¹⁴ 8² 10 30⁷, Zec 11⁷).

(b) *Speech and writing*.—The earlier Hebrew prophets, or 'prophets of action' (J. G. Herder, *Vom Geist der ebraischen Poesie*, in *Werke*, Karlsruhe, 1820-27, II. ii. 135), whose utterances consisted mainly of brief oracles, may be clearly distinguished from the 'literary prophets,' the authors of the distinctively prophetic literature that took its rise (c. 760 B.C.) in the composition of the primitive Obadiah (cf. König, *Einführung*, pp. 360-362). The grounds of the literary development have been found mainly in one or other of the following factors: (1) the injunction to make a permanent written record of prophetic utterances (Is 8¹ 30⁸, Hab 2², Jer 30² 36²), as was urged by Oehler (*Theologie des AT*, Tübingen, 1873-74, § 180); as a matter of fact, however, more than one book of prophetic discourses was extant prior to Is 8¹; (2) 'the more ethically reformative efforts of the prophets of the 8th century' (so Kuenen, *Einführung in das AT*, Germ. tr., Leipzig, 1885-94, § 48. 1)—a theory that seems questionable in view of the powerful defence of morality made by men like Nathan and Elijah; while, again, the connexion between the reformative efforts of the prophets and the recording of their speeches is far from clear. The present writer's view is that the change was due not to a religious development at all, but to the general progress of civilization. As noted above, the utterances of the earlier prophets are of the nature of isolated sentences, and light is thrown upon this by the fact that, while the words of Balaam are described as *mšālīm* (Nu 23⁷ etc.), the word *māšāl*, in this sense, never occurs in the prophetic books. Prophetic utterance, however, would naturally share in the progress which raised Hebrew literature in general to a higher level. At a time when such methodical and yet plastic historical works as J were being composed the

simple oracle of the prophets gave place to more elaborate discourses, and some prophets were now indeed writing books of their own.

7. *Period and chronological sequence.*—The chronological succession of the literary prophets as well as their actual date is a matter of great importance, since the historical background of the discourses furnishes the best commentary upon them. The chronological succession may be made out from certain indications both in the form and in the contents of the books. (1) Linguistically, we note, *e.g.*, that the ratio in which *ʾānōkhi* and *ʾani*, the two Hebrew words for 'I,' occur in Samuel is 48:50; in Kings 9:45; and in Chronicles 1:30; and, again, that in Amos it is 10:1, in Hosea 11:10 (owing perhaps to a mid-Palestinian colouring of the work); in Isaiah (1-39) 5:8; in Micah 1:2; in Jeremiah 37:53; in Ezekiel 1:138; in Haggai 0:4; in Zechariah 1:8; and in Malachi 1:5. Here we notice that in the prophetic books, as thus arranged, the use of the form *ʾani* constantly increases. Now, as the three historical works named by way of example doubtless came into being successively in different centuries, it follows that these prophetic writings, running parallel to them in their linguistic character, must also have arisen in the order given.¹ (2) Still clearer indications of the date of a particular prophet are to be found in the political conditions to which he refers. Thus the discourses of Amos allude to a number of still independent states lying around Israel—Damascus (1⁸⁻⁹), Gaza, *i.e.* Philistia (4-8), Tyre (9^c); while Samaria too is still independent (7^{9a}). Further, Amos (5²⁷) and Hosea (9⁸ 10⁶ 12²) make but cursory allusion to Assyria as the power which was to execute judgment upon the unfaithful portion of Israel. In Isaiah (7^{30ff.} 10³⁴ etc.), however, the allusion is quite unmistakable; Assyria, in fact, has now trodden Damascus (732 B.C.) and Samaria (722) under foot (10³); in 20¹ mention is made of Sargon, the Assyrian monarch who, according to the cuneiform chronology, reigned 722-705 B.C.; and in the later discourses of Isaiah Judah is the only kingdom that still preserves its independence (28^{9ff.}). In Nahum and Jeremiah, again, we see the fall of Assyria and Babylonia's advance to the hegemony of W. Asia. The Exile, which Jeremiah had predicted (25¹¹ etc.), was a fact of experience for Ezekiel (1¹ etc.); and, finally, Haggai, Zechariah (1-8), and Malachi refer to the Persian king, or to the viceroy (Mal 1⁸) who now ruled in Jerusalem.

The mass of the prophetic literature, accordingly, arose in the period 760-460 B.C.; and, in the present writer's opinion, a group of five books (Amos, Hosea, Isaiah, Micah, Nahum) represents the golden age of Hebrew rhetoric, while other three groups (Jeremiah, Joel, Zephaniah, Habakkuk; Ezekiel, Deutero-Isaiah [40 ff.], Jonah; Haggai, Zechariah [1-8], Malachi) may, in view of their tendency to pleonasm and their less metaphorical style, be assigned to the silver age. The concluding portion of 'Isaiah' (55-66), while containing perhaps some literary remains of the prophet, will then, in its present form, probably be the work of a disciple (cf. 8²⁰); and 'Daniel' will be a recast of traditions and expectations connected with a historical Daniel (Ezk 14²⁴ 20 28³), circulated during the Maccabæan wars with a view to exhorting the weak and comforting the godly (cf. Dn 8¹², and König, *Einleitung*, §§ 78-82).

Recently, it is true, the theory has been hazarded that the writings of all the Hebrew prophets were composed in the period 300-200 B.C. (so, notably, M. Vernes, *Essais bibliques*, Paris, 1891, p. ix, etc.)—a theory which demands some examination in view of the fact that certain scholars (Duhm, P. Haupt,

etc.) assign portions of the prophetic literature (Is 24-27, Hab.) to the 2nd cent. B.C. Now (a) the type of Hebrew written c. 300 B.C. is found in Chronicles, Ezra, and Nehemiah. It is true that Vernes (*Précis d'histoire juive*, Paris, 1889, p. 802) believes that the editor of these three books lived c. 150 B.C.; the latest hand in the composition of Nehemiah, however, closes the genealogy of the high-priestly family with Jaddua (Neh 12¹⁻²²), a contemporary of Alexander the Great (Jos. *Ant.* xi. viii. 7), so that we must still assign the books in question to c. 350-300; and hence the prophetic writings, reflecting an older stage in the development of Hebrew, must be products of an earlier period. (b) It is easy to see why Hebrew contemporaries of Nabu-kudurri-uzur (604-562 B.C.), king of Babylon, should reproduce his name in the form Nebukhadrezzar, which occurs 27 times in Jer (21² etc.) and is the only form found in Ezk (20⁷ 26^{18c} 30¹⁰). If Jer. and Ezk., however, were written in the 3rd cent. B.C., *i.e.* some 300 years after the time of Nabu-kudurri-uzur, the form Nebukhadrezzar is by no means so intelligible, quite apart from the fact that in Hebrew works which really date from the post-Exilic period the form Nebukhadnezzar is used. (c) It is surely mere caprice to say that the kingdoms of Damascus and Israel, Nineveh, the Babylonian monarchy, and the Persian empire would be made the historical background of books written (according to the theory) at a time when these political magnitudes were no longer in existence (for a full discussion of the theory cf. König, *Einleitung*, § 59).

8. *What the true prophets actually accomplished.*—(a) They upheld the lawful religion of their nation. We see this in Samuel, who by his appeal for loyalty to Jahweh moved the people to express their penitence by a common symbolical action (1 S 7⁶). We see it in Elijah, who at a critical moment stood forth as the champion of the ancestral religion (1 K 17¹). We likewise find it in Amos, when, in his very first discourse, he presages a divine retribution upon Damascus for the evils which it had wreaked upon Israel (Am 1⁹). Amos here assumes that the Disposer and Judge of all will act on Israel's behalf, and makes it clear, as by a lightning flash, that the nation was connected with the Eternal God by an ancient bond which it is the prophet's one aim to maintain. It was with the same conviction in their hearts that Hosea (11¹ etc.), Isaiah (1²), and the other representatives of true prophecy came upon the scene. Hence the prophets of the 8th cent. B.C. were in no sense creators of a new era in religion, as is so widely held to-day—a view that reappears in Wellhausen (p. 23), while Marti (*Die Religion des AT unter den Religionen des vorderen Orients*, Tübingen, 1906, Eng. tr., London, 1907) finds three successive periods in the spiritual history of Israel, those namely of the 'Bedawi religion,' the 'peasant religion' (beginning with Israel's arrival in Canaan), and the 'prophetic religion' (from Amos onwards). This quite modern hypothesis, however, rests upon a misconception of the permanent and fundamental character of the lawful religion of Israel. This, even on the lowest estimate, comprises the following elements: (1) belief in the existence of a God who is not, like the Babylonian or Greek deities, a product of the cosmic process (Gn 1¹ 2⁴, Is 31⁹); (2) a thoroughgoing monotheism, involved in the universal scope of the religion that began with Abraham (Gn 12³, from an ancient Jahwistic source); (3) the thought of God as purely spiritual—there being at first no trace of an idol in the history of the earliest patriarchs (Gn 12¹⁻²⁵); (4) the rejection of magic and soothsaying (Ex 22¹⁸, Nu 23²³), etc. The supporters of the modern hypothesis assert that Amos made the idea of justice the main element in the conception of God. But, besides the fact that Amos himself says nothing of any such radical change and adopts no new divine name to signalize it, it must be remembered that the God of the prophets had all along been the patron of justice and law. Was it not in the name of this God that the great principles of justice found in the Decalogue were promulgated, that Moses instituted courts of law (Ex 18¹⁸⁻²⁶ [E]), and that even royal transgressors were arraigned (2 S 12, 1 K 18)? All that can be said of Amos in this regard

¹ The distinctive linguistic characteristics of the prophets are fully discussed in the present writer's *Einleitung*, § 59.

is that he strongly emphasized the divine justice by proclaiming that the Eternal God would not pass over His own people when His day came (Am 5^{18a}). What Amos did with reference to the justice of God was in fact precisely what, a little later, Hosea did with reference to God's love (cf. Hos 1^{2a}, 11¹), and Isaiah with reference to His holiness (6^{3a}; as a sanction for universal righteousness, 1⁴ 5^{18, 24} etc.). Nevertheless, the prophets of the 8th cent., in thus emphasizing individual attributes of God, were certainly not the founders of a new religion.

(b) The prophets directed the affairs of the Kingdom of God. Originally and in principle God Himself was to be the sole ruler, and could be represented only by those who were filled by His spirit. When at length an earthly kingdom was sanctioned, the prophets still retained their religious jurisdiction, and acted as the conscience of the nation. This explains Samuel's conflict with Saul (cf. König, *Gesch. des Reiches Gottes*, pp. 133 f., 199 f., 202 f.); and even to a David prophecy in the person of Gad had to make clear that the king's part in external politics was to maintain the independence of the country and to avoid wars of offence (2 S 24). Solomon's political and religious obliquities were denounced by Ahijah the Shilonite (1 K 11^{29d}), and Shemaiah and Elshah likewise intervened effectively in national affairs (1 K 12²³⁻²⁴, 2 K 9¹). The most important factor here, however, was Isaiah's great utterance, 'In quietness and in confidence shall be your strength' (Is 30¹⁵), and his assertion that by political alliances and material preparations for war Jahweh's people were only trying to rival the Gentile nations (v. 15, and the contemporary passages Zec 9^{1a}, Hos 2²⁰). The chosen nation must keep to its mission of being a light to mankind (Is 42⁵ 49^{6a}); and, if it had but obeyed this prophetic injunction, it would not only have preserved its existence as a state, but would have discharged a supremely great function in the world's history.

On similar lines the Hebrew prophets solved the related problem of their attitude to foreign nations. As was said above (§ 5 (a)), the true prophets were ardent patriots. Isaiah identifies himself fully with his guilt-laden nation (cf. 1⁹ 3¹²), and Micah can but wail and howl for its calamities, deserved though they were (1⁸). True patriotism, however, does not consist in pandering to the natural instincts of the masses—instincts but too easily directed to the conquest and exhaustion of alien peoples. The genuine patriot, on the contrary, must ever keep in mind the higher ideals of his nation. Hence the Hebrew prophets, with their unparalleled gifts of a spiritual leadership, brought all things under the moral and religious point of view, and it is this too which regulates their attitude to the great monarchies of their time. The prophet might hold over his own people the doom of foreign invasion, but the invader himself was only an instrument in the hands of the Supreme Disposer. Thus the Assyrian was the rod of God's anger (Is 10⁵), and the evils which he wreaked upon Israel were an element in the retribution to which the majority of Jahweh's people were rightly liable by reason of their unfaithfulness. Similarly, foreign rulers are sometimes even called the 'servants' of God (Jer 25⁹ 27⁶ 43¹⁰, Ezk 26⁷). But, when such rulers in mere ruthlessness pass beyond the limits of their divinely appointed work of retribution, the prophet threatens them with judgments of the sternest kind (Is 10⁵ 'Woe to Asshur, the rod of mine anger!' [R.Vm], Jer 50⁷ 11^{17, 23}, Ezk 33^{1a}, *Enoch*, lxxxix. 69).

In view of the actual facts, it is strange that the old charge of unduly favouring the Chaldeans should recently have been once more brought against Jeremiah in particular (H. Winckler,

KAT [1903], p. 170 f.). We can but repeat, however, that, as the sources make absolutely clear, Jeremiah demanded the submission of Israel to an alien domination only by reason of his divinely inspired conviction that God had so decreed it in order to punish the unfaithful majority (so, e.g., K. H. Grell, *Der Prophet Jeremia*, Leipzig, 1862, and others, as cited in König, *Gesch. des Reiches Gottes*, p. 200 f.).

(c) A third phase of the prophets' activity appears in their preserving, expanding, and spiritualizing the Law. (1) That they loyally defended the legislative basis of the Jahweh religion scarcely requires proof. In view of certain modern theories, however, it may be well to state that Amos accused his people of rejecting God's Law and not keeping His statutes (2⁴); and Hosea bitterly denounces the same evils (4⁸ 8¹²). But, without adducing further testimony, we may affirm that what the prophets did with regard to the divine commandments was, in the first place, to guard the long-inherited religious and moral ideals of the community. They were primarily reformers, and their demand for repentance could never have appealed to the conscience of their contemporaries except upon the common ground of a recognized law. (2) That the prophets also expanded the Law, though not quite so obvious, is nevertheless distinctly shown by the following incidents: at the institution of the human kingship Samuel defined 'the prerogative of the kingship,' i.e. some kind of constitution, and deposited it 'before the Lord,' i.e. in the most holy place of the chief sanctuary of the time (1 S 10²⁵); in Hosea (2¹⁵), again, we find the injunction that the designation 'Ba'al' (lit. 'owner,' 'husband') shall no longer be applied to Jahweh, the implication being that, in the critical days of the conflict between the Ba'al cult and the worship of the Eternal, the people must avoid what had previously ranked as an adia-phoron; once more, the law in Deuteronomy (23¹ [Heb. 2]) by which eunuchs were excluded from the community of Jahweh is repealed in the closing (Exilic) division of Isaiah (56³⁻⁶)—the result of a deepening sense of the ultimate universality of God's Kingdom. (3) The prophets spiritualized the Law by the emphasis which they laid upon religion and morality as the all-important factors in human life. This appears from a long series of prophetic utterances which begins with Samuel's great saying, 'To obey is better than sacrifice' (1 S 15²²), and is continued in the question of Amos (5²⁵), 'Did ye bring unto me sacrifices . . . in the wilderness forty years?' Devotion to God can find expression without sacrifice—a truth that is even more strongly insisted upon in Hos 5⁶ 8¹³ 14³, Is 1¹² 29¹³, Mic 6⁶⁻⁸, Jer 7^{22a}. Nor does even Ezekiel in any degree depart from this attitude. He severely reproaches his people with their impiety and immorality; he calls Israel 'a rebellious house' (2⁵ etc.); he insists above all things upon an inward transformation (11¹⁹ 36²⁵⁻²⁷); he is anxious to prevent disloyalty in every form (37^{15a}); his zeal for the rebuilding of the Temple was a means of making Israel ashamed of its past transgressions (43¹⁰ 44^{8a}, 45⁹⁻¹²); and one of his great aspirations was the benevolent treatment of aliens (47^{22a}). If Ezekiel was also concerned for the ceremonial law, it was simply in order that by means of a regular order of worship the impious might be warned against a repetition of their former disloyalty. The prophets, moreover, sought to spiritualize the Law positively; thus, in contrast to the ordinance regarding fasting (Lv 16^{29a} etc.), we read in the prophets: 'Is not this the fast that I have chosen? to loose the bonds of wickedness,' etc. (Is 58^{6a}; cf. Zec 7⁵⁻¹⁰), while, in place of the rending of garments as a symbol of mourning (cf. 2 S 3³¹), Joel (2¹³) bids the people rend their hearts (cf. König, *Gesch.*, p. 317 ff.).

(d) These three aspects of prophetic activity

with regard to the Law are now largely ignored, and the main emphasis is usually laid upon what the prophets say about the future. Here, however, it is to be noted that they were much less concerned with prediction (of concrete occurrences) than with true prophecy, i.e. the verbal portrayal of the great regulative lines of the future course of things. Sometimes, no doubt, they foretold special events, such as the fall of Shebna (Is 22^{15ff.}), the withdrawal (29^{1ff.}) and the destruction (31⁸) of the Assyrians, the death of Hananiah within the year (Jer 28^{16ff.}; cf. also Am 7⁸, Jer 34⁸, [2 K 25⁷⁻²⁷], Zec 7⁵). In the main, however, prophetic utterances regarding the future were designed to set forth the fundamental lines upon which the divine kingdom would evolve.

The vistas of the future thus opened are manifold and glorious; a notable instance is the vision of the nations flocking exultantly to the Temple of Jahweh (Is 2²⁻⁴ || Mic 4¹⁻³). Still, these unveilings of times to come could not, in view of human guilt, but be sometimes full of menace, and it was only in rarer moments that the prophets could depict the splendours of the final consummation. It must be remembered, of course, that the more ominous forecasts were given conditionally, as Jeremiah (18⁶⁻¹⁰) realized in the potter's house, though this conditional character extends no doubt to the promises as well. The conditional nature of prophecy is a fact of the utmost significance, for it serves as a preliminary explanation of that non-fulfilment or only partial fulfilment of certain prophecies which has led some recent scholars to disparage OT prophecy in general (cf. e.g. Kuenen, *De Profeten*, i. 114 ff., with König, *Der Offenbarungsbegriff des AT*, ii. 374 ff.). There are other explanations, no doubt, and the most important of them lies in the supreme achievement of the prophets in the distinctively prophetic sphere, viz. the *spiritualization of prophecy* relating to the future of the divine kingdom.

Of this spiritualizing process we may trace the following main indications. (1) The relation between the divine kingdom and its earthly sphere is more and more relaxed. The noteworthy circumstance that the patriarchs had no permanent possession in the Land of Promise except a burial cave (Gn 23²⁰ etc., 47³⁰ 49²⁰) seems to presage the later historical development—the restriction of the Davidic dynasty to the lordship of Judah and its immediate neighbourhood (c. 937 B.C.), and the final overthrow of that dynasty (c. 586 B.C.). Prophecy is often an eloquent commentary on these facts. Isaiah (11¹) had said that the perfect governor of the divine kingdom would spring from the root (not the top) of the Davidic tree, and Micah (5²) added that he would be born in the ancestral village (not the capital) of the dynasty, while in the post-Exilic section of Isaiah (esp. 55³⁻⁵) the Davidic line recedes into the background, and Malachi (3¹) makes no reference to the Davidic descent of the coming messenger. (2) Other indications of the growing spiritualization of prophecy are found in the increasing clearness with which the following truths were realized: the superhuman gifts of the coming leader (Is 9⁶ 11², Mal 3¹); suffering as an element in his work (Is 11¹, Mic 5¹, Zec 9⁹ 12¹⁰, Is 53), and finally his priestly function (Ps 110⁴, Zec 6¹²); inward change as the necessary condition of salvation (Jer 31^{33ff.}, Ezk 36²⁶, Mal 3²³, [4^{6ff.}]); the universalistic tendency of the divine kingdom (Zec 8²², Mal 1¹¹). For a more detailed account of this process cf. König, *Gesch.*, pp. 267-278.

Notwithstanding these lofty ideals, the Hebrew prophets have in recent times been charged with one-sidedness and partiality, more especially by Kuenen, who (*De Godsdienst van Israël*, Haarlem, 1869-70, ii. 86 f., Eng. tr., *Religion of Israel*, London, 1874-75) exclaims: 'We will not let ourselves be robbed of the

conviction that God rules in all history.' (1) This protest, however, does not really affect the design by which, according to the prophets, the human race was to be disciplined and redeemed. A father who permits his son for a time to go his own way cannot be accused of indifference regarding that son's welfare. So may the providence of the Heavenly Father encompass even the peoples whom He suffers 'to walk in their own ways' (Ac 14¹⁶), and He actually does more. He instructs the husbandman (Is 28²⁶); in the heavens He manifests His glory to all (Ps 19¹); He instructs the nations and teaches man (94¹⁰). (2) Nor do the destinies of Israel violate the justice of universal history. In Israel the law of equipoise as between rights and duties was maintained with remarkable strictness; here it held good that 'mighty men shall be mightily tormented' (Wis 6⁶), and here were enforced the principles that 'to whomsoever much is given, of him shall much be required' (Lk 12⁴⁸; cf. Ro 2¹²) and 'many shall be lost that are first' (Mt 19³⁰). Exultation in the covenant with God is often stifled by sorrow for the frequent violation of that bond and the attendant penalties. (3) Friedrich Delitzsch (*Babel und Bibel*, Leipzig, 1903, i. 38) asserts that in OT prophecy the history of the ancient world is looked at from a most oblique visual angle. Here, however, Delitzsch not only overlooks the facts just adduced, but ignores the universalism that forms the sublime element in the historical design unfolded by the prophets. He quotes Gn 12³, but omits 2³ (repeated in 13⁸ 22¹⁸ 26⁴ 28⁴): 'in thee [or 'in thy seed'] shall all the families of the earth be blessed.' He likewise leaves out of account the excellence of the laws relating to aliens, in which the OT surpasses both the Code of Hammurabi and the Hellenic attitude to 'barbarians'. Nor has Delitzsch any real understanding of that lofty stage of culture from which sprang a passage like Is 2²⁻⁴ || Mic 4¹⁻³ (see above). Our rejoinder to his structures must therefore be that, on the universalistic side of OT prophecy, the history of the ancient world is surveyed from a pre-eminently ideal point of view.

The consummate achievement of OT prophecy, however, lies in the idea of the *new covenant*—a covenant which is to secure the effacement of human guilt, in which the fundamental law of acknowledging God is alone to prevail, and which is to be observed in hearts renewed by gratitude. This idea first emerges in Jer 31³¹⁻³⁴, and nothing could more clearly indicate the aspiration towards a higher stage in the development of the divine kingdom. The work of the Hebrew prophets thus culminates in a prospect which corresponds at once to the highest longing of the human heart and to the most perfect conception of God.

9. The inner sources of prophecy.—In the discourses of Micah (3⁸) that prophet says, 'I am full of power, even the spirit of the Lord' (RVm), so expressing his conviction that his prophetic gift came from a superhuman source. Similarly Isaiah (8¹¹) says, 'The Lord spake to me with strength of hand' (RVm), implying that he felt himself profoundly influenced by something outside the range of ordinary forces. A like impression, as from the wave-beats of some 'immortal sea,' was known also to Jeremiah (23²³); and the Psalmist (Ps 104²⁴) interprets these throbbings as the pulsations of a heart at the centre of things, and sees in them the source of cosmic movement. Now, reflexion upon the origin of this cosmic movement (*πρωτὴ κίνησις*) really brings us, as far as the present writer can judge, to the conclusion that—in agreement likewise with Aristotle—the truth that 'God is Spirit' (Is 31³, Jn 4²⁴) contains the only reasonable solution of the primordial riddle of the universe. But, if we admit the possibility of an abnormal impulse proceeding from this focal energy, may not the consciousness of the prophet have been affected by it in an abnormal way? May not his power of spiritual vision have been peculiarly intensified? As a matter of fact, if the prophet's conviction of his being influenced by an unwonted spiritual impulse has a basis of reality, this increased sensitiveness is psychologically quite intelligible. Even in the sphere of ordinary experience, sense and memory may be strangely quickened by some unusual impression; thus, in moments when a man is suddenly brought face to face with the peril of death, scenes long forgotten will pass before his mental vision, and he may make discoveries that at ordinary times seemed beyond him. Hence it is in no sense incredible that a

soul, receiving, as it believes, an impression from a region otherwise unknown, should thereby be endowed with a capacity for a knowledge beyond the range of wonted experience.

The prophets also affirm that they are granted visions of what lies behind the ordinary process of events. This is implied in their repeated use of the expression 'I saw'—an assertion all the more significant because it is always expressed in a special way (over 30 times; Am 7⁸ etc.). Thus the true prophets, when speaking of their abnormal visions, use the verb *rā'āh*, the Hebrew word for simple ordinary seeing, whereas, when referring to those who falsely claimed the title of prophet, they expressly denied that such could 'see' (*rā'āh*), saying of them that they 'follow' . . . what they have not seen' (Ezk 13³), and ascribing to them at most a certain power of 'beholding,' 'looking at' (*chāzāh*), i.e. a purely sensuous faculty, and not 'seeing' in the proper sense at all. That the true prophets were able to speak of others in this way argues a remarkable degree of conviction regarding their own powers of prophetic vision.

It may be asked, however, whether the prophets were not simply men like Swedenborg, who, e.g. (as we shall not deny, and as is admitted by Kant [*Werke*, ed. G. Hartenstein, Leipzig, 1838-39, x. 453 f.]), 'saw' a conflagration in distant Stockholm, a letter in a secret drawer, etc. But Swedenborg's clairvoyance (parallels to which may be found, e.g., in Ezk 8¹⁴ 11¹³ 24²¹) falls short of the true prophetic faculty of prescience. The prophets claimed to foretell new things before they sprang forth (Is 42⁹), and they actually did foretell them. The prophecy, sometimes associated with the characteristics given on p. 390, anticipated the course of events, as shown in signal fashion by Is 55⁵⁻⁶. Thus, too, Isaiah amazed his fellows by his conviction that Jerusalem would be delivered from the Assyrian beleaguering in 701 B.C. (Is 29⁷⁻⁸); he also foretold that the Assyrian host would be destroyed by a 'not-man' (31⁴), i.e. a superhuman power, as actually took place on the Egyptian frontier (37³⁶; Herod. ii. 141). Similarly Ezekiel (33²¹⁻⁴) knew of the fall of Jerusalem the day before it took place.

These examples suffice to furnish us with a principle that governs the relations of history and prophecy (cf. König, *Der Offenbarungsbegriff des AT*, i. 278 ff.), viz. that, while the discourses of the OT prophets run parallel to history in form and matter (§ 7 above), history is not their source. Thus Jeremiah's conviction that he was called to a great religious task doubtless came to him during the Scythian invasion of W. Asia (c. 628 B.C.; Herod. i. 103-108); his work as a prophet, however, was not causally connected with that invasion, but is simply concurrent with it. The historical events of his day merely supplied him with imagery (Jer 1^{13ff.}), but countless utterances of the prophet show that his commission was not derived from the course of events, and could not be so derived; cf. e.g. 20⁷ (it is Jahweh who prevails over him) and 32^{8ff.} (the symbolical action with the deed of sale, expressing his conviction that the departed Israelites would return).

The knowledge of the future which we find in the words of Isaiah and other prophets cannot be explained as resting upon 'the interpretation of the historical revelation of God' (F. Wilke, *Jesaja und Assur*, Leipzig, 1905, p. 96). Isaiah certainly reproaches his people with disregarding the work of the Lord (52²), but by that work he means the events that have already happened. His prophetic knowledge, however, was of a peculiar kind; cf. 28²² 'I have heard,' and the fact that, when the king's counsellors were at their wits' end (29⁹), he himself knew what would happen, and was convinced of his superiority to the prophets whom the people called 'their wise men' (vv. 10-14). The present writer's belief that the insight of the prophets was something distinctive and exceptional is shared by such modern scholars as C. F. A. Dillmann, F. Bleek, S. R.

Driver, R. Kittel, and C. von Orelli; and S. Oetli (*Die Propheten als Organe der göttlichen Offenbarung*, Berlin, 1904) puts the matter admirably when he says that 'to speak here of religious genius is merely to substitute one mystery for another.'

Here we must once more consider the judgment passed by the true prophets upon certain of their contemporaries who likewise claimed to speak in the name of Jahweh.

(1) As regards the commission of the latter, the true prophets held that it was not from Jahweh at all (Jer 14¹⁴ etc.). The motives of these pretenders were really of a material kind (Mic 3¹¹), and arrogance and presumption lay at the root of all that they did (Jer 23³⁴, Zeph 3⁴ etc.)—'they follow their own spirit' (Ezk 13³). (2) As regards the sources from which their utterances were drawn, these are stigmatized as 'lying visions' (Jer 14¹⁴, etc.), 'what they have not seen' (Ezk 13³ Avim), 'visions by night' (Mic 3⁶), i.e. mere dreams (Jer 23²⁸ 29), or 'their own heart' (11¹⁴ 23¹⁶, Ezk 13² 17). As already said, these characterizations indicate a remarkable intensity of conviction on the part of the genuine prophets, all the more so because they were uttered in face of a public to which both classes were known.

The claim of the true prophets, nevertheless, is still being met with objections.

(1) It is said, e.g., that Ezekiel suffered from temporary dumbness and hemiplegia (A. Klostermann, *SK I* [1877] 301 ff., 417 f., 422; A. Bertholet, R. Kraetzschmar [Commentaries on Ezekiel]; A. Jeremias, *Das AT im Lichte des alten Orients*, Leipzig, 1906). Klostermann finds symptoms of these diseases in the prophet's occasional dumbness (32⁴ 27 24²³ 27) and his lying alternately on his left and his right side (4^{1ff.}). But this is assuredly mere caprice, for we must not isolate these occurrences from other actions of a kindred character imposed upon Ezekiel by God. What bodily idiosyncrasy would such critics associate, e.g., with Ezekiel's shaving his head and beard (5), his basking with excrement for fuel (4¹²), or his withholding his tears (24¹⁸)? (For a full discussion of the points at issue cf. *HDB* v. 175 f.; also König, *NKZ iii* [1892] 650 ff., and J. Hermann, *Ezechielstudien*, Leipzig, 1908, p. 72.) The theory of bodily indisposition is in any case quite inadequate to account for the spiritual insight so characteristic of the prophets.

(2) A fairly common theory is that the prophets were subject to ecstasy, and a recent scholar of some eminence, F. Giesebrecht (*Die Berufsbegehung der AT Propheten*, Göttingen, 1897, p. 47), comes to the conclusion that their prophetic consciousness was in part due to the ecstatic state. The prophets in question, however—not to be confounded with the 'sons of the prophets' (§ 4 (a))—give no hint of any state of ecstasy, i.e. unconsciousness or frenzy. It is true that Jeremiah was said by one of his opponents to be mad (Jer 29²⁶). Hosea, again, referring probably to himself, says that the prophet is out of his senses (9⁷); quite obviously, however, his meaning is that the iniquities of his people (cf. Is 12⁴, Jer 21¹³ 81⁴) were enough to derange the mind of a true prophet and patriot. It is clear, accordingly, that the theory of ecstasy finds no support in the passages cited, while we have the positive evidence that the prophets lived an ordered life in the family and the State, and that their discourses, alike in construction and diction, are the work of sane and sober minds. Moreover, even in the hour of their call, i.e. when most deeply moved by abnormal influences, they perfectly retain their self-consciousness and their memory; it was precisely in such experiences that Isaiah realized his own sinfulness (6⁵), and Jeremiah felt that he was too young for the task set before him (1¹⁵).

(3) The Hebrew prophets have also been charged with ignorance in matters of psychology. In answer to this we may recall Isaiah's severe strictures against the sophistical perversion of moral concepts (52²) and the remarkable precision of his own ideas and judgments. How often does Jeremiah reprove his people for 'the stubbornness of their evil heart' (31⁷ etc.)! It is he too who speaks of his God as searching the heart and trying the reins (17¹⁰), and it is most unlikely that such a mind would mistake its own phantasies for divinely-given convictions (cf. Cornill, *Das Buch Jeremia erklärt*, Leipzig, 1905, p. 420). This may be said also of Ezekiel, who (speaking in God's name) declares, 'I know the things that come into your mind' (11⁵). Such utterances are not easily reconcilable with ignorance regarding the nature of the human spirit.

In point of fact, taking into account the precise intellectual distinctions and the delicacy of moral feeling displayed in the prophetic writings associated with the names of the prophets, we find it impossible to charge the prophets even with self-deception. Self-deception always implies some lack of discrimination and of religious and moral sobriety—the very opposite of the characteristics set forth above, to ignore which were to reject the one line of evidence that can avail in the question at issue.

Wellhausen (p. 15) has finely said that the individual upon whom the grace of God has come remains a mystery. In view of what the prophets

said and did, however, we must go beyond this and recognize that they were wrought upon by some mysterious force lying behind the veil of ordinary phenomena. Difficult as it may be for the modern mind to acknowledge this, there seems to be no other way of doing justice to the historical facts. After all, as the phenomena of life and of the human consciousness cannot be explained by reference to their antecedents, it need not seem strange that the paramount position of the true prophets in the spiritual history of the Hebrew people should defy every attempt to explain it on natural grounds.

10. Non-Israelite analogies.—(a) In Babylonia and Assyria divination, which was rejected by the prophetic religion of Israel (§ 1), was an organized function of the State (cf., e.g., C. Bezold, *Die babylon.-assyrl. Lit.*, Leipzig, 1906, p. 44 f.), the Babylonian-Assyrian religion being in this respect on a level with the religion of Egypt, Greece, and Rome, but assuredly falling far short of what we find in Israel. In Hebrew literature, moreover, we hear nothing of any person like Enmeduranki, to whom Babylonian literature traces the art of divination. But we must still ask whether, outside the recognized practice of divination in these lands, there were individuals of prophetic character who might be compared to the prophets of Israel.

A personality of this type has been found in Hammurabi (cf. art. LAW [Babylonian], vol. vii. p. 817 ff.), who, in a relief preceding his well-known Code, is depicted as standing before the sun-god (Shamash). From this, however, we are to infer that Hammurabi is not the pupil or prophet of that deity, as Bezold thinks (p. 8), but rather his counterpart; for in the introductory lines of the inscription we read:

'Anu and Bel called me, Hammurabi, the exalted prince, the worshipper of the gods, to go forth like the Sun . . . to enlighten the land,' etc. (R. F. Harper, *The Code of Hammurabi*, Chicago, 1904, p. 8).

Further, the particular laws are as often ascribed to Hammurabi himself as to the sun-god, and towards the close of the inscription we find such utterances as 'My weighty words I have written upon my monument' (Harper, p. 101), and 'My words are weighty, my wisdom' (Harper, p. 103, 'deeds') unrivalled—sayings which we cannot well imagine coming from Moses (cf. Ex 31¹⁴ [EJ], Nu 11²⁸ [EJ] 12³ [EP], or from the literary prophets of a later age (cf. Is 5²¹, Jer 23^{18a}, Ezk 13^{4, 17} etc.).

In the cuneiform literature of the 7th cent. B.C. another writer speaks of himself as follows:

'I, the servant, the prophet (?), of his lord the king, utter my prophecies for my lord the king. May the gods whose names I have enumerated accept and hear these prophecies on behalf of my lord the king; may they add to him more than his portion, and give to my lord the king! But may I, the prophet of my lord the king, stand before my lord the king, and with all my heart worship on my side (?) When my sides become weak, may I exert my power to the utmost by the power of my word. Who must not love a good lord? Surely it is said in the song of the Babylonians: "Because of thy gracious lips, my shepherd, all men look to thee" (We follow the version of F. E. Peiser, in *MVG* iii. [1898] 2571; but the original term here rendered 'prophet' simply means 'servant,' 'worshipper.')

Winckler (*KA⁷*, p. 170 f.) refers to this passage as exhibiting a Babylonian-Assyrian counterpart to the Hebrew prophet, as, e.g., Jeremiah. In point of fact, however, a speaker who stands 'before the king,' and is obviously subservient to him in all things, rather suggests the 'prophets' who, while claiming to speak for Jahweh, were but the servile agents of King Ahab (1 K 22⁹); or those who in the days of Isaiah were regarded by the ruling faction as 'their wise ones' (Is 29^{10, 14}, Jer 28¹⁶ etc.).—men from whom the representatives of the lawful religion of Israel distinguished themselves in the most decided way (1 K 22²⁷, Am 7¹⁴, Is 3^{9, 15} 28⁷ 29^{10, 14}, Mic 3^{5, 11}, Jer 7²⁵ 23¹ etc.).

Winckler has also sought to disparage men like Amos and Jeremiah by speaking of them as 'political agents' (*Gesch. Israels*, Leipzig, 1895–1900, I. 96), and as the 'spies' or 'professional agitators' of the rulers of Nineveh of Babylon (*KA⁷*, p. 170 f.). Thus Amos is said to have laboured on behalf of the policy of King Ahaz (Winckler, *Religionsgeschichte und geschichtl. Orient*, p. 38). In answer to this, however, we need only recall the fact that, when Amos was ordered by Jeroboam II to leave Bethel, he asserted that he had been called to his religious office by God (Am 7¹⁵), and in all his utterances we overhear his conviction that he is in the service of the Eternal (Is 3⁷ etc.). As for Jeremiah, again, it is clear that the Monarch whom he believed himself to serve was none other than the King of kings, and that he regarded himself as belonging to that great succession which had championed the supreme interest of Israel throughout the ages (Jer 7²⁵). His patriotism and his attitude in political affairs have already been dealt with (§ 8 (b)). Jeremias (*Das AT im Lichte des alten Orients*, p. 35) suggests that the Hebrew prophets were the vehicles of Babylonian culture: 'Mercury is the morning-star; his name means "harbinger." Here we come upon the astral interpretation of the word *nabî*, "prophet"; he is the harbinger or vehicle of a new age.' The Babylonian-Assyrian diviners, however, found their patron, not in Mercury, but in the sun-god (*KA⁷*, p. 368), while the genuine Hebrew sources say nothing of any such connexion between their prophetism and Mercury, and in fact actually protest against divination in every form (§ 8).

If, therefore, we find in Babylonia and Assyria no direct evidence of the existence of prophetic personalities comparable to the Hebrew prophets, it remains to ask whether we have any indirect traces—such as might be afforded, e.g., by the literature. Here, however, as in Assurbanipal's library, we find nothing higher than series of omen-tablets, in one of which, e.g., we read:

'If in the month of Sivan (June) an eclipse occurs between the first and thirtieth day, vegetation throughout the land will lag behind.'

But where in the Babylonian-Assyrian literature do we find anything to compare with the profound religious ideas, the earnest moral exhortations, and the glowing anticipations of the future, so characteristic of the writings of the Hebrew prophets?

Attention has been directed to the following passage as indicating Babylonian visions of the future (F. Hommel, in *Glauben und Wissen*, i. [1903] 9 f.):

The god Marduk, seeing a sick person, says to his father Ea. 'My father, disease has come upon man; I know not by what means he may be healed.' Then Ea answered his son thus: 'My son, what may there be that thou knowest not? What new thing might I still teach thee? What I know, thou knowest, and what thou knowest, I know; go, my son, and break the spell upon the sick one.' Then come the directions for exorcizing the disease.

Now, while this may show that the Babylonian-Assyrian deities were regarded as ready to heal man, it is to be noted that the healing implied was only of a physical kind; and, besides, the passage is not really predictive at all. T. K. Cheyne (*EB* iii. 3063), however, finds the predictive element in the following passage:

'Sea-coast against sea-coast, Elamite against Elamite, Cassite against Cassite, Kuthaan against Kuthaan, country against country, house against house, man against man. Brother is to show no mercy towards brother; they shall kill one another.'

But this prediction, referring probably to Hammurabi's triumph over the neighbouring kings, is a purely political one. It is hardly necessary to point to the contrast with Hebrew prophecy, which moved essentially in the sphere of religion, and for which the founding of a divine kingdom has as its supreme practical end the culture of the ethico-religious interest—assuredly the highest element in the life of a nation.

(b) E. Meyer (*Die Israeliten und ihre Nachbarstämme*, Halle, 1906, pp. 451–453) asserts that Hebrew prophecy was derived from Egypt, and cites a prophecy (partly from the earlier, partly from the middle, period of Egyptian literature, and recently more accurately deciphered) to the following effect:

'A wise man (or the inspired lamb) reveals to the king the future of Egypt, and then with his last word falls down dead, and is ceremoniously interred by the king. His prophecies,

however, are put on record and handed down to future ages. Their tenor is that there is coming, to begin with, a period of awful distress, in which everything in Egypt turns topsy-turvy—foreign peoples make inroads, servants become masters, people of position are slain, women enslaved, the entire social order subverted, temples plundered and desecrated, and their mysteries laid bare, while the king himself is carried away captive or forced to flee to a foreign land. Then follows an epoch in which the gods once more bestow their favour upon the country, and in which a just king, beloved of the gods and sprung from the sun-god Re, expels its enemies, restores its worship and its ancient order, subjugates the neighbouring lands, and enjoys a long and happy reign.

Meyer maintains that this 'fixed traditional schema' was known to the Hebrew prophets, who, in fact, merely elaborated it in detail and applied it to the situation of the day. But there is certainly no positive evidence to show that Hebrew prophecy was based upon any such design. This schema was not followed even by the popular prophets, whose great watchword for the future was 'peace' (Jer 6¹⁴ etc.). The important point, however, is this: the distinctive features of Hebrew prophecy are that its predictions of good or evil were conditional upon the moral and religious bearing of men, and that it was concerned throughout with the founding of a peculiar divine kingdom, which was instituted in the call of Abraham (Gn 12¹⁻³) in order to establish in Israel a nursery of true religion and morality (Is 51⁷), and so to open a fountain of blessing for all nations (42⁶ etc.). Egypt supplies nothing that may for a moment compare with this.

(c) Finally, as to a possible comparison of the Hebrew prophets with Muhammad, we find an OT scholar (J. Koberle, *NKZ* xvii. [1906] 202) giving expression to the view that their consciousness of their vocation loses significance when we look at Muhammad, who likewise, for that matter, regarded himself as a divine messenger. In answer to this we must carefully examine the qualities of the evidence which the Hebrew prophets themselves give regarding their mission. As the value of a witness's testimony may be measured with a fair degree of objectivity by certain of its characteristics, we shall compare the Hebrew prophets and Muhammad with reference to the following points.

(i.) *Clearness and definiteness.*—The clear conviction which underlies the utterances of men like Amos, Isaiah, etc., meets us everywhere in their works; they had distinct recollections of their call (cf., e.g., Is 6^{1st}), as also of a certain reluctance to respond to it (e.g., Jer 1⁶ 20⁷). Such definiteness is certainly not exceeded by the utterances of Muhammad. Moreover, scholars who, like A. Müller (*ThLZ* xii. [1887] 278 ff.), are anxious to do all justice to the latter speak of his 'indeterminate thinking,' his 'self-deception,' in that he claims a divine source for narratives which, like the 'Joseph' *sūrah* (xii.), are obviously mere plagiarisms.

(ii.) *Difficulty of the situation in which the testimony was given.*—The genuine prophets had to affirm a distinction between themselves and others who claimed to represent the same God (cf. § 9), while Muhammad had no such difficulty in what

he said about himself—a contrast to which due weight has not yet been given.

(iii.) *Disinterestedness.*—The Hebrew prophets never strove for earthly honour or for material gratification of any kind; on the contrary, indeed, neither popular misunderstanding nor persecution on the part of the ruling classes turned them from their task (cf. 1 K 22^{6th}, Jer 38^{4th}, 2 K 21^{10th}). We should also remember how, as the living conscience of their nation, they fought against the perversion of ethical concepts and against all immorality. In Muhammad, on the other hand, we find no such renunciation of worldly honours and enjoyments, or of material expedients for the furtherance of his plans. *Sūrah* xxxiii., relating the various exceptional privileges alleged to have been accorded to him in the matter of marriage, cannot but excite repugnance in any unprejudiced mind, and, as A. Tholuck (*Vermischte Schriften apologetischen Inhalts*, Gotha, 1867, p. 13) suggests, speaks less of a devout enthusiast than of a godless deceiver.

Even apart from the moral aspect, however, and regarded simply as an enthusiast, Muhammad still falls far below the true Hebrew prophets, in whom, as was shown above (§ 9 (2)), we find no trace whatever of fanaticism or ecstasy. So fearless a critic as Cheyne (*EB* vi. 3854) was compelled to write:

'A succession of men so absorbed in "the living God," and at the same time so intensely practical in their aims—i.e., so earnestly bent on promoting the highest national interests—cannot be found in antiquity elsewhere than in Israel.'

It is, moreover, a remarkable circumstance that in all that long succession no single prophet ever appealed to the words of another, while the fact that the succession came to an end all at once in the person of Malachi is another point that has not yet been sufficiently pondered.

Thus, when compared with Muhammad, the prophets of Israel still maintain their distinctive place in the history of religion, and we would summarize, in closing, the factors by which this historical position may be appraised. These are (1) the prophets' clear and definite consciousness of their vocation; (2) their unquestionable disinterestedness; (3) their achievement in the development of culture, i.e. their mediation of moral and religious principles which even to the present day compel the recognition of thinkers and scholars; and, finally—connected with the foregoing—(4) the relationship between their place in history and the appearance of Jesus, who nevertheless did not answer to their prophetic presentation of the future in any mechanical way, but with fresh and original power carried it to its most sublime consummation (cf. König, *Gesch.*, pp. 317–323).

PROPITIATION.

Introductory and Biblical (C. M. KERR), p. 393.

Greek (A. FAIRBANKS), p. 397.

Roman (A. C. PEARSON), p. 398.

PROPITIATION (Introductory and Biblical).—Propitiation (Lat. *propitiatio*, *propitius*, 'perhaps originally a term of augury meaning flying forward [*pro*] or well; cf. Skr. *pat*, to fly, Eng. *feather*' [Webster, s.v. 'Propitious']; cf. Eng. 'petition') may be defined as the appeasing of the

wrath of one by another in order to win his favour; or the means adopted to that end. The root ideas of the term imply that he who propitiates feels himself in some manner to be lacking or at fault, and that the favour of him who is propitiated is worth the gaining. It further implies that he who

is propitiated is more powerful than he who propitiates; else the latter would not require to implore, either by entreaty or by offering, those things which he considers necessary to his welfare. It is with propitiation in its more definitely theological sense, i.e. as affecting the relations between God and man, that we have here to deal.

1. *The idea in primitive religion.*—Religion finds its origin in the conviction of man that his life is overruled by forces other and greater than those which he finds in himself. This power man has construed, from the earliest times, and according to his light, in the terms which he applies to his own life and personality. The only difference is that those characteristics which he recognizes to be rudimentary and fragmentary in himself are conceived of as existing in all their ideal perfection in the nature of the divine. In this sense all religions, whether their development be high or low, are anthropomorphic. Again, since man, in the earliest stages of his evolution, has little self-sufficiency, and is in all things closely dependent upon Nature and her forces, even for his bodily wants, he is instinctively impelled to find this superior power in every external object or circumstance affecting him. This is the stage of animism, when worship is paid to the spirit or spirits which reside in trees, fire, wind, cloud, or sky.

Yet the mere belief in the existence of those superior powers would not be sufficient in itself to give rise to religion. It is felt also that these powers are interested in the welfare of man; and, further, that their interest can be quickened, or restored when lost, provided that proper means be adopted to achieve this result. Primitive man attributes to his god the same feelings of like and dislike, of love and aversion, of friendship and hostility, as he finds to exist between himself and his fellow-men. Hence, from the first, there are present in religion the elements not merely of thought, but also of feeling and of will. In fact, it is due to the conjunction of these that religion ever came into being. Man does not merely think of his god; since, through nature, that god manifests his power often in terrible form, he conceives of him, now with feelings of utter dependence, now with awe and fear, as of one who smites and visits him with wrath and destruction. Yet the emotion is not entirely that of fear. Fear in itself has the effect of sundering and driving farther apart. But, in point of fact, religion is the expression of an exactly contrary effect upon the will. Viewed in its practical aspect, religion is the effort on man's part, not to flee from, but to draw near to his god.

While the beginning of religion is not to be attributed entirely to fear, it is unquestionable that that emotion played a great, and even a predominating, part in the awakening of the religious consciousness. The things by which primitive man is first prompted to think of the divine are generally those disastrous to himself or to the community. Any misfortune or disaster that he cannot trace to known human or natural sources he attributes to the direct agency of his god. Since, then, in primitive times the realm of the unknown was much wider than it is now, and since also, leaving out of count man's spiritual wants, even his bodily comfort was then more open to attack, there was all the more room for the working on him of that fear of his god which is the beginning of wisdom.

But, if fear thus awakens him to a knowledge of his god, it is his instinct of self-preservation that impels him to give to that knowledge a practical turn. The aim of religion is not solely to draw near to gods, nor even to propitiate them, but to

secure the worshipper's well-being and happiness. It is just because man recognizes his present happiness to be imperfect, because he feels that only through his god can that deficiency be supplied, that he ever seeks to win his favour. And the means which primitive man adopted towards this end were those which he employed in his dealings with his fellows—conciliation and petition. From this arose the ancient religious system of propitiatory sacrifice.

While the broad aim of sacrifice is thus to please the gods, the meaning and content attached to it are more clearly defined by reference to (a) the nature of the god who is to be propitiated and (b) the evil which renders propitiation necessary. It may happen that man identifies this evil not with himself, but with the essential being of his god. This god is conceived of as one who delights in violence and bloodshed, and who sends plagues, storms, and floods in order to satiate himself with the suffering of man. Man therefore offers such sacrifice as he imagines will appease this passion for blood on the part of his god, that the impending doom may be averted from himself. It is with this notion that some of the darkest rites of early sacrifice are associated. A degraded idea of the god leads to a degraded form of worship.

On the other hand, man may feel that the cause of his suffering lies not so much in the nature of his god as in his own misdoings or shortcomings. This was the idea that ultimately prevailed. Experience accumulated throughout the ages taught him that much of his misfortune was simply his own fault, and that by methods of forethought, of industry, and of hygiene he could avert many of those evils which formerly he traced solely to supernatural influence; and that which experience taught him to be true of part of his existence he came more and more to infer as true of the whole. Thus he reached the conception that, wherever his present happiness was marred, it was due not to the arbitrariness of his gods, but to his neglect to pay deference to them or to obey their commands. Once this truth emerged, the idea underlying propitiatory sacrifice assumed a new and more hopeful trend. Man aimed no longer at changing the original nature of his gods and bringing them into a temporary state of favour to himself; he sought rather to restore them to that normal condition of benevolence which, by his offence, had for the time being been disturbed. How, then, could he better accomplish this than by sacrificing a part of his goods and possessions, in order to show the gods that he valued their favour more than anything else? It is not, of course, contended that primitive man regarded his own confession as part of the propitiatory sacrifice. That idea lay as yet in the background. He still retained a mechanical conception of the relations between sin and punishment, between sacrifice and benefit. In his eyes not his repentance, but the material offering that he made, was the thing of propitiatory value as affecting his god. Yet, despite all this, in the higher sacrificial forms of primitive religion, in which man dimly confessed himself as the sinner and his god as the standard of righteousness and love, were embodied the rudiments of those truths concerning propitiation which were to receive a fuller and more spiritual meaning in ethical religions, and which at last attained to their perfection in Christianity.

2. *In the OT.*—In the religion of the Hebrews the intermediary stages of this evolution are clearly traceable. Man is now not merely conscious of the fact that he offends against God; that fact has taken on for him a moral significance—he is conscious of it as sin. Davidson (*The Theology of the OT*, p. 315 ff.) points out how in the OT a distinc-

tion comes to be drawn between (a) sins of ignorance or inadvertence and (b) sins done with a high hand or of purpose.

(a) *Sins of ignorance or inadvertence.*—To these alone do the Levitical sacrifices apply. In this there is a certain natural fitness. The idea of sacrifice in general arose at that stage in man's development when he conceived of his relations to God as being semi-mechanically rather than morally conditioned; when, too, he imagined that the Deity could be propitiated in a correspondingly mechanical fashion, by material offerings. The Hebrew priests merely carried forward this idea and gave it a greater symbolism and elaboration. In the first place, the moral sense being as yet imperfectly developed, there was in their conception of sin no element of personal guilt. The idea of sin was attached to no specific acts of which the perpetrators were conscious at the time that they were wrong; it belonged rather to the entire nature of man, as being tainted and impure. Thus sin was placed by them in that region intermediate between the purely physical and the definitely moral; i.e., it belonged to the region of the æsthetic, and partook of the nature of uncleanness. Again, corresponding to this view of sin as uncleanness was their view of the manner in which it offended against God. Being not yet definitely of the moral, not yet a wilful transgression of God's law, it did not violate God's righteousness, and so did not provoke His wrath. It was rather an offence against God's holiness. These are the considerations which lie at the root of the ancient Jewish sacrificial system. They explain how the priestly offerings were regarded as atoning not for definite misdoings, but for the whole life as being imperfect or impure. They explain, too, how the symbolical 'covering,' or 'wiping out'—the root ideas of the Hebrew word *כָּפַר*, which stands at the centre of Levitical thought on sacrifice (cf. *HDB*, s.v. 'Propitiation,' vol. iv. p. 131)—had in itself a propitiatory value as affecting God. Since God's justice had not been offended, and His actual wrath had not been provoked, there was no need that any positive recompense should be made. There was need only that the cause of offence to His æsthetic nature, i.e. to His purity and holiness, should be removed. That being accomplished by the priestly sacrifices, complete harmony was established. And, lastly, though no definite explanation is given in the OT itself, these considerations may help to make clear why special emphasis was laid on the efficacy of the blood-sacrifice as a means of propitiation. Since 'the life of the flesh is in the blood' (Lv 17¹¹), so the offering to God is the effort on man's part to make propitiation not for certain sins, but for the whole soul or person. Again, the blood, as it is sprinkled on the altar, symbolically wipes out, or cleanses away, impurity and uncleanness. God is thus enabled to look on the inadvertent sins of His people as covered or non-existent; He is propitiated in this negative sense, in that the stain offensive to His holiness is washed away, and His favour is restored.

(b) *Sins done with a high hand or of purpose.*—Just as the sense of personal guilt implies a new stage in the growth of the moral personality, so also does it lead to a higher conception of the divine nature and of the means of propitiation. The relationship between man's offence and the wrath of God is uplifted from the physical and the æsthetic to the moral and the spiritual. Material sacrifices are felt to be no longer available to propitiate God. But the need for propitiation is even more poignantly felt. This was the class of sins with which the prophets especially dealt; and for them the only remedy was for sinners to cast themselves upon God's mercy, when He Himself

would cover their sins (Ps 65³). Here the propitiation is effected not by any offering on man's part, but by some transaction within the being of the Divine. God's mercy prevails over His justice, so that His wrath is done away. But no hint is given that this victory of God's love or mercy is won at any cost to itself. At the same time, it is dimly suggested that the self-surrender of the soul in repentance and prayer to God possesses an element of propitiation—'A broken and a contrite heart, O God, thou wilt not despise' (Ps 51¹⁷).

The last idea emerges into clearer consciousness when the intimate connexion between suffering and sin is recognized. Since sin is the cause of suffering, the thought inevitably arises that suffering may in turn have some propitiatory value. But the ethical note is not lost sight of. Thus it is essentially the sufferings of the righteous that are regarded as having expiatory value. This coupling of suffering with merit as having power, by vicarious means, or in a substitutionary sense, to propitiate God is witnessed to in the frequent OT references to the trials of Abraham and other patriarchs and prophets, and reaches its culmination in the passage describing the Suffering Servant of Is 53. Yet even there the idea is not fully wrought out. It is simply stated that 'it pleased the Lord to bruise him' (v. 10), and that 'with his stripes we are healed' (v. 9). Thus the relationship between the propitiatory act (the bruising) and the beneficial effect (the healing) is still regarded as in great part mechanical; and to mankind, apart from the Servant, is relegated simply the part of the passive onlooker, who reaps the results, but who himself has no vital or active part in the transaction.

3. In the NT.—It has been indicated how in the OT the idea of propitiation developed in its higher aspects along two different lines of thought: on the one hand, the consciousness of personal guilt led to the casting aside of material sacrifice and to the surrendering by the sinner of his soul to the mercy of God; on the other, the connexion between sin and suffering gave rise to the thought that suffering, and especially the suffering of the righteous, possessed a propitiatory value. Yet both these conclusions were deficient. The former certainly recognized the need for a change in the attitude of the soul; but it did not give sufficient consideration either to God's justice or to the demands of His wrath. It simply made God's mercy take the place of the Levitical sacrifice, in that the mere exercise of that mercy was sufficient to wipe out all past transgressions, even those done with a high hand. No account is taken of the fact that not merely God's holiness, but also His righteousness, has been offended, and that this violated righteousness demands a certain satisfaction before His mercy can intervene. In the latter there is a procedure to the other extreme. Emphasis is now laid upon God's just indignation, and how it is by suffering that it is propitiated. Yet this is viewed wholly in a vicarious sense, and no vital organic connexion is traced between the propitiation rendered to God and the spiritual change effected in man. It will thus be seen that the two trends of thought are in a sense complementary. The connecting link between them consists in this, that both lead up to the idea that propitiation is in itself a divine act, and consists in the interaction of certain aspects of, or certain personalities in, the godhead. Such was the truth embodied in the Incarnate Christ; and a consideration of the NT passages where He is referred to under the heading of 'propitiation' will render this clear.

(1) In 1 Jn 22, *ἡμεῖς ἵνα ἐκτιμῶμεν τὰς ἁμαρτίας ἡμῶν*, Christ is simply stated to be 'the propitiation for our sins.'

(2) In 1 Jn 4¹⁰ this idea is elaborated. The main thought of the passage (vv. 8-21) is that God is love, and that God is fully Himself only when that love is completely exerted. But the realization of the divine love is checked by the presence of sin in man, which produces in him fear (v. 18) and want of love towards God (v. 8). Thus, though the situation or the occasion for propitiation is created by man, it is in God that the active stimulus and the felt need for reconciliation initially arise. 'Herein is love, not that we loved God, but that he loved us'; i.e., it is not so much that man feels himself alienated from God as that God feels Himself alienated from man. In the same way, it is not man, but God, who not only feels the need but also provides the means or the instrument of propitiation. Here, then, is repeated the OT priestly idea of God's mercy or love 'atoning' or 'covering' the sins of His people. But it is no longer stated in bald terms that God's mercy or love simply prevails over His righteousness. That victory is effected at the cost to His love of sending His own Son. There is further this new idea, prominent in the teaching of St. John, and in many ways the dominant note of the NT, that the sending of Christ is not merely in satisfaction to God's justice, but also—and this thought received from St. John far greater emphasis—exerts a propitiatory effect upon man, in that it shows forth, or exhibits, God's love to him, and so wins him to draw near to God. By this indication of the vital, dynamic connexion between the divine propitiatory act and its spiritual effect on man does St. John supply the other deficiency in the OT theory of atonement (cf. above on Is 53). It is God's love that stimulates Him to send His Son, and this exhibition of His love in turn stimulates man to love God. Hence, for St. John the immediate propitiatory effect of the gift of Christ is not upon God, but upon man. But this is not the ultimate end of propitiation. Once this immediate effect is accomplished in the awakening of man's love through faith in Christ, then God's love assumes its proper function of bestowing upon man eternal life (Jn 3¹⁶). Thus God's love first treats itself as a means, in order that it may return to the normal mode of its activity, in which it is at once the means and the end of its own existence, and in which alone it realizes its complete self-satisfaction.

(3) He 2¹⁷, πιστὸς ἀρχιερεὺς τὰ πρὸς τὸν θεόν εἰς τὸ ἱλᾶσθαι τὰς ἁμαρτίας τοῦ λαοῦ. If in the second reference prominence is given to the 'covering,' or 'annulling,' of sin by God through Christ, emphasis is here laid upon the element of suffering in propitiation. According to the writer of the Epistle to the Hebrews, the qualifications of a true high-priest are divine appointment to his office (51) and 'at oneness' with his people (21). To this high-priest Christ is now compared (217). But Christ's appointment is ratified, and His identification with His people is sealed, by the fact that He is 'made like unto them' in undergoing the experience of suffering (210 17). Thus it is in virtue of His sufferings that Christ is qualified to make propitiation for the sins of His people. In this there is a correspondence with the thought of Is 53. But the aim of the writer to Hebrews is now to develop this thought and show how Christ's sufferings produce this effect. The underlying idea is not that suffering in itself gives satisfaction to God. For what God supremely and ultimately desires is to 'bring many sons unto glory' (210). But sin is the barrier which stands in the way of this perfection, and suffering is the only means by which it can be removed (cf. 214); hence, in this derivative sense, suffering does possess a pleasing aspect in the eyes of God. Again, since Christ's sufferings bring Him into greater sympathy with His brethren, and so enable Him to render them greater help (218), suffering has the additional propitiatory effect upon God in that it furthers the attainment of that by which God is completely satisfied.

It has been suggested that the view taken by the writer to Hebrews regarding Christ's sacrifice may be that its propitiatory value lies not in its suffering but in its obedience (cf. W. F. Paterson, *HDB*, s.v. 'Sacrifice,' vol. iv, p. 345). Yet it is not necessary to place these two views in so sharp a contrast. In the interpretation of the writer to Hebrews, suffering and obedience both possess a propitiatory value, but in a different sense. The immediate purpose of suffering is not to please God. Its direct effect is (a) upon Christ, to teach Him obedience (cf. 210 58) and to create in Him sympathy towards man, (b) upon man, awakening his trust and confidence in Christ (416). This confidence then passes into obedience; and in this way does Christ become the author of man's eternal salvation (59). Thus suffering is propitiatory only as a means; but obedience—the end towards which suffering is directed—is propitiatory in itself, as being that by which God is immediately satisfied.

That this is the view of the writer to Hebrews regarding suffering is corroborated by the manner in which he relates Christ's sacrifice to sin. The class of sin for which Christ is the propitiator is not so much a wilful transgression of God's law as a state of moral or spiritual uncleanness (cf. 1022). Because sin, then, while it offends God's holiness, does not offend His justice, there is attached to suffering no idea of expiation, i.e. as satisfying the divine wrath. The death, or the blood, of Christ is interpreted rather along the line of the OT Levitical sacrifices (cf. He 9). His perfect and spotless offering suffices to sprinkle men's hearts from an evil conscience and to wash their bodies with pure water (914 1022). That being accomplished, 'their sins and iniquities will God remember no more' (1017). But just as, according to the Mosaic law, there were certain sins to which the priestly sacrifices could not apply, so also, according to the writer to Hebrews, there is one especial sin for which not even Christ can atone, and that is wilful transgression after knowledge of the truth (cf. Dt 17-7 with

He 10²⁶). It is only when the unpardonable sin of rejecting Christ's sacrifice has been committed that God punishes man in wrath. But the suffering which this punishment involves, being not disciplinary but penal, in no way leads to any reconciliation between man and God. The sending of it is indeed in satisfaction of God's wrath; but the enduring of it by man does not tend towards the appeasing of that wrath or to the restoration of God's favour. It comes upon man only in utter condemnation—'It is a fearful thing to fall into the hands of the living God' (1031). Thus again it is seen that for the writer to Hebrews there is no propitiatory value in suffering except as it is borne in the spirit of obedience and leads to a further development of that virtue.

(4) Ro 8²⁶, ὃν προσέθετο ὁ θεὸς ἱλαστήριον διὰ πίστεως ἐν τῷ αὐτοῦ αἵματι. In the passage Ro 319²⁶ St. Paul also takes his starting point from the OT. But Christ is now regarded not as a high-priest, the active agent who through His suffering unto obedience propitiates, but as the passive means or place through which that propitiation is wrought, and in which God's righteousness is declared. This may be the reason why St. Paul uses the Greek word ἱλαστήριον instead of ἱλασμός. In further contrast to the writer to Hebrews, his aim is not so much to win men to accept Christ as the sacrifice as to show the necessity for that sacrifice in the nature of the godhead.

While the teaching of the writer to Hebrews concerning suffering is a great advance upon that of Isaiah in that it explains its educative value, it does not sufficiently make clear the divine aspect of suffering, as being a law immanent in the very being of God. It treats it rather as something extraneous to the divine nature, and merely imposed upon man to bring him to obedience. This defect, as is indicated above, is a consequence of the view which the writer to the Hebrews takes of sin as uncleanness and of God as essentially holy. Thus for him God is still in great part the God of the OT, who accepts the offering made by Christ, and who, at no cost to His own nature, simply pardons or forgets the sins of His people. These defects, then, St. Paul sets himself to correct. In the first place, he takes a more serious view of the nature of sin. It is not simply uncleanness, but a definitely moral disorder, and is connected with the will. In the second place, he makes the chief attribute of God's being to consist in righteousness. With these two principles alone no atonement would, according to OT theory, be possible. But St. Paul finds a way out of the dilemma by putting a new construction upon suffering. He treats it no longer as external to the godhead and operative merely upon man, but as a vital principle of the divine nature itself. Suffering, in so far as it falls upon man in consequence of his sin, is simply the working out of his condemnation. But, if that suffering be assumed and vicariously endured by one who is himself sinless, the demands of God's wrath will be appeased, and that reconciliation with God will be effected which man by his own efforts or by his own suffering cannot achieve. This is the view which St. Paul expounds. It is because Jesus Christ is the setting forth or the declaration of this truth that He is the propitiator for our sins (Ro 318-26). Further, since God is the one who requires to be propitiated, and is both the provider and the offerer of the sacrifice, He is at once just to Himself, or true to His own righteousness, and the justifier of the man who believes in, who accepts, or who appropriates that sacrifice as made on his own behalf.

4. Summary and conclusion.—The form of the idea of propitiation, from its appearance in early religion to its presentation in the theology of the NT, is constant: God has been offended, and means must be found whereby His wrath may be appeased and His favour restored. It is in the content given to that form that the development takes place. Man seeks first to propitiate God by material offerings. To these, and especially to the blood-sacrifice, a symbolical meaning is afterwards attached, as representing the offering by man of his own life to God. A clearer understanding of the nature of sin then leads to the casting aside of material sacrifices and to the idea that God is pleased only with repentance and personal obedience (cf. Is 1¹¹⁻²⁰). Side by side with this, the connexion between sin and suffering suggests the thought that suffering may possess in itself a propitiatory value. A further stage is reached when man begins to realize that he is utterly unable of himself to make any offering sufficient to recover God's favour. Hence the idea emerges that God Himself must provide the sacrifice. But, if God is the provider of the sacrifice, it cannot be the whole of His nature which is the object of propitiation. He is no longer simply the God of holiness, or the God of righteousness; but He partakes of the complex nature of a personality. Thus it is only one aspect or attribute of that personality which is propitiated, while another aspect or attribute provides the propitiation. But this in itself would

lead to nothing further than that God becomes reconciled to Himself. Yet it is in the interests of man that God's love seeks to propitiate His righteousness; and therefore man must also be involved in the transaction. Two difficulties, however, stand in the way of his inclusion. The first is that recompense must be given for his past sins; and the second is that, since man's natural state is sinful, therefore there must be infused into him that divine life which alone can make him acceptable to God. The theories of St. John, of the writer to the Hebrews, and of St. Paul are all endeavours to show how in Jesus Christ these difficulties are met and overcome. St. Paul alone lays emphasis on the first. It is by the vicarious suffering of Jesus Christ that the wrath of God, aroused by the sin of man, is appeased. St. John and the writer to the Hebrews deal principally with the second. According to St. John, God's love, made manifest in Christ, appeals to man's love, and so induces him to lay open his heart to the inflow of the divine life. According to the writer to the Hebrews, suffering, borne in the spirit of and under the guidance of Jesus, is that which makes man perfect. It is to be remembered, however, that St. Paul also gives consideration to this second difficulty. Faith is the contribution that man must bring before the process of propitiation is finally completed. It may thus be concluded that the propitiation made by Jesus Christ acts both upon God and upon man. It acts upon man in that it is a revelation to him of the immensity of God's wrath and of the intensity of His love. It thus wins him to draw near to God in reverence and humility, yet in faith, trusting in the efficacy of the sacrifice made on his behalf. It acts upon God in that it satisfies His offended justice, and enables His love to go forth in all its fullness to the man who now has a share in the righteousness and life of Jesus Christ. Finally, just as the 'appeasing of wrath' is only the first term in propitiation in order that 'favour may be restored,' so the ultimate end of Christ's sacrifice is that God may be able to say of each of his children, 'This is my beloved son, in whom I am well pleased.'

PROPITIATION (Greek).—The nature of divine anger, as conceived by the Greeks, has been considered in the art. EXPIATION AND ATONEMENT (Greek); the special rites for allaying the anger of the gods remain to be treated under the present heading. Briefly stated, calamities not easily traceable to human causes are referred to the gods—failure of the crops, plagues and diseases, childlessness, disaster at sea, and defeat in battle—and, when they occur, the anger of the gods is assumed. It is necessary first to remove the causes of divine anger, and then to propitiate the gods, as in the first book of the *Iliad* Chryseis must be returned to her father, the army purified, and sacrifices offered to Apollo who had sent the plague. While the thought of possible anger and its propitiation was doubtless present in all worship, the proper sacrifices to an angry god were totally different from the normal worship to the Olympian deities. The normal form of sacrifice was the communion

meal, in which the animal was consecrated to the god, certain portions were burned on the altar, and the remainder was cooked and eaten by the worshippers. This form of sacrifice (*θυσία*) was frequently described in the Homeric poems (*e.g.*, *Il.* ii. 421 f.), and with slight variations it was the typical form of worship to the greater gods of Greece. In sharp contrast with it is another type of sacrifice, called by a different name (*σπάργα*; cf. *ἐπαγίεσθαι*, *ἐντρέφειν*, etc.) and decidedly different in character. Ordinarily it took place at night rather than in the morning; the animal prescribed was often black; when its throat was cut, the blood was allowed to flow on the ground; the altar was a low mound (*ἐσχάρα*), not the structure used in ordinary sacrifice (*βωμός*); and the body of the animal was never eaten, but was usually entirely consumed by fire. Animals not suited for food, like the dog, were used for these sacrifices at times; but offerings of food as such, grain or cakes, found no place in them. These sacrifices, however, were not reduced to one definite type, but retained variations peculiar to the god to whom they were offered and the occasion of the offering. Similarly, the libations to angry gods or gods prone to anger differed from the usual libation to Olympian gods, in that wine was regularly used for the latter but never for the former; honey and milk were the more fitting to soothe angry deities (*μελιγγματα*).

According to tradition in Greece, human sacrifice was at times demanded to soothe the anger of the gods. Agamemnon, who had offended Artemis by slaying a hind in her sacred precincts, was prevented from sailing for Troy till he had sacrificed to the goddess his daughter Iphigeneia; and the death of Polyxena alone made it possible for the Greeks to start on their homeward voyage. A sacrifice of Egyptian youths was attributed to Menelaus as a means of stilling winds that prevented his voyage (Herod. ii. 119; cf. *Æsch. Agam.* 146 f.); and it seems possible that *σπάργα* offered in later times to secure favourable winds (cf. *Plut. Ages.* 6; Herod. vii. 191) were substitutes for human sacrifice. According to Plutarch (*Aristid.* 9, *Them.* 13), three captive Persians were sacrificed by Themistocles before the battle of Salamis. In myth similar sacrifices to secure success in battle were demanded by the oracle of Creon (*Eur. Phœn.* 890 ff.), of Erechtheus (Apollod. *Bibl.* iii. xv. 4; Lycurg. *Leocr.* § 99), of Aristodemus (Paus. iv. ix. 2, 5), and of other heroes. It is Greek tradition that the oracle at Delphi commanded human sacrifice on the occasion of pestilence to allay divine anger. Human sacrifice is also reported as part of the regular worship of Zeus Lykaïos in Arcadia, of Apollo Katharsios in Leucas, and of Apollo at the Athenian Thargelia. The explanation given (*Eus. Prep. Evang.* iv. 16, p. 156^a; cf. *Eur. El.* 1026; *Verg. Æn.* v. 815) is that the anger of a god which threatens to destroy a whole people may perhaps be satisfied by the voluntary sacrifice of one of their number. The Greek practice, however, was to substitute an animal for the man, as a deer is said to have been substituted for Iphigeneia (cf. the calf treated like a child and sacrificed to Dionysus at Potniæ [Paus. ix. viii. 1]).

The gods who received propitiatory sacrifice regularly were not the Olympian deities, but spirits who had shown their anger or who were easily stirred to anger. Such were the Eumenides at Athens, whose very name of 'kindly ones' was a euphemism to denote the blessings which the Furies might send when propitiated (cf. *Æsch. Eumen.*, *passim*); the *θεοὶ μελιχίοι* of Myonia (Paus. x. xxxviii. 4); Hecate, goddess of spirits of the night; the winds and in particular Boreas, the north wind (Paus. ii. xii. 1; *Xen. Anab.* iv. v. 4);

gods of the sea (Arr. *Anab.* vi. xix. 5) and of rivers (I. de Piott, *Leges Graecorum sacræ*, i., *Fasti sacri*, Leipzig, 1896, p. 14, no. 5, line 36 f.). The spirits of the dead received sacrifices similar in character, doubtless to prevent evil results that might be caused by their anger (Herod. v. 47), and it was the regular method of worshipping local heroes who might send special blessings, but whose anger was terrible if they were neglected. When *σάβια* were offered to Olympian deities, as not infrequently occurred, it was because of some special reason for fearing their anger. Zeus Meilichios, feared like the *θεοὶ μελιχίοι*, received holocausts of pigs to allay his possible anger and secure his blessing (Xen. *Anab.* vii. viii. 4, and accounts of the Diasia at Athens), and Zeus Chthonios, a god of agriculture, received propitiatory offerings at Myconos. In Ionian regions these sacrifices were offered to Apollo to avert danger from the crops, as in general they were offered to him to get rid of pestilence (G. Kaibel, *Epigr. græc.*, Berlin, 1878, no. 1034; Paus. ii. xxiv. 1, and *passim*). Before the battle they might be offered to Aitennus (Xen. *Hell.* iv. ii. 20). Some of the peculiar sacrifices to Dionysus (Paus. ix. viii. 1) and Demeter (Diod. Sic. v. iv. 2, iv. xxiii.) as well as to Poseidon (Arr. *Anab.* vi. xix. 5) should also be classified as propitiatory in nature. That propitiatory sacrifice found no larger place in the worship of the Olympian gods is due to the intimate and normal relation which existed between these gods and their worshippers, a relation that found fit expression in the communion meal sacrifice.

The occasion for propitiatory sacrifice was the presence of calamity or the fear of calamity. A pestilence that attacked men, herds, or crops, or the fear of possible calamity before battle, a voyage, or any important undertaking, furnished such an occasion. These sacrifices were offered in Athens before marriage and childbirth (Æsch. *Eumen.* 835). In agriculture specific dangers threatened the crops at certain seasons, and at these times rites to avert them were performed. Finally, as dangers or blessings might at any time be expected from such spirits as the Eumenides and heroes and souls of the dead, propitiatory sacrifices to them occurred both at stated intervals and on special occasions.

The meaning of this type of sacrifice, in so far as one type is found, is clear from its form. While in the communion meal the victim was shared by god and worshippers together and the rite strengthened the actual bonds that united them, the propitiatory sacrifice assumed no such bond, but rather the opposite. The rite here seems to centre in the death of the animal, sometimes clearly the death of an animal as a substitute for a man; its life-blood is poured out to appease the gods, and it only remains to dispose of the body by burning it or casting it into the sea. When Polykrates followed the advice of Amasis (Herod. iii. 41) and threw into the sea the ring that was his most valued possession, he acted on the naive principle that too much prosperity was likely to bring calamity from the gods, and sought to propitiate them. In the Greek divine world were many powerful spirits who were easily offended, be it by too much prosperity, by neglect, or for some reason not clear to men. If their anger could be anticipated and allayed, its effects might be escaped; accordingly, propitiatory sacrifices were offered before important undertakings and even at regular intervals. It was the same principle that led men to bring votive offerings to the gods that the gods might not look with disfavour on the undertakings which they had in view. When the calamity was present, the need of propitiatory sacrifice was so much the greater.

The life of the animal was given to the god, sometimes clearly as a substitute for the life of the man, in the hope that thus divine anger might be allayed. It is the peculiarity of Greek religion that ordinarily men feared the anger of other than the Olympian gods, and that therefore propitiatory sacrifice to the great gods of Greece was unusual.

ARTHUR FAIRBANKS.

PROPTIATION (Roman).—If we accept the definition of religion as an 'effective desire to be in right relation to the Power manifesting itself in the universe' (W. Warde Fowler, *Religious Experience of the Roman People*, p. 8), propitiation in its widest sense is co-extensive with religion. Every utterance of prayer and every act of sacrifice, as being religious, is necessarily propitiatory. But it is unnecessary to make this the occasion for a general survey of the Roman attitude towards religion, more especially since the ambit of propitiation is usually confined to the placation of an offended deity, as distinguished from the effort to secure a continuance of divine good-will. On the other hand, propitiation is a religious act which assumes the personal intervention of a deity, and has nothing to do with the objects and methods of tabu or magic. Thus, certain ceremonial practices of which we have a record from historical times may be survivals from an era antecedent to the development of the national religion. Horace's *triste bidentale* (*Ars Poet.* 471), the walled enclosure preventing ingress to the spot where a thunderbolt had fallen, is an example of a permanent tabu not associated with any particular cult. But a definite act of propitiation is involved in the sacrifice of two black lambs to Summanus by the Arval Brethren, which took place whenever the grove of the Dea Dia was struck by lightning at night (W. Henzen, *Acta Fratrum Arvalium*, Berlin, 1874, p. 146). For Summanus, though an obscure personality (Ov. *Fast.* vi. 731), was associated with Jupiter as lord of the thunderbolt, and his name appears occasionally as an epithet of that god (G. Wissowa, *Religion und Kultus der Römer*, p. 124, n. 4). Another example may be quoted to show the difficulty of tracing the history of the most primitive Roman cults. The mysterious rite of the 14th of May, on which day 27 straw puppets known as *argei* were thrown into the Tiber from the *pons sublicius*, is sometimes interpreted as a magical ceremony whose chief intention was to serve as a spell ensuring an adequate rainfall in the coming summer (Warde Fowler, *Roman Festivals*, p. 119). In that case it would be unnecessary to suppose that any deity was specially concerned with it. Much the same may be said of the rite of the *lapis manalis*, which is nowhere definitely associated with Jupiter Elcivus (*ib.* p. 233). But the above-mentioned explanation of the *argei* is not generally accepted, and an alternative view treats the puppets as substitutes for human victims, holding that on some occasion of stress during the 3rd cent. B.C. a piacular sacrifice of foreigners (*Ἀπρεῖοι*) was introduced on the advice of a Sibylline oracle (Wissowa, *Gesammelte Abhandlungen*, p. 228). We should then be in possession of a parallel to the otherwise isolated sacrifice of two Gauls and two Greeks, who were buried alive in the *forum boarium* in the year 216 (Livy, xxii. lvii. 6).

A few examples of propitiatory rites which go back to the oldest stage of the native religion may now be mentioned.

On the 25th of April, in order to remove from the crops the danger of mildew or red rust, a procession marched to the grove of Robigus near the fifth mile-stone on the Via Claudia, and a dog was sacrificed by the *flamen Quirinalis* (Ov. *Fast.* iv. 905 ff.; Pliny, *HN* xviii. 285). On the 15th of April at the Fordicidia pregnant cows (*fordae boues*) were sacrificed to Tellus as well in the several curies as by the *pontifices* on the Capitol (Ov. *Fast.* iv. 629 ff.). The unborn calves were torn from their mother and burnt, with the object of securing the fertility of the corn then lying in the womb of the earth (Warde Fowler, *Roman Festivals*, p. 71). Volcanus, the god of fire, had his special festival on the 23rd of August at a time of the year when the danger of fire was particularly to be dreaded for the new grain. The antiquity of his cult is shown by the existence of the *flamen Volcanalis*, but, beyond the appearance of the Volcanalia in the calendar, very little is known about it. Domitian probably followed ancient precedent when, in erecting an altar to Volcanus in commemoration of the fire in Nero's time, he ordered the sacrifice of a red calf and a boar on the day of the Volcanalia (*CIL* vi. 828). We also have the curious information that on this day it was the custom to throw living fish into the fire as a peculiar offering (Varro, *de Ling. Lat.* vi. 20; Fest p. 238).

Although the institution of *flamines* marks the establishment of a State religion, the earliest cults indicate its development from a worship by the family intended to secure the prosperity of each of its members. The powers to be propitiated were spirits originally nameless, which were severely limited in the extent of their operations, and only by degrees acquired a distinct identity (Warde Fowler, *Religious Experience*, p. 117). It is noticeable, however, that there had arisen a tendency to group the divinities in pairs, a male and a female, Faunus and Fauna, Liber and Libera, Quirinus and Hora, and that there were grades of dignity among them, as is shown not only by the distinction between *flamines maiores* and *minores*, but also by the fact that piacular offerings were made to the *femulae divi* as well as to the *divi* themselves (Wissowa, *Religion und Kultus*, p. 19). Even the great gods of the city, Mars, Jupiter, and Quirinus, being disconnected from any traditional mythology, were, as originally worshipped, devoid of any personal characteristics (E. Aust, *Religion der Römer*, Münster, 1899, p. 19). Thus propitiation was only in a limited sense possible for the Romans, who, apart from Etruscan and Greek influences, had no conception of anthropomorphic deities. Varro (*ap.* Augustine, *de Civ. Dei*, iv. 23) made a very instructive comment on the spirit of the old Roman religion when he stated the remarkable fact that for a period of 170 years, that is to say, up to the time of the building of the temple of Jupiter on the Capitol in the reign of Tarquinius Priscus, the old Romans worshipped the gods without making images of them, and added that the man who first made such images for the people not only destroyed the fear of God, but introduced a source of distraction.

Whatever possibilities of spiritual growth lay in the recurring festivals of the old agricultural communities were conducted in a particular direction by the rapid development of the city-State and the increasing influence of the priestly colleges. The general tendency of Roman religion to place every department of human life under the protection of a separate *numen*, which is displayed in its most conspicuous form in the pontifical classifications of the *indigitamenta*, and the practical and utilitarian outlook of the average Roman, who desired to settle his relations to the gods upon fixed and definite terms, combined to produce that rigid system of formalism which made the *ius divinum* a series of precise regulations adapted to secure the *pax deorum* upon every possible contingency. It has been succinctly stated that the general object of the Roman festivals was so to propitiate the gods as to forestall any hostile intention by putting them under an obligation (C. Bailey, in *EBR*¹¹ xxiii. 578). It was the interest of the State to see that its concord with the gods remained unbroken. This purpose was secured in particular

by the periodical observance of lustrations, which served both to purify their object from all contracted stains and to ensure a renewal of divine protection against the danger of further contamination. The lustration was accomplished by symbolic acts of cleansing with water or fire, or by a procession conducting the sacrificial victim round the area which required purification. The former method was observed at the *Parilia* (Prop. iv. 4. 75 ff.), the latter at the *Ambarvalia* (Cato, *de Re Rust.* 141; Verg. *Georg.* i. 343 ff.), and both together at the *Lupercalia* (Plut. *Rom.* 21). Besides these annual celebrations, lustration was required on special occasions, such as the invasion of an enemy's territory or the departure of a fleet. Above all, it became necessary when special notice had been received by means of extraordinary portents that the *pax deorum* had been broken and the anger of the gods incurred. Among these signs were thunder and lightning, solar eclipses, showers of stones and of blood, and monstrous births, all of which are frequently recorded in the pages of Livy (e.g., xxii. l.). On the announcement of such an occurrence the first duty of the senate was to determine whether the report was trustworthy, and, if so, whether the event had happened within the limits of the public jurisdiction (cf. Livy, xliii. xiii.). If these questions were answered in the affirmative, the duty of *procuratio* fell to the consuls, who would take the advice of the sacerdotal authorities so far as might be necessary. Before the innovations consequent upon the introduction of the *ritus Graecus*, the usual means adopted was the *lustratio urbis* (Lucan, i. 592 ff.), i.e. an additional celebration of the *amburbium* annually held on the 2nd of February (Wissowa, in Pauly-Wissowa, i. 1817). Old-established tradition required that the portent of a shower of stones should be purged by a *novemdiale sacrum* (Livy, i. xxxi. 4). The introduction of the *ritus Graecus* at the suggestion of the Sibylline oracles prepared the way for the employment of new methods in the placation of divine disfavour. The most remarkable of these was the *lectisternium*, or the symbolical entertainment of the six Greek gods, Apollo and Latona, Hercules and Diana, Mercurius and Neptunus, in some public place (Livy, xl. lix. 7) by serving a banquet before their images, each of which reclined on a sacred couch (*pulvinar*). It is expressly recorded by Livy that the first institution was due to a severe pestilence in the year 399 (v. xiii. 6). After the disaster at Trasimene in 217, when the altogether exceptional consecration of a *ver sacrum* was vowed, a *lectisternium* of unusual magnificence was celebrated in honour of six pairs of deities who were identical with the twelve great Olympian gods of Greece (Livy, xxii. x.). Another method adopted for restoring the *pax deorum* in times of national crisis was the *supplicatio*. On such occasions the senate had always been accustomed to decree extraordinary *feriae*, during which the people, clad in suitable garb, passed from temple to temple imploring the assistance of heaven (Livy, iii. v. 14, vii. 7). But the systematization of the practice was a development of the *ritus Graecus*, as is shown by the regular mention of *pulvinaria*, by the fact that it was usually the result of an application to the Sibylline books, and by the responsibility for its administration being given to the *decemviri sacris faciundis* (Wissowa, *Religion und Kultus*, p. 358). Among the details of the celebration may be mentioned the wearing of wreaths and the carrying of laurel branches by the participants (Livy, xl. xxxvii. 3) and the public oblation of wine and incense (x. xiii. 1). The solemn invocation of help (*obsecratio*), a chant led by the magistrates and repeated by the people,

was the climax of the whole proceedings (IV. xxi. 5).

The portent of a monstrous birth at Frusino in the year 207 was made the occasion for a procession of maidens, 27 in number, who marched from the Carmental gate to the temple of Juno Regina, preceded by two white cows, and followed by the *decemviri* crowned with laurel and wearing the *præstata*. Behind the maidens were carried two images of Juno Regina made of cypress wood. A halt was made in the Forum, while the maidens, all holding to a rope which passed from hand to hand, sang a hymn composed for the occasion by Livius Andronicus and accompanied their singing with appropriate dances (Livy, xxvii. xxxvii. 7-15). The Greek origin of this rite, which in certain of its details is identical with the ceremonies described in Horace's *Carmen Saeculare*, is manifest (H. Diels, *Sibyllinische Blätter*, Berlin, 1890, p. 89 ff.).

The various modes of restoring the former goodwill of the gods which have been enumerated are often described as *piacular*—a nomenclature which was sometimes adopted even by the Latin authorities (Livy, XL. xxxvii. 2). But, according to the strictest acceptance of the term, a *piaculum* is not a prayer for divine protection or renewed favour, but a compensation rendered for a breach of the *ius sacrum*, arising out of a fault either of commission or of omission (Wissowa, *Religion und Kultus*, p. 329). Every sacred ordinance had to be carried out with the utmost precision and accuracy, and even the slightest irregularity in the ritual proceedings, however little deliberate, constituted an offence which might have serious consequences. To avoid such dangers precautions were sometimes taken before the beginning of a festival, as when a *porca praedidanea* was offered to Ceres before the gathering in of the harvest with the object of purging the celebrant from the effects of any offence which might have been previously committed by him in the performance of the funeral rites of any member of his household (Aul. Gell. iv. vi. 7 f.). The immediate result of the breach of contract was to give a claim for compensation (*postillo* [Cic. *de Har. Resp.* 20]) to the god whose interests were involved. The occurrence of a portent was a notification to the citizens that the claim must be made good. It followed as a matter of course that the celebration of the rite where even a slight irregularity had occurred became null and void, and it was essential that the whole of it should be repeated. Hence Cicero remarks in reference to the Megalesian games:

'If a dancer halts, or a flute-player suddenly stops, or if the carefully selected youth who drives the sacred car slips from his seat or drops the reins, or if an aedile misses a word or uses the wrong vessel for libation, the whole celebration becomes irregular, the mistake must be expiated, and a renewal is necessary to appease the wrath of heaven' (*de Har. Resp.* 23).

The same circumstances caused Plutarch to marvel at the scrupulousness of Roman piety:

'If one of the horses that draw the chariots in which are placed the images of the gods, happened to stumble, or if the charioteer took the reins in his left hand, the whole procession was to be repeated. And in later ages they have set about one sacrifice thirty several times, on account of some defect or inauspicious appearance in it' (Plut. *Coriol.* 25).

But the public renewal did not exonerate the individual whose fault had made it necessary. If his sin was wilful, he became *impius*, and the favour which he had forfeited could not be restored to him (Varro, *de Ling. Lat.* vi. 30). If the act was inadvertent, or performed at the bidding of an inevitable need, it could be expiated by an appropriate offering, as when the sacrifice of a dog was prescribed as compensation for the performance of pressing agricultural duties during *feriae* (Colum. ii. xxii. 4). The particular sacrifice necessary was generally fixed by precedent; but all cases of doubt were referred to the pontiffs for decision (Livy, xxix. xix. 8). In this connexion it may be remarked that there was a noticeable tendency to act liberally in the matter of sacrifices required for expiatory purposes. Thus the complete offering of *suovetaurilia* was reserved for lustrations

(Tac. *Ann.* vi. 37, *Hist.* iv. 53), whereas in the expiation of prodigies *hostiae maiores* were the rule, and often in considerable numbers (Livy, XLIII. xiii. 7, XXII. x. 7). In the case of the failure of an ordinary sacrifice, a second victim of the same kind as the first was required as a *piaculum* (*hostia succidanea* [Aul. Gell. iv. vi. 6]).

LITERATURE.—J. Marquardt, *Römische Staatsverwaltung*, iii. 2, Leipzig, 1885; W. Warde Fowler, *The Roman Festivals of the Period of the Republic*, London, 1899; G. Wissowa, *Religion und Kultus der Römer*, Munich, 1902, *Gesammelte Abhandlungen zur römischen Religions- und Stadtgeschichte*, do. 1904; W. Warde Fowler, *The Religious Experience of the Roman People*, London, 1911; C. Bailey, art. 'Roman Religion,' in *EB* xiii. 577-580. A. C. PEARSON.

PROSELYTE, PROSELYTISM.—1. Meaning of term.—The term 'proselyte' is usually employed in both a wider and a narrower sense to include one who is attracted by, and inclines less or more to, another form of faith, as well as one who has altogether come over and been incorporated. The half-proselyte, or the quasi-proselyte, who accepts a part but not the whole, is to be distinguished from the full and strict proselyte, who becomes even as one born in the faith. An extremely comprehensive use of the term is recognized by A. C. Lyall:¹

'... if the word proselyte may be used in the sense of one who has come, and who has been readily admitted, not necessarily being one that has been invited or persuaded to come.'

This permits consideration of specific forms of religion whose growth is by agglomeration over and above extension by missionary zeal, and the inclusion of religions non-proselytizing in character as well as those which are admittedly proselytizing.

2. Scope of article.—The scope of this article is restricted by leaving out of account religions that are professedly missionary—e.g., Christianity and Muhammadanism, which have been already treated (see artt. MISSIONS). The proselytism of sects may also be omitted as falling to be dealt with in the numerous articles under this head (see artt. SECTS). Inasmuch as the gain resulting from missionary propaganda is concurrent with loss to the religion or religions forsaken, the converse of proselytism is to be found in apostasy (see art. APOSTASY).²

In this way it is possible to narrow down consideration of the subject to nearly the usual limit of articles on 'Proselyte' appearing in Bible dictionaries, which have treated of proselytism solely as a feature of the Jewish faith. At the same time it is fully recognized that the religion which has given the name (proselyte) to the world has not stood alone in the practice of the thing. Within Judaism itself the period of missionary activity, during which proselytes were sought and found, is comparatively short. It is generally recognized as having ended in the beginning of the 2nd cent. after Christ, when the Jews were forbidden by the laws of Rome to make proselytes, and when they also ceased to desire additions to their number and retreated more and more upon themselves. The rise of proselytism is found in post-Exilic influences, particularly the Dispersion, and the period of its bloom is set in the age of Hellenism.

A great deal of our information regarding proselytes is subsequent to this period of activity, being stored in the Talmud and reflecting the views of the Rabbis upon the past, with or without historical basis. The distinction between 'proselytes of righteousness' and 'proselytes of the gate,' full as opposed to quasi-proselytes, was evolved by the later Rabbis, but is to be regarded as without

¹ *Asiatic Studies*, i. 2, London, 1907, p. 136.

² Cf. Philo, *de Penit.* 2, where proselytes are contrasted with apostates.

meaning for the life of the past.¹ The distinction may be still binding upon the orthodox of the Jewish faith (see art. JUDAISM, vol. vii, p. 592^b; cf. vol. iv, p. 245^a)—although for various reasons the proselytes of the gate have ceased to be recognized in Judaism²—and until recently it won acceptance with most Biblical scholars. To E. Schurer belongs the credit for the discovery of the right historical perspective in this matter. With the fall of such a main prop the greater part of the superstructure collapses. 'Proselytes of the gate,' once employed as a 'convenient anachronism,'³ is now dismissed as a 'misnomer.'⁴

In view of the restrictions imposed both from without (chiefly on account of persecution) and from within (because of insistence upon circumcision) proselytism might be regarded as almost non-existent in Judaism throughout the Christian era from the 2nd cent. onwards. A modern Jewish writer has collected the evidence for the survival of proselytism in spite of adverse circumstances, and he affirms that within the last half-century tens of thousands of proselytes have entered the Jewish fold, notwithstanding the *laissez-faire* attitude of modern Judaism towards the proselyte question.⁵ The strict adherence to the traditions received from the fathers may be judged from the fact that until the last decade of the 19th cent. no official sanction was given to relaxing the bond by which the proselyte was fully initiated to the Jewish (Reformed) faith (see art. CIRCUMCISION, vol. iii, p. 664^a). It is only in a wider sense, therefore, that proselytes have been added. Inter-marriage has accounted for most of the gains,⁶ yet has given occasion for some losses.⁷

3. Materials essential for the study.—Although the term 'proselyte' is now universally employed, we must still seek the materials essential for the study of proselytism in the centuries immediately preceding and following the coming of Christ to earth. An introduction is generally found in a discussion of the position of the *gēr*, the 'stranger,' or rather the 'client' (*ERE* vi. 77^b) of OT. The LXX reproduces this word some 75 times by *προσῆλυτος*, and in a few cases by other Greek substantives, but a detailed examination of all passages would fail to disclose a scientific discrimination on the part of the translators which might in any way be compared with the results yielded by the modern documentary theory. The term *προσῆλυτος* seems to have been already so familiar to the LXX translators that it was made by them to do duty for nearly all occasions, even when the current sense of the term failed to suit past historical circumstances (e.g., the Israelites are called *προσῆλυτοι* in Egypt).⁸ Commenting on the difference between D and P regarding the *gēr*, S. R. Driver states:

'In P the term is already on the way to assume the later technical sense of *προσῆλυτος*, the foreigner who, being circumcised and observing the law generally, is in full religious communion with Israel.'⁹

W. C. Allen concludes¹⁰ that in the LXX a later meaning like that of the Mishna was read into the word. But no strict law can be laid down when it is so evident that the word *προσῆλυτος* was made to do duty for most cases, and it seems better to

regard the LXX usage as on the whole dictated by the freer conditions of the Hellenistic period, when proselytes were recognized in both the wider and the narrower sense. The usage of Philo, Josephus, and NT (Acts) will be found to accord with this.

Those who were in reality but half- or quasi-proselytes are considered by Schurer¹ to be denominated by the phrase *φοβούμενοι* or *σεβόμενοι τὸν θεόν* (Ac 10², 22 13¹⁶, 26, 43, 50 16¹⁴ 17⁴, 17 18⁷), in which opinion he stands opposed to Bertholet, who endeavours to prove at length that they are equal to *προσῆλυτοι* in the narrower sense.² Apart from the question of a specific term for each, we may admit the existence of two main classes, and we then find the crucial difference to be that the one class adhered to the Jewish theological and moral code, while the other were bound by the ritual also, in particular having submitted themselves to circumcision.³ It is conceivable, indeed, that there were not two but many kinds of proselytes, according to the degree of affiliation and the amount conceded by the one party or required by the other.

In the provinces and among the Jews of the Dispersion the proselytes, or quasi-proselytes, would have laboured under slight disability, but in Jerusalem within the Temple precincts they would have been barred, lacking circumcision. The Greeks of Jn 12²⁰, e.g., seem to have been proselytes in the wider sense, yet they had to stand without the *chēz*, or terrace, like other Gentiles (cf. Ac 21^{26a}).⁴ It is not to be supposed that at the very centre of the faith born Jews would have stopped short at any intermediate stage in their efforts to make proselytes, yet in general their own position among the nations was such that they had to content themselves with what they were able to secure.⁵ That there were Judaizers before the time of St. Paul is not to be denied; even Hellenized Jews remained Hebrews, with a zeal for the whole law.⁶ Yet in the main there was a cleavage between Palestinian Judaism, a religion of law, and Hellenistic Judaism, a religion of hope, and, corresponding thereto, there were particularists *v.* universalists, legalists *v.* apocalyptists, literalists *v.* spiritualists.⁷ The atmosphere of Mt 23¹⁶ is suggestive of the one, and of Acts (see reff. above) of the other. A way of reconciling such difference has been sought by supposing that the proselyte of Mt 23¹⁶ is a proselyte to the sect of the Pharisees, not to Judaism in general;⁸ but this is against the meaning of the word *προσῆλυτος*,⁹ or at least is pressing it to an extreme.

The rivalry of the Jewish sects of the period has indeed to be reckoned with, and even the exclusive and separatist Pharisees must be credited with a zeal to win converts, who, it is true, had to come over wholly or not at all. The Essenes secured proselytes notwithstanding a strict and prolonged novitiate, and they even adopted children to ensure additions to their number (see art. ESSENES, vol. v, p. 397 f). For the methods employed by the sects in order to gain adherents there is but slight evidence, but it is otherwise with regard to the propaganda of Judaism as a whole. The testimony of Josephus as to the outcome of

such efforts is clear,¹ while beneath the contempt in the allusions of classical writers² to the Jews we can detect the measure of their success in making converts. This, it must be remembered, was accomplished in spite of the obloquy to which the convert exposed himself—a point elaborated by Philo.³

With the exception of one short period during the Maccabæan triumph, when force was employed to bring over the Idumæans and Ituræans to Judaism,⁴ the propaganda made headway through the inherent merits of the Jewish system of religion and morality. As to the ritual, Josephus specifies that both Greeks and heathen learned to copy the observance of the Sabbath, fasts, kindling of lights, and many restrictions in the matter of food.⁵ These last invite comparison with certain of the decrees of the Council of the Apostles in Jerusalem (Ac 15²⁰) and with the 'Seven Noachian Laws' (see art. NOACHIAN PRECEPTS, vol. ix. p. 379^b), but in neither case can identity be established. None of the items specified by Josephus touches the vital point, which is circumcision, and the conclusion to be drawn is that relatively few of the adherents proceeded to the utmost. The preponderance of female proselytes is taken to indicate the unwillingness of males to fulfil all that the law required of them.

According to the Talmud, three things were required of the full proselyte: (1) circumcision (*mīlāh*), (2) baptism (*tēbīlāh*), and (3) sacrificial offering (*harṣēṭ'ath, dāmim, korbān*), all of which may be taken to have been in operation at the time of Christ. (3) fell into disuse with the destruction of the Temple, although substitutes for it were found. (1) has already been referred to as essential at all times for full proselytes. (2) would have passed unquestioned as a requirement of the ceremonial law but for the dispute which arose in the 18th cent. regarding the priority of Christian v. Jewish baptism (see art. BAPTISM, vol. ii. pp. 378^a, 408 f.). It may be assumed that the instruction of proselytes was a necessary preliminary to these ceremonial acts (see art. CATECHUMEN, vol. iii. p. 256^b, n. 3; INITIATION [Jewish], vol. vii. p. 324^b; HILLEL, vol. vi. p. 683^a).

4. Historical sketch.—The limits of the period of missionary activity in Judaism have already been assigned. The Rabbis afterwards maintained that the Dispersion was with a view to securing proselytes, but the truth is rather that in the cosmopolitan atmosphere of the Dispersion the Jews first gained the incentive to add to the number of the faithful. The evidence for the existence of proselytes among the Jewish colony at Elephantine in Egypt (5th cent. B.C.) is doubtful.⁶ The nature of the records prevents us drawing any conclusion as to the conditions among the Jews in Babylonia at the time of Ezra.⁷ During the period of Hellenistic influence the development of proselytism was rapid, the influence of Jewish colonists and their synagogue worship in every place being supplemented by literary aids of many kinds: the LXX translation of OT, commentaries on Scripture, philosophical and historical books, apologies and even forgeries after the manner of the Sibylline Books.⁸ The issue of all this is plainly to be seen in the many cities and towns in which proselytes

are expressly mentioned as being found (see reff. to Acts already given). At the time of Christ a keen missionary spirit prevailed among the Jews, their trading proclivities going hand in hand with religious propaganda. Until the destruction of the Temple (A.D. 70) they persevered in their efforts to secure converts.¹ With the Hadrian persecution and the bitterness engendered by the subsequent revolt against Rome, the Rabbis were prompted to change their attitude towards the outside world, and henceforth the terms of conversion were made as difficult as possible.² The missionary epoch may be said to close with the prevalence of Gentile over Judaistic Christianity, or, from another point of view, when Pharisaism conquered Hellenism.³

A remarkable parallel to the general course of the history of Jewish proselytism will be found in the account given of Zoroastrian missions (see art. MISSIONS [Zoroastrian], vol. viii. pp. 749^b, 751^b).

5. Numbers and outstanding instances.—The number of proselytes made during the centuries of missionary zeal was doubtless very large—amounting to millions, although there is reason to believe that they were mostly adherents, and not members in the proper sense.⁴ Syria appears to have been the most fruitful field,⁵ but it was in Jerusalem at the time of the feasts that the most striking testimony to the power and results of Jewish propaganda could be obtained (Ac 2^{9a}).

Outstanding proselytes in the wider sense are to be recognized in the centurions of Lk 7^{1a} and Ac 10^{2a} and the eunuch of Ac 8^{7a}. The most complete triumph of Judaism is to be seen in the conversion of the royal house of Adiabene,⁶ the story of which is instructive as revealing a temporizing spirit among the leading Jews of the time on the question of the chief ceremonial requirement. Among the imperial family there have been reckoned as converts Flavius Clemens, cousin of Domitian, and his wife Flavia Domitilla (see art. JUDAISM, vol. vii. p. 592^b), although most authorities incline to regard them as converts to Christianity.⁷ A historical instance, which might be brought within the Rabbinical category of 'Esther'-proselytes (whose motive in conversion was fear), is forthcoming in the Roman general Metilius.⁸ Instances within the department of literature are Aquila (Onkelos), 2nd cent. A.D., translator of the Scriptures into Greek, and (doubtfully) Theodotion.⁹ Within the realm of Rabbinism are R. Akiba, R. Meir (son of a proselyte), and other Talmudic sages.¹⁰

6. The ethics of proselytism.—In judging of the motives which led the Jews to seek for proselytes during the period of their missionary zeal we must believe that they were actuated chiefly by a desire to impart to others that best form of religion which they felt they had received of God. This serves to explain their keenness as missionaries. The agents whom they sent forth to make proselytes were imbued with the same earnestness to convert the world as were the first Christian apostles. Their propaganda succeeded, they believed, because of the inherent power of their laws.¹¹ While they accommodated themselves so far to those whom they sought to win as to present first the most attractive features of their faith, as judged from the outside, they steadily kept in view the ultimate purpose, which was to make the converts as themselves, filled with a zeal for the whole law and willing to make sacrifice of themselves in body

and estate. Being of a subject race and in a hopeless minority among the nations, they were under no temptation to employ violent methods. The proselytes when made were, in theory at least, subject to no disability, save that which must ever attach to the naturalized as compared with the native born. In actual life and practice disabilities must have existed,¹ although these are not brought to light until Talmudic times, when they may no longer have been operative.

It cannot be supposed that there were not disinterested motives present in the seekers any more than in the sought. The gifts of the converts helped to swell the riches of the Temple,² and Josephus openly allows an instance of misappropriation by a Jew and his accomplices of purple and gold made over for this purpose by Fulvia, a Roman convert of great dignity.³ In other ways the Jews doubtless invited others to follow them ostensibly for their soul's good, yet with an actual view to the material advantage to be reaped by themselves and their nation.

Those who were the sought were for the most part in a position to invite themselves, if they felt thus disposed. They were Roman citizens, or under the protection of the conquering power of that time, or else were inheritors of the professedly superior culture of the Græco-Roman world. Yet many of them voluntarily surrendered themselves to Jewish influence, abandoning the gods in whom they had ceased to believe, and finding in the higher morality of Judaism a refuge from the licentious spirit of the age. The latter motive is said to have had special weight with heathen women. The monotheism and moral purity of Judaism held a powerful attraction for minds of a philosophic cast in every province. Considering the obloquy to which the converts were exposed, and the persecution of a later day, which led many to profess the Jewish faith in secret, proselytism must have been attended by a greater or less measure of conviction. Josephus admits that not all who came over continued in the faith; some had not courage and departed.⁴ Yet 'the vast majority of devout Gentiles certainly sought in the synagogue nothing but the true God.'⁵

On the side of the proselytes also certain unworthy exceptions must be allowed for, viz. those who came over to avoid military service (from which the Jews were exempt), those who were actuated by superstitious motives, and those who thought to secure commercial privilege or social advantage through marriage with a noble or wealthy Jewess.⁶

The judgment of the outside world upon the proselyte movement, as conveyed by classical writers (reff. above), counts for little. The most grievous charge they make, viz. atheism, has no foundation, nor yet has the scoffing dictum of Seneca:⁷ 'Victi victoribus leges dederunt.' The references in NT are favourable to proselytes, with the single exception of Mt 23¹⁵, which after all is more a condemnation of the leaders than of the followers, and that perhaps within a sect only.

The most abundant materials for forming a judgment on the ethical value of the proselyte appear to be found in Talmudic literature, but their worth is discounted by the fact that they are often contradictory (e.g., stories of Hillel v. Shammai),⁸ that they were evolved apart from actual historical conditions, and that in the main they are disparaging.

They 'chiefly serve to illustrate the strong animus which a large section of post-Christian Jews displayed against proselytizing and proselytes'¹

The judgment of the present day is determined according as one belongs to a religion which considers proselytism, in the modern sense, to be 'an essential and a sacred duty,'² or to a religion, such as the Jewish, which reckons that the fulfilment of its mission does not require the support of numbers.³

Christian opinion is largely moulded by a sense of indebtedness to proselytes, for they, in the wider acceptance, were the feeders of Christianity at the beginning. By this standard of judgment the 'God-fearers,' regarded as proselytes, are superior to those—their number relatively few—who became punctilious in observing all the ceremonial requirements of the law. In the case of these the saying, 'the more converted the more perverted,'⁴ may well have been true. Proselytes in the strict sense formed no link between Jew and Gentile, and did not prepare the way for Christianity.⁵ All that legal Judaism achieved over against Christianity, which came after, has been pithily summed up by Stopford A. Brooke thus:

'A few swallows do not make a summer, nor a few thousand proselytes a regenerated world.'⁶

Modern Judaism is concerned to clear itself of the reproach that by its very constitution the Jewish religion is, and has ever been, hostile to the reception of proselytes. It points to past successes in this respect, to the debt which Christianity owes to Judaism for providing it with universalistic sympathies,⁷ and it further maintains that willing proselytes are still freely received, once their good faith has been proved.⁸ But the missionary zeal has departed from Judaism, and indifference as to increase of numbers prevails. How great the change is between the present and the era of proselytism, which has been considered, appears to be reflected in the following condemnation of the missionary methods of Christianity and Muhammadanism:

'History and experience teach us that the proselytizing spirit, which is bred by the craving after universality, generally engenders a tendency which develops into an indirect negation of human brotherhood.' 'To the Moslem as to the Christian, questions of love or humanity were of little moment in the spread of their religion, the stranger could only become their brother-in-faith, or remain their implacable foe.'⁹

While remitting nothing from the duty to strengthen the confederation of Christians over against the world as still lying in unbelief, the apologist for Christianity is free to admit the presence and operation of an objectionable proselytism, whose root is found in particularism, not universalism.¹⁰

A judicial estimate of the principles and methods governing Christian and Muhammadan propaganda will be found in art. MISSIONS, vol. viii. pp. 743f., 748^b.

LITERATURE.—*ERE*, art. 'Judaism' (H. Loewe) and other artt. quoted above; art. s.v. in *HDB* (F. C. Porter), *SDB* (J. Gilroy), *EB* (W. H. Bennett), *PRE*³ (E. von Dobschütz), *EB*¹¹ (I. Abrahams), and *JE* (E. G. Hirsch).

PROSTITUTION.

Greek (W. J. WOODHOUSE), p. 404.
Indian (W. CROOKE), p. 406.

Roman (W. J. WOODHOUSE), p. 408.
Semitic. — See CHASTITY (Semit.-Egyptian),
HIERODOULOI (Semitic and Egyptian).

PROSTITUTION (Greek).—The Greeks had but little notion of moral purity in the modern sense of the term. The virtue of chastity with them was confined within very narrow limits,¹ being obligatory upon the wife (or daughter), while the husband (or son) was required only to refrain from adultery, i.e. from violating the family rights of his neighbour. The husband's honour was fully protected by law, but the wife had no legal remedy against her husband's irregularities;² nor did public opinion, capricious and ineffective at best, supplement the law's deficiencies, except in cases of gross neglect and outrage of the forms of respectability.³ Morally, according to the opinion of the day, this sort of indulgence was upon exactly the same plane as any other satisfaction of appetite. The question was one simply of more or less. Self-control,⁴ if not itself carried to undue lengths, was, it is true, something to be admired, and by common consent must be a main element in that careful and worldly-wise balancing of competing desires to which Greek thought and practice reduced the art of correct living (cf. the saying *μηδὲν ἀγαν*).

The philosophers themselves took no higher ground than this (see, e.g., Socrates in *Xen. Mem.* i. iii. 14, and *Sympos.* iv. 38, where he lays down the rule with his accustomed audacity and simplicity). Even Plato practically goes no farther than to say that a wise man will attach no great value to these particular forms of pleasure (*Phaedo*, 64 D), and in his *Republic* he would so far consult the weakness of the flesh as to allow promiscuous intercourse to both sexes when past the age for rearing children for the State—always provided that incest be avoided, and that no child be born of such unions (*Rep.* 461 B: *ὅταν δὲ δι, οἶμαι, αἱ τε γυναῖκες καὶ οἱ ἄνδρες τοῦ γεννᾶν ἐκβῶσι τὴν ἡλικίαν, ἀρῆσθαι πῶς ἐλευθέρους αὐτοὺς συγγίγνεσθαι ὥς ἂν ἐθέλωσι, κτλ*). In the *Lysis* he hopes to be able to restrict such intercourse to persons legally married, or at least to enforce a regulation that in other cases it shall be covered with a decent veil of secrecy (*Lysis*, 841). Aristotle is of the same mind (*Pol.* iv. (vii) 18 17=1335b: *τὸ δὲ λοιπὸν ἡμέλει χάριν ἢ ἢ ὡς ἂν ἄλλης τοιαύτης αἰτίας φαίνεσθαι δεῖ ποιούμενους τὴν ὁμιλίαν*).

In this matter, then, the Greeks are to be pronounced not so much immoral as non-moral. Their practice was due to the simple directness with which they regarded the facts of life and human nature. There were few facts of human nature for which they felt it necessary to apologize. In a very literal sense they were naked and not ashamed. Not that they interpreted life simply in terms of animalism, though there were among them also plenty of men to whom bodily indulgence was the sole end or the chief end of life; for the average man, as for the better sort also, it meant just the sober exercise of natural faculties and the moderate enjoyment of natural pleasures. Taken in the mass, the Greeks were probably just as far from being sensualists as from being ascetics. Aristotle's somewhat mechanical doctrine of virtue as a mean expressed a deep-rooted instinct of the race.

¹ This is so in Homer also, where Odysseus hangs his incontinent handmaids simply on the ground that their unchastity has dishonoured his family (*Od.* xxii. 418: *αἱ δὲ μ' ἀτιμάζουσιν; καὶ 424 f. ἀναδείξας ἐπέβησαν, | οὐτ' ἐμὲ τίουσιν οὐτ' αὐτὴν Πηνελόπειαν*).

² Cf. Arist. *Bocles* 178 f.: *ἐπειτα τὰς πόρνας καταπαύσαι βούλομαι | ἀπαξάσας, κτλ*.

³ E.g., the case of Alcibiades (*Andoc.* iv. 14: *οὗτος ὑβριστὴς ἦν, ἐπεισάγων εἰς τὴν αὐτὴν οἰκίαν ἐταῖρας, καὶ δούλας καὶ ἐλευθέρους, ὥστ' ἠνάγκαζε τὴν γυναῖκα σωφρονεσάτην ὅσων ἀπολαύειν, ἐλθοῦσαν πρὸς τὸν ἀρχοντα κατὰ τὸν νόμον*). It is evident from the sequel that his wife had no legal remedy.

⁴ Cf. *Xen. Mem.* i. v. 4: *ἀρά γε οὐ χρή πάντα ἄνδρα ἡγρομένου τὴν ἐγκράτειαν ἀρετὴς εἶναι κρητίδα, πάντων πρῶτον ἐν τῇ ψυχῇ κατασκευάσθαι; κτλ.* and *Mem.* iv. v. 5: *τὴν κακίστην ὅρα δοῦν εἶναι οἱ ἀκρατεῖς δουλεύουσιν, κτλ.*

This purely naturalistic or humanistic attitude of the Greeks towards life was reinforced not only by their ingrained selfishness but by certain facts of political and economic significance. The net result was that, from the point of view of morality and social institutions, and the place held therein by women, two distinct types of life were found among them. Without, of course, asserting an absolute and rigid distinction, we may recognize, on the one hand, a Dorian or Achæan (*Æolian*) type, in which women enjoyed a relatively large degree of freedom, and, on the other hand, an Athenian (Ionian) type, in which women were mostly restricted, if not to the *γυναῖκωνίτις*, at any rate to the house and its precincts,¹ with but rare opportunity of mingling with external life, and none at all of social significance (cf. the question put to Cynobulus in *Xen. Œc.* iii. 12: *ἐστὶ δὲ ὅτῳ ἐλάττω διαλέγει ἡ τῇ γυναικί; and his reply—**εἰ δὲ μή, οὐ πολλοῖς γε*).

Typical of the one sort are Sappho and Corinna, the latter five times the successful rival of Pindar; the spirit of the other mode breathes in the oft-quoted words put by Thucydides in the mouth of Pericles.² 'Hers is the greatest glory, of whom men speak least whether for good or bad' (*Thuc.* ii. 45: *μεγάλη ἡ δόξα, καὶ ἥς ἂν ἐπ' ἐλάχιστον ἀρετὴς πέρι ἡ ψόγου ἐν τοῖς ἄρσεσι κλέος ᾗ*)—words which must surely have sounded strangely, coming from the lips of the professed lover of the most noted courtesan of the day! Within each of these types of society irregular sexual intercourse, in different forms, exercised a most profound and far-reaching influence. The actual physical facts of that intercourse were necessarily the same then as to-day, but their relation to public and private life was to a large extent peculiar to the Greek people, and has in fact never been reproduced in the world in quite the same colour. The low standard of intellectual attainment of Athenian women (due to a defective education,³ which was itself but one consequence of a defective social system), standing as it did in startling contrast with the multifarious and hyperpoliticized interests of masculine life, no doubt partly explains and partly excuses the reluctance and inability of men to find satisfaction in the home circle. We must, however, be on our guard against attaching too much importance to this excuse, for after all it is a fact that the majority of the *ἐταῖραι* with whom a man associated were, apart from their superficial accomplishments, just as uneducated as his own wife or sisters. The sensuous appeal was, then as now, primary. The main reason for the failure of home life to hold men was that the social code did not permit a man to entertain his male friends in his own house, at any rate in the bosom of his family.

In Athens comparatively few native-born women had to earn their own living, the system of dowry and marriage making them, generally speaking, economically independent (see art. MARRIAGE [Greek]), though there were of course instances in which the ravages of war or other disaster had driven native Athenian women to rely upon their own industry.⁴ The case of alien women

¹ Cf. Menand in Koch, iii. 546: *τοὺς τῆς γαμετῆς ὄρους ὑπερβαίνει, γυναῖ, | τὴν αὐλίαν πέραν γὰρ αὐλίας θυρᾶ | ἐλευθέρᾳ γυναικὶ νενδύμιστ' οἰκίας | τὸ δ' ἐπιδιώκειν εἰς τὴν δόξαν τρέχει, | ἐπὶ λοιδορουμένῃ, κυνὸς ἐστ' ἔργον, 'Ρόδῳ*. In the same strain Lykurgus, describing the panic in Athens after Charoneia, says (*C. Leocr.* 40): *ὁρᾶν δ' ἦν ἐπὶ μὲν τῶν θυρῶν γυναῖκας ἐλευθέρους περιφόβους κατεττηγμένας*.

² Cf. Esch. *Sept.* 182 f.: *μέλει γὰρ ἄνδρῳ, μὴ γυνὴ βουλευέτω | τᾶξωθεν ἐνδόν δ' ὅσα μὴ θάλατταν τιβῇ—where Eteocles is made to speak quite in the manner of a 6th cent. Athenian, and even to repeat the stock gibe at the sex in line 242.*

³ Cf. here the curious symptom of the way in which women lagged behind the intellectual standard of their men-folk, in Plato, *Crat.* 418: *οὐχ ἥκιστα αἱ γυναῖκες, ἀλλὰ μάλιστα τὴν ἀρχαίαν φωνὴν σώζουσι*. See also the intolerable condescension and priggishness of Ischomachus, the model Greek gentleman (*καλὸς τε καὶ ἀγαθός*), in *Xen. Œc.* vii. 1 f.

⁴ See the inscriptions published in BSA viii. [1901-02] 1971; *Dem.* lvii. 80 f.: *παρὰ τοὺς νόμους, οἱ κελυσσύνι ἐνοχον εἶναι τῇ κακῇ ὁρίᾳ τὸν τὴν ἰσχυρίαν τὴν ἐν τῇ ἀγορᾷ ἢ τῶν πολιτῶν ἢ τῶν πολιτῶν ἀνεδίδουσαν τὴν ἡμεῖς δ' ὁμολογοῦμεν καὶ ταῖνας παλεῖν, καὶ ᾗ οὐκ ὄντινα πρόπον βουλόμεθα—an important passage (the speaker is a lone woman) as showing the suspicion*

resident in Athens was very different. Coming, as most of them did, from Asia Minor, traditionally accustomed to a larger measure of freedom than the native-born women, they for a time bade fair to bring about a radical alteration in the attitude of Athenians towards women and the question of their place in society. Suddenly this normal development of liberalism received a rude check. The purifying Acts of 451 B.C. (Plut. *Per.* 37; Ar. *Ath. Pol.* 26. 4), rigidly defining the conditions of Athenian citizenship, had the further effect of drawing a sharp line between alien and native-born, making it impossible for the children of mixed unions to attain citizenship. This vitally affected the general relationship of alien women to Athenian male citizens, and virtually compelled a large number of women to rely upon their own physical and mental endowment as a means of livelihood.¹ From this period, then, dates the beginning of the enormous expansion and social importance of the class of *ἐταῖραι* in Athens, and through Athens in Greece generally. For the main profession henceforth open to such alien women was, in fact, that of 'companion' (*ἐταῖρα*). From this time on the professional 'companion' played a definitely recognized and accepted rôle in Greek society, and one thoroughly in accord with the economic and spiritual factors of the age. Hence there is nothing surprising in the naive and striking definitions expressed by Dem. lix. 122:

τὰς μὲν γὰρ ἐταῖρας ἡδονῆς ἔνεκεν ἔχομεν· τὰς δὲ παλλακὰς, τὰς καθ' ἡμέραν θεραπείας τοῦ σώματος, τὰς δὲ γυναῖκας τοῦ παιδοποιεῖσθαι γυναικῶς καὶ τῶν ἐνδόν φύλακα πιστὴν ἔχειν—

definitions which ought to preserve us from illusions as to the real nature of the demands which the class of *ἐταῖραι* existed to satisfy.

By Sappho the word *ἐταῖρα* is used without any opprobrious significance (cf. the similar fate of the English word 'mistress'), just as even in the days of Athenæus (end of 2nd cent. A.D.) girls applied it to their female friends (Athen. 571 D: καλοῦσι γοῦν καὶ αἱ ἐλευθεραὶ γυναῖκες ἐτι καὶ νῦν καὶ αἱ παρθενοὶ τὰς συνήβους καὶ φίλας ἐταῖρας ὡς ἡ Σαπφώ). As early as the time of Herodotus, however, it was applied by way of euphemism to a woman who followed a life of promiscuous intercourse for gain, for whom the proper word was *πόρνη* (*πορνίδιον*), 'whore' (Herod. ii. 134f., where he sketches the history 'Ροδάπιος ἐταῖρας γυναικός, with whose fame Hellas sang).² A long list of synonyms for the class is to be gathered from Hesych and Pollux, vii. 201. In this sense the word *ἐταῖρα* had a wide range, from the concubine (properly *παλλακή*), who was wife in all but legal status (like *Aspasia*), through the *ἐταῖραι* πολυτελεῖς (*μεγαλόμισθοι*) to the lowest prostitute that was *κοινὴν ἅπασιν*, for which the Greek language, rich in opprobrious epithets, had a great variety of terms of terrible significance. These were doubtless appropriated to infinite fine gradations of the profession.³

attaching to such cases. See also the interesting experiment in domestic production, suggested by Socrates, in Xen. *Mem.* ii. 7f.; cf. Hom. *Il.* xii. 433f.: γυνὴ χειρὶς ἀλγῆς . . . ἵνα παῖσιν ἀεικέα μισθὸν ἄρῃται, and Aristoph. *Thesm.* 445f. (a widow with five children who earns her living *στεφανηπλοκοῦσα ἐν ταῖς μυρναῖς*).

¹ Cf. Amphis, in Meineke, *Frag. Com. Gr.*, Berlin, 1839-67, iii. 301 = Athen. 559 A (contrasting the *ἐταῖρα* with the *γυνὴ γαμέτη*): ἡ μὲν νόμῳ γὰρ καταφρονουμένη ἐνδὸν μένει, ἡ δ' οἶδεν ὅτι ἡ τοῖς τρόποις ὠνήτος | ἀνθρωπος ἐστὶν ἡ πρὸς ἄλλων ἀπείτεον— which puts the matter crudely, as simply one of supply and demand and market competition.

² Rhodope (or Rhodopis), a Thracian slave at Nancratis in Egypt, was ransomed by Charaxus, brother of Sappho, who 'roundly rebuked him in a poem' (Herod. ii. 135). According to Strabo, p. 303, the name of the *ἐταῖρα* to whom Charaxus fell a victim was Doricha, and, according to Athen. 506, it was Doricha whom Sappho attacked, and not her brother, Doricha and Rhodopis being two different persons. The poem first published in *Oxyrh. Pap.* i. [1898] 10f. (see also J. M. Edmonds, in *Class. Quart.* iii. [1909] 249) must allude to this. Herodotus (i. 135) mentions also a courtesan Archidice who became *δοιδίμος ἀπὸ τῆν Ἑλλάδα*. He was evidently interested in the subject, and in this respect is a forerunner of a large number of writers who afterwards wrote many books *περὶ ἐταῖρων*, or *περὶ τῶν Ἀθήνησιν ἐταῖριδων*, which were the sources from which Athenæus gathered the material of his own 15th book on 'Courtesans.'

³ Cf. what Antiphanes says in his *Hydria*, frag. 1 (Meineke, iv. 124), speaking of an *ἀσπὴ* turned *ἐταῖρα*: ἦδός τε χρυσὸν πρὸς ἄρεσιν κεκτημένης | ὄντως ἐταῖρα· αἱ μὲν ἄλλαι τούτομα | βλάπτουσι τοῖς τρόποις γὰρ ὄντως ἐν καλόν.

Athens, as a centre of maritime trade, was probably from the earliest times familiar with women of this class. Dracon (Athen. 569) seems to have legislated against them, but after his time the State not only tolerated and protected, but even to a certain extent exploited, them. The change was traditionally fathered upon Solon, who is said to have established State houses of prostitution, and to have built a temple of Aphrodite Pandemos from the profits:

στήσαι πριάμενόν ποτε γυναῖκας κατὰ τόπους κοινὰς ἅπασι καὶ κατεσκενασμέναις (Athen. 569).

However this may have been, it is the fact that in post-Solonian Athens those who followed this profession paid a licence fee to the State, which was farmed out in the usual way to *τελώναι* (also *πορνοτελώναι*).¹

The superintendence of this tax was one of the duties of the *ἀστυνόμοι*.² The non-existence of contagious disease for which they were responsible made the policing of prostitutes in ancient times a comparatively simple problem.

The vase-paintings of the early 5th cent., and later, indicate the great importance of the *ἐταῖραι* in the social life of the time,³ and furnish a score of names of courtesans then flourishing (see W. Klein, *Die griech. Vasen mit Meisterinsignaturen*, Vienna, 1887, *passim*; or P. Hartwig, *Die griech. Meisterinsignaturen*, Berlin, 1893, *passim*). Sparta naturally stood in great contrast, because her men had little time and little money to spend on such things (Plut. *de Fort. Rom.* 4. ὥσπερ οἱ Σπαρτιάται τὴν Ἀφροδίτην λέγουσι, διαβαίνουσιν τὸν Εὐρώταν, τὰ μὲν ἐσπέρτα καὶ τοὺς χιλιῶνας καὶ τὸν κεστὸν ἀποθέσθαι, δόρυ δὲ καὶ ἄσπιδι λαβεῖν κοσμουμένην τῷ Λυκούργῳ); and Keos boasted, or others did for her, of her poverty in this respect (Athen. 610: ἐν ταῖς Κεῖων πόλεσιν οὐτε ἐταῖρας οὐτε αὐλητρίδας ἰδεῖν ἐστι). On the other hand, Corinth was notorious throughout the Greek world for her *ἐταῖραι*, most of whom were in the service of the great temple of Aphrodite there (cf. the saying, οὐ παντὸς ἀνδρὸς ἐς Κόρινθον ἐστ' ὁ πόσις; see art. *Ἡieroδοῦτος* [Græco-Roman]).⁴

Among the Athenian *ἐταῖραι* two main classes must be distinguished. Probably by far the greater number were slaves⁵ bought or otherwise obtained by owners, male and female, who as *πορνοβόσκοι* kept them in a *πορνεῖον* (also *οἴκημα*, *ἐργαστήριον*, and many other terms)⁶ *ἐργαζόμεναι ἀπὸ τοῦ σώματος*. These would be under the general conditions

¹ Cf. Aesch. i. 119: ἀποθανυμάζει γὰρ εἰ μὴ πάντες μέμνησθ' ὅτι καθ' ἕκαστον ἐνιαυτὸν ἡ βουλὴ πωλεῖ τὸ πορνικὸν τέλος, κτλ.

² So also apparently in Corinth; cf. Justin xxi. 5: 'apud aediles adversus lenones iurgari.' As regards Athens there is some confusion. Speaking of the *ἀστυνόμοι*, Aristotle says, in *Ath. Pol.* 50: καὶ τὰς τε αὐλητρίδας καὶ τὰς ψαλτρίδας καὶ τὰς κιθαρστρίδας οὗτοι σκοποῦσιν ὅπως μὴ πλείονος ἢ ὅντιν δραχμῶν μισθωθῇσονται, κτλ., but he does not mention prostitutes. According to Suid. s.v. *διέγραμματα*: διέγραψαν γὰρ, ὅσον ἐοικε λαμβάνειν τὴν ἐταῖραν ἐκάστην, the *Agoranomoi* (*εἰδ*) fixed the *ταῖ* (if of the licensed prostitutes; this must surely be a mistake (*λαμβάνειν* for *καταβάλλειν*) for the amount of *tax* to be paid by them—if, indeed, the notice refers to Athens at all. There was a similar tax in Roman Egypt (B. P. Grenfell and A. S. Hunt, *Gr. Pap.* ii [Oxford, 1897] 67f.).

³ Cf. Athen. 570, where Themistocles is said to have driven through the Athenian Agora with the courtesans Lamia, Nannion, Satyra, and Skione. See also Athen. 538: σῆμα Ἀθηναίων μεθυσκομένων οὐδ' ἐταῖρας χρωμένων, ἐκφανὲς τέτριπτον ζεύξας ἐταῖριδων διὰ τοῦ Κεραμικοῦ πληθύνοντος ἑωθινὸς ἤλασεν— a fact vouched for, he says, by Idomeneus, who, however, did not make it quite clear whether the *ἐταῖραι* were on the car or were themselves yoked to it!

⁴ Although the information about it comes to us through Greek sources, and the practice prevailed among many who doubtless coveted themselves genuine Greeks, we do not here treat of what may be called 'sacred' prostitution, in which before marriage, or for a season, respectable women must give themselves up to promiscuous intercourse (*ε.g.*, in Cyprus [Herod. i. 199]; in Lydia girls earned their dowry by this means, though that was probably not the *raison d'être* of the practice [*ib.* i. 93; Athen. 515]). Cf. W. M. Ramsay, *Cities and Bishoprics of Phrygia*, Oxford, 1895, i. 94f., and J. G. Frazer, *GB* i. pt. iv., *Adonis, Attis, Osiris*, London, 1914, i. 36f., 57f.

⁵ Hence in Aristoph. *Ecol.* 721f.: καὶ τὰς γὰρ δοῦλας οὐχὶ καὶ κοσμουμένας | τὴν τῶν ἐλευθέρων ὑπαρτίζων Κύντην. The temple prostitutes were simply a variety of this class, for the most part—certainly all those in Corinth.

⁶ Apart to these places were the taverns (*καπηλεῖα*) in which also *πόρνοι* were to be found. Cf. Sanger, *Hist. of Prostitution*, p. 560. In Strabo, p. 578, at Koraura in Asia Minor *σαῖ* *πορνοβόσκοι* αὐλισθῆναι ἐν τοῖς πανδοχείοις σὺν πολλῷ *παίζει* γυναῖκων νύκτωρ γενομένων σεῖσμοι *συναφανισθῆναι πάσαις*. But perhaps this was an itinerant company.

governing the institution of slavery in Athens and elsewhere (see art. SLAVERY). This class must have been largely recruited from the number of female infants 'pot-exposed,' i.e. cast out to their fate by fathers unwilling to rear them.¹ Of this sort, perhaps, were the seven *παιδίσκαι* brought up by the freedwoman Nicarete to stock her brothel (Dem. lix. 18 f.), she being *δευτὴ φύσιν μικρῶν παιδίων συνδεῖν εὐπρεπῆ, καὶ ταῦτα ἐπισταμένη θρέψαι καὶ παιδεύσαι ἐμπείρως, τέχνην ταύτην κατεσκευασμένη καὶ ἀπὸ τούτων τὸν βίον συνειλεγμένη*. She called them her daughters, apparently a common deception—to enhance the price.

Often such slaves were instructed in accomplishments, and were then hired out as flute-girls, harpists, dancers, etc., at banquets, where, as we see from countless vase-paintings and literary references, ample opportunity was as a matter of course given for other services. This species of more or less educated prostitute trenches upon the second great class, and, indeed, under the conditions of Greek slave life, it was possible to rise from the one class to the other. This higher class consisted partly of freedwomen, partly of free-born aliens, more rarely of native-born Athenians,² who for various reasons adopted this profession on their own account. The story told by Sino in Terence (*Andria*, 69 ff.: 'ita ut ingenium omnium hominum ab labore proclive ad lubricum' [77]) was doubtless as familiar then as now; and that of Corinna, daughter of Crobyle, forced by her mother into a life of shame (Luc. *Dial. Mer.* 6), perhaps not less common. These independent courtesans, again, fell into varieties—from the *τριάντος πόρνη* of Hesiarchus to the *ἐταῖρα μεγαλόμισθοι* (Athen. 569) at the head of the profession in the hey-day of their charms (cf. the story of Demosthenes and Lais, in Aul. Gell. *Noct. Att.* i. 8).

In spite of her would-be apologists, Aspasia (of Miletus?) the concubine (παλλακή) of Pericles, must still be taken as a type of this higher grade of *ἐταῖρα* in the 5th century. The most absurd claims have been made on her account, both in ancient and in modern times (e.g., in the *Menaenetus*, generally ascribed to Plato, she is a rhetorician, instructress of both Socrates and Pericles. Cf. Xen. *Œc.* iii. 14: *συστήσω δέ σοι ἔγὼ καὶ Ἀσπασίαν, ἣ ἐπιστημονώτερον ἑμῶν σοὶ ταῦτα πάντα ἐπιδείξει*, says Socrates, referring to the subject of female education—but surely he is speaking with his accustomed irony). She was doubtless highly gifted and highly educated, but withal an adventuress with a very practical turn of mind; but that does not imply our acceptance of the gross stories and epithets applied to her by the comedians and others (e.g., Aristoph. *Acharn.* 524 f.; Plut. *Per.* 24 f.). Far more illuminating as to this whole class of what may be called 'respectable' *ἐταῖραι* is the conversation of Socrates with the *ἐταῖρα* Theodote, in which he discourses with her pleasantly and quite as a matter of course upon the rationale of her profession (Xen. *Mem.* ii. 11. 1 ff.). But not all interviews with *ἐταῖραι* were of so innocent a sort.

It is to the 4th cent. B.C., and later, that the most famous names of *ἐταῖραι* belong—e.g., Phryne (story of the orator Hyperides unveiling her bosom before the jury, and so securing her acquittal as *τὴν ὑποφῆν καὶ ἡδαιόρον Ἀφροδίτην*, in Athen. 590, where also are other examples of her insolence and extravagance); Thais, the evil genius of Alexander the Great at Persepolis (burning of the palace at Persepolis at her suggestion [Athen. 576]); Lamia, who for years held Demetrius Poliorcetes in thrall; Pythonice and Glycera, who went to Babylon to Harpalus, Alexander's treasurer, who

¹ Cf. Aristoph. *Frogs*, 1190: *ἐξέθεσαν ἐν δοτράκῳ*, and *Clouds*, 531: *παῖς δ' ἐτέρᾳ τῇ λαβόντ' ἀνέλετο*. Opinions differ widely both as to the probable number of children thus exposed and as to the proportion of those who were rescued from death as a speculation. Naturally, no conclusion at all, beyond the bare fact that such rescue sometimes took place, can be drawn from the frequency of this motive in the New Comedy.

² That native-born Athenians did sometimes sink into the class of *ἐταῖραι* is certain, from Antiphanes, *Hylar.* frag. 1 (Meineke, iv. 124): *ἴδων ἐταῖρα εἰς ἔρωτ' ἀφίκετο, | ὁστίς ἐρήμιον δ' ἐπύραρον καὶ συγγενῶν*, as well as from the apologies put forward in Dem. lvi. 34 f., already quoted—even if we were not told that one famous *ἐταῖρα*, Lamia, a mistress of Demetrius Poliorcetes, was daughter of Cleonora an Athenian, and presumably therefore herself of free birth (Athen. 577).

decamped with over a million and a quarter in gold; these and scores of other courtesans were, for the most part, products of Athens, who in this way repaid her long-standing debt to Asia; for in this age Athens 'became to Hellenistic potentates what Miletus and the Ionian towns had been to the Lydians and the Persians—the most popular source of their supply of "pleasure women"' (W. S. Ferguson, *Hellenistic Athens*, London, 1911, p. 70).

There was perhaps no business more capitalistic in its organization and international in its scope than the traffic in courtesans, so that, despite its losses, the Athenian *demi-monde* maintained its lead and its reputation' (ib. p. 71).¹

Into this world of superficial accomplishment, tawdriness, vulgarity, and heartlessness, in which men and women frankly preyed upon each other for what each could offer, Athenicus in his 13th book gives us more than a glimpse. In a sense it is true that the *ἐταῖρα* was the one free woman in Athens; moreover, it is probable that the general simplicity of ancient life was itself a check upon the *descensus Avernus* which inevitably characterizes this class in modern times. The comparative feebleness, and almost non-existence, of the sense of degradation in the career of the *ἐταῖρα* must also have tended to keep them individually upon the social plane to which their respective intellectual and physical qualifications, that is to say, their true economic measure, raised them; so that the more terrible issues of prostitution remained unrevealed to the Greeks. To the Greek *ἐταῖρα* Lecky's famous phrase is thus only partially applicable; 'eternal priestess of humanity' she was, it is true, but hardly 'blasted for the sins of the people' (*Hist. of European Morals*², London, 1890, ii. 283).

LITERATURE.—K. Schneider, art. 'Hetairai,' in Pauly-Wissowa, is very complete on the archaeological side; W. W. Sanger, *The Hist. of Prostitution*, new ed., New York, 1913 (uncritical and superficial in dealing with the ancient material); W. A. Becker, *Charvates*, tr. F. Metcalf, London, 1845, is still perhaps the most complete collection of material, outside the 13th book of Athenæus, our chief source of information. Nothing very recent seems to have been written on the general subject, which requires investigation from the point of view of economics and female industries.

W. J. WOODHOUSE.

PROSTITUTION (Indian).—I. Early history of prostitutes.—As was the case in other parts of the world, the trade of the prostitute has been practised in India from a very early period.

(a) *The Vedic period*.—Prostitution is found in the *Rigveda*, but its extent is disputed. Brotherless girls were frequently compelled to earn their livelihood in this way, and the putting-away of an illegitimate child is mentioned (i. cxxiv. 7, iv. v. 5, ii. xxix. 1). Terms like *pumsālī*, *mahānagnī*, and *rāma* clearly mean 'harlot,' and there are unmistakable references to the trade. Expressions like *kumārī-putra*, 'son of a maiden,' and *agrū*, 'son of an unmarried girl,' point in the same direction. The *Vājasaneyi Samhita* seems to recognize prostitution as a profession; but the exact meaning of the references collected by R. Pischel and K. F. Geldner (*Vedische Studien*, Stuttgart, 1888-89, i. xxv. 196, 275, 299, 309 ff., ii. 120) is not certain (A. A. Macdonell and A. B. Keith, *A Vedic Index of Names and Subjects*, London, 1912, i. 395 f., ii. 480 f.). In the case of a widow the custom of *satī* seems to have been in abeyance; in some cases she was burned with her dead husband (*Atharvaveda*, xviii. iii. 1), but in other cases the levirate prevailed and, as she married the brother of her late husband, this

¹ But the predominance of the courtesan in the New Comedy must not destroy our sense of proportion. It was, in part, a necessary outcome of the convention which laid the scene always in the street, into which respectable women could not venture, except under escort and upon rare occasion. Hence the plays mirror social, but not domestic, life, and work their threadbare a few stock motives.

source of prostitution may have been generally closed (Macdonell and Keith, i. 488).

(b) *In the law-books.*—Mann (*Laws*, ix. 259) directs that harlots are to be punished, and a Brāhman is forbidden to touch food given by harlots, which excluded him from the higher worlds (iv. 209, 219). The same prohibition applies to food given by an unchaste woman, and libations of water are not to be offered to women who through lust live with many men (iv. 211, 220, v. 90).

(c) *In the Buddhist age.*—A Brāhman was forbidden to witness dancing or hear music, the trade of the *śraipa* (T. W. Rhys Davids, *Buddhist India*, London, 1903, p. 185 f.). But numerous references to prostitutes in the *Jātaka* show that they were tolerated and to a certain degree held in respect. The fees paid to some of them were exceedingly high (*The Jātaka*, Eng. tr., Cambridge, 1895–1907, i. 40, 261, iii. 283, iv. 157); 700 courtesans are found in the palace of a king (vi. 145). Sakka, after giving money to a harlot, does not visit her, but rewards her continence by filling her house with jewels of seven hoards (ii. 259 f.). One of this class is said to keep the five virtues (ii. 251). On the other hand, the roguery and rapacity of prostitutes are referred to, and it is regarded as a misfortune for a virtuous man to be reborn in a harlot's womb (vi. 117). Somadeva, who used much Buddhist material, writes:

‘Thus, O King, even hetairai are occasionally of noble character and faithful to kings as their own wives, much more than matrons of high birth’; he also speaks of the famous *śraipa* of Ujjayini, Devadattā, who had a place worthy of a king (*Kathā-sart-sāgara*, ed. C. H. Tawney, Calcutta, 1880, i. 854, ii. 621).

In the Buddhist legends we read of Ambāpatā, the famous courtesan of Visala, and the princess Salawatī takes this profession (R. S. Hardy, *A Manual of Buddhism*, London, 1853, p. 244). An inscription of the W. Chalukya dynasty of Bādāmi, early in the 8th cent. A.D., records gifts made by a prostitute to a temple (*BG* i. pt. ii. [1896] 372, 394).

At the present day prostitutes are tolerated in India to an extent which can hardly be paralleled in any other part of the world. It is considered lucky to meet a prostitute at the beginning of a journey, probably because she can never become a widow, whose appearance is an evil omen (E. Thurston, *Castes and Tribes of S. India*, Madras, 1909, ii. 139). One class of dancing-girls, known as *mātangi*, are held in much respect, and among those castes in which girls are prostituted this is done after a regular session of the council (below, § 3).

(d) *Under Muhammadan rule.*—The Muhammadans kept prostitutes under supervision.

Under Akbar ‘the prostitutes of the realms (who had collected at the capital, and could scarcely be counted, so large was their number) had a separate quarter of the town assigned to them, which was called Shaiṭānpura, or Devilsville. A Dāroghah [superintendent] and a clerk were also appointed for it, who registered the names of such as went to prostitutes, or wanted to take some of them to their houses. People might indulge in such connexions, provided the toll collectors heard of it. But, without permission, no one was allowed to take dancing-girls to his house. If any well-known courtier wanted to have a virgin, they should first apply to His Majesty, and get his permission’ (Abul Faḍl, *Āin-i-Akbari*, tr. H. Blochmann, Calcutta, 1878–94, i. 192).

Khāfi Khān (*Muntakhabu-l-lubāb* [H. Elliot, *Hist. of India*, London, 1887–77, vii. 283]) states that ‘the minstrels and singers of reputation in the service of the Court were made ashamed of their occupation, and were advanced to the dignity of *mansabs*. Public proclamations were made prohibiting singing and dancing. It is said that one day a number of singers and minstrels gathered together with great cries, and having fitted up a bier with a good deal of display, round which were grouped the public wailers, they passed under the Emperor’s *jhārokha-i-darshan*, or interview window. When he enquired what they intended by the bier and the show, the minstrels said that Music was dead and they were carrying his corpse for burial. Aurangzeb then directed them to place it deep in the ground, that no sound or cry might afterwards arise from it.’

According to Manucci (*Storia di Mogor*, ed. W. Irvine, London, 1907, ii. 9), ‘in the reign of Shāhjahān dancers and public

women enjoyed great liberty, and were found in great numbers in the cities. For a time, at the beginning of his reign, Aurangzeb said nothing, but afterwards he ordered that they must marry or clear out of the realm. This was the cause that the palaces and great enclosures where they dwelt went to ruin little by little; for some of them married and others went away, or, at least, concealed themselves.’

The elaborate organization of the brothels at Vijayanagar in the 15th cent. is described by Abdur-razzāk, *Matla’us-salāwīn* (Elliot, iv. 111 f.).

2. *Temple-dancers.*—The appointment of women as dancers and courtesans in connexion with the greater Hindu temples is not peculiar to India (*GB*³, pt. iv., *Adonis, Attis, Osiris*, London, 1914, i. 57 ff.). Such women are known in India as *dēvadāsī* or *devavatīlī*, ‘slaves of the gods,’ or in Travancore as *kudikkār*, ‘those who belong to the house.’

‘The rise of the caste and its euphemistic name seem both of them to date from about the 9th and 10th centuries A.D., during which much activity prevailed in S. India in the matter of building temples and elaborating the services held in them. The dancing-girls’ duties, then as now, were to fan the idol with Chāmāras, or Tibetan ox-tails, to carry the sacred light called Kumbārti, and to sing and dance before the god when he was carried in procession. Inscriptions (*South Indian Inscriptions*, ed. E. Hultzsch, Madras, 1890–1903, ii. pt. iii p. 250) show that in A.D. 1004 the great temple of the Chola king Rājārāja at Tanjore had attached to it 400 *takk’cheri pendugal*, or “women of the temple,” who lived in free quarters in the four streets round it, and were allowed tax-free land out of its endowments. Other temples had similar arrangements. At the beginning of the last century there were one hundred dancing-girls attached to the temple at Conjeevaram¹ (F. Buchanan, *Journey from Madras*, London, 1807, i. 12 f.), and at Madura, Conjeevaram and Tanjore there are still numbers of them who receive allowances from the endowments of the big temples at those places. In former days the profession was countenanced not only by the Church but by the State. Abdur Razāk, a Turkish Ambassador to the Court of Vijayanagar in the 15th cent., describes women of this class living in State-controlled institutions, the revenue of which went towards the upkeep of the police. [A similar account of the State regulation of prostitution at Golkonda is given by J. B. Tavernier, *Travels in India*, ed. V. Ball, London [1889], i. 157 f.] At the present day they form a regular caste, having its own laws of inheritance, its own customs and rules of etiquette, and its own panchayats [caste councils] to see that all these are followed, and thus hold a position which is perhaps without a parallel in any other country. Dancing-girls dedicated to the actual profession are generally married in a temple to a sword or a god, the *tālī* [gold trinket worn round the neck as a symbol of marriage] being tied round their necks by some man of their caste’ (*Census of India, 1901*, xv., ‘Madras,’ Madras, 1902, i. 151 ff.; for full accounts of the *dēvadāsīs* see Thurston, ii. 125 ff.; J. A. Dubois, *Hindu Manners, Customs, and Ceremonies*, Eng. tr. 3, Oxford, 1906, pp. 337, 584 ff.; *Census of India, 1901*, xxvi., ‘Travancore,’ Trivandrum, 1903, i. 276 f.; V. Nagam Aiyar, *Travancore State Manual*, do. 1906, ii. 883 ff.; R. V. Russell, *TC Central Provinces*, London [1916], iii. 374 f.; for other references see *GB*³, pt. iv., *Adonis, Attis, Osiris*, i. 61 ff.).

In W. India this class of women is known as *bhāvinī* (Skr. *bhāvinī*, a handsome, wanton woman), *devī* (Skr. *devālā*, an attendant on an idol), or *nāikīn*, ‘mistress,’ ‘procuress.’ They are said to be descended from the female servants of the Sāvant-vādī or Mālvān chiefs, but some of them are of earlier origin, and their ranks have been recruited from the households of the chiefs—women of other Śūdra castes, besides Marāṭhas and Bhandāris, who may become *bhāvinīs* by pouring water from the god’s lamp in a temple over their heads.

When a *bhāvinī* girl attains puberty, she undergoes a form of marriage with the god, the rite being performed both at the girl’s house and in his temple by the officiant (*gurav*, *rāul*). These and other servants of the temple go in procession to the house of the girl, taking with them a dagger and the mask of the god. The marriage rites are performed in the usual way, with the lighting of the sacred fire (*homa*), the mask taking the place of the bridegroom. The rite involves considerable expenditure, and in some cases, with a view to economy, the girl worships Gaṇapati or Gapeśa, god of enterprises, and goes to the temple accompanied by a party of her own caste and temple servants, taking in her hand a coco-nut and a packet of sugar. She places these things before the image of the god and bows to him. The *gurav* and other temple servants then invoke on her the blessing of the god, and the ceremony ends.

The *bhāvinī* practises prostitution, and differs from common prostitutes only in being dedicated to the god. From her children she chooses two or three to succeed her as temple servants. In the social scale she ranks below the *kulāvānt*, the

¹ See art. KĪRĪTIPURAM.

higher class of courtesan, who is not allowed to sing and dance in public. Her duties in the temple are to sweep and purify the floor by washing it with cow-dung and water, and to wave a fly-whisk before the god. The male members of the caste, known as *devli*, blow the temple horns and trumpets to wake the god from his slumbers. They are paid partly in cash and partly by a share of the offerings (*Ethnographic Survey, Bombay*, monographs 60, 92, Bombay, 1907-09; BG x. [1880] 128). In Mārwar a class of dancing-girls and prostitutes is known by the ironical title of *bhagtan* or *bhagtāni*, 'wives of a *bhagat*, or holy man.'

'It is necessary for a daughter among them to be nominally married before she enters on her profession, as it is considered a sin to allow their maiden girls to offer themselves to their infamous employment before the ceremony of marriage is performed. No betrothal takes place in such cases, and the girl is only nominally married to a Sādhu [one of the Hindu ascetic orders], who is always prepared to give up every connection with his bride on payment of a rupee and a half. If, however, no Sādhu is available, the ceremony of *phera* [circumambulation round the sacred fire] is performed by procuring the portrait of Ganesha, a Hindu divinity, invoked at the commencement of every affair' (*Census Report Mārwar, 1891, Jodhpore, 1894, ii. 124*).

3. Prostitutes under British rule.—Since the abolition of the Contagious Diseases Act there has been no regular supervision of prostitutes, and, as it is impossible to draw the line between those who practise the trade as profession and those who prostitute themselves in a surreptitious way, no statistics are available. At the last census they were included in the class of unproductive labour, with beggars, vagrants, receivers of stolen goods, and cattle poisoners (*Census of India, 1911, i. 'India,' pt. ii. [Calcutta, 1913] 432*). At the present day prostitutes in N. India are known as *īwāīf* (pl. of Arab. *īwāf*, 'troop,' 'band'), *pātar*, *pātur*, *paturīya* (Skr. *pātra*, 'an actor'), *kanchan*, 'golden,' *rañāī*, 'widow,' or *kasbi* (Arab. *kasb*, 'acquiring,' 'earning'), while those who practise the trade secretly are called *khanagī*, 'those of the house,' or *harjāī*, 'gadabout.' They are often recruited from widows or women expelled from caste for immorality or other misconduct. In the port towns, like Calcutta and Bombay, they are sometimes Eurasians or foreign women, mostly French or Austrians. Native prostitutes often live in brothels managed by a procuress (*nāika*, *sāgin*, *bhangerin*) who treats her customers to tobacco and various compounds of opium or hemp (W. Hoey, *Trade and Manufactures in N. India*, Lucknow, 1880, p. 176). Many of the gypsy-like nomadic tribes in N. India prostitute their girls. Thus, the Bedyās of N. India reserve nearly all their girls for prostitution, and the men keep concubines drawn from other castes; in some places, if a man marries a girl of the tribe, he is expelled, and if he marries a girl who has been reserved for prostitution, he is fined by the council (Crooke, *TC*, Calcutta, 1896, i. 245). The Kolhātis of Bombay are to a large extent dependent on the prostitution of their women, a girl on attaining puberty being allowed to choose between marriage and prostitution; if she chooses the latter occupation, she appears before the caste assembly, and, with the consent of its members, becomes a prostitute; the tribe is now kept under supervision, as they sometimes kidnap high-caste girls to bring them up as prostitutes. The same is the habit of the Hārnīs, Berads, and Māng Gārudas of the Deccan (M. Kennedy, *Notes on the Criminal Classes of the Bombay Presidency*, Bombay, 1908, pp. 13, 122, 274, 283). The Dombars, a caste of acrobats in Mysore, are notorious for dedicating their smart and good-looking girls as prostitutes. In a troupe one girl is generally reserved for this trade.

The dedication is made when the girl comes of age, when, on an auspicious day, the caste people assemble by invitation. The girl is bathed and seated on a rice-pounder before the

assembled caste people. Married women or dedicated prostitutes smear her with red powder and turmeric, pour rice over her, and fill her garment with coco-nuts, rice, and other lucky substances. On rising, she bows to the elders of the caste and receives their blessing. She is then taken in procession to the temple of Anjaneya or Yallammā, a man beating a drum and the women singing. She is given holy water (*tūtha*) by the priest, and she is again seated on a rice-pounder in the midst of her caste people. Rice is poured over her by *basavi* prostitutes and married women, and the ceremony ends with a feast. She is then made over to her first lover.

Such women are said to remain faithful to their protectors when kept as concubines, and it is asserted that they may be flogged and fined by the castemen if they prove false. A woman who does not enter into a connexion more or less permanent with a man is free to consort with other men, provided her lover be not of a caste lower than her own. A *basavi*, or dedicated prostitute, if she wishes to live a chaste life, can be married, and she then ceases to perform acrobatic feats in public. Her children born before the marriage are left with her relatives (monograph 13, *Ethnographic Survey, Mysore*, Bangalore, 1908, p. 12 f.). In the same province the Bedā, Gollā, Kurubā, Mādgā, and other castes often dedicate their eldest daughter, in a family where no son has been born, as a *basavi* prostitute; and a girl falling ill is likewise vowed to be left unmarried, with the usual result (B. L. Rice, *Mysore*, rev. ed., Westminster, 1897, i. 256).

LITERATURE.—The authorities have been quoted in the article; see also Al-Bīrūnī, *India*, ed. E. C. Sachau, London, 1910, ii. 142 f.

W. CROOKE.

PROSTITUTION (Roman).—The difference between Roman and Greek views on this subject flows not so much from a deeper appreciation of the family¹ on the part of the former as from a deeper conception of personality and of the value of the individual citizen as such, independent of sex. Doubtless there was hence reflected back upon the family a sentiment that contributed much to the enhancement of its dignity and authority; but the primary result was to create an attitude of mind, on the part of men, towards free Roman women in general, and especially towards them as wives, entirely different in quality from that exhibited among the Greeks. This is not to say that the legal position of the Roman woman was actually very different from, though it was certainly superior to, that of her Greek sisters. Especially as wife and mother (*materfamilias*), her position was one of dignity and esteem; she was not servant, but mistress ('ubi tu Gaius, ego Gaia,' ran the old marriage formula). She was denied neither freedom of movement nor share of social intercourse, within or without the house.² Custom debarred her from direct access to public affairs, but her position was free from any suggestion of intentional personal abasement, though it was true that in the older Roman system she was subject in law in the strictest degree to her husband or other male *tutor* (see T. Mommsen, *Hist. of Rome*, Eng. tr., new ed., London, 1901, i. 74 f.).

The Greek influence, when it was finally brought to bear upon Roman society, proved one of its

¹ Cf. Cic. *de Off.* i. 54: 'nam cum sit hoc natura commune animantium, ut habeant libidinem procreandi, prima societas in ipso coniugio est, proxima in liberis, deinde una domus, communia omnia; id autem est principium urbis et quasi seminarium rei publicae.'

² Cf. Corn. Nepos, *Probat.*: 'Contra ea pleraque nostris moribus sunt decora, quae apud illos turpia putantur. Quem enim Romanorum pudet uxorem ducere in convivium? aut cum materfamilias non primum locum tenet aedium, atque in celebritate versatur? quod multo fit aliter in Graecia. Nam neque in convivium adhibetur, nisi propinquo; neque sedet, nisi in interiori parte aedium, quae *gynaecoon* appellatur, quo nemo accedit, nisi propinqua cognatione coniunctus.' For freedom of social intercourse see Cic. *pro Cael.* 20, 'qui dicunt uxores suas a cena redeuntes attractas esse a Caelio'; cf. Plut. *Rom.* 20: 'ἄλλα μέντοι πολλὰ ταῖς γυναῖξιν εἰς τὴν ἀνέωκον . . . ἐξίστασθαι μὲν ὁδὸν βαδίζουσαι, κτλ.; Cic. *Verr.* i. 84.

most powerful solvents, so that the tone of those grades of society which find expression in the literature of the Empire was in complete discord with that of the early Republic. It is, in fact, a striking phenomenon that, while the Greeks, on the one hand, made no pretensions to any loftiness of principle in reference to the intercourse of the sexes, but maintained upon the whole a high degree of outward decency, the Romans, on the other hand, whose principles, and for a long time their practice, were upon a higher plane, exhibited a declension which apparently reached a depth far below that ever attained by the Greeks, save in isolated cases. This difference must, in part, be explained by the existence in the Roman of some deep-lying coarseness of instinct, due perhaps to some early racial (Etruscan?) infusion. A curious result was that in Greece it was the free lances of love (the *ἐραῖται*) who in individual cases attained to great wealth and to social and political influence; in Rome the class of professional prostitutes remains throughout in the shadows of the background,¹ the adventuresses whose charms make them a power in politics being drawn exclusively from the ranks of free-born Roman society ladies (e.g., the fascinating Clodia, the notorious sister of Cicero's enemy, P. Clodius; see G. Boissier, *Cicero et ses amis*², Paris, 1884, p. 174f.). The economic emancipation of Roman women, the relaxation of the family tie, and the vogue of the laxer forms of marriage are symptoms of a moral disintegration that has no parallel in the history of society in Greece, and one all the more grave as it was for the most part independent of economic pressure.

As a matter of strict principle, then, among the Romans prostitution was *per se* shameful (*flagitium*)—for both parties. That this was the Roman sentiment, at its best, is clear enough even from the passage in which Cicero, with his usual verbose insincerity as an advocate, denies it (*pro Cael.* 48: 'Verum si quis est, qui etiam meretricis amoribus interdictum iuventuti putet, est ille quidem valde severus—negare non possum—sed abhorret non modo ab huius saeculi licentia, verum etiam a maiorum consuetudine atque concessis. Quando enim hoc non factum est? quando reprehensum? quando non permissum? quando denique fuit ut quod licet non liceret?').³ Perhaps from the earliest times there was in use in Rome a system of police registration analogous to that found now in most European countries. Women adopting the career of a prostitute (*meretrices, scortum, prostibulum, amica*) were required to register themselves at the aedile's office, and to take out a licence upon payment of a tax. The register gave full personal details of the licensee, with her professional name and price, etc. Once placed upon the register, the name could never be erased, but remained as a perpetual memorial of shame. That is to say, the moral turpitude of the act of prostitution itself (*guæstium corpore facere*) was felt to override completely all other aspects, so that recovery of status was for ever foreclosed. The unwillingness of the Roman mind to draw upon its own facility of legal fictions in order to open a way to repentance and recovery for the prostitute is in startling contrast to the humane and reasonable attitude of the Greeks towards this class. From this same thoroughgoing attitude of the Romans sprang also the minute regulations which imposed upon prostitutes a distinctive dress,⁴ dyed hair, or yellow wig, and other civil disabilities, designed to mark them out for public reprobation and to penalize their profession.

As wealth and luxury increased, and the spiritual strength of the Republic decayed, while Greek, and especially Oriental, models of profligacy, springing from a quite different religious and social conception, poured into Italy in an ever-swelling flood, these repressive regulations were of no avail to prevent the recruiting of the ranks of open or

secret prostitutes from even the upper strata of society. Amid the general depravity prostitution ranked merely as one form, and that not the gravest, of immorality. As emperor, Tiberius tried to check it by more stringent enactments,⁵ but his own *libido effrenata et indomita*, real or suspected, made it impossible for him to exercise any authority over the licence of the age.⁶ Caligula even exploited the registered prostitutes as a source of revenue.⁷ The prostitute's tax continued to be levied until the time of Theodosius in the 4th cent., and was not finally abolished until a century later, by Anastasius I., when the old registers of the prostitutes were also consigned to destruction. Justinian, in the 6th cent., removed some of the civil disabilities of prostitutes (possibly only to enable himself to marry the reformed prostitute Theodora; see E. Gibbon, *Decline and Fall*, ed. J. B. Bury, London, 1898, iv. 215).

Probably the influence of Theodora is to be seen in the interesting experiment made by Justinian, who converted a palace on the Asiatic side of the Bosphorus into a monastery as a rescue home for 500 reclaimed prostitutes of the capital. Here, to be saved from themselves, they were kept in a perpetual seclusion, to which many preferred suicide, so that the experiment was a failure. It marks, however, an approach to the modern attitude of charity and sympathy in dealing with the class, as contrasted with both its theoretical repudiation by the Romans and its frank acceptance by the Greeks. So far as our scanty knowledge goes, neither the Greeks nor the Romans had to face the problem of dealing with prostitution in the interests of national hygiene. The Roman system of registration and public supervision is of interest in that it represents practically the utmost that, as yet, appears possible in dealing with this problem. With the exception that there is no tax, and that the door to recovery is not legally closed, the procedure of most of the Continental peoples is simply a reversion to the Roman system. The object of both is the same, namely, outward control of the phenomenon in the interests of public order and decency; to this, for modern societies, the protection of public health falls to be added as a further complication, towards the solution of which the ancient procedure can offer no suggestion.

LITERATURE.—Save for incidental references, mainly upon the general subject of social morality under the Republic and the Empire, nothing dealing with this specific topic is known to the present writer.

W. J. WOODHOUSE.

PROTAGORAS.—Protagoras was the most famous of the Greek sophists of the 5th cent. B.C. (see SOPHISTS).

1. Life and writings.—Protagoras was a native of Abdera in Thrace. Plato, our best authority, tells us that he was seventy years old when he died, and that he had spent forty years in the practice of his profession (*Meno*, 91 E), and he visited Athens not for the first time after the production (in 420 B.C.) of a play by Pherecrates. With such data as we have, his birth seems to fall between the limits 490 and 480 B.C. The subjects

¹ Of course they are frequently alluded to, especially by the poets, but not in such a way as to reveal any specifically Roman details, or to make it necessary here to multiply quotations which do little more than prove the existence and wide prevalence of vice in Roman brothels and other meeting-places.

² When it suits his purpose, his language is very different; e.g., *pro Mil.* 55: 'ille, qui semper secum scorta, semper exoletos, semper lupas duceret,' and cf. *Cat.* ii. 10.

³ Prostitutes might not wear the matron's stola, but must wear a toga of sad stuff (*toga pulla*); cf. *Juv. Sat.* ii. 69f.: 'talem non sumet damnata togam'; *Hor. Sat.* i. ii. 63: 'quid interest in matrona, ancilla peccesne togata?', and cf. *Cic. Phil.* ii. 44: 'qui te a meretrice quaestu abduxit et, tamquam stolam dedisset, in matrimonio stabili et certo conlocavit.'

⁴ *Tac. Ann.* ii. 85: 'gravibus senatus decretis libido feminarum coercita cautumque, ne quaestum corpore faceret cui avus aut pater aut maritus eques Romanus fuisset. Nam Vistilia, praetoria familia genita, licentiam stupri apud aediles vulgaverat, more inter veteres recepto, qui satis poenarum adversum impudicas in ipsa professione flagitii credebant'; cf. *Suet. Tib.* 35: 'feminae famosae, ut ad evitandas legum poenas iure ac dignitate matronali exsolverentur, lenocinium profiteri coeperant'.

⁵ Cf. W. E. H. Lecky, *Hist. of European Morals*⁸, London, 1890, ii. 303: 'There have certainly been many periods in history when virtue was more rare than under the Caesars; but there has probably never been a period when vice was more extravagant or uncontrolled.'

⁶ *Suet. Cal.* 40: 'ex captivis prostitutarum quantum quaeque uno concubitu mereret,' etc.

that he taught included oratory, grammar and the right use of words (Plato, *Phædr.* 267 C; Diog. Laert. ix. 53), the interpretation of the poets (Plato, *Protag.* 339 A ff.), and, generally, those accomplishments which enabled a Greek to take a prominent part in the politics of his native city (*ib.* 319 A). His popularity was unbounded (*ib.* 309 C, *Theæt.* 161 C): Plato even pits him against Homer as an authority on the education and improvement of mankind (*Rep.* 600 C). At the same time, like Socrates, Protagoras incurred the dislike of certain sections of society typified by the demagogue Anytus (*Meno*, 91 B-92 C). The publication of a work on the gods is connected with the traditional story which we find in Cicero (*de Nat. Deor.* i. 63) and earlier still in Timon (Sext. Emp. *adv. Math.* ix. 55-57), that the Athenians condemned Protagoras and publicly burnt all the copies of his book which they could collect; and that he saved himself by flight, but on the voyage to Sicily was drowned at sea. This account receives some slight support from the words ἀνακρίψαι . . . κατὰδὲς in Plato (*Theæt.* 171 D).

A few fragments, or at least the titles, survive of some sixteen works attributed by the ancients to Protagoras (Diog. Laert. ix. 55; H. Diels, *Die Fragmente der Vorsokratiker*², Berlin, 1906-10, p. 538). They dealt mostly with literature, rhetoric, or education. The title of the work, which contained the famous maxim that man is the measure of all things, is quoted by Sext. Emp. (*adv. Math.* vii. 60) as κατὰβάλλοντες (sc. λόγους), but the reader of Plato is forced to infer from many allusions that the work was commonly known as the *Truth* of Protagoras (J. Bernays, *Gesammelte Abhandlungen*, Berlin, 1885, i. 117-121). Considering his great fame, it would be interesting to recover some specimens of his style; Gomperz conjectured that the apology for medicine, one of the tracts in the Hippocratic corpus, is by Protagoras. With greater certainty peculiarities of his stately method can be inferred from Platonic imitations (*Protag.* 316 C ff., 320 C-322 D, 333 D ff., 339 A-D, perhaps even 342 A ff., *Theæt.* 165 E-168 C) and from the unmistakable allusions of Aristophanes in the *Clouds* (112-114, 658-671, 677-679), though the sophist is not named in that play.

2. *Doctrine.*—In the dialogue of Plato named after him Protagoras appears as an exponent and champion of customary morality—Plato's δημοτικὴ ἀρετή. The human instincts of reverence and right (αἰδώς, δίκη) are the weapons by which helpless man has been protected against the teeth and claws of other animals (*Protag.* 322 C, 329 C). Man's history is a record of progress; the criminals of a civilized society would be virtuous if compared with down-right savages (*ib.* 327 D). Hence the aim of legislators and educators is to displace harmful opinions by wholesome and profitable ones (*Theæt.* 167 A ff.). Hence, too, the aim of punishment should be to reclaim the offender and to deter others from his offence (*Protag.* 324 A ff.). Virtue is inculcated in an enlightened community by public opinion, by good laws and institutions, forces working silently (*ib.* 324 D ff.). Of the vagueness and contradictions of this unwritten code the sophist has little conception. Indeed, when the Platonic Socrates offers him a foundation in the shape of a hedonistic first principle (*ib.* 351 C ff.), he declines to accept it, and even argues against it. The same vagueness is shown in the sophist's claim to turn the 'weaker' into the 'stronger' case (τὸν ἥττω λόγον κρείττω ποιεῖν). The desire to excel was a passion with Greeks, especially to win forensic honours; why should the pursuit of this branch of excellence impair another—a scrupulous regard for right? Absolute inability to see where the Socratic elenchus will

land him is a main feature of comic relief in Plato's presentation of Protagoras, as of other early sophists. Among other tendencies of his time, Protagoras took part in the protest of philosophers against the theological opinions of the poets. His famous utterance runs thus:

'Of the gods I cannot say whether they exist or not, nor of what nature they are. For there are many obstacles to inquiry, especially the obscurity of the problem and the shortness of life' (Diog. Laert. ix. 51).

Here the nature of the gods is obviously the real problem, and frank agnosticism, however provocative of odium, was in keeping with the highest thinking of an era of 'enlightenment.' The most original opinion ascribed to Protagoras is of course that man is the measure of existence and non-existence. Ever since its publication this maxim has been a subject of controversy, as Plato's *Theætetus* proves. It seems to be an affirmation of the subjective element in all experience, all thought and language. There may have been need for such emphasis in Greece, but in Rome the very forms of giving evidence (*arbitror, videtur mihi*) were a perpetual reminder that in the law-court, at any rate, in the investigation of facts, it was impossible to go behind the individual. Some say that the maxim amounts to a recognition of the relativity of knowledge. It should rather be 'of opinion.' There is nothing in it to forbid the conclusion that absolute knowledge is impossible, but that opinions are relatively true; and so Plato seems to have understood it. That its author never intended it to bear any destructive practical consequences is admitted by Plato (*Theæt.* 165 E-168 C). Nor would it be fair to link it up, as Plato has done, with Heraclitean doctrine—'all things are as they seem to all,' for 'all things flow like a stream'—or with a subtle theory privately imparted to disciples (*Theæt.* 155 ff.); and, though Sextus fathers this theory on Protagoras (*Pyrrh. Hypotyp.* i. 217), he cites no authoritative work, and may therefore be presumed to be drawing upon Plato. Lastly, the brilliant defence put into the mouth of Protagoras by his critic (*Theæt.* 166 C ff.) suggests that the author of the dialogue had become conscious that his handling of the maxim had been somewhat too free, and that he wished to redress the balance. Generally speaking, it is most improbable that the first framer of such a maxim could have foreseen, much less intended, all that acute metaphysicians like Plato and Aristotle have deduced from it. Even the psychological implications of the doctrine were but imperfectly understood at a time when no one could explain why perceptions of tastes and flavours were variable, while men agreed in their perception of weight. It seems safest, therefore, to make of Protagoras neither a positivist nor a pragmatist, whatever superficial analogies to these later doctrines may be ingeniously read into his maxim.

PROTECTION.—See ECONOMICS.

PROTESTANTISM.—1. *Derivation and definition.*—The Lat. *protestari*, a post-Augustan word found in Quintilian and frequent in law, means 'to profess,' 'bear witness (or declare) openly,' so that it is nearly equivalent to *proferri*; in both cases the preposition adds the idea of openness or publicity to that of witness or declaration. It has no inherent negative force as a protest against

something, though it is often used in law as a declaration that the speaker's meaning has been misunderstood.

Of the cognate English words, we find 'protestation' in Hampole (c. 1340), and thenceforth they imply, like the Latin, an open declaration.

Thus in Shakespeare, *Much Ado about Nothing*, v. i. 149: 'Do me right, or I will protest your cowardice'; *Macbeth*, v. ii. 11: 'Youths that even now protest their first of manhood.'

The negative meaning common in modern English came in later. Thus a bill might be 'protested' (from 1622), i.e. an open declaration made that it had been presented and not paid. There were also 'protestations' (later 'protests') in the Lords from 1626 and in the Civil War, though they were not common till after the Restoration. Johnson, however (1755), still defines 'protestation' as 'a solemn declaration of resolution, fact, or opinion,' though he notices the negative meaning under the noun 'protest.'

2. Theological meaning.—The word received a technical meaning in theology from the protest made by the Lutheran princes and some free cities before the Diet at Speyer in 1529. An earlier Diet at Worms in 1521 had put Luther to the ban of the Empire and ordered the suppression of heresy. But the heresy spread nevertheless, and, when another Diet met at Speyer in 1526, it was supported by strong princes, and a compromise had to be made on the principle of 'Cujus regio, ejus religio.' It was decided, and that unanimously, that, till a General Council met, every prince should be free to make religious changes if he thought fit. But by a second Diet at Speyer in 1529 the compromise was annulled; all further innovations were forbidden to Lutheran princes, and the Zwinglian doctrine was made unlawful. Hereupon (19th April) the 'protestation' was drawn up. In it the princes of Saxony, Brandenburg, Brunswick-Lüneburg, Anhalt, Hesse) and fourteen cities (some of them Zwinglian) declare that they will not carry out the new edict or tolerate the Mass in their dominions, further maintaining that the unanimous decision of one Diet could not be reversed by a mere majority in another, and that, as they had acted according to Scripture and conscience, they could not in any case admit the right of a majority to control them. There is no question here of any particular doctrines—only an assertion of the liberty of particular churches; the actual doctrines of the princes were set forth next year in the Confession of Augsburg.

3. Lutherans and Calvinists.—Thus 'Protestants' at first meant Lutherans as opposed alike to Papists and Zwinglians. The word was convenient from a political standpoint, and came into use in spite of Luther's own dislike of it, so that it soon became the current name for Lutherans in Germany and England. Then came a double development. On one side the Romanists persisted in stigmatizing the heretics of the Reformation all over Europe as Lutherans; on the other the heretics themselves came to adopt from the Lutherans the common name of Protestants. The unifying force was the consciousness of a common cause against Rome; but it worked slowly. The breach between Luther and Zwingli in 1529 was never made up. So four of the fourteen cities presented a separate Confession (*Tetrapolitana*) at Augsburg, and Zwingli sent a third. Calvin some years later signed the Augsburg Confession of his own accord; but all through the second half of the 16th cent. Lutherans and Calvinists hated each other almost as they hated Rome. The Lutherans established their principle of 'Cujus regio, ejus religio' at the Peace of Augsburg in 1555, and henceforth were (so to speak) respectable heretics, but the Calvinists had no protection. They bore the brunt of

the battle with Rome, and they gained on the Lutherans in Germany. So the quarrel was bitter, and the misfortunes of the first period of the Thirty Years' War (1618-24) were in great part caused by the unwillingness of Lutheran princes to help Calvinists, and it was only under the pressure of the calamities which followed that they learned to sink their differences under the common name of Protestants.

4. Anglican usage.—In England the Lutherans had little influence after the time of Henry VIII, and their consubstantiation is repudiated in Art. xxviii. ('only after a heavenly and spiritual manner'). The Reformers looked to Bullinger and Calvin, rather than to Melancthon and Chemnitz. In doctrine, then, the Church of England leaned more to Calvin; but it had a political tie with Lutheranism. Among the ever-changing phases of Elizabeth's policy in her early years was the idea of gaining something from the Peace of Augsburg, by trying to pass herself off as substantially a Lutheran ruler ordering the religion of her own people like the German princes. The strange tricks in her private chapel indicate this policy rather than any leaning to Romanism. Moreover, she appreciated the Erastian obedience of the Lutherans, and detested the ecclesiastical independence of Calvinism. Thus there was a true affinity between the Erastian church of Elizabeth and the Erastian churches of N. Germany, and English Churchmen of the official sort learned to call themselves Protestants like the Lutherans, while the Puritan section clung to Geneva, and was not forward to adopt the name. It is not found in any revision of the Book of Common Prayer, nor in Jewel's *Apology* (London, 1567), and even the Canons of 1604 only claim that the Church of England is 'a true and apostolical church.' But by 1608 we find mention of 'Papists, Protestants, Puritans, Brownists,' where the word is used strictly of the Church in opposition to Puritans as well as Romanists. In this sense it became a watchword of the Caroline divines, and was frankly adopted by Laud himself. Even Chillingworth's *Religion of Protestants a Safe Way to Salvation* (Oxford, 1638) has the Church in view, and forms a transition to a wider meaning only because the supremacy of Scripture is the doctrine of all the Churches of the Reformation. So, too, when Charles I. declares his attachment to the Protestant religion, he is disavowing Popery and Puritanism together. So also Laud. But what the Thirty Years' War did for Germany was done for England by the Puritan policy of the Commonwealth and the Protectorate and by the Romanizing policy of the Stuarts. In different ways both brought the Nonconformists nearer to the Church in a common consciousness of antagonism to the common enemy, so that they began to be known as Protestant dissenters in contrast with Popish recusants and some of the extreme sectaries. Thus Protestantism became a general name for every sect sprung from the Reformation which could be considered passably orthodox. The Quakers were included, but the claim of Socinians and Deists was more doubtful. They are not among the Protestant dissenters relieved by the Toleration Act. We find 'Protestant dissenters' in a bill of 1672, and constant mention of the Protestant religion or the Protestant interest. At the Revolution the Prince of Orange declares (10th Oct. 1688) that he comes over because the Protestant religion is endangered; Delamere in Cheshire rises in defence of it; and the Bill of Rights limits the Crown to such persons as 'being Protestants' shall make the declaration imposed on members of Parliament in 1678 denying transubstantiation and disavowing the worship of the

Virgin Mary or any other saint and the sacrifice of the Mass as 'superstitious and idolatrous.' By the Act of Settlement the sovereign must be a Protestant—perhaps a Lutheran like George I.—but he must 'join in communion with the Church of England as by law established.' So the law still remains, except that the declaration of 1678 was abolished for members of Parliament in 1829, and softened for the King in 1911, though he is still required to be a Protestant.

5. The modern view.—The word has undergone no serious change of meaning since the end of the 17th century. But, being now opposed to Romanism instead of Puritanism, it was disliked by some of the High Churchmen a century ago, such as Alexander Knox; and it is now cordially detested by the Tractarians and their successors, not only as summing up most of the things that they chiefly hate, but even more as linking the Church of England with Churches of Christ which they count no better than unlawful assemblies. But, if we look at the general position—at things instead of words—there can be no doubt that the official doctrine of the Church of England is as definitely Protestant as it can well be. To sum up in the words of Bishop Stubbs of Oxford:

'While, however, I distinctly claim for our Church her full Catholic character unembarrassed by any such committal [to the dogmatic utterances or disciplinary machinery of any of the communities that have called themselves Protestant], I would in the strongest way condemn the idea that would repudiate the name of Protestant as a mere name of negation, as well as the notion that the maintenance of Protestant negation is the whole or the most important part of our religious work and history. I should unhesitatingly reject the theory that regards Protestantism by itself, either at home or abroad, as a religious system devoid of spiritual constructive energy' (*Visitation Charges*, London, 1904, p. 342).

LITERATURE.—It will be enough to name *OED* vii. 1504 f.; W. Wace, in *Church and Faith* (Essays on the teaching of the Church of England by various writers), Edinburgh and London, 1899; the ordinary histories of the Reformation, and for the Continent the elaborate art. by F. Kattenbusch, in *PAE* xvi. 135 ff.

H. M. GWATKIN.

PROVERBS.—1. Definition.—While the formal definition of a proverb is difficult to frame, and every authority attempts to give his own, there is a general agreement as to the chief characteristics of proverbial sayings. Four qualities are necessary to constitute a proverb: brevity (or, as some prefer to put it, conciseness), sense, piquancy or salt (Trench), and popularity. Aristotle, in writing of proverbs, embodied three of these properties in defining them as 'remnants which, on account of their shortness (*συνομιαν*) and correctness (*δεξιότητα*), have been saved out of the wrecks and ruins of ancient philosophy.'¹ More modern definitions, such as 'a short pithy saying in common and recognized use,'² or 'much matter decocted into a few words,'³ or 'the wisdom of many and the wit of one,'⁴ set forth the same elements in slightly varying phraseology. Mere brevity, however, will not give an expression the force of a proverb; it must in every case present a serious thought, and expressions dealing with trivialities can never gain the force and prestige of proverbial sayings. By piquancy or salt we understand the wit that is embodied in a genuine adage. In its wit the proverb expresses a pungent criticism of life which frequently has a flavour of cynicism about it. On this quality depends the power of a proverb to do more than amuse the hearer. Its wit, like the barb of an arrow, makes the maxim

¹ According to Aristotle, proverbs are important for the following reasons: *ὅτι παλαιὰ εἰσι φιλοσοφίας ἐν ταῖς μεγίσταις ἀνθρώπων φθοραῖς ἀπολομένης ἐγκαταλείμματα περισωθέντα διὰ συνομιαν καὶ δεξιότητα* (ascribed to Aristotle by Synesius, *Encomium Calpurnii*, ed. 'Turneh', p. 59).

² *OED*, s.v.

³ Thomas Fuller, *Gnomologia, Adagies, and Proverbs*, 2 vols., London, 1732, pp. 1728-31.

⁴ Lord John Russell (1792-1873)

stick in the memory. There are many sayings in all literatures which are not recognized as proverbs because they lack the element of popularity. To attain the rank of a proverb, a saying must either spring from the masses or be accepted by a people as true. In a profound sense it must be the *vox populi*. Eiselein, a German collector of proverbs, has emphasized this element in his definition: 'A proverb is a sentence coined with the public stamp, current, and of acknowledged value among the people.'¹ To put it more briefly, a proverb is a household word of the people. James Howell, an English paroemiographer, incorporated in his collection 500 proverbial sayings which he himself invented, but, as they were not coined with the public stamp, they have never been used or quoted.² A true proverb, then, is a spontaneous growth out of the soil of national character; it is in a sense autochthonous, and among the people who gave it birth it possesses a finality from which there is no appeal. This popular element is implied in the etymology of both the Latin and Greek terms. In the former language the term was *proverbium*, signifying 'a word uttered in public.' The synonym *adagium*, which is usually traced to the phrase *ad agendum aptum*, and from which we get our English 'adage,' besides suggesting this popular origin, also suggests a moral tone and brings out the practical nature of the proverb. The Greek correlative is similar in import, *ταπεινὰ*, signifying a trite roadside expression.

The stamp of public approval gives proverbs a profound influence even when they convey a false morality. A genuine proverb may not embody a true ethical principle, yet it is an index to what the people regard as true, and presents their ideals of life and conduct. Certain groups of proverbs have a peculiar authority for a special, and in a sense an artificial, reason. All the sayings of the canonical book of Proverbs among Jews and Christians, those of the Vedic writings among the Hindus, and those that are embedded in the Qur'an among Muslims have wielded a tremendous authority, on account of the inspiration claimed for these books. Many of the sayings of Jesus are in the form of proverbs, and He frequently used proverbs to make His teaching impressive. He took some from Jewish literature and others from the current speech of the people; still others He coined Himself. The authority of these and their influence on ethics and religion are due to the unique position of authority in which the Founder of Christianity is acknowledged to stand. In the sphere of religion the proverbial sayings of Jesus have exercised the widest and most pervasive influence of any group of proverbs.

2. Origin.—In discussing the origin of proverbs it is necessary to make a sharp distinction between the popular proverbial saying and the literary proverb, or gnome. The latter is the product of reflection, and its final form is likely to be the result of considerable literary polishing, while the former is naive and was originally uttered spontaneously and in connexion with some occasion or event that stirred the imagination. It is in keeping with its popular origin that the author of a genuine proverb is unknown; it is a spontaneous utterance which has been called forth by an unusual and stirring incident or experience. It originated with the people and has gained circulation and authority through universal acceptance of its

¹ J. Eiselein, *Sprichwörter des deutschen Volkes*, Freiburg, 1840, p. x: 'Das Sprichwort ist ein mit öffentlichem Gepräge ausgemünzter Satz, der seinen Ursprung und anerkannten Werth unter dem Volke hat.' In this connexion the famous definition of Erasmus (*Adagiorum Chiliades tres*) may be given: 'Celebre dictum, scita quaplam novitate insignite.' The second part of this definition is not generally accepted by recent investigators.

² *Proverbs and Old Sayed Saws and Adages*, London, 1659.

truth. The sages of Israel may have started with the popular proverb as the basis of their work, but their finished product shows evidence of careful literary workmanship. The literary flavour of the gnome is unmistakable, and its lineage can very frequently be traced. If this distinction is maintained, the polished gems of the canonical book of Proverbs are gnomes. They are fruits of long reflexion.

The genuine popular proverb takes us back to the infancy of races and civilizations; in their origins they belong to the age which gave birth to the folk-song and the ballad. The OT reveals the manner of the genesis of the folk-proverb. An impressive event called it forth. The incongruity of the situation when Saul fell under the influence of the prophetic ecstasy produced such a profound impression on the popular mind that it led to the utterance of the proverb, 'Is Saul also among the prophets?' (1 S 10⁹). We also know an ancient Egyptian proverb which owes its origin to some historical event. Alluding to Merenptah's fame in Libya, it runs: 'The youth say to youth, concerning his victories, "It has not been done to us before since the time of Re."' Freytag thinks that many of the oldest Arabic proverbs arose in connexion with some notable event in the history of a tribe or some striking personal experience.² The historical occasion that gave birth to famous popular proverbs is more easily traced in the Greek and Latin literatures. With the words, 'Don't move Camarina' (μὴ κινεῖς Καμάριναν), the Greeks were accustomed to caution each other to give questions fraught with uncertain issues a wide berth. The allusion is historical and refers to the draining of the lake north of Camarina contrary to the advice of the oracle, thus weakening the defences of the city. The famous Latin adage, 'Romans sedendo vincit,' sprang from the effective tactics of Hannibal's opponent, Fabius Maximus. The popular proverb, 'When you go to Rome, do as Rome does,' is an interesting instance of how an aphorism may grow out of an incident which was subsequently forgotten. Few who use it know that it had its origin in connexion with Monica, the mother of St. Augustine. As the Sabbath was a feast day in Milan according to prevailing Roman usage, but a fast at her native place of Tagaste, Monica was perplexed as to her course and her conscience troubled her. St. Ambrose settled the case of conscience by uttering this oft-quoted adage.

Another group of proverbs were derived from riddles (*q.v.*), and it may well be that many of the maxims of the OT canonical collection originated in this way. The adage of Pr 22¹, 'A good name is rather to be chosen than great riches, and loving favour than silver and gold,' is probably the finished form of an answer to a riddle. The riddle was probably propounded as follows: 'What is worth more than gold?'; the answer would be, 'A good name.'³ Again, a proverb may be the condensation of a fable or parable into a single phrase. Thus arose the popular Greek adage, 'To play the fox to another fox' (ἀλωπεκίζεν πρὸς ἑτέραν ἀλώπεκα). A popular maxim even in modern times, 'Every cock on his own dunghill,' can be traced back to Seneca, who thus summed up the quintessence of one of Æsop's fables ('Gallus in suo sterquilinio plurimum').⁴ This process accounts for the genesis of English aphorisms like 'sour grapes' and 'dog in the manger.'

Famous proverbs which owe their popularity to their well-balanced symmetrical phraseology have long individual histories behind them. This literary development frequently cannot be traced in the languages of antiquity. But the process by which a popular saying was cut and polished into a gem by a succession of artists may be seen in the case of Sterne's famous adage, 'God tempers the wind to the shorn lamb.' Sterne found it in the writings of George Herbert (1634) in the form, 'To a close-shorn sheep God gives wind by measure'; Herbert in turn borrowed it from the French, and it has been traced back to the Latin.

3. Form.—While the folk-proverb, when it originates, may not circulate in poetic dress, yet well-established proverbs and gnomes are almost invariably expressed either in rhythmical language or in poetry proper. The Hebrew proverbs of the OT canon, as well as those of Sirach,¹ possess all the characteristic features of Hebrew poetry, the most notable of which is parallelism. Sumerian proverbs, among the most ancient that have come down to us, display the same characteristic. Arabic proverbs are couched in the various rhymes of Arabic poetry. Gnomonic poetry forms a large section of the ethical side of Sanskrit literature. The Chinese proverbs are in the form of couplets. With this people it has been a favourite practice in the schools for the teacher to give one line and the scholar to furnish the second.² The majority of Greek proverbs are metrical in form. The Greek gnomonic poets, like Theognis and Solon, did for Greek literature what unknown poets did for the Hebrew—gave many of the popular proverbial sayings a literary setting and thereby invested them with a permanent influence. The usual metres of Greek proverbs are the anapestic, iambic, trochaic, and dactylic.³ In modern literatures proverbs usually assume poetical form, for rhyme and alliteration lend charm not only to English proverbs but also to those of all modern nations. A few samples must suffice: 'A king's face should give grace'; 'Slow help is no help'; 'Who goes a-borrowing goes a-sorrowing'; 'Qui prend, se rend'; 'Chi va piano va sano, e va lontano'; 'Gutes Wort find't gute Statt'; 'Wie die Arbeit, so der Lohn.' A popular Italian proverb combines the three qualities of brevity, rhyme, and alliteration: 'Traduttori, traditori,' 'Translators, traitors.' Proverbs abound in certain figures of speech which add to their impressiveness. The two most characteristic of these figures are hyperbole and paradox. The forcefulness of the proverb is largely due to the employment of these figures of speech, which the Oriental especially affects. As an example of hyperbole let us cite an Arabic proverb: 'Fling him into the Nile and he will come up with a fish in his mouth,' or the German 'Wer's Glück hat, dem kalbert ein Ochs' ('The lucky man's ox calves'); as a paradoxical proverb, note 'No answer is also an answer.'

4. Occurrence.—Proverbs are of universal occurrence; there is no speech or language in which they are not found. Going back to the remotest antiquity, we discover them embedded in the literary remains of Babylonia and Egypt. The oldest are found in a Sumerian text. Rawlinson, ii. 16, is the copy of a tablet inscribed with examples for instruction in Sumerian grammar, and a number of these examples consist of ancient Sumerian proverbs. In all, this tablet has preserved eighteen proverbs and riddles, some of which are very

similar in structure to those of the OT.¹ Among the Egyptians the viziers Kegumne, Imhotep, and Ptahotep, of the Vith dynasty, put their wisdom into the form of proverbs. As these officials belong to the Old Kingdom, i.e. prior to 2500 B.C., some conception may be gained of the antiquity of proverbial literature among the Egyptians. Long before the days of Confucius the Chinese had embodied their wisdom in gnomes, and they were a favourite vehicle for moral instruction with that sage. The proverb had reached a position of commanding influence among the Greeks prior to the great gnomie poets, Solon, Phocylides, and Theognis. The great lyric poets who preceded them, and the seven so-called wise men who followed, put into literary form the popular wisdom of preceding generations. An adequate testimony to this fact is the famous anthology, *Sarnagadhara-Paddhati*, of the 14th cent., containing 6000 verses culled from 264 different writers.² Bohtlingk collected 7613 verses of Sanskrit gnomie poetry and published them under the title *Indische Sprüche* (Leipzig, 1870-74). Aphoristic ethical poetry was zealously cultivated among the Hindus. Turning to one of the standard collections of proverbs, such as *La Sapienza del Mondo* by G. Strafforello, a monumental Italian dictionary of proverbs, we find catalogued in it proverbial sayings from every nook and corner of the world. No race, whether high or low in the scale of civilization, has been without them. Nations renowned for the cultivation of literature have treasured their proverbial inheritance and have polished their adages until they have become gems. Non-literary people, the savages of primitive culture, have had their proverbs, which have been learned only through direct intercourse with the people. The missionary and the adequately equipped traveller have collected these for us. A notable anthology of this kind is R. F. Burton's *Wit and Wisdom from W. Africa* (London, 1865). C. M. Doughty, in the classic *Travels in Arabia Deserta* (Cambridge, 1838), records a few that he heard in conversation with the Bedawin. While proverbs are universal in their occurrence and are found to take local form and colour even in the dialects of modern languages, yet they are especially beloved by Oriental peoples, and it is among them that they were seriously cultivated. In the modern world of Europe and America the folk-proverb still wields a potent influence among the masses, while the gnomie saying which has behind it the authority of great literary genius is often quoted by the cultivated.

5. Value and significance.—Proverbs and gnomie literature are worthy of serious study for two principal reasons: (1) they have had a subtle and pervasive influence on popular opinion; (2) they are trustworthy witnesses to the social, political, ethical, and religious ideals of the peoples among whom they originated and circulated. Gerber says:

'The significance of the proverb in its influence on the formation and preservation of the modes of thought is to be rated very high. Its influence on the civilization of nations is exceedingly far-reaching. With silent guidance it moulds public opinion as powerfully and as manifoldly as the estimate of the relations of private life, indeed even the reflections of the highly cultured' (*Die Sprache als Kunst*, ii. 405).

The greatest literary geniuses have set the seal of their approval upon popular proverbs and made them household words by quoting them or placing them in the mouths of their characters. Among the Greeks many of the earliest proverbs were responses of oracles; their poets were fond of quoting and coining maxims and proverbial sayings. All the great writers of Hellas affect them.

They are found in the verses of Hesiod and Homer, among the lines of the lyric Pindar, the gnomie poets Solon and Theognis, the great tragedians and comic poets.¹ The moral of many of the stories of the Homeric poems was summed up in a single line which gained currency as a proverb. The great Latin poets loved the proverb, and many proverbs that are common in the modern world go back to Horace, Juvenal, or Terence; e.g., the Frenchman characterizes the favourite of fortune as 'le fils de la poule blanche,' a phrase which can be traced to Juvenal's 'gallinæ filius albæ.'² Shakespeare has given popularity and authority to many a striking sentence which has become a proverb in cultivated circles. Two may be mentioned: 'Something is rotten in the state of Denmark,' and 'All's well that ends well.' Dante's 'Lasciate ogni speranza,' Molière's 'Vous l'avez voulu, George Dandin,' and Schiller's 'Die schonen Tage in Aranjuez sind nun zu Ende' are examples of proverbial sayings which have become household words through the popularity of national poets.

The great philosophers of antiquity did not disdain proverbs. The pages of Aristotle and Plato are liberally sprinkled with terse, pithy sayings, and Cicero's writings teem with proverbs. More than this, proverbs and gnomie literature were two of the seed-plots of Greek philosophy. The political and moral philosophy of the Hellenic race had its origins in the isolated maxims and gnomes of the seven sages of Greece and the gnomie poetry of Theognis and his contemporary, Phocylides (6th century B.C.).³

While Greek philosophy outgrew these humble beginnings and developed into an elaborate metaphysical system, the spirit that produced the proverbs of Solomon and Sirach reached its full development within the pale of later Judaism. The number of proverbs was legion, and they were used by the learned rabbis, were current in social intercourse, and were the favourite means of imparting ethical instruction to the youth. The two Talmuds, Jerusalem and Babylonian, the Mishnah, and the Midrashim, as well as the Targums, are rich in proverbs and proverbial sayings. They occur both in Aramaic and in Hebrew, touch upon almost every conceivable subject, and extend over a period of more than 800 years of Jewish history, from Simon the Righteous (high priest, 310-291 B.C.) down to Rabbi Asher. The best known and most popular collection of Jewish proverbs is found in the Mishnic tract entitled *Pirgê Abhōth* ('Sayings of the Fathers').⁴ Another famous collection is the *Abhōth de R. Nathan*. The former, usually bound with a Jewish prayer-book, contains the sayings and proverbs of 63 rabbis and teachers arranged chronologically and covering a period of 500 years, from 300 B.C. downwards. Its importance may be judged from the rule requiring a reading of one of its sections each Sabbath. The *Abhōth de R. Nathan*, a Tōseftā or Haggādā of the Mishnic tract *Abhōth*, consisting of 41 chapters which contain proverbs and their explanations, reached its final form in the 8th century A.D.

The Jews of this period delighted in gnomes. A quotation from the *Midrash Rabbah* to Canticles will give an idea of the esteem in which they were held:

'Let not a proverb be despised in thine eyes, for by means of a proverb one is able to understand the words of the Torah (*Midr. Cant. 1b*).

It was all the more highly esteemed if it could be supported by a proof text from the OT. In this

case it was introduced by one of two formulæ: (1) 'There is for it a proof text' (יש לו כקרא), or (2) 'Lo! it is a verse of the Scripture' (הוא קראוהו). So popular was it, and so highly esteemed, that it was used to elucidate problems in almost every sphere and circumstance of life. Proverbs were considered efficacious in removing doubts and difficulties; they were quoted to elucidate names and obscure passages of Scripture; amid sorrow they shed comfort, and in social gatherings they increased the good cheer. With a *mishal* it was customary to speed the parting guest, and with one a literary man found an appropriate close for his book.

In this period of Jewish history a careful distinction was drawn between the proverb of the scholar and the folk-proverb, and a distinctive formula was used to introduce each kind. To the former was prefixed one of the following formulæ: 'a proverb in the mouth of the rabbis,' 'the rabbis teach,' 'they teach,' or 'some say'; to the latter: 'according to the words of the people,' 'so speak the people,' 'the Judeans say,' 'the Galileans say.' If the proverb happened to occur in Scripture, there was a special introductory formula: 'the proverb runs' (המשל אומר). To the folk-proverb belong the maxims of the trades and guilds, for each such organization or profession had its own special proverbs; to the former belong the gnomes of the collections mentioned in the preceding paragraph. To gain an adequate idea of the scope of the topics embraced in Jewish proverbs and to form an estimate of their influence, one must turn to J. R. Fürstenthal, *Rabbinische Anthologie* (Breslau, 1835), L. Dukes, *Rabbinische Blumenlese* (Leipzig, 1844), or J. Fürst, *Perlschnüre Aramaischer Gnomon und Lieder* (do. 1836).

It is worthy of note that, among the Chinese, proverbs and proverbial sayings enjoy a similar position of high esteem and a far-reaching influence. The classics of the Chinese abound in them, and ignorant peasants are said to coin them. We have noted above that the schoolboy is furnished with one line and, as an exercise, is required to complete the couplet. Every class of society takes delight in the proverb, from the emperor on his throne to the beggar in his hovel. There is no conceivable situation in life for which the proverbial wisdom of the Chinese cannot furnish some apposite citation.

Among the nations of the Occident gnomic poetry does not flourish, and proverbs are not used in the formal instruction of the philosophical schools, yet the popular proverb has been of importance in the formation of the standards of public morality. Proverbs like the following are valuable ethical precepts which have kept high ideals before the masses: 'A lie has no legs' (the Spaniard says: 'A lie has short legs'; the Swiss: 'It takes a good many shovelfuls of earth to bury the truth'; a Spanish parallel runs: 'Tell the truth and shame the devil'). On the other hand, there are proverbial sayings accepted by the masses as current coin of the moral realm which have been very pernicious in their influence. Trench strikingly terms them 'scoundrel maxims' (*Proverbs and their Lessons*, p. 102). They are frequently quoted to justify sin and immorality. Outstanding examples are: 'Every man has his price' (Dutch: 'Self's the man'); the German 'Einmal keimmal,' which has had a very vicious influence in defence of sin; similar to it is the Italian: 'A sin concealed is half forgiven.'

Some proverbs are distinctly Christian and reach the heights of evangelical morality: 'Love rules his kingdom without a sword' (Italian); 'The way to heaven is by Weeping Cross' (English); 'God never wounds with both hands' (Spanish); 'Every cross hath its inscription' (English).

Our investigation leads to the conclusion that among Orientals and peoples of primitive culture a gnomic literature forms the foundations of moral and political philosophy. In races of advanced civilization and culture it plays no part in the teaching of formal schools, but continues to exercise a potent influence on popular ideals of conduct and conception of character. Proverbs continue to be employed by poets and religious teachers to impress upon the minds of the masses fundamental principles of morality and noble living. The authority of proverbs is acknowledged by the people generally because they constitute the hoard of a nation's wisdom, the silent unconscious accumulation that grows up in a long lapse of time.

LITERATURE.—R. C. Trench, *Proverbs and their Lessons*, London and New York, 1905 (the best general work in English, with a valuable bibliography including a list of proverbial collections in various languages), G. Gerber, *Die Sprache als Kunst*, Berlin, 1885 (the author discusses the proverb as a literary form, n. 337-442), Erasmus, *Adagiorum Chiliades*, Venice, 1508 (a great treasure-house of classical proverbs from which all subsequent writers and collectors have borrowed), G. Strafforello, *La Sapienza del Mondo*, 3 vols. Turin, 1883 (an elaborate collection of proverbs from every quarter of the globe translated into Italian); H. Bois, *La Poésie gnomique chez les Hébreux et chez les Grecs*, Toulouse, 1886. Other important works have been mentioned in the article and notes.

JAMES A. KELSO.

PROVIDENCE.—I. USE OF THE WORD.—The English word 'providence,' meaning by derivation foresight, is in practice applied to thoughtful preparation for future needs. As used in religion, Providence is understood in a theistic sense to denote the care of God for His creatures, His general supervision over them, and the ordering of the whole course of things for their good. There is no corresponding word in Hebrew, though the thought is present throughout the OT. In Greek *πρόνοια* is used freely in classical literature for forethought, human and divine. It is employed absolutely in Xenophon and Plutarch for the watchful care of the gods, and it forms one of the names under which Athene was worshipped at Delphi. It occurs twice in Wis (14³: 'Thy providence, O Father, guideth' the vessel amidst the waves, and 17²: lawless men are said to be 'exiled from the eternal providence'). In the NT *πρόνοια* is found twice only (Ac 24², Ro 13¹⁴), in both cases to describe human prevision. But the doctrine of the Divine ordering of the affairs of the world pervades all the NT writings. In a very wide sense some such idea would seem to be indispensable to religion, although—as in Buddhism and some forms of pantheism—the word 'providence' cannot be legitimately used as of a relation between 'God' and 'the world.' In popular parlance it has too often included superstitions and unworthy ideas of deity, which responsible teachers would not countenance.

In the more restricted area of Christian theology Divine Providence is theoretically distinguished, on the one hand, from God's preservation of all His creatures, including man; and, on the other, from His moral government. The latter is said to concern the character and education of men as moral creatures, their welfare and destiny, while Providence is concerned with the affairs and events of life and the way in which a Divine purpose is accomplished in and through them. The two are, however, almost inseparable even in thought. The Christian doctrine is one of faith, resting upon the attributes and character of God generally, but especially as made known in Christ. Providence implies a God of unbounded wisdom, power, and goodness, who unceasingly directs human affairs, great and small, for the accomplishment of the highest spiritual ends. Divine action depends on a Divine purpose; and this perfectly expresses the Divine nature and perfections. Christian faith holds that God rules and overrules all that

takes place in the universe, so as ultimately to realize His own eternal purposes. It is always to be understood, however, that such language implies a measure of symbolism. As in creation God is not a Divine 'artificer,' though the phraseology employed may seem sometimes to imply this, so in Providence He does not need to 'plan' and scheme as men do; He views all things *sub specie eternitatis*. But, allowing for the imperfection of human speech, the truth as to the relation between God and the world is best conveyed by some such phraseology.

II. HISTORICAL. — 1. Introductory. — Beliefs implying some kind of living relation between divine and human beings are found in all religions; in proportion as these die down, the character of the system changes from a religion to a philosophy. Even in fetishism, or in Caliban's description of Setebos, some kind of purpose is discernible, some measure of protection is granted to worshippers who take the steps necessary to propitiate the ruling powers. In polytheism, with its 'gods many and lords many,' such a word as 'Baalim' may stand simply for unknown forces in nature or for particular deities who quite arbitrarily reward their favourite devotees. But, as in Greek mythology, an order may be discernible in the pantheon. Such a measure of superiority may be assigned to Zeus that his decrees may run, and his rewards and punishments be distributed, as those of a kind of secondary Providence. Above him may stand, or hover, a dim figure—Μοῖρα, Θέμυς, or Ἀνάγκη—so that it is often difficult to say whether the rudimentary control of all things, as thus outlined, is blind or intelligent. The Buddhist idea of *karma*—the inexorable linking of all acts with their consequences—excludes Providence. *Karma* does not indeed, as has been said, necessarily lie outside the pale of religion proper. A moral order may be bound up with it; a saviour of a sort may appear, and there may be, in other ways than by *nirvāna*, an end beyond the end. But in none of these cases can the word 'Providence' be applied in its usual acceptance, since this implies intelligent purpose and an end presumably good and beneficent, together with active and constant operation for the attainment of clearly conceived designs.

2. In the OT.—The OT conception of life is dominated by the thought of Divine Providence in some sense, but progress is discernible in the ideas entertained of God's purposes and methods and of man's relation to them. In the early stages of Israel's history these were necessarily crude and partial. Tribal and national ideas of deity prevailed, and only after the Exile was the God of Israel identified with the God of the whole earth. Without attempting in this sketch accurately to distinguish the stages of development, it may be said that, throughout the whole, God is recognized as accomplishing His purposes for men (1) in the ordinary course of nature, and (2) by means of special interventions, or miracles. Ps 104 gives a striking illustration of the belief that God in nature works for the benefit of all His creatures, making winds His messengers and flames of fire His ministers. In Jer 31³⁵ 33²⁰ the succession of day and night is viewed as part of a beneficent Divine 'covenant' with man, which cannot be violated or modified. The great symbolic picture of the chariot in Ezk 1 portrays the glory of sovereign Providence. Miracles are special proofs that God, who can do whatever He wills, makes all forces to subserve His designs, especially for His own people. He works, however, not as fate, nor as mere abstract law. Man's power of choice and voluntary action is presupposed; appeals are made for obedience, and disobedience will be punished. Ultimate control, however, lies with

the All-Sovereign, who moulds His material as a potter the clay; in dealing with the headstrong wills of men God rules—and overrules. The story of Joseph shows how actions intended for evil were made to accomplish good. The moral of this and nearly all OT stories is summed up in Pr 16⁹ 'A man's heart deviseth his way: but Jahweh directeth his steps.'

Even where exceptions arise so serious that it would appear either that the idea of superintendence is a mistake, or that God has forgotten, or that 'my way is hid from Jahweh,' the godly man will not lose his confidence. In the later history certain standing riddles of Providence were explicitly raised—e.g., the visting of the sins of the fathers upon the children, the sufferings of the righteous, and the prosperity of the wicked. These problems were faced by the prophets Jeremiah and Ezekiel, in certain Psalms, and in the book of Job, more or less unsuccessfully. The book of Ecclesiastes stands by itself, and its main drift has always been disputed. Its presence in the canon is probably due to the view that the awkward knots presented in earlier chapters were cut by the sharp knife applied to them all in 12³². But some of the sceptical suggestions made in Qoheleth were recognized in passing moods by the writers of such Psalms as 49, 73, 77, and 88, who nevertheless did not abandon their belief in a Providence both wise and kind.

3. In the extra-canonical writings.—In the extra-canonical writings of the 1st and 2nd centuries B.C. Greek and other external influences are occasionally manifest, but they show no weakening of belief in God's righteous government of the world. Anthropomorphic expressions become less frequent, and the transcendence of God is emphasized, but the moral qualities of the Deity—righteousness and loving-kindness—are as fully maintained as in the canonical books. In Wis 8¹ Divine wisdom is identical with Providence, which 'ordereth all things graciously,' and in 11²⁰ the same power is said to have 'ordered all things by measure, number and weight.' Delays in the execution of judgment are due to the fact that 'Thou, being sovereign over thy strength, judgest in gentleness, and with great forbearance dost thou govern us' (12¹⁸). A power of choice is given to man, for the Lord who made him 'left him in the hand of his own counsel,' so that 'before man is life and death; and whichsoever he liketh, it shall be given him' (Sir 15¹⁷). The language of Josephus in a much-quoted passage is not quite clear, but he seems to ascribe to the Pharisees a belief in 'fate, which co-operates in every action,' while the Sadducees 'ascribe all evil to man's free choice' (BJ II. viii. 14, Ant. XIII. v. 9). The chief differences, however, in the Jewish doctrine of Providence during this period are due to a growing belief in a future life and in judgment beyond the grave, as well as to the general tenor of Apocalyptic teaching concerning the relation of the present and the coming age. In 2 Mac 7 the hope is several times reiterated that 'the King of the world will raise up those who have died for his laws unto an eternal renewal of life' (vv. 2, 36 etc.).

4. In the NT.—The NT is continuous with the OT, but its doctrine of Providence is more minute, more personal, more tender. The teaching of Jesus in the Sermon on the Mount strikes the key-note. Not the Lord of heaven and earth, mindful of Israel alone among the nations, is there celebrated, but 'your Father which is in heaven,' who clothes the lilies with beauty, and without whom not even a sparrow falls to the ground. The Lord's Prayer is addressed to a Father who can and will care for both the bodies and the souls of His children. The impartiality of the Creator

under a 'reign of law' is recognized in Mt 5⁴⁵, as well as the special response which He makes to the believing prayer of true disciples (Mk 9²³ 11²²⁻²⁴). Rash conclusions concerning the character of those upon whom grievous calamities have fallen are condemned (Lk 13¹⁻⁵); the anomalies and inequalities of earthly conditions will be rectified at the great Judgment that is to come, by the rewards and punishments then to be allotted. The parables of the Tares, of Dives and Lazarus, and those recorded in Mt 25 are sufficient indications of this.

The Apostles in their teaching follow the lines thus laid down. St. Paul occasionally affords a glimpse into his philosophy of history, as in Ro 9-11 and 1 Co 15²⁰⁻²⁸. The teaching of 1 Peter on suffering, of Hebrews on the two Covenants and their issues, of 2 Peter on Divine forbearance, and of the Apocalypse on present and future judgments shows how largely the early Church in times of severe persecution found its theodicy in expectations of a coming age. The OT teaching concerning the Divine purposes in ordering the course of this world is for the most part preserved in the NT with special emphasis on the redeeming love, as well as the judicial righteousness, of God. But nothing less than a revolution was created by the revelation of a future life and the Resurrection and Second Coming of Him who had 'abolished death and brought life and immortality to light through the gospel.' Whilst the same elements are preserved in the spiritual landscape, the focus of the picture is so altered, and its proportions and values are so different, that the effect is wholly new. Problems of Providence almost disappear in the light of grace and the glory which shines into the present life from beyond the grave.

5. In Græco-Roman teaching.—Græco-Roman teaching on what corresponds to a doctrine of Providence is chiefly represented in the Stoic schools. Earlier traditions are found in popular mythologies, which present for the most part a superficial view of life and human affairs. The schools of philosophy represented by Heraclitus and Anaxagoras inculcated a belief in the Eternal Reason, while lofty views of justice and retribution appear in the great Greek dramatists. Plato stands for the supremacy of the Right and the Good, for a World-Reason, and a World-Process, the teleological character of which he maintained. But he taught no doctrine of the personal care of a personal God. Aristotle followed on similar lines, and may be said to have taught monotheism without God. He believed in order, harmony, unity of control in the course of the world, but the fact that his interpreters still debate concerning the connotation of the term 'God' in his writings speaks for itself. Cicero represents the best side of paganism when he makes Balbus say that, granted the existence of the gods, it must be acknowledged that the administration of the world is carried on 'eorum consilio' (*de Nat. Deor.* ii. 30).

Epicurus and Zeno represent opposite poles of thought. The Epicurean held that fear of the gods was servile, that those who wish to live in serenity care nothing for the gods, as the gods, if there be such, care nothing for them. The Stoic, on the other hand, emphasized the unity of life and often spoke of Providence, though without theistic implications. His doctrine was a philosophic monism, the world being a single substance, a kind of self-evolution of the Deity. God was but a mode of matter, or matter a mode of God. The resemblance between Stoicism and Christianity is superficial and largely a matter of phraseology, though the coincidence of words and phrases is often very striking. Lightfoot, in his essay on

Paul and Seneca (*Philippians*⁴, London, 1878, pp. 270-328), has illustrated this subject at length. Parts of Cleanthes' *Hymn to Zeus* might be used by a theist believing in Providential government. But the God of Stoicism is synonymous with nature, necessity, fate, the all. The Stoic said 'God is spirit,' but his *πνεῦμα* was an etherealized form of matter, and for him the universe itself is alive. The Providence of the Stoics was a kind of causal nexus running through the whole universe. All that happens is through determination, *ἐμπαρμένην*, that which is fixed by fate. The glorification of *ἀνάγκη*, which was characteristic of the school, shows that no personal interest or care was ascribed to the abstraction called God. To 'live according to nature' meant that each man formed part of a mighty and orderly system, in harmony with which it was his duty to live, submissive to that *universum* of which Marcus says:

'O Nature! From thee are all things, in thee all things subsist, and to thee all tend' (*Meditations*, iv. 19).

Neo-Platonism exhibits more affinity with Christianity on the mystical side, but its speculative doctrine of an ineffable and absolute deity stands diametrically opposed to such a relation between God and the world as is implied by a fatherly Providence.

6. Patristic and Scholastic.—In the Patristic and Scholastic periods of the Christian Church interest, so far as our subject is concerned, circles chiefly round the great standing problems of the existence of evil and of predestination *versus* free will. A general doctrine of Providence is assumed by Christian teachers as essential to belief in God. The Greek Fathers from Clement and Origen onwards taught human freedom and responsibility, and were disposed to explain the presence of evil in the world by describing it as negative, not a substance. The teaching of predestination in the West was in practice held side by side with a belief in Providence, Augustine furnishing a striking example of this. In a famous passage (*Conf.* bk. vii. chs. 11, 13) he describes God as the only reality, evil being at the same time 'unreal' or 'partial good' (see also *Soliloq.* i. 2 f.). But, combined with these distinctly Neo-Platonist elements, Augustine taught a clear and elaborate doctrine of Providence as controlling events in their utmost details. His treatise *de Civitate Dei* formulates a philosophy of history based on this fundamental conception. Scholasticism, by its intimate blending of philosophy and theology, did much to develop Christian doctrine on the relation between God and the world. Thomas Aquinas brought all his resources to bear on questions of this kind. His position is that of a modified predestinarianism. The Divine foreordination which he teaches leaves room—at the expense of some inconsistency—both for human free will and for a doctrine of Providence which theoretically embraces all details in human history. Roman Catholic doctrine as formulated at Trent is based on Aquinas, and exhibits God as Ruler and Guardian of men in the minutiae of individual life, as well as in the broad outlines of national history.

7. Protestant.—Protestantism manifested little divergence on the great fundamental questions of natural theology. Luther, Calvin, and Zwingli alike understood by Providence a Divine foreordination, which included the operations of man as well as the course of nature. They believed that the actions of wicked men are so overruled by Divine wisdom and power that the presence of evil in the world is no blot upon God's character and government. Few attempted to work out these general theories in detail. The 'occasionalism' (*q.v.*) of Malebranche, which implied the continuous interposition of the Deity and treated finite things as

affording only 'occasions' for Divine operations, may be mentioned as one hypothesis. It was not accepted by many, and was obviously open to the charge of implying a kind of perpetual miracle. It made way for the more reasonable theory of 'concurrency' (see below). The rationalism (*q.v.*) of the 18th cent. produced both the *Theodicæe* of Leibniz, with its picture of the world as, in spite of all its imperfections, the best of all possible worlds, and the caustic scepticism of Voltaire, who in *Candide* satirized an optimism which could accept the earthquake of Lisbon with a light heart. It was left for the 19th cent. to show that neither the faith of the optimist nor the sneer of the cynic was adequate to deal with the facts of life and history.

III. MODERN CONCEPTIONS.—1. 19th cent. theology.—The changes discernible in the course of the 19th cent. were produced in the main by the following causes, themselves more or less closely connected: (1) a change in the conception of God, which may be described as a passing from deism to theism, from a belief in a transcendent Deity, set over against the world which He originally created, to a God immanent as well as transcendent, informing and sustaining a created universe, which continues to be entirely dependent on His indwelling power; the cold rationalism which was satisfied with a mighty absentee Deity was displaced by belief in One who meets the craving of the human spirit for union and communion with the living God; (2) the influence of modern physical science, which in the first instance attempted a mechanical explanation of the universe, but which ultimately, through its doctrine of evolution, revealed the world as an organism developing under the influence of indwelling life; (3) philosophical tendencies of an idealistic type, operative mainly at the close of the century. These affected very deeply the view taken of the relation between God and the world, and consequently the meaning of Providence. As a matter of fact, in the Christian theology of the period the name 'God' covered various undefined meanings, ranging from bare theism to views which approached pantheism. The prevalent orthodox opinion was described by the term *concursum*, adapted from the Schoolmen, implying a joint activity of God and man, so that the effect of every act is produced not by God alone, nor by an independent creature. There is one efficiency of God and the creature, the evil in sinful deeds being due to man alone.

2. The crucial question of to-day.—The significance and bearings of 'concurrency' had certainly not been thought out. The scientific discoveries and philosophical activities of the 19th cent. forced upon theologians a number of questions which they were only partly prepared to answer. The worlds of theology, philosophy, physical science, and ordinary practical life had been so far apart that what may be called the necessary exosmosis and endosmosis of ideas was not effected. Such intercommunication is still far from complete, but the process has been carried far enough to show that the complex questions raised by the term 'Providence' can be answered only by a deeper understanding of the relations between God and man.

Hume, among other questions which roused men from dogmatic slumber, put this very searching one—Is the philosophy of the universe to be wholly empirical? If so, all depends on the definition of 'experience.' What are the facts on which an inquiry into Providence—in the sense of belief in an Orderer of human life, both omnipotent and benevolent—is to be based? Physical facts are clearly insufficient. The whole experience of man must be taken into account, and mere colligation of happenings will not suffice. Their interpreta-

tion is all-important, and in the process postulates are employed concerning which fundamental differences of opinion exist. The hypothesis of blind force as the originating and sustaining cause of the universe may be read into what are called facts, as well as the hypothesis of a celestial Artificer, or of an indwelling as well as overruling Deity. Issue between them can be joined only on the question, Which of these theories best accounts for all the facts of human experience, and what doctrine of Providence, or the maintenance of a Divine purpose in human affairs, is warranted in the light of the best modern knowledge? Granted that the doctrine is one of faith, is the faith reasonably based upon all the facts, physical, moral, and spiritual, of human life? It is from this standpoint that the subject has been approached during the close of the 19th and the opening of the 20th century.

Does the theory of an overruling Providence, all-wise, almighty, and all-good, 'work'? That is, does it give a permanently satisfactory account of the facts of life, and result in a permanently satisfying explanation of them from a moral and spiritual point of view? If it be granted to the theist that there is a God, who operates within, as well as over, the existing order, do the facts warrant a belief that He has power and wisdom enough to co-ordinate the whole and accomplish a purpose beneficent enough to bear out the statement that He is as gracious as He is powerful and wise? No doctrine of Providence can satisfy the modern mind which cannot frankly meet this question. But the issues raised are so vast and complex, and they are so distinctly personal and ethical, rather than philosophical and scientific, that they are, as they always have been, differently determined by different inquirers.

3. 'General Providence.'—The answers given by the best representatives of modern Protestant theology may be described under two headings—general and special (or particular) Providence. Certain general principles in the ordering of human affairs which imply a controlling Deity are such as these: (1) God works by law, *i.e.* by a regular and uniform, not by an irregular and arbitrary, method; and this recognized order, while it raises serious difficulties in particular cases, is obviously advantageous to the welfare of the whole. But the Divine operation in question is exerted not upon a plastic material substance, but upon the partially independent and largely recalcitrant wills of men. Hence conflict is discernible, contradictions appear, and at best delay arises in the accomplishment of results. The principles of (2) solidarity and (3) sacrifice are also discernible. These imply that men as a race stand or fall together; that, in the family, in society, in the nation, and as time advances in the history of the race, individuals are made to realize the importance of self-denial, self-suppression, and it may be self-surrender, for the good of the whole. The relation between the parts and the whole in the organism, imperfectly understood at first, and still ignored in thought and practice by many, becomes increasingly clear as the knowledge and experience of mankind extend. And the twin principles of solidarity and sacrifice are pillars upon which any doctrine of Providence must ultimately rest. (4) While advance in the accomplishment of Divine purposes is slow and is retarded by only too obvious retrogression, progress is on the whole discernible, though the goal which by hypothesis is being aimed at can be reached only by advance of an admittedly gradual and imperfect kind. The above considerations belong to natural theology. (5) The believer in a special Christian revelation turns naturally to that as normative and determin-

ative amidst the baffling complexities of human history. Faith in Christ holds a clue to the labyrinth which unaided reason disdains to use. Whether Christian faith can be proved to be in itself reasonable or not depends upon the extent to which the Christian solution, resting upon the Incarnation, the Cross, and the Resurrection, can be shown to meet the demands made upon it.

4. 'Special Providence.'—The term 'special Providence' dates from the time of the Schoolmen, who distinguished between Providence universal, general, particular, special, and most special. Discredit has been brought upon the idea by the way in which it has been interpreted and the inferences drawn from supposed Divine intervention in particular cases. But it is obvious that the Providence which does not concern itself with *species* and *genus* as well as with *universum*, and with the individual as well as with the race, is none at all. A deity who is 'careful of the type' and 'careless of the single life' does not exercise providence in the usual acceptance of the word. The doctrine of special Providence means that God is able and willing, not only to promote general well-being, but also to secure to every one who trusts and obeys Him that all things shall work together for his true personal welfare. God does not generalize without particularizing. Such a process is as meaningless in the realm of intellect as it is iniquitous in the realm of morals. The Father in heaven makes His sun to shine on evil and good alike; He operates by general laws. But He also so orders their working in the natural and spiritual worlds taken as one whole that all things are made, sooner or later, to contribute to the abiding welfare of the faithful servant of God. In this ordered whole there is no distinction of small and great, as the words are often understood. The criterion of magnitude and importance is to be found in the spiritual world. The care for the welfare of the individual does not abrogate general laws. A doctrine of special Providence does not imply the deliverance of the individual from specific dangers or the granting to him of specific advantages. The same event has a totally different significance for different men. Opportunities proverbially come to him who is ready to use them. And all things may 'work together for good to them that love God' in a sense that is not, and cannot be, true for those who are not found in union with Himself and in harmony with His great designs.

It may be said that some belief of this kind is essential to a theistic religion. It is tested in practice by a belief in the efficacy of prayer and by a corresponding doctrine of values in personal, social, national, and racial life. It cannot be proved by *a priori* reasoning or established by a complete induction from the events of experience, especially as understood by those for whom the word 'spiritual' has little or no meaning. But it represents a reasonable faith, not a credulous or superstitious attitude towards the universe, because it is open to receive all well-attested facts and furnishes the best explanation of experience as a whole, when studied from a moral and spiritual point of view.

IV. PROBLEMS RAISED.—The difficulties in the way of the acceptance of a doctrine of Providence are in the main those raised against theism (*q.v.*). Theists maintain their view of God and the world in spite of the prevalence of pain, failure, death, and other factors of existence, of which under the rule of a perfectly good God only partial explanations can be given. The doctrine of Providence is the feature of theism most frequently assailed and most difficult to defend, making, as it does, the lofty claim that all human activities are subordi-

nated to the accomplishment of the Divine will and to purposes of perfect benevolence. Some of the problems raised are metaphysical and concern the relation of the One to the many, or the compatibility of Divine foreknowledge with human free will. Others are ethical and can be satisfactorily dealt with only as parts of a complex whole (see art. GOOD AND EVIL). Others can only be described as standing difficulties, which must always attach to what Butler described with characteristic caution as 'a scheme imperfectly understood.' To relegate a portion of the problems of Providence to this category is not an unworthy evasion, because these proofs of human ignorance remain on any alternative theory of the universe and are—as the theist holds—far less satisfactorily dealt with on the hypotheses (say) of naturalism, deism, or pantheism. The essential conditions of human existence make a measure of ignorance concerning what may be called the plans and methods of Providence to be inevitable, and all reasonable theories of the universe allow for it. None the less, no doctrine of Providence can be defended, or is likely to be generally accepted, which does not find a place for great catastrophes—the earthquake of Lisbon, the eruption of Krakatoa, the Black Death, or the colossal world-war of 1914— . It does not come within the scope of the present article to do more than indicate some of the ways in which outstanding problems of Providence may be, not solved, but reasonably met.

1. Evolution and design.—Evolution as part of the Divine method in the genesis and history of life is not inconsistent with teleology. Mode does not exclude purpose. The study of processes need not interfere—though in practice it may often do so—with a belief in ends. The principles of evolution as traced in the lower organisms can be applied to human society only with very important modifications; but, so far as evolutionary methods are discernible, they do not interfere with design. Though they may destroy the evidence for certain separate and specific designs and ends, they help greatly in building up a conception of one vast purpose, which as yet only dimly looms in view. Man is on this planet the consummation of life, and it is quite consistent with all that is known of his development to hold that by the operation of Providence the history of mankind is being so ordered that the race may realize its highest conceivable capacity.

2. Immanence and transcendence.—The idea of Divine immanence, which has gained such hold of recent years, may seem to undermine belief in Providence—a doctrine essentially dependent on Divine transcendence. The theist claims to maintain both doctrines side by side. If immanence is accepted as sometimes taught, it approaches pantheism, and the possibility of Providence proportionally disappears. A professed theist, who yet ignores or denies the transcendence of a personal God, has no real belief in Providence. But even Matthew Arnold's 'The Eternal, not ourselves, that makes for righteousness' at least prepares the way for a doctrine which Shakespeare's 'divinity that shapes our ends, rough-hew them how we will,' carries a stage further. Also, 'immanence' is a word only recently adopted to express, not quite happily, the fact that the Divine relation to the creature, and especially the course of human history, is not purely external. This may, and in contemporary writers frequently does, imply movement in one or more of the following directions: (a) a protest against undue reliance on Divine intervention from without, especially on miracle, as the chief evidence of Divine action; (b) the acceptance of self-limitation on the part of the Deity as beginning in creation and continuous

throughout in His relation with the creature; (c) hence the admission that the course of human history, whilst ordered for good, is not the best possible or conceivable. Man has a measure of power to delay, or mar, a Divine work which he cannot ultimately prevent. If the action of Providence is discernible in the destruction of the Armada or the banishment of Napoleon to St. Helena, account must also be given of the murder of Lincoln at a critical moment in the history of the United States and the cutting short of the career of the German Emperor Frederick III. and the succession of so different a ruler as William II. (d) Arguments for or against a belief in the Divine control of human affairs can never be satisfactorily based on isolated events. It is the power to compel all seeming and real discords into ultimate harmony that is asserted; and this by means of an indwelling life, rather than a merely external control and mastery.

3. Divine omnipotence.—Discussions concerning the nature of Divine omniscience and omnipotence, and the relation of these to man's freedom of choice, cannot be dealt with here (see FREE WILL, GOD, PREDESTINATION). It may be said, however, in a word that the doctrine of omnipotence has often been seriously misunderstood; that the creaturely will may be real and operative within limits without upugning the doctrine of Divine control. As Herbert puts it,

'Either thy command, or thy permission,
Lay hands on all: they are thy right and left'
(*The Temple*—'Providence')

A line in the context of the same poem puts the truth still more succinctly,

'All things have their will, yet none but thine.'

4. Some moral problems.—One large class of perpetually recurring problems arises from the constitution of nature as a whole, man forming only a part of this, and sometimes a distinctly subordinate part. The phenomena of physical pain and death fall to be considered under this heading. The theistic contention is that the facts point not to essential dualism in the order of nature, but to the development of designs which include the welfare of the human race as a whole, but as a relative rather than as an absolute end. The existence and course of moral evil in the world constitute a still graver difficulty, which is discussed in art. GOOD AND EVIL, but which does not necessitate either, on the one hand, an explanation of sin as mere negation or, on the other, a denial of the holy love of God.

5. Immortality.—No doctrine of Providence can be complete which does not deal with the question of immortality. If life beyond the grave is wholly denied, our estimate of human nature and the significance of human life is altogether changed. Natural theology cannot prove immortality, but it can build up a strong argument in its favour, 'since a contrary supposition is negated by all that we know of the habits and methods of the cosmic process of Evolution' (J. Fiske, *Life Everlasting*, London, 1901, p. 86 f.). But, at the best, strong and confident hope is all that can be reached on the basis of natural theology, and hope cannot be used to establish a doctrine of Providence. If, however, the Christian revelation is to be trusted, the solution of the most perplexing problems in relation to the Divine government of the world may be postponed until the dawn of a future life illumines them. Enough if it be true concerning God as revealed in Christ that 'of Him, through Him, and unto Him are all things,' and that the 'one far-off Divine event to which the whole creation moves' will be realized in the End beyond the end, when the Son has delivered up the Kingdom to the Father and God is all in all.

LITERATURE.—For the OT the well-known handbooks of G. F. Oehler (*Theol. of the OT*, Eng. tr., 2 vols., Edinburgh, 1874-75), H. Schultz (*OT Theol.*, Eng. tr., 2 vols., do. 1892), and A. E. Davidson (*The Theol. of the OT*, do. 1903). For the later Jewish period E. Schurer, *HJP*, 5 vols., do. 1886-90; also H. J. Wicks, *The Doctrine of God in the Jewish Apoc. Literature*, London, 1915; W. Bousset, *Die Religion des Judentums in NT Zeitalter*, Berlin, 1903. For NT theology the text-books of B. Weiss (*Biblical Theol. of the NT*, Eng. tr., 2 vols., Edinburgh, 1882-83), W. Beyschlag (*NT Theol.*, Eng. tr., 2 vols., do. 1895), and G. B. Stevens (*The Theol. of the NT*, do. 1899). For pagan thought Cicero, *de Nat. Deor.* II, *de Finibus*, iii.; Seneca, *de Providentia*.

Useful essays on the subject are found in *The Faith and the War*, ed. F. J. Foakes-Jackson, do. 1915. W. T. DAVIDSON.

PRUSSIANS.—See OLD PRUSSIANS.

PSALMODY.—See HYMNS, MUSIC (Christian).

PSYCHICAL RESEARCH.—During the ages of universal belief in ghosts and spirits unusual phenomena were commonly attributed to their agency. In antiquity visions, haunted houses, and clairvoyance were, as a matter of course, referred to spirits. The old Romans practised crystallogmancy and hydromancy, i.e. clairvoyance by gazing in crystals and at the surface of still water. They knew also the 'divining rod' in the form of the *pendule explorateur*. The forked rod has for centuries been used to discover treasures, and even to trace criminals to their hiding-places; and the belief in premonition, received in dreams or in apparitions of waking life, was current ages before Gurney's 'Census of Hallucination.'

But these and other unusual phenomena, real or alleged, readily explicable through spirits while the belief in their existence was unshaken, grew mysterious in the extreme as soon as that simple form of explanation became open to suspicion. Scepticism regarding the existence of spirits led in 1882 to the foundation of the now well-known Society for Psychical Research (S.P.R.), the purpose of which was officially expressed as the investigation of 'various alleged phenomena apparently inexplicable by known laws of nature and commonly referred by Spiritualists to the agency of extra-terrene intelligence, and by others to some unknown physical force.' And Andrew Lang could state in a presidential address that 'the Society, as such, has no views, no beliefs, no hypothesis, except, perhaps, the opinion that there is an open field of inquiry; that not all the faculties and potentialities of men have been studied and explained up to date, in terms of nerve and brain.'

The society counts among its leaders men of the first rank; in science William Crookes, Oliver Lodge, W. F. Barrett, and Charles Richet; in philosophy and letters Henry Sidgwick, William James, A. J. Balfour, Andrew Lang, and F. W. H. Myers. These names are sufficient warrant that its work is carried out with great seriousness and ability. The 27 volumes of its *Proceedings* already

issued contain extensive reports upon telepathy (thought- and feeling-transference), automatism of various sorts (divining-rod, table-moving, automatic writing, slate-writing, etc.), clairvoyance, haunted houses, premonitions, spirit-communications, and other topics.

For convenience' sake the facts studied may be roughly classified as physical and psychical. The first class includes levitation and translation (of tables, chairs, human bodies, etc.) and materialization (of ghosts and other objects), the production of noises, music, etc. To the second class belong premonitory or otherwise significant visions (crystal-gazing, apparitions), the discovery of objects by means of the divining-rod or the pendulum, slate-writing, and the alleged 'messages' from spirits expressed through a 'medium.'

The outcome of the work of the S.P.R. with regard to the physical phenomena may be conservatively summed up as the establishment of the improbability of there being anything in them but conscious or unconscious fraud—unconscious when the medium performs while in a trance. The evidence for this unfavourable verdict cannot be adequately given here. But, in order to illustrate the conditions under which the performances of 'physical' mediums are conducted, the difficulty of obtaining their consent to satisfactory test-conditions, and what happens when those conditions are accepted, we shall consider briefly the case of the latest and best studied great claimant to the possession of mysterious power, Eusapia Palladino.

Palladino, an Italian peasant woman, who had from her early youth shown mediumistic powers, became widely known by the report in 1913 of a series of sittings held in Milan before a number of distinguished scientists. She submitted thereafter to numerous investigations conducted in several countries by men of international reputation. Already, in Milan, fraud had been shown to be the probable explanation of some of her feats. Placed on a balance, she would gradually lose 17 lbs. of her weight (a more accurate balance decreased considerably the loss of weight), and then recover it, also gradually. This startling fact lost much of its mysteriousness when it was observed that, whenever her dress was prevented from touching the floor beyond the balance, no change in weight occurred.

Palladino's performance before a committee of the Institut Général de Psychologie uncovered not only a number of tricks, but also her rooted aversion to really scientific control, and the impotency to which she is reduced when she submits to conditions satisfactory to the investigators. One of the interesting discoveries of this committee was made by means of a device recording, unknown to the medium, the weight of the chair in which she sat during the table-levitation performances. It was found that, whenever the two feet of the table nearest to her, or three, or all four feet were lifted, there was an increase in her weight, corresponding to the weight of the table, and, whenever the two feet opposite the end at which she was seated were lifted, a decrease in her weight was recorded by the apparatus. This is just what would be expected on the supposition that in the former cases the weight of the table rested on her body, and in the latter she pressed upon the near end of the table in order to cause the raising of the opposite end. Her success in deflecting 'without contact' a delicate balance gave way to complete failure when it was protected in various ways. It was, moreover, discovered that a long hair and a pin were among the apparatus apparently required for the performance of this feat.

These and similarly suspicious or condemnatory tests might, it seems, have convinced the committee that they were investigating merely a very clever prestidigitator; yet their report admits the possibility of Palladino's possession of an unknown power. It is argued that deception in a medium does not preclude the possession of supernormal power, and that the detection of occasional or even frequent deception is not sufficient warrant for judging all the feats to be tricks. The answer to this argument is that a combination of frequency of deception, kinds of performance, and nature of the required conditions may be realized which would decrease to the vanishing point the probability of the presence in the medium of a supernormal force. This combination of factors is realized in Palladino's case.

Before the French investigators she operated under the following conditions. The room in which the experiments were made was darkened, and, at times, quite dark. The darker the room, we are told, the more remarkable the performance. The control of the medium's hands was theoretically secured by two persons, each holding one of hers; but in practice she insisted, when she chose, upon the right to place her hands on those of the controllers, and even, at times, to give them gentle taps instead of remaining in uninterrupted contact with

them. Corresponding conditions existed as to the control of her feet. During the sittings her hands were in motion carrying with them those of the controllers. She refused to have pieces of tape seven centimetres long sewed between her sleeves and those of the controllers. She refused to allow observers to be stationed in the room elsewhere than around the table. After the first flash-light photograph had been taken, she refused to permit any to be taken without warning, on the ground that it caused her a most painful shock. She did not propose to wear dark glasses, but expressed a willingness to give the signal herself, 'Fuoco!'

Together with these facts must be weighed two important considerations: (1) the performances in which she was not caught at tricks are of the same sort as those in which she was; (2) every one of the conditions that she maintained against the wish of the investigators favours deception. Why is it so? Why must there be a cabinet closed in front by a curtain? Why must the stand, the clay, and other objects be within reach of her hands or feet? Why the poor illumination? Why was she not willing to suffer the annoyance of an unexpected flash of light and of a safe control of her hands and feet? Were she occasionally honest, she might, it seems, occasionally dispense with some or all of these suspicious conditions. That certain requirements must be observed in order to make possible the manifestation of any power is not disputed. But why is it that those demanded here are precisely those that would afford the medium a chance to deceive?

We need not be deterred from a negative conclusion by the sitters' declaration that they cannot possibly understand how, in light sufficient for observation and with her hands and feet under control, Palladino could by normal means accomplish certain of the things which they have seen her do. Photography shows how unable they were to realize what was going on. In the only photograph taken without warning Palladino is seen actually lifting the table with her hands, while the controllers have theirs upon hers, and yet they were not aware of her action. In another photograph the stand which they thought they had seen floating freely in the air appears supported on the medium's neck and head. Their judgment as to the sufficiency of light and the occupation of the medium's hands while under control can evidently not be relied upon.

What is true of Palladino is true in substance of all mediums, so far as the production of physical phenomena is concerned. Every one of them, with the single exception of Daniel Dunglas Home, has been detected in deception. The distinguished personality of this famous medium inspired too much respect among the small and carefully selected circle before whom he performed to permit of the suspicion of trickery. He was, therefore, spared the humiliation of an investigation implying the possibility of fraud.

Certain of the wonder-exciting phenomena recently subjected to scientific study are complicated by automatism and by the possible presence in the agent of unusual susceptibility to certain sensory stimuli. It has been established, e.g., that the movement of the rod which indicates the presence of water is unconsciously imparted to the rod by the dowser; and that the finding of a hidden object, by a person in contact with one knowing its location, is achieved by the 'reading' of slight unconscious movements. But automatism is only the beginning of an explanation of these phenomena. Why should the hands of the dowser move when over water, and how is it that movements seemingly too slight to offer any guidance are, nevertheless, in the experiments referred to, sufficient to lead the percipient to the hidden object? The existence in the percipient of an extraordinary delicacy of sensory perception is, in most cases of the kind, the pertinent explanation. Should cases occur which this explanation does not fit, the possibility of telepathic communication between the persons in contact, or even perchance between the percipient and some one else than the person in contact with him, would have to be considered. Neither one nor the other of these explanations is applicable to the dowser. Vision, or another kind of perception of the water or the ore, through the intervening opaque media, has been suggested as a possible explanation; but, before recourse is had to clairvoyance, it may be demanded that the fact itself be more firmly established than it now is. The doubter must, however, admit that the reported experiments (W. F. Barrett, 'On the so-called Divining Rod,' *Proc.*

S.P.R. xiii. [1897] 2-280, xv. [1900] 130-383) establish at least a presumption in favour of the possession by certain persons of a peculiar aptitude for this sort of discovery—an aptitude not dependent upon knowledge of an acknowledged kind.

The greatest achievement of the psychical researchers is the well-nigh unquestionable demonstration of occasional communication between living persons without any known intermediary (telepathy). The evidence is now of such quality and quantity that even particularly sceptical investigators find it impossible to deny its adequacy. The evidence consists of experimental and of spontaneous communications. Among the notable experiments are those conducted by Prof. and Mrs. H. Sidgwick, in which a percipient named numbers of two digits taken out of a bag by the former. Of 644 trials 133 were entirely successful—i.e. the two digits were correctly given; and in 14 trials the right digits were given, but in the reverse order. None of the tricks known to the professional prestidigitator could apparently find application in this, or in several other instances of the same sort.

In *Phantasms of the Living* Edmund Gurney has published over 200 well-attested instances of spontaneous communications. His 'Census of Hallucination' and the subsequent more elaborate census of a committee of the S.P.R. apparently prove that the number of veridical hallucinations is much greater than is indicated by the rule of chance (*Proc. S.P.R.* x. [1894] 393). It must, moreover, be acknowledged that, when hallucinations include several veridical incidents not logically connected, none of which is ordinary or to be naturally expected by the percipient, a small number of them seems sufficient to exclude coincidence as an explanation.

But, even were it possible to dismiss these spontaneous, premonitory hallucinations as due to coincidence, mistake, or deceit, there would yet remain the weighty experimental evidence for thought-transference. Nevertheless, the critical investigator may well stop short of complete assurance when he considers that these experiments are only sporadically successful. The only persons able to produce, whenever desired, alleged telepathic feats either are definitely known to be deceivers or are open to serious suspicion. No fact may be incorporated in any science unless the conditions of its appearance are known sufficiently to make possible either its reproduction or the circumstantial prediction of its reappearance. Conviction of the reality of telepathy will not become general among men of science until one or the other of these conditions is realized.

As to the tentative explanation of telepathy, we may say here merely that the dominant tendency is to seek for a physical explanation on the analogy of the wireless transmission of electric energy. Vibrations of some sort, produced by a brain in a particular physiological state, are supposed to be transmitted to another brain in a condition that makes it an appropriate receiver. The main difficulty in the way of this theory seems to be the distance (half the circumference of the earth) through which these waves would at times reach the receiving brain. But, until we know more about this supposititious brain-energy, there is little force in the objection that its energy is insufficient.

Clairvoyance, or, as it is also called, telæsthesia, is commonly produced by gazing in a crystal or at other polished surfaces (cf. art. CRYSTAL-GAZING). The percipient sees, often with great clearness of detail, objects and happenings at practically any distance. This very old belief has been neither placed on a secure scientific foundation nor discredited by the labours of the S.P.R. If the

numerous well-authenticated reports of telæsthesia are to be accepted at their face value, we are in the presence of a problem the solution of which is clearly beyond our present knowledge. This remark is applicable also to the preposterous accuracy in the estimation of time-intervals displayed by some persons, either in the normal condition or in hypnosis (see the experiments of J. Mulne Bramwell, *Hypnotism: its History, Practice, and Theory*, London, 1903, pp. 119-139).

The wonderful physical phenomena to which we have referred, the no less wonderful clairvoyance, supernormal time-estimation, and telepathy might all be what they seem, and yet the problem of survival after death remain untouched. But there is another class of phenomena—the alleged 'spirit-messages'—which are not so easily detached from the spiritistic hypothesis. The most famous of the living spirit-mediums is doubtless Mrs. Piper of Boston. No other medium has been so long and carefully studied by so many able investigators, and none has contributed so much that seems beyond the ingenuity of any one to explain. The stage-setting of these séances is somewhat complicated. The medium passes into a trance and speaks or writes automatically messages purporting to come from some spirit; but this communicating spirit is introduced and superintended by a familiar spirit called the 'control.' Mrs. Piper's reputation for honesty has never been shaken.

We need not enter into a critical analysis of Mrs. Piper's utterances, but pass on to the more decisive experiments in cross-correspondence, the latest and most promising of a settlement of the question of survival after death. The theory of cross-correspondence is that, if several persons receive messages which are singly unintelligible, but have meaning when combined, we ought, it seems, to admit—on the supposition that fraud is excluded—that these messages have been suggested to the percipients by a single mind. If, moreover, the thing communicated does not seem to have been possibly within the knowledge of any one of the percipients; and if it is discovered that some dead person possessed that knowledge when on earth; and, finally, if that person is mentioned by name as the communicator in one or several of the unintelligible parts of the message, then at least a strong presumption in favour of the existence of that spirit may be regarded as having been established.

The experiments in cross-correspondence (*Proc. S.P.R.* xx. ff. [1906 ff.]) have been conducted chiefly through three English ladies, one of them residing in India, and Mrs. Piper. Chance coincidence is absolutely insufficient to account for the results secured, and collusion is rejected by all those who know something of these persons and of the conditions of the tests. There is apparently no escape from the conclusion reached by that acute critic and tenacious sceptic, Frank Podmore:

'The automatists unquestionably show that they possess information which could not have reached their consciousness by normal means' (*The Newer Spiritualism*, p. 302).

Whether the explanation of these mysterious cross-correspondences will be found in telepathy acting at any distance, taken together with the well-known fact of the reappearance in certain mental states (e.g., in trance-consciousness) of things once known but long forgotten, even of things of which we never had more than an imperfect knowledge and should at no time have been able to reproduce correctly, remains for future investigations to disclose. As long as we can affirm with Podmore that 'the trance personalities have never told us anything which was not possibly, scarcely anything which was not prob-

ably, within the knowledge of some living person' (p. 312), telepathy will appear the more plausible and the less revolutionary hypothesis. But who will venture to formulate the test which will mark particular messages as not within the 'possibly known' to some one living anywhere on the surface of the globe?

The telepathic hypothesis of spirit-messages receives support from the unexpected meaninglessness of the 'revelations' made by the alleged spirits regarding their state and the circumstances of their existence. They have been fairly loquacious; yet none of them, not even those from whom much could have been expected, have revealed anything at all. More significant still than the insignificance of their remarks concerning the other life is the pertinacious effort of these alleged spirits to avoid answering the many and pointed questions addressed to them on that subject. From Richard Hodgson, the late secretary of the S.P.R., nothing enlightening has been learned, despite his haste in giving sign of his existence. For several years after his death Mrs. Piper scarcely held a sitting without some manifestation of what professed to be Hodgson's spirit. Of trifling incidents which may be useful in establishing his identity he talked abundantly; but, when questioned concerning the circumstances of his existence, he either drivelled or excused himself clumsily and departed. Frederic Myers and William James have been equally disappointing.

It has been urged that the spirits may find it difficult to work with the muscular mechanism of the medium; a disincarnate soul may be inefficient in the matter of bodily control; he may also be for a time not fully conscious and muddled. The fact is, however, that spirits do communicate a great many things; it takes volumes to record their utterances! The difficulties are apparently of such peculiar nature that nothing concerning the other life, and only things that have taken place on this earth, transpire. None of the hypotheses offered accounts for this puzzling aspect of the communications—not even the latest suggestion which would shift the blame from the spirit to the medium. Here we are asked to admit that, because of the peculiar condition of spirit-existence, the spirit's mental content is transmitted whole to the medium—in a lump, as it were—instead of coming out in the organized and selected form which is ensured by normal speech. Were it so, it would be small wonder that the medium should grow confused, contradict himself, and speak irrelevantly. But why, when he knows that the sitter seeks information on things above, does the medium not succeed once in a while in choosing in the total consciousness of the spirit something which would gratify the sitter's curiosity? Why are the things picked out always trifling, meaningless, or ridiculous? To this pertinent question no satisfactory answer has ever been given. The limitation of the knowledge of the alleged spirits to earthly facts points to an earthly origin of the medium's information.

One may, perhaps, venture to quote William James as a fair representative of those among the well-informed who regard the mystery of death as unsolved. Shortly before his death he wrote:

'For twenty-five years I have been in touch with the literature of Psychical Research, and I have been acquainted with numerous Researchers . . . yet I am theoretically no further than I was at the beginning' (*American Magazine*, lxxviii. [1909] 580).

As to those who regard the results of the S.P.R. as proving survival, they must admit that no amount of optimism and ingenuity in explanation can hide the repulsiveness of such glimpses of the future life as they think they have caught and its lack of the essential features of the Christian con-

ception. In any case, then, the belief in the Christian hereafter, elaborated by humanity under the pressure of exalted desires, remains entirely unsubstantiated.

If, after thirty-four years of activity, many of the mysteries which the S.P.R. set out to explore are still unfathomed, much has, nevertheless, been explained. Thus the mischief which mystery works upon credulous humanity has been decreased by the extension of the field of scientific control. This is particularly true with regard to the various forms of automatism. But the greatest accomplishment to record is the approximate demonstration that, under circumstances still mostly unknown, men may gain knowledge by other than the usual means, perhaps by direct communication between brains (telepathy) at practically any earthly distance from each other. This dark opening is indeed portentous. It may at any time lead to discoveries which will dwarf into insignificance any of the previous achievements of science.

LITERATURE.—Among the important literature may be mentioned: *Proceedings of the Society for Psychical Research*, London and Glasgow, 1883 ff.; *Proceedings of the American Society for Psychical Research*, New York, 1907 ff.; E. Gurney, F. W. H. Myers, and F. Podmore, *Phantasms of the Living*, 2 vols., London, 1886; F. Podmore, *Apparitions and Thought Transference*, do. 1894; *Modern Spiritualism: a History and a Criticism*, 2 vols., do. 1902; *The Newer Spiritualism*, do. 1911; T. Flournoy, *Des Indes à la planète Mars*, Geneva, 1910 (a very interesting account of a case of somnambulism and glossolalia); F. W. H. Myers, *Human Personality*, 2 vols., London, 1903; Oliver Lodge, *The Survival of Man?*, do. 1909.

JAMES H. LEUBA.

PSYCHOLOGY.—I. DEFINITION AND SCOPE.

—I. Psychology the study of the world of experience.—A cursory survey of the literature of this subject shows that it deals chiefly with the direct impressions of sense, such as colours, sounds, tastes, and smells; with their complex integrations, such as visual forms in one, two, or three dimensions, groups of consonant and dissonant tones, tonal intervals, melody, and the localization of these sensory experiences; with our apprehension and appreciation of space; with our perception of objects and our general notions regarding them; with memory, imagination, thinking; with feeling, emotion, and sentiment; with voluntary activity of all kinds, whether ideational or practical; and with a number of general questions arising out of these topics. It does not deal with the parts and processes of the material world, but with all our awareness of, and our activity and interest in, the world. Or, if the difficulty of separating the material objective world from our activity with it is pointed out, we may say that psychology deals with all of the world that is immediately or directly before us; or with the world in so far as it is momentarily dependent upon our own activity; if we shut our eyes, all colours and their forms and localizations vanish from us as actualities; if we cease to remember, the things of the past are no longer with us; when love takes the place of hate, the incompatibility of another person with us vanishes like a frown and there is only agreement and harmony. But we do not therefore suppose that the things that appeared coloured, or the past, or our neighbour, have momentarily vanished or have been replaced by others.

This obvious distinction between the world in so far as it is dependent upon itself and upon us is commonly expressed by saying that, whereas the natural sciences study the world of nature, psychology studies the world of experience. The objects which psychology studies are known as experiences. There are many other special sciences that deal with experiences; but psychology is the fundamental one. It holds the same place in the world of mind as physics does in the world of nature. It is the basal mental science.

In such a statement of the subject-matter of psychology as this three terms inevitably emerge into prominence: 'nature,' 'experience,' and 'self.' The world appears to us in experience. Experience is that aspect of the world that is (momentarily) dependent upon *our* activity. The world is that mass of implications of experiences that is not momentarily dependent upon our activity. We are that which, over against the fleeting medium of experience, partakes somewhat of the permanence of the world.

Now, if it is commonly admitted that the primary object of psychology is the study of experience, the further question must arise as to what concern psychology has with the relation of experience to the world and to the self.

2. Relation of experience to the world.—(a) *Psychology and epistemology.*—In its broadest form the relation to the world is the problem of epistemology—not, How in actual fact do we become aware of the world? (that is a purely psychological problem), but, By what right do we assert the existence of a world independent, to whatever extent, of experience (and of the self)? It might well be asserted that the only possible answer to the question of right is the correct answer to the question of fact. But an artificial distinction is often made to the effect that psychology can have no legitimate concern with truth or error. It is the business of logic to establish correct conclusions, and perhaps to classify fallacies; psychology will record and describe with impartiality the correct conclusion drawn by one man and the wrong conclusion drawn by another. Because the problem of psychology includes both the 'correct' and the 'false' process, it will make generalizations valid for both, and therefore invalid for what is logically true or rational. And in any case it requires a separate, not descriptive but normative, discipline to distinguish between the true and the false. That seems to be the line of argument taken by those who hold this view. They often give further support to their view by reference to the unconcern of natural science for truth, beauty, good, or evil. Two stars disrupt each other—it is a case of impact or tidal motion. The beauty of a rose is a problem in the minute chemistry of coloured compounds. The woe of mortal disease may be the struggle of two forms of life-force equally valid as biological energies.

That is all quite true, of course. But, though the sciences of medicine study health and disease impartially—if not indeed disease rather than health—and make generalizations valid for both, do they not also strive to win a special body of generalizations valid for health alone? Similarly, though the psychology of cognition will speak of the forms common to both truth and error, will they not also separate the variations peculiar to truth from those peculiar to error? If there is none such, how then does the other discipline proceed to distinguish between truth and error? If a general, reflective method, not regulated by the general methods of scientific procedure, can gain knowledge of the ways of truth, will not a special, introspective, experimental method that looks microscopically through the experience of single thinkers, fulfil the required task better in the end? If a man by introspection cannot discern the forms of truth, how will they ever be discerned? And, if the method is introspective, will it not be improved as much by the exact methods of psychology as other special problems of psychology have been? The discipline that distinguishes between the true and the false does not *make* or create the truth any more than it makes the falsehood or than a chemist makes or creates new organic compounds. And yet this, of course, does

no prejudice to the possibility that there may be many aspects of knowledge that are much broader in their scope and relations than are the minute aspects of knowledge, such as come within the range of a few seconds' duration. These broad aspects may be studied by special broad methods, just as certain broad aspects of health are studied by certain broad (statistical) methods which ignore the single individual. But the broad aspects rest in the end scientifically upon the narrow ones in all regions.

Psychology, therefore, has full right to all that it can accomplish regarding the relation of experience to the world, and no discipline that concerns itself with that relation can afford to ignore the relevant work of psychology.

(b) *Psychology and physiology.*—In so far as psychology is concerned with the *proximate* relation of experience to the world—the relation to the body and specially to the nervous system of the individual—its science merges into that of psychophysics. The science which holds the other end of the relation is physiology. Much obscurity prevails regarding the relation of physiology and psychology, so that it is necessary to review it here in spite of its essential simplicity.

Psychology is the scientific study of experience, physiology that of the functions or activities of the body. Whatever asserts the existence, the time, the manner, the properties, or anything whatever, directly about an experience is an item of psychological science. Whatever asserts anything about the body or a part of it other than its topography and morphology is an item of physiological science. Consequently, the work of psychology consists in the increase of psychological science, in the increase of statements about experiences. An assertion regarding a touch-organ, an eye, an ear, or a nerve is an item of physiology; no matter how it was gathered, whether by the microscopical examination of the organ, or by inference from the observation of sensations of vision or of sound, or of loss of memory, or what not.

This obvious distinction is not in itself important in an exposition of psychology. Most people would agree to it at once. But they generally omit to draw the equally obvious deductions from it, and so to dispel their favourite prejudices. It is, e.g., a common prejudice of scientists especially interested in physiology that psychology claims to be able to do what they already know they cannot yet do. It tries to show how consciousness arises, how the brain senses, feels, thinks, and acts; but with flimsy, superficial methods, such as the asking of questions, the recording of reaction times; ignoring all the while, e.g., such a flagrant fact as that the occurrence of intelligence is dependent upon the proper functioning of the thyroid gland, and so on. It is in face of such a mistake that it is so necessary to point out that the fact regarding the thyroid gland belongs to psycho-physics, and that it does not add anything to our knowledge of experience as such. Many physiologists have definitely excluded any consideration of experiences from the scope of reference of their science. That is all the more reason why they should admit the scientific study of the field of experience as the task of others.

Another application: experimental psychologists are rightly highly impressed by the importance of physiology. The first foundations of the physiology of the senses are easier of access than are the foundations of a psychology of the senses. This difference of bulk and systematic coherence in the two spheres of knowledge relating to sensory life creates a prejudice in their minds, so that, when they proceed to study sensory experiences, they apply their own psychological methods to the

gathering of facts of observation, but, when they come to the problem of explanation, they are often completely diverted to the terms of physiological explanation, ignoring, it may be, altogether their duty of giving a psychological systematization of the facts gathered—in other words, a psychological explanation. This prejudice commonly governs professed psychologists even in dealing with questions relating to higher experiences, such as memory, feeling, emotion, etc. In the field of sensory experience it is almost universal.

The physiologist is correct in holding that, if he, specially active in the direct study of the functions of the body, and not ignorant of the indirect sources of physiological knowledge, cannot advance a true theory of neural action in some special department, such a theory will hardly be deduced solely or chiefly from indirect sources. On the other hand, the psychologist, who is specially active in the direct study of experiences, is more likely to be able to systematize these completely in his special department, and so to explain them psychologically, than he is to be able to deduce from them, in their unsystematized and therefore unregulated and perhaps incomplete form, a scheme for the completion of the knowledge and for the systematization of a neural field that has not been specially the object of his direct study. All this is, of course, without prejudice to the fact that one man may be equally fitted for, and may do equally complete, work in some field of both psychology and physiology. If so, he is merely formally two scientists in one, and must in both capacities work as perfectly, without prejudice, in the interests of each science as he would if he were a specialist in one only.

Psychology, then, is primarily a pure psychology, the scientific study of experiences in terms of experiences, involving their complete description, analysis, classification, and systematization. In the connecting science of psycho-physics it has equal rights with physiology. In the connecting science of epistemology it has equal rights with any philosophical discipline which may concern itself with that science—and so on for all other sciences through which psychology may be related to other sciences.

3. Experience in relation to the self.—Having dealt thus with experience in itself and in relation to the world, we have now only to deal with experience in relation to the self. But there is this difference between the world and the self, that, whereas there are highly developed sciences other than psychology that deal with the world, there is no other distinct science than psychology that deals with the self. In fact, psychology is by name the science of the soul, or self, that which is of the nature of experience perhaps, but certainly transcends the single, momentary, fleeting experience. We might, then, expect psychology to include a special field devoted to the study of the self. A survey of psychological literature, however, will hardly reveal this field. In fact, there are many who flatly deny that there is any such thing strictly as a self, distinguishable from the sum total, or field, or stream, of experiences. And, where there is no dispute as to the existence, there is frequent difference of view as to the nature, of the self.

About the popular view there is no doubt. The self is something more than the experience of any moment. Though in sleep its activity is temporarily suspended, yet it persists in consciousness of itself through years, and it is the leader of all the mind's activity. It thinks, observes, feels, and senses. And yet common sense in this region often gets into difficulties; it has to distinguish between the true and false, better and worse, selves. Its doubts about the independent nature of the self

reveal themselves in frequent scepticism as to the survival of the self beyond the life of the organism.

The popular self, then, is quite problematical. After Hume's leading it is commonly agreed that no unitary self is distinguishable among the objects of introspection. What we mean by the self may therefore be the unity of experience in detail, or the continuous unity of it throughout life, or a certain logical or real implication of experience.

(a) *Self as the fount of unity.*—It is a common argument against the view that the self is to be identified either with the sum total of experience or with the stream of experience that by no conceivable means could a mere series of experiences turn into a consciousness of that series as a unity. Hence the sum total of experience simply could not exist as a sum total, unless we suppose that some miracle of unification is perpetually happening. The stream of experiences can be unified only in so far as it is a stream-for-a-self. It is only through the presentation to one self, through the common relation to one self, that the mass becomes individual.

It is true that we cannot rationalize the process of unification or synthesis that we find broadcast throughout our experience; nor can we rationalize the synthesis of atoms to a molecule, of molecules to a cell, or of cells to an organism. But, admitting that, we have the strength to perceive that a reference to one subject is impotent and irrelevant. It is irrelevant because it blandly begs the question. How do experiences ever arrive before one subject's gaze? And what is this gaze? It is impotent, because no amount of reference to one subject will explain the great variety of forms in which experiences integrate to unities, or the laws of their integration. If it is difficult to conceive of an experience by itself having an object, it is just as difficult to conceive the rationality of a subject thinking objects through experiences. In short, the hypothesis of the self as a unifying form, though it undoubtedly gives a sense of great comfort and satisfaction to many minds, is nevertheless useless. It is of no service whatever in a scientific sense, and that must be the final test in a science of psychology. Its acceptance cannot be advocated on this ground.

The doctrine is really an inheritance from Kant. The leading idea of his philosophic reconstruction of experience was the postulation, not of one single-all-important synthesis (Hume), but of a whole hierarchy of them, forming an easily exhaustible system. But Kant failed to draw the proper inferences from this idea and from what success he achieved in applying it in detail. He failed especially to see that the data of experience and the forms that emerge from them must synthesize themselves *from below upwards* according to common laws. In the search for a source of synthesis he then looked upwards in experience instead of downwards, and found the synthetic unity of apperception, the consciousness of 'I think.' The efficacy of that notion, however, is nothing but the notion of synthesis itself; and so nothing was gained by his whole procedure. At the same time, almost everything was lost. For the confusion into which Kant worked himself in his various deductions left the almost indelible impression that all such deductions are hopeless undertakings. So the very valuable idea with which Kant started was emasculated beyond further usefulness. In his successors, and especially in Hegel, it was degraded to a scheme of purely fanciful and imaginary forms, whose only claim to actuality was the vague atmosphere of logical connexion that pervaded them. At the same time, the universal function ascribed by Kant to the synthetic unity of apperception was exaggerated until the real world seemed to fade utterly away and only

the self remained in its universe of experience. Had Kant succeeded in solving the problem of the scheme of synthesis in experience from below upwards, there is no doubt that he would never have developed his phenomenalism, nor would the idealistic extravaganzas of his successors ever have been propounded.

(b) *The metaphysical Ego.*—So much, then, for the self as the fount of unity in experience in its details. There is, of course, just as little reason for assuming the existence of a self in order to give unity to the data of experience of a lifetime. If experience cannot raise its own unity upon its own foundations and upon the hierarchy of special integrations just discussed, no notion of self will ever inspire the data of experience, which are as the sands of the sea for number, into one coherent whole. All this mysticism of the self is nothing but a failure to grasp the problem of the system of experience positivistically and scientifically. As it stands, and is expounded still, it is a distinct barrier to proper progress in psychology. For it cannot yield any fruit of detail problems, and so it clogs the minds of those who hold it.

As to the implications of experience, they are rather the result of psychological study than a part of its subject-matter. If the psychologist is concerned to draw all legitimate inferences from his data, implications regarding the self, whether they be logical or real, will follow of themselves. There is no fear of anything being ignored here. The intensity of the individual's struggle for existence and his desire to survive indefinitely will coerce him into probing for all possible reasons for believing in the perpetuation of his self. Every possible reason, however improbable, will be hopefully contemplated and appraised.

It is, finally, sometimes said that psychology does not fulfil its duty, which is to study the self and its states, not to study the objective contents of experience, such as colours, sounds, concepts, thoughts, and memories. Quite possible; but the other things are more clearly there, and call for study. They are what most psychologists now study chiefly. If any one can develop a method of demonstrating the existence of the self, in some sense clearly distinguishable from experience and its syntheses, of studying its states, and of making our knowledge of it progressively larger, his success will surely be highly acclaimed. Thus far, however, in the opinion of the writer, no one has done so. The field of psychology, therefore, is properly described exclusively as a study of experiences in the systems in which we find them and of the relations of these experiences and their systems to the fields which in the universe surround experience or rest in part upon it. These are, apart from the biological (process) sciences already referred to, the (product) sciences of history, linguistics, aesthetics, and the like, and the social sciences of political philosophy, and economy, social economics, etc. (cf. art CONSCIOUSNESS for fuller discussion from opposed point of view).

II. *THE SENSORY-COGNITIVE SYSTEM.*—I. Theories as to the constituents of experience.—The task of psychology, as Ward has said,¹ is to ascertain the ultimate constituents of all experiences and to determine the laws of their interaction. The matter is still under dispute, but it is possible to maintain with perhaps increasing show of probability that the ultimate constituents of all experiences are sensations. Where this theory goes upon the assumption that all experiences that do not directly reveal themselves as sensations are in some subtle way aggregates of more or less obscure and attenuated sensations, we have the ancient doctrine of sensationalism. That

¹ *EB* 11, s.v. 'Psychology,' xxii. 548².

doctrine is now commonly held either to be insufficient to account for the facts or to involve too great assumptions regarding the variability of appearance of sensations in aggregations. Obviously, too, the proof of the presence in all experiences of a complement of sensations, approximately co-extensive with the experiences discerned in aggregate—which is the chief line of proof followed by sensationalists—does not exclude the alternative theory that all experiences are either single or multiple sensations, or special integrative complexes of sensations. Here the only interest in the sensation is that it is the lowest rung on an indefinite ladder of integrative processes, one that cannot be further resolved by us.

Another line of theorists hold that there are other ultimate, irreducible constituents of experience than sensations—feelings, thoughts, etc. But this type of theory need not be taken to have proved anything more than that feelings, thoughts, and the rest are special points, units, or parts of a certain range of experience, just as cells are special and, in many senses, unique parts of the body, and are held by many to be irreducible wholly to the next lower units of matter—molecules and their laws. The burden of proof lies heavy on any school that draws such limits. For it has for its task a negative proof. The best policy for united work is obviously the plea that, while feelings and thoughts may be reducible to lower grade units, this reduction has not yet been satisfactorily accomplished. Thus all theorists may work forward together, each supplementing the other's outlook, observation, and interpretation. Whatever the outcome may be, the theoretical work of psychology may well be set up as if it would ultimately converge on the sensationalistic ideal, when that is re-animated by the substitution of integration for aggregation.

Certain other theories refuse to consider any such analytic, dissecting, and devitalizing outlook as these. They stand fast by the indivisibility and qualitative unity of experience, its ever changing and developing wholeness and completeness, which are only brought to the inert forms of the above theories by the destructive work of the abstracting intellect. In its older form this group of theories made great use of the earlier notions of the biologists. The organic unity of experience was constantly emphasized. Experience is an organism in which every part detectable by abstraction stands in living, moving interaction with every other, and is inseparable from it without the destruction of the (spirit of the) whole. Doubtless; but modern biologists are not deterred by this thought from a progressive analysis and synthetic reconstruction of the wonderful life of the organism. They do not allow themselves to be held up in their progress by the contemplative admiration of completeness and unity. A recent form of this type of theory clothes itself anew in biological terminology, taking as its prototype of action the mystic unity and the insight-without-intellect of the instinct—a very fine doctrine for those who love to linger on the hill-tops of philosophy, chanting the wonders of the stars, the clouds, the trees, and the clover, and yearning to embrace the universe in a great wave of life, and very refreshing to the tired mind, but hardly the way of progress. The world, no doubt, is full of wondrous forces; but we happen to be soldiers of the intellect and must do what we best can.

A third group of theories, which also lie somewhat aside from the main drift of psychological work, looks upon experience as not ours, not subjective or mental, coming between our self and a real world; but as really of the world, objective, physical, the same in stuff as the things that we

call material. In a certain sense the difference is only a matter of words, and, provided such a theory has the interest to study experiences or objects in detail, the same results will emerge as are found by the more 'orthodox' psychologist, so to speak. But in its older form of objective idealism this line of doctrine acted almost as an excuse for not investigating the minute, systematic build of objects (experiences). If the alleged experiences were really objects, the study of them might well be left to the scientists. And, if there were a science that might be called experimental psychology, then that title was in a sense a misnomer; the science was really a branch of physiology, obviously not part of the work of a philosopher. In a recent form the theory shows a special interest in the minute build of objects or of the first physical data. For knowledge is required to show how these data are so directly related to, or continuous with, the material things of science as they seem to our common sense to be. This group of theorists is obviously forced into the attempt to make a special plea for, and a special study of, the self. For one can hardly solemnly go the length of asserting that there is nothing in the world but the objective, the physical, and its complexities—no self and no personal activity. These views evidently carry us back to the problem of the self already discussed. They do not yet affect the detail work of psychology (or of this new physics that the physicists do not promote). If the field of work and the drift of fact and theory are clear, psychology may leave the classificatory names to the wider comprehension of philosophy. When we have all the knowledge of fact required for exhaustive systematization and understanding, we shall hardly object seriously to any useful drawing of boundaries and naming of provinces.

2. Sensations and their attributes.—The ultimate constituents of all experiences, then, are probably sensations. Sensations are indicated in the universe of things as being the simplest experiences that are directly dependent upon the stimulation of a sense-organ or of a sensory nerve. They are familiar in the five senses of man; but the work of later years has increased that number considerably. The senses may be divided into three groups.

(a) *Simplest senses of the skin.*—The first contains the simplest and perhaps more primitive senses of the skin and, in an irregular way, of the viscera. They are four: pain, touch, cold, and warmth. Itch and tickling are related to pain and touch respectively. The problem of the psychological description of the simplest experiences of these senses is a useful preliminary and guide to the psychological definition of sensation in general. It is the important problem of the attributes of sensation.

There are at least six attributes. (1) *Quality* is the name for the radical difference between the sensations of different senses—e.g., colour, sound, touch. And touch, pain, warmth, and cold are all qualitatively different. (2) The variant known as *intensity* is too familiar to require any indication. These two attributes have been universally admitted and are readily acceptable by all as direct properties of, or variants in, these simplest experiences.

The next most frequently admitted attribute is (3) *extensity*. A colour mass is extensive; so is the warmth felt in a bath or the pain of colic, as compared with the coldness of a drop of rain or the pain of a pin-prick. Some folk feel a repugnance of a kind to the assertion that our experiences are extended or spread out. But that is merely traditional prejudice. Thought may not be extensive, but sensations certainly are; only it is not the spatial kind of extensity that is meant,

but another 'kind' or sub-class of extensity. The attribute of extensity has not always been admitted. Some have tried to derive it from groups of qualitative and intensive differences; but the attempt was never convincing; hence the gradual recognition of the primacy of extensity.

Now, those who thus admitted extensity usually proceeded to attempt to develop a further attribute of *localization* out of those three. The cover for the act of conversion involved in this attempt has been since Lotze's time the term 'local sign,' the idea being that the skin is of such different texture, etc., at different parts that a touch at one part would be distinguishable from another at another part of the total extent by its qualitative and intensive differences. But the same futility attaches to this attempt at derivation as to the previous one. The intellect can by no device convert into local signs what are after all only groups of items devoid of any sort of arrangement. These must remain what they are, unless the intellect can correlate them with a spatial order otherwise provided. And then the spatial order so obtained would not become inherent in the sensory complex, as would be required. No, mere extensity is insufficient. For it implies no definite construction, form, shape, or extent, but only extensity as a variable magnitude. If this magnitude is at the same time to have form or shape, it must be supposed to include orders implicitly or explicitly. And the magnitude cannot be definite without the help of explicit orders. This is, then, the fourth attribute—(4) *order*. It is not to be confounded with spatial order, as which it appears most definitely before our cognition in the sensory experience of the skin. It is the basis of the spatial construction. Space, as we shall see, is a form or complication of sensory order.

Two other parallel attributes are the basis of our temporal differentiation of sensory experience, namely (5) *duration* and (6) *temporal order*. The former order may be distinguished from (6) as systemic order, because it is the kind of order that depends psycho-physically upon a system of elementary sense-organs (receptors).

Another attribute has been proposed by Titchener—*clearness*. But there are great difficulties in the way of its acceptance. A sensationalistic system, of course, as already indicated, requires some primary variant to account for the apparently great difference between the higher psychical complexes and any obvious aggregates of sensations. But an integrative system, full of variously directed streams of action and of different levels, the one more remote from the other than a third, can probably account for all the facts without such a difficult attribute.

This first easy group of sensations has an appendage in the sense or senses of taste. No new primary fact is met in it.

(b) *Articular, muscular, and organic senses.*—The second group of senses differs from the first in offering in each case some feature of obscurity or difficulty. The senses here are the articular, the muscular, and the organic (a medley of hunger, thirst, lust, nausea, etc.). The difficulty consists in properly classifying the attributes of each and the obscurity in detecting their presence. Thus the quality of articular sensations has been generally held to be their indication of position. And a class of positional qualities has even been distinguished from a quality of movement. But the 'positional' variation must be classed as the ordinal attribute, while the difference of movement does not constitute a separate sense at all, as we shall see later. The obscurity attaching to articular sensations, on the other hand, concerns their intensity. But we can with care produce

intensive differences in this sensation, and we then recognize that the obscurity is not in Titchener's sense attributive, but is only apparent. Failing to recognize the fact that the physiological basis of intensive differences in this sense is almost lacking—from the nature of the case—and expecting intensive variations that we do not find, we call these variations obscure, just as visual presentations are when we try to read in the gloaming. We feel that we cannot detect fully all that is there. But when we cease to expect more than there is, we also drop the term 'obscure.'

(c) *Senses of sound, sight, and smell.*—The third group of senses presents very complex and very difficult cases that can be made to conform completely to the formula of attributes only after elaborate study. The senses here are sound, sight, and smell.

The present writer has given¹ a re-interpretation of the sense of sound on the basis of the formula of the six attributes which completely alters our view of this sense and brings it into perfect conformity with the psychology (and, by inference, with the physiology) of the other senses. It may be dogmatically indicated here. There is one quality in sound, that which distinguishes sight from sound. Intensity is familiar. The difference generally classed as quality—pitch—is really the attribute of order, while the extensity of sounds is apparent in their volumes, which run parallel to the pitch series, low tones being large and bulky, high tones thin and small. These volumes, however, are really extents or masses of sensation, so that tones are not the primary particles of this sense, but are well-rounded, balanced, symmetrical masses of sound, in which one (hypothetical) particle (or a few) is prominent in a central position, and is known as the pitch of the tone. Thus all audible tones may be reduced to a single series of particles of sound sensation, the lowest tone involving the whole series, and the higher ones progressively less and less of the series, the end particle on one side being common to all tones. This is only another way of expressing the fact that, as we rise in the tonal scale, the pitch series moves progressively to one side.

There is no need to attempt to reduce noises to tones. For noises are themselves masses of sound-particles. They differ from tones only in their irregularity and want of balance and in their lack of a prominent ordinal centre, *i.e.* pitch. All degrees of variation, however, from tone to noise are obviously possible.

In the sense of vision the systemic attributes of extensity and order offer no difficulty. That attaches only to the attributes of intensity and quality. We have interesting and highly developed physiological theories of vision, of which the most familiar are those of H. L. F. von Helmholtz and of E. Hering. But we have still to get a satisfactory psychological account of the elements of this sense.

The sense of smell is specially peculiar because of the fact that we seem unable as yet to give a complete survey of its qualities. We are unable to tell whether the enumeration that we already have is complete. This merely means that we have not yet got the key to the psychological analysis of this sense.

In spite of these outstanding difficulties, we may look forward to bringing the attributes and varieties of aggregation of the elements of all the senses some day finally into full agreement with one another. This solution may be expected to conform at least closely to the formula of six attributes indicated above.

3. Modes and laws of integration.—The other

¹ *The Psychology of Sound.*

task of pure science in psychology is to ascertain the laws of the interaction of these probable ultimate constituents of experience; or, better, to determine their modes and laws of integration. The problem of these modes has been before the minds of psychologists for some time in the form of the figure-qualities described by C. von Ehrenfels. A melody, *e.g.*, must be something more than the sum or sequence of the tones that form it. For it remains the same melody even when it is raised or lowered in pitch so far that none of the tones of the first version occurs in the second. And a square is a square, whether it be given in blue colour or red, or even in tactual sensation. Similar distinctions and arguments are found in older philosophical literature. Kant's forms of sense and of understanding are essentially the same idea. They are something more than any data that they may include or synthesize; they are the mind's own work or contribution to the build of knowledge; they cannot come from without; they are, as we may say, purely integrative 'processes' of experience.

Following Kant's suggestions farther, we may think of these integrations as a hierarchy co-extensive with experience—a scheme that, as being in experience, is directly before our observation and may well be completely described by our science before very long. Moreover, it is one that should bring with its gradual discovery a sense of its own completeness and 'necessity.'

Unlike Kant, however, we cannot hope to succeed unless we can put our scheme of integrative processes into relation to the properties or attributes of the elementary data of experience—the sensations. This connexion is expressed in the following two laws. (1) The integrative product must bear a close resemblance to the lower-level product or to the attribute upon whose integration it rests. We cannot, *e.g.*, expect localizations to rest upon differences of intensity or of quality or of both, but only upon differences of order. In such a connexion there would be no inner coherence, insight, 'necessity' (Kant), or whatever it might be called, that makes our experience coherent in all its parts instead of a mere mechanical conglomeration. (2) Wherever similar attributes (or integrative products) integrate (anew), there we must expect to find products both introspectively and functionally similar to one another. Thus, if the integration of visual orders gives systemic intervals and motions, then, if pitch is really properly classified as ordinal, we must expect to find differences of pitch integrating to similar products. And these are to be found, namely, (tonal) interval and (a certain aspect of) melody.

(3) A third law states a fact that has already been referred to and is of the greatest importance, namely that the integrative product is an addition to the mass of integrating experiences, whose existence and continuance within the integrative process it in no way impairs. It is this fact that makes such a profound difference between the scheme of sensationalism and that now expounded. At the same time, this addition to experience gives a place within experience to all that has been claimed and taught regarding the creative synthesis or evolution of experience. But this interpretation or description of experience may claim to be more scientific than others, in so far as it is more positivistic. It does not gather all the creative talents of experience in a greedy hand and bestow them upon a single agent—the brain, or the soul, or apperception, or what not. It leaves them all in their places. It lets psychical creation come forth in its order, just as the natural and biological sciences set forth the order of natural creation.

4. Scheme of integration forms.—No proper

exposition of the different forms of sensory and of cognitive integration can be given in this short article. But a scheme of those forms may help to bring some comprehensive arrangement into the mass of data that the reader will find in the chapters of textbooks of psychology dealing with sensory and cognitive experience. Of the six attributes the chief integrating one is order. Differences in systemic order alone give systemic distance, differences in temporal order temporal distance or time interval. The unity of simultaneous and progressive differences in these two ordinal attributes is motion. These three integrates all vary in magnitude—size or speed. Distances are found in all the senses that show distinct variations in the attribute of order—touch and the other skin sensations, articular sense, sound, and sight. All senses give differences of temporal order, but some give them much better than others. So we have specially temporal, or rhythmic, senses. Obviously motion will be limited to the senses that give distance well. No other attribute than order integrates well, or even at all perhaps. An exception seems to occur in vision, where lustre is found to involve differences of brightness and seems to be a new character supervening upon these differences. It also obeys a further law of integration in that it supervenes both upon simultaneously (binocularly) and upon successively (unilocularly) presented differences. This law appears to be observed in all integrations that do not involve differences in temporal order, which, as we know them, are always successive. But the problem of lustre is not quite clear; lustre may, in fact, belong to the next level of integration, which is called bisystemic, because it involves two systems of elementary sense-organs, or two ordinal systems, of the same kind—e.g., two eyes, two ears.

This bisystemic level gives, in vision, a new third dimension to the forms that are found in the plane field of vision of one eye. With two eyes simultaneously, or with one eye successively, we see solidity, i.e. stereoscopically. Binaural hearing is similar, but simpler. It gives a new (transverse) line of orders. The pitch series of each ear is a single (longitudinal) dimension. The combined use of these two (not mathematical, but merely narrow) lines allows of (transverse) oscillation of emphasis from one side (or ear) to the other, and so provides a basis, though a very imperfect one, for our correspondingly weak power of localizing sounds round the head.

The next level of integration is intersystemic; it holds between systems of different kinds of senses. This kind of integration is still more difficult for the individual to acquire than the preceding. We may express the problem materially by asking how the impressions of the different senses ever meet together in the vast brain, so as to form a unitary whole. Although the problem has been perpetually ignored, the same question must be asked about the (vast) mind. How do the systems of the different senses become reconciled and correlated with one another? How do the impressions of the different senses ever meet together 'in the mind'? The question becomes specially acute when we turn to examine the psychological origin of the 'object.' Take the old stock example of the 'orange.' How do the different sensations given by an orange hitch on to one another in the child's mind? Not by mere simultaneous association, for not all things that are merely together in the mind associate together. There must be a specific basis that regulates association.

A minute study of visual bisystemic integration shows that this basis is the identity or similarity

of the plane forms or figures that appear in the integrating systems of the two eyes. Similarly, the systems of the different senses may be supposed to unite to form our sensory space only by the integration of their systems by means of the very similar forms and motions that are impressed upon the different senses by one and the same real object. Thus too the contributions of the different senses are brought together to form units of perception—e.g., 'orange.'

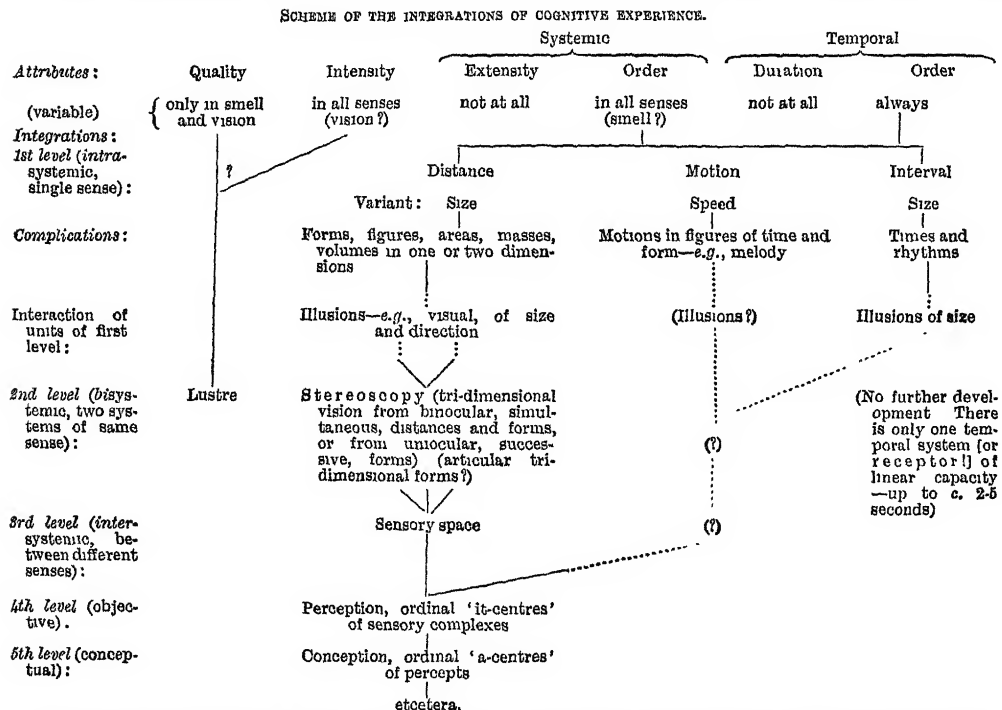

The interaction of the distances and forms presented within the system of a single sense offers a rich field for study. This is most apparent in the many visual illusions (*q.v.*) now so familiar. These figures are illusions simply because their parts, when presented together, modify one another and so appear otherwise than they do when presented alone. They are chiefly illusions of distance or size, and of direction—a derivative of distance.

The scheme of sensory cognitive integrations may be summed up schematically as on next page.

5. The higher cognitive powers. — (a) *The psycho-physical problem.* — The cognitive work of experience thus appears as a great hierarchy, developing upwards by its own initiative from the data given by the senses—we say 'by its own initiative,' because in such a scheme we do not need to postulate any sort of developing agent to work or even to guide development. We can study the whole process positivistically, just as the physical, chemical, and biological sciences study the course of development within their spheres. We may speak of 'development' because the 'higher' unities are more comprehensive and also (we may confidently assert) *later* than the unities of the lower levels.

Thus, e.g., we need make no speculative references to the brain for a basis of integration. Whether there is in the brain a parallel or preceding, real, unifying process or not is a question for the physiologist to settle. An answer to it, whether positive or negative, can in no way affect the work of psychology in the study of the integrative process as it is in experience. Whether parallelism or interaction be the true answer to the psycho-physical problem is not very important for the present, for the simple reason that it will be very long before proper material for an answer is to hand. On the other hand, a psychical agent, such as the soul, is quite useless. Even the spy-glass rôle of thought may be dispensed with. In that theory thought is held to be an indispensable accompaniment or attribute of sensation. It comes with it in some germ-like form, and over and through sensation, as it were, it spies out the object or cause of sensation. How could an experience have or know an object, if it were not so? How could it even if it were so? we may ask in reply.

The scheme propounded, on the other hand, offers a direct basis for constructive work on the 'references' of thought. An integrated state is always attached to, and so refers to, the basis upon which it is integrated. A melody is not a unity that is just present along with tones, as the title-name of the melody more or less is. It is intimately blended into the being of the tones, as it were. It is this intimacy of connexion that makes a psychologist like Titchener altogether overlook the presence of something new in the melody-total (or in a square) beyond the ultimate data of sense. In the same way in a perception each sensation which enters into the unity is equally 'it.' The colour of the orange is 'it,' and so are the taste, the smell, and the feel (of 'it'). And, on the other hand, the 'it' of the perception refers to each of these.

The stage of perception (*q.v.*) at which the cause of a percept comes into view is certainly not the earliest form of perception, where the integrate is nothing but an it-centre of sensory experience, but a rather advanced stage in which there is some conceptual concentration of individual perceptions and some of the 'knowledge about' that then supervenes. This 'knowledge about' is not the result of an excursion or observation beyond the confines of experience, as the cause-idea might suggest, but merely the attachment to one another of experiences above the first perceptual stages by the same or similar mechanism as produced these first stages, whereby the higher integration is attained that we know as abstract knowledge or conception (*q.v.*). All these abstract units must not, however, be supposed to have to hang in the air above the sensory levels of integrations, as if they were the gases of corruption mounting upwards from them. They are attached or refer downwards to their basis through a continuous line of integration, just as the other integrative products do. And it is just this attachment which puts substance, cause, and interaction, particles or parts of various levels—atoms, molecules, and the rest—into the objects of perception.

(b) *Development in man and animals.*—The study of development (*q.v.*) is readily accessible in this way. If a certain level of integration can be shown by indirect evidence—of conduct, learning-by-experiment, and so on—to be proved to exist in any animal, we know what earlier levels of experience are implied in it. Research thus far seems to have shown conclusively that no animal other than man shows any evidence of commanding the conceptual level of integration. But recognition and, still more, perception are by no means excluded among the higher animals. The task of deciding in each particular case is very difficult, involving a great deal of very elaborate and pre-cautious experimentation.

To the further important question why every animal that is well endowed with efficient sense-

organs does not develop to as high an integrative level of experience as man, psychology is unable as yet to give a definite answer. This appears the more strange as man seems in certain respects to be possessor of senses which compare unfavourably with those of many other mammals. This is especially so in the case of smell and of hearing. In vision we are relatively efficient. But in one important respect we have a great advantage; we are possessors of mobile hands and fingers. The significance of this is that it endows us with a second highly elaborate and clear field of tri-dimensional forms, namely the tactual-articular. The other mammals, with the exception of our nearest relatives, use their articular sense almost only for the general purpose of postures and bodily movement, while their touch is imprisoned behind their masses of fur.

There can be no doubt that the possession of a plurality of tri-dimensional senses is highly important for development. For hearing is only weakly dimensional, and smell in ourselves (and possibly in the other mammals as well) is not so at all. All our other senses, apart from the visual and articular, are only vaguely dimensional, inactive, and of poor discriminatory power. But, as we have seen, the correlation and integration of active and complex dimensional senses are required for the proper development of sensory space, and that in its turn is the gateway to the higher cognitive powers. So we may maintain as probable the view that the height of development of the 'mind' depends largely upon the extent of variation given in the elementary data of the senses. And we should, therefore, expect to find that the size of the brain depends not so much upon the room required for the cerebral mechanisms of conception as upon the size of the parts required for the bi- and tri-dimensional senses of fine discrimination. Of course neural centres may also be required for all integrative levels. But these are problems which we must leave to the physiologist.

6. *Memory and imagery.*—With memory (*q.v.*)

another aspect of experience comes into view that is of the greatest importance. It seems clear that there can be no memory work except upon the basis of the spontaneous integrations of experience. Memory is not mechanical association of contiguous parts of an aggregate, as sensationalism is compelled to suppose. Much, if not all, has yet to be done before the springs of memory are clearly exposed. But there is a growing tendency of evidence and conviction to show that memory presupposes some form of integrative activity which makes the old form of contiguous association untenable except as a formula that presupposes but ignores this integrative activity.

But, if this is granted, there seems no doubt that association gives experiences a new grip of one another, so that, even when an integrative unity is dissolved by lapsing as an actuality, it can be reinstated from a part of its original foundations by the extra bond established before the integration lapsed. And, as we know, repetitive contemplation of the integrative complex helps to make associations more powerful and enduring. The experimental study of memory in recent years has greatly extended our knowledge of the conditions affecting strength of association. By association, too, we can extend the scope of integrations, so as to make them include a wider scope of experiences than they otherwise would spontaneously at any one moment. If integration gives height of growth to experience, as we might say, then memory gives it breadth. And the growth that can be attained in breadth by effort is enormous.

At the same time this redintegrative action of memory makes it possible for an integrative product to be revived from the side, as it were, instead of by its full conditions from below. And the revival of these lower springs does not seem to be necessary in memory work. A concept, *e.g.*, can never be got originally except from below. And yet in the fluent operations of thought, which depend so much upon the work of memory, that concept may be revived, and used as an essential link in the process of thought, without the revival of any of its sources of integration, even in the form of imagery.

And from this issue we may pass directly to the question of the value of imagery. An older evaluation of imagery considered it as a mere trace or record of previous direct impressions of sense-sensations now called up accidentally owing to the associative linking that supervened to bind it and the present reviving sensation together when both were previously present as sensations. But that view is almost certainly wrong. Imagery is revived more often because of the integrative complexes into which it was as sensation wrought up, and because it is now wanted for the redintegrative and new integrative processes of thought. Thus, when one is asked, 'Does the water-line of a ship rise or fall as it passes from fresh water to salt?', the reason why an image-scene of a ship passing from a river-mouth to the sea appears in some form or other in almost every one's mind is that such a scene presents all the material of the question in a natural and familiar scheme, each concept attached to its own peg. The memory has then to work upon the instructions given in the question and to revive what material is readily available in it, so that some of that material may perhaps cohere well with the points of the question and thus yield the answer. And, according to the drift of this work of memory and coherence (thought), so a person will even *see* the ship rising or falling in his mind's eye. Compare with that easy question such a one as this: 'John is twice as old as Mary was when he was as old as Mary is. If John is

21, how old is Mary?' Conceptually the two questions are probably equally easy; but no image is readily forthcoming in the second to hold all the concepts and their relations together in the mind and make action between them easy. When that action is easy, the answer to the question is its outcome, or rather is the verbal expression of its outcome. The thought involved in answering the question is partly the memory work, partly the trying of the concepts and the memory additions together to see if they will not give the definite complex implied by the question.

Now, one is tempted to elaborate the point and to show the question groping for its answer, like the tentacles of an octopus searching in some dark cave for what is movable and appetizing. And the reader may feel impatient at the futility of trying to make the mind work like a machine. It is the self that thinks and searches, is it not? The self is the proper that searches and sees fitness and judges? It is the self that attends, at least, for sure? It is difficult to see how one self could do so many different things. We ought at least to have the case for the self put more convincingly before us than hitherto. This will doubtless be done, if it can be done. But this much may be said, that recent psychologists in general do not seem to find that line of construction the most hopeful at the present time. Of course, very much further study by experimental and systematic methods is required if the complex field of cognitive activities is to be fully understood.

III. *EMOTIVE ASPECTS.*—Thus far we have dealt with the sensory-cognitive range of experience. We have now to consider the emotive aspects of it.

1. *Integrative theory of feeling.*—One of the most familiar views of feeling is incorporated in the three-aspects theory, according to which every experience has three aspects—cognitive, emotive, conative; knowing, feeling, and will. Or these three are merely one and the same experience from different points of view. Now there can be no hesitation about rejecting this theory so far as concerns feeling. Feeling is not an aspect of every experience; it is an experience definitely distinguishable from every other. Nor does it even accompany every other kind of experience regularly. Any one familiar with the experimental practice of introspection knows that he is not constantly feeling pleasure or displeasure. In fact, he will have found that he is in a state of feeling rather seldom than otherwise. Whole complexes and trains of experience pass by without any feeling of pleasantness or of unpleasantness appearing. It is for this reason that the theory of feeling as an attribute of sensation has also been rejected.

The difficulty has been at all times to know where to place feeling. The attributive theory is the only attempt that has been made to give it a definite place in the sensory cognitive range. The older sensationalists tried to work it into their field as a definite sensation or by the device known as mental chemistry. In this a group of sensations was held to turn by combination into an experience that did not at all resemble sensation, just as the gases hydrogen and oxygen combine to form the very different liquid water. So feelings might really be groups of tactual or organic sensations and yet not appear as such. That theory has been rightly rejected by everybody and has wrongly created a prejudice against every inclination to gather ideas towards the elucidation of experience from such a science as chemistry.

But even in recent times an attempt has been made to show that feeling is psychologically a sensation. It has quality—pleasantness and un-

pleasantness—and intensity; and the two problematical attributes of extensity and 'localization' (supposed in this theory to be an attribute) can be made plausible with an effort; feeling is not located at the beautiful picture and in the beautiful sound, but it seems to be spread out in the head more or less indefinitely. If no sense-organ of feeling is known, at least we may suppose that one does exist. Only it would not appear on the periphery, but would probably be concealed within the peripheral sense-organs or within the central nervous system, revealing to us how these organs are being affected, whether as usual (pleasantly) or far away from the range of their normal functions (unpleasantly).

This theory of feeling-sensations has not found many supporters—not that it has been definitely proved to be wrong; but it is too supposititious and speculative. Something as plausible and more in accord with the psychical facts is imaginable.

We need not discuss the theory that looks upon feeling as an irreducible element of experience. This view is the natural outcome of many fruitless attempts to resolve feeling into sensations or the like. But it does not preclude renewed attempts at reduction in general, and in particular an integrative theory of feeling is still a possibility.

Titchener has attempted to carry this theory of feeling as an element to its logical conclusion—a psychological definition of feeling as characterized by a different set of attributes from that peculiar to sensation. His important point is that feeling lacks the attribute of clearness possessed by sensation. We shall not renew the discussion of clearness. What we may notice now specially is the subtle difficulty of positing elements of experience of which one possesses attributes that another lacks. Besides, in this talk of the non-clearness or unclearness of feeling and of the difficulty of observing feeling are we not looking for a mare's nest, as it were? Suppose motion were regarded as a specific experience by such a theorist as Titchener. What would he say about its quality and intensity? Would they be non-existent or non-clear? And would motion, then, have only two attributes of extensity and localization? Or would it also be said to lack clearness? Probably no one is ever in doubt as to whether he is pleased or not. Where, then, is the non-clearness? Nor is he in doubt about how pleased he is. Then, if all that and nothing else is clear, probably there is nothing else in feeling to be clear about. Feeling would then be very like motion, as it appears within an integrative theory. It is just motion (its quality, if you like), and it has magnitude—speed. So feeling has quality and magnitude—intensity.

The work of an integrative theory of feeling really begins when the double basis of feeling has to be shown up, and also the difference in the parts of that basis that integrates to form feeling. There are many lines of evidence that converge to support this theory and to make it at least probable as an advance beyond the more conservative theory of feeling as an irreducible element of experience. But their exposition is too long to be given here.

2. *Problem of the emotions.*—We may consider briefly the other great division of the emotive life—the emotions proper. The feelings are only slight movements of the soul, as it were; emotions are rolling waves and storms whose troubles reach far down into the deep waters. And the scientific problems of emotion are equally deep and agitated.

Even the enumeration of the emotions is by no means settled. Of course about the great emotions—fear, anger, and love—there is hardly a doubt. Questions are sometimes raised about the primacy

of love—the attempt may be made to attach it so closely to the sexual instinct as to endanger its dignity as an emotion—whereas there is no such introductory function of bodily origin for the emotions of fear and anger; they come upon us like the thunder-storms of summer.

This absence of a bodily preparation serves to distinguish the emotions from the instincts, which are concerned with the great functions of reproduction, nourishment, self-protection, and the like. But there are those who tack on special 'instincts' to the emotions in order to explain the typical and neurally inherited expressions of the emotions—e.g., fear and the instincts of flight and concealment, anger and the instinct of pugnacity.

Other disputed emotions are sorrow, pride, humility, parental emotion, disgust, curiosity, loneliness, etc. No one would dispute the presence of an emotive state in these affections. The question rather is: Are they primary emotions or are they variant forms of a few generic emotions that differ only in the objects to which they refer?

This *object* of emotions offers as many hard problems as does the object of cognition. Not only is it hard to see how emotion comes to be directed upon an object at all—on that rock the James-Lange theory of the emotions, e.g., foundered—but the peculiar individuality of the object is puzzling. Of the object of cognition we know at least that it only gradually emerges into clear view, and we can form plausible theories of the gradual emergence of a definite objective relation. But in emotion the object may appear suddenly upon the mental horizon without any sort of previous preparation, and lo! the emotion is directed upon it at once in full force. This peculiarity is found also among the instincts. Many insects seem to be born with a nervous system prepared specifically for attention to special objects. The physiological difficulty lies in the complicated process that seems required to account for the 'perception' of those special objects. Animals may 'recognize' their other sex by simple smell-impressions. But how should a wasp recognize a certain kind or size of caterpillar in that way? Hence even the possibility of innate ideas has been seriously considered to be re-admissible. But that way out of the difficulty seems to the writer intolerable in science.

Then, again, the emotions renew the psychophysical difficulty. They are held to be strange phases of the spirit, as strange and unaccountable as the sensations of red and yellow in their dependence on etheric wave-lengths. The feeling of fear is said to be an experience for which we cannot account by relating it to other experiences; it is a gift from the brain; something happens in some remote corner of that vast mechanism, some subtle neural congestion, and the colour of our mood is determined by it in accordance with unknown psycho-physical laws. This doctrine may be illustrated by an example from another region: we draw the hand away from heat because of the pain, so we think; that is an illusion; the real reason for drawing the hand away is neural mechanism; we should draw the hand away in just the same way if even pleasure were substituted for pain; and we should then think, as now, that we drew it away because of the pleasure of it.

The writer is firmly convinced that this is a doctrine disastrous to any form of psychological science and a mockery to the sense and coherence of the whole of experience. For, if it is a doctrine applicable anywhere—e.g., in the emotions—it is applicable everywhere. And then, as has been so often deduced, Shakespeare's work is the accidental product of a swarm of chance variations.

As well might one truly think that, if a fount of type were cast into the air often enough, it would come down one day as *King Lear*. These reminiscences of scientific speculation carry us back to a line of thought that is far from rare, although it was probably much more universal among biologists a decade or two ago than it is now. But, as far as the outlook upon pure psychology is concerned, it has changed very little. It means, after all, only that a coherent sphere of law has not yet been recognized in experience, and that the recognition of it as such has been made very much less likely by the success of the theory of chance variations in the neighbouring sphere of biology. It is pleasant to think that such an absurd doctrine has so often been rejected by the professed philosophers of the mind.

But we must not be content with vague 'spiritual' terms and generally 'ideal' expressions. We must carry over the methods and spirit of the natural sciences into the systematic, constructive work of psychology and show how purely psychical laws will yield us a satisfactory understanding of the world of spirit, just as purely material laws give us a satisfactory knowledge of the world of matter. The evolutions and actions of the material world can be worked by no agents or guides, so far as science is concerned at least. Of course, science is only the systematic mirroring of realities in cognition. Being other than what it pictures, it can hardly repeat the inner spontaneity and being that are the essence, as against the form, of its objects. Nor can psychical evolutions and actions be worked by spiritual agents or guides, so far as the science of mind is concerned. We can only hope to find general laws of mind or of psychical stuff and to explain particular psychical phenomena properly according to them, as the ways of science demand. Then we may let matter and mind come into cognitional harmony with one another, as they undoubtedly can and will, in due course.

And a psychology on these lines of construction is in no sense a descent to a lower level, an abandonment of higher ideals. It is rather a confidence and claim in the equal primacy of the sphere of experience as a basis for the derivation of laws alongside any other part of the scientific universe. We have every right to expect that the world of experience will be as amenable to the strict ways of science as the world of matter upon which it is, as we know it, dependent.

IV. *CONATION*.—The only other sphere of experience to be mentioned is conation. In so far as that is conation within experience, as in attending, remembering, thinking, and the like, the study of it is continuous with that sketched in the preceding pages. In so far as conation involves muscular movement, we enter upon a new region of special difficulty. Here psychology is still struggling with the barest facts and first principles, as the dearth of information on the topic in any of the textbooks indicates. The reader must simply be referred to special treatises on the subject.

The primary question is an introspective one: What precisely lies before the mind's observation in the case of voluntary movement? And how can we make a coherent, systematic whole of all the facts gathered by the experimental pursuit of this problem? One of the common earlier answers to the question has been disproved. We do not necessarily anticipate our voluntary movement in a mental image of it and will movement from that basis. But the true psychological formula of voluntary movement has still to be determined. The way to knowledge is probably blocked in this, as in other regions of experience, by the confused notions left from the wrecks of previous theories.

We may expect the right key to unlock the door quite easily.

The problem of conation makes possible a reference to the line of thought that distinguishes the content, or objective side, of an experience from its subjective side or the act of it. Those two sides can be distinguished in all experiences. So we have for the series of sensum, percept, concept a corresponding series of acts—sensation, perception, conception. This distinction carries us back again to the distinction of the objective aspect of experience from the self which acts experience or does it. It is in fact only a variant upon this theory. Ingenious attempts have been made to build up a science of these acts—sensing, perceiving, remembering, imagining, etc.—which deserve serious consideration. But the writer, at least, is not convinced of the validity of the results claimed or of the merits and necessity attributed to this line of construction. At the same time, he is aware that a psychology 'without a soul,' and still more without such a series of acts, may seem to many to be a wooden affair. It seems to him that the dispute is not one which as yet makes great difference to the detail work of psychology, and he inclines to think that the difficulty discussed is the appearance in psychology of the difficulty of substance and action, matter and energy, that runs throughout all the sciences of the real. Content and act are, then, rather inseparable aspects of one reality—the reality described statically by the titles of its distinguishable unities and dynamically by the titles of the chief interactions of its parts—rather than the waters of matter and the spirit that hovers over them to divide them hither and thither.

LITERATURE.—The following works will introduce the reader in detail to the methods, facts, and theories upon which this article is based: C. S. Myers, *A Text-book of Experimental Psychology, with Laboratory Exercises*, Cambridge, 1911; E. B. Titchener, *A Manual of Laboratory Practice*, 4 vols., London, 1901-06; G. M. HENRY J. WATT.

PSYCHO-THERAPEUTICS. — This is the name employed for the processes by which man attempts to influence disease by measures acting through the mind. It is a subject which brings out more prominently than any other the close relation which has existed throughout its whole history between medicine on the one hand and magic and religion on the other. The earliest modes of healing of which we know are psychotherapeutic, and, if the remedies of existing peoples of rude culture provide any indication of primitive modes of thought and action, psychotherapeutics would seem to be the oldest branch of medicine. A distinction must be made, however, between the use of measures for the cure or amelioration of disease which act through the mind and the recognition of their psychotherapeutic character. Though psychotherapeutics may have been the earliest form of medicine, it has been the last to be brought within the scope of scientific treatment, the last to undergo that process of rational-

ization and foundation upon scientific principles which is the essential feature distinguishing medicine from those social processes with which it has been closely allied throughout its history.

A study of the behaviour of savage man towards disease shows that it consists almost exclusively of measures which, when successful, must have acted through the mind, especially by means of faith and suggestion. A leech who treats a case of headache on the assumption that it has been caused by the magical actions of a sorcerer, and either performs counter-charms or induces the sorcerer to remove his spell, is evidently acting purely through these agencies. In other cases faith and suggestion only assist a process which acts in some other way. Thus, a leech who treats a case of constipation on the assumption that the trouble is due to the presence of a snake or octopus in the abdomen will produce a good effect by the mechanical action of manipulations designed to destroy the imaginary animal, but in such a case faith and suggestion also play a great part. In most of the cases in which leaves, bark, or roots are employed by lowly peoples to cure disease we can be confident that success is due purely to faith and suggestion. The history of pharmacology reveals a process, still far from complete, in which medicaments supposed to act upon disease have failed to justify their reputation when subjected to scientific study and have evidently owed their reputation for medicinal virtue to faith and suggestion. While faith and suggestion are processes inextricably interwoven with the employment of therapeutic measures from the earliest stages of medicine down to the present time, these agencies have taken many other and more direct forms. The modern explanation of miraculous cures given by those who rationalize religion is that they act through faith and suggestion, and the systems of healing which are continually coming into existence in opposition to the orthodox medicine of modern civilized peoples owe their success largely, if not entirely, to the power and efficacy of these agencies. The large measure of success which these movements obtain in popular opinion is due to their exploitation, wittingly or unwittingly, of processes which orthodox medicine has failed adequately to recognize.

1. *Scope.*—It is often supposed that psycho-therapeutics, whether belonging to orthodox medicine or to some form of faith-healing, is especially applicable in cases of hysteria or similar diseases. There is, however, hardly a variety of disease for which this mode of treatment may not be useful. It is customary in medicine to distinguish between organic and functional disease, though these are, in fact, merely categories convenient for practical purposes, which pass insensibly into one another and are difficult to define. Roughly, by functional disease is meant disease for which existing knowledge does not allow us to assign any structural or chemical basis, which has been found by experience to tend towards recovery. There are other diseases, such as so-called idiopathic epilepsy, of the physical basis of which we are ignorant, which are characterized by a tendency towards permanent loss of function and death, and these diseases are not usually included in the functional category. Organic diseases, on the other hand, are those whose structural or chemical basis has been discovered. They again fall into two main groups: those which tend towards recovery and those which tend towards loss of function and death. In addition many mixed forms occur. Nothing is more frequent than the occurrence of functional disturbance as an accompaniment of organic disease, the real nature of which it often conceals or obscures.

It is in the treatment of functional disease and of the functional accompaniments of organic disease that psycho-therapeutic measures are most obviously applicable, but the scope of their usefulness is far from being limited to these. When it is claimed that some psycho-therapeutic measure, employed by physician or priest, has cured a case of organic disease, it will often be found that all that has been done is to remove the functional disorders which so often accompany organic disease. Psycho-therapeutic agencies can certainly influence organic conditions themselves, though the investigation of cases like these is attended by such difficulties that the mode of action is still surrounded by much doubt. We know that suggestion, especially in the form of hypnotism, can produce changes in organic processes and especially in the circulation. If such an organic change as a blister can be produced by suggestion, it is easy to understand how other organic changes can be ameliorated or removed by similar means.

A more frequent cause of the success of psycho-therapeutic measures in organic disease depends on the fact that many forms of progressive organic disease—even so grave an illness as cancer—are liable to periods of retardation or quiescence. Disease usually depends on a struggle between some noxious agent which has found its way into the body and the mechanism of the body itself. Progressive disease is that in which the external agents have the upper hand in this struggle. Any factor which raises the efficiency of the intrinsic forces, or, in other words, which reinforces the vitality of the patient, may diminish the ravages of the destroying agent and lead to retardation or quiescence of the disease; or may even in some cases turn the balance in the direction of recovery. It is thus intelligible that psycho-therapeutic measures should be capable of the beneficial action upon organic disease so often imputed to them by leech or priest, quite apart from the mere removal of functional complications. The scope of psycho-therapy is therefore as wide as medicine itself. It is especially applicable, however, in those states which depend on diminished efficiency of the nervous system and are classified together as neuroses.

2. *Basis.*—Certain principles are now widely recognized as of universal application in the domain of therapeutics, while others have been put forward to support special systems.

One widely-accepted principle is that psychical disorders and bodily disorders due to psychical conditions require psychical remedies. There are, of course, limits to the application of this principle. The influence of abnormal bodily conditions upon psychical states stands beyond all doubt. If there are morbid states of the body which are capable of being treated by physical means, it is essential that they shall be put right as a preliminary or accessory to the employment of psychical measures. In many cases, however, it is far from easy to estimate the need for the two kinds of treatment. Thus, there is no doubt that the retention in the body of waste products consequent upon constipation influences mental states, but in many cases the constipation itself is largely or altogether due to psychical conditions. As in every other branch of medicine, the essential preliminary to successful psycho-therapy is a correct diagnosis. When we have estimated correctly the relative shares taken by bodily and mental conditions in the production of an illness, there will be no difficulty in deciding how far the patient is to be treated by measures acting through the body and measures acting through the mind respectively.

A second principle which is now coming to be widely accepted is that in disorders of the mind or

affections of the body due to mental conditions it is necessary to discover the causes by which this morbid state has been produced. The history of medicine has been one of gradual progress from the treatment of symptoms to the treatment of the conditions by which symptoms are produced. In this progress the treatment of disorders of the mind has lagged far behind that of bodily disease. There are many practitioners of medicine who, although fully recognizing the importance of aetiology in bodily disease, fail to recognize that it applies equally to the mind, and they continue to treat symptoms as they arise or practise a purely empirical system of therapeutics.

To those who accept the two principles which have just been considered, every case of mental disorder or of bodily disorder consequent upon mental conditions is the outcome of the mental life-history of the patient, and the conditions to which it is due can be discovered only by the investigation of that history.

A third principle, now widely accepted by workers who otherwise differ greatly from one another, is that mental disease is predominantly due to disturbance of the emotional and instinctive aspects of the mind. It is believed that in the search for the conditions which have produced an abnormal mental state it is necessary to get back to experience which has been associated with a strong emotional tone, and it need hardly be said that either this emotional tone must have been of an unpleasant kind in itself or the unpleasantness must have arisen out of consequences which the experience has brought in its train.

Closely associated with this view is that according to which the intellectual disturbance in a case of mental disease depends on a process of rationalization through which the patient endeavours to account to himself for his morbid emotional condition. The direction taken by this process of rationalization is often such as leads to the formation of those beliefs at variance with reality which we call delusions.

A principle which actuates more than one system of psycho-therapeutics, but is still far from meeting with general acceptance, is that mental disorder is predominantly due to experience which has passed out of manifest consciousness. It is customary to speak of the body of experience which does not enter into manifest consciousness as the unconscious mind which shades off into manifest consciousness through an intermediate region of subconscientness.

Putting aside the largely verbal question whether this body of apparently forgotten experience is or is not to be regarded as forming part of the mind,¹ we are met with the far more vital problem concerned with the distinction between experience which is merely lying dormant, ready to appear in manifest consciousness whenever the suitable stimulus arises, and experience which has come to stand in that relation to manifest consciousness which is known as dissociation. A dissociated body of experience is one which has been separated from the body of experience making up manifest consciousness through some kind of active process—a process resembling in many respects that known as inhibition in neurology. Such dissociated experience is not recalled even by otherwise suitable stimuli in normal mental conditions, but requires abnormal or at least unusual conditions to bring it to the surface. A good example of such a dissociated mental state is that which occurs in the deeper stages of hypnotism. One of the most vexed problems of psycho-therapeutics turns on the question how far such dissociated bodies of experience, when accompanied

by an unpleasant tone of feeling, act as the basis of bodily and mental disorder. One theory of the rôle taken by such unconscious experience in the production of mental disorder which is now especially prominent is that of Freud.

Freud's theory of the unconscious.—From the point of view which concerns psycho-therapeutics, the most important part of Freud's system is his theory of forgetting. According to Freud, forgetting is not a passive process, but one which, at any rate in so far as unpleasant experience is concerned, depends on an active process of repression. It is held that unpleasant experience which has passed out of memory to such an extent that it does not enter into the manifest consciousness of everyday life has not ceased to exist, but continues to exert an influence upon the mind. It may express itself more or less continuously in the form of a phobia, a tic, stammering, dreams, etc., or, after a long period of quiescence, it may show itself under the influence of some shock or strain as a paralysis, contracture, affection of sensibility, or some form of mental disturbance. The disturbance, whatever may be its nature, is held to be the result of a conflict between a suppressed body of experience, now generally known as a 'complex,' and the general personality of the patient.

Freud has not been content merely to ascribe abnormal bodily and mental conditions to such conflict, but has put forward an elaborate theory of the mechanism by which the suppressed experience or complex produces its effects. He supposes that its modes of expression are governed by a mechanism of control which, using a metaphorical simile, he terms the 'censor.' This censorship allows the suppressed body of experience to find its way to manifest consciousness only in some indirect and often symbolic manner.

Two special features of the psychology upon which the Freudian system of therapeutics is based may be considered here: (a) the importance of the experience of childhood and (b) the rôle of sexuality in the production of morbid mental states.

(a) According to the earlier views of Freud, the suppressed experience of childhood forms the chief factor underlying morbid mental states, whether these express themselves explicitly in the form of mental symptoms or as paralyses, contractures, or other bodily affections. These states, he argues, depend on complexes dating back to early childhood, or even, in the more grotesque forms of the theory, to parturition or ante-natal experience. Freud has himself acknowledged the unsatisfactory character of much of the evidence upon which he originally based his belief in the importance of the experience of early childhood. The trend of modern work has been to accentuate the importance of recent traumata in the production of morbid mental states and to make of less account the experience of early life. This movement should not be allowed, however, to go too far and obscure the great extent to which early experience is responsible for the phobias, tics, and tendencies to morbid modes of thought, and still more of feeling, which form so fertile a soil for the growth of morbid mental states in later life.

(b) Another principle of the Freudian psychology which has led to much controversy, and has through the exaggeration of its importance gone far to wreck the immediate success of the whole construction, is concerned with the rôle of the sexual in the production of morbid mental states. Freud has come to the conclusion that the bodies of suppressed experience which he believes to underlie mental disorder invariably centre in incidents of the sexual life. So far as he himself is concerned, the form thus taken by his psychology of the morbid rests largely on an extension of the

¹ Cf. *Lancet*, 16th June 1917.

connotation of the term 'sexual' far beyond the customary, but, in the hands of his disciples and to a large extent in his own, the theory has come to deal almost exclusively with crude sexual experience, morbid mental states being ascribed to the working of repressed sexual trends and especially of perverse tendencies. There is no question that disorder of the sexual life, especially when its nature leads to repression, takes a vast part in the causation of mental disorder and of functional affections of the nervous system. It can also be granted that Freud and his followers have made definite advances in our knowledge of the sexual life, but, following the ordinary lines of scientific progress, the importance of the sexual has been so exaggerated by its advocates that it has produced a wide-spread failure to recognize the undoubted merits of the Freudian psychology and of the system of psycho-therapeutics founded upon it.

When regarded dispassionately, Freud's theory is only an extension and systematization of a principle, now widely accepted, that mental disorder, in the broadest sense, is not merely the result of the shock or strain which seems to be its immediate cause, but is the outcome of life-long processes by which the mental life has failed to adapt itself to its social environment. Every case of mental disorder is the product of two factors—a shock or strain, on the one hand, and the body of experience making up the mental constitution of the patient, on the other hand. The main principle upon which any system of psycho-therapeutics must be based is that this mental constitution must be studied and analyzed so as to discover the elements of weakness which have allowed the shock or strain to produce a morbid effect. The great merit of Freud's theory is that it provides a scheme of mental structure which, though it will doubtless have to be greatly modified, yet furnishes a most useful hypothesis from which to start in the study of mental disorder and of the measures by which its effects may be combated.

3. Psycho-therapeutic agencies.—The measures employed by those who practise psycho-therapeutics, whether they be leeches, sorcerers, or priests, depend on belief in certain agencies, though, as a matter of fact, the vast majority of practitioners employ their remedies without definitely formulating to themselves, or even without being at all aware of, the nature of these agencies; or, if the practitioner has definite notions concerning the mode of action of his measures, the agencies upon which his success really depends are often different from those in which he places his trust. The chief agencies upon which psycho-therapeutic measures are based are supernatural agency, direct human agency, faith and suggestion, and three agencies of especial importance which may be called catharsis, autognosis, and sublimation, while more subsidiary rôles fall to reasoning, sympathy, and occupation.

(a) *Supernatural agency.*—The belief that supernatural beings are able to act upon disease is common to nearly all, if not all, the religions of the world. Everywhere man believes, or has believed, that beings with powers superior to his own can be induced to influence the course of disease if they are approached by suitable rites. This belief applies not only to beings who can be regarded as gods, but also to the spirits or ghosts of the dead, and especially of dead ancestors, the cult of which forms the essential element in the religious systems of most of the peoples of the earth. In the ruder forms of religion the efficacy of the rites which make up the cults of the gods, the ancestral ghosts, or other spiritual agents is universally ascribed to the direct action of these

beings upon disease, but in the more developed forms of religion it is recognized more or less explicitly that the supernatural being works through some natural agency, such as faith. The modern belief that supernatural agents do not directly influence the course of disease depends on the wider belief in the universality of natural causation which is the foundation of science. This belief is supported by the experience that the more closely we examine cases in which the cure of disease is ascribed to supernatural intervention, the smaller becomes the residue which cannot be ascribed to some category of natural causation. The more highly developed the religion, the more do its leaders themselves adopt the theory of natural causation and ascribe successful results of their rites to the working of faith and suggestion.

(b) *Human agency.*—There is a wide-spread belief among the peoples of the earth that human beings are able to cure disease by their own powers. This is usually associated with the belief in the production of disease by magical rites, manual and verbal. In such cases the cure is effected either by inducing the sorcerer to remove his spell or by employing some other human agent, believed to be more powerful than the sorcerer, to counteract the spell or avert its consequences. In many of these cases the belief attaches in large measure to the objects or words which are used in the curative rites, and it is probable that the powers ascribed to these objects and words can often be traced back to a belief in divine or ghostly agency. It is certain, however, that efficacy is largely ascribed to the personality of the sorcerer. Some degree of confusion between personality and measures runs through the whole history of medicine. Even at the present time, and in the most civilized communities, the efficacy of therapeutic measures and of religious rites in connexion with disease is largely ascribed by the less educated members of the community to the personality of the physician or priest. Here, even more clearly than in the case of supernatural agency, the trend of modern opinion is to ascribe the efficacy of personality to the action of faith and suggestion.

(c) *Faith and suggestion.*—In modern writings on therapeutics and allied subjects it is not customary to distinguish between faith and suggestion, or, if they are distinguished, faith is regarded as a form of suggestion or is held to act through suggestion. This attitude is the result of a tendency to make the scope of suggestion so wide as to include nearly every process by which one mind is acted upon by another mind, by an object of the environment, or even by itself (auto-suggestion). When it is said that faith acts through suggestion, it is meant that through the process of belief, which is the main element in faith, a deity, person, or object produces a certain effect upon the mind which is classified with other effects ascribed to suggestion. Belief is an active and conative process, differing fundamentally from the condition of passive receptiveness which is the essential feature of the cases for which the concept of suggestion was originally framed. Though the two processes are poles apart psychologically, they are often combined. Suggestion often produces its effects through faith, but this is very different from explaining faith by suggestion. We could just as well, or perhaps with more justice, say that suggestion is explained by faith. The fact is that they are two distinct processes, differing essentially from one another in psychological character and producing their effects in very different ways.

Both faith and suggestion are of the greatest importance in psycho-therapeutics. It is undoubtedly to them that the remedies employed by savage and barbarous peoples owe their efficacy,

and they continue to be operative in the most modern forms of medicine where the confidence of the patient in his physician is generally acknowledged to be the first and most important step towards therapeutic success. Throughout the whole history of medicine from the stage of its close association with magic or religion to its full emergence as an independent social institution, the personality of the healer has been of predominant importance. It is through faith in this personality and its influence in directing the process of suggestion that therapeutical measures attain a large proportion of their success.

The influence of faith and suggestion pervades the whole system of treatment of the sick. Not a dose of medicine, not even a measure of diagnosis, can be used without bringing them into action. Their effect often begins even before the physician has seen his patient, and usually they are the more efficacious the more unwittingly they are employed. There are many practitioners of medicine, among both savage and civilized peoples, whose measures would lose most of their efficacy if they realized the true mode of action of the remedies in which they have so profound a faith. Here, as in so many branches of social life, it is half-measures that are especially likely to fail. A physician who understands the real nature of psycho-therapeutic activity and one who is wholly ignorant in this respect will succeed. The unsuccessful practitioner will be one who knows enough to destroy his faith in his medicaments and diatetic remedies without having acquired a sound knowledge of the processes upon which the success of these remedies so largely depends.

(d) *Catharsis*.—The two factors, faith and suggestion, run as manifold threads throughout the whole texture of psycho-therapeutics. They are of special importance where the mind is intact or where, more correctly, the mental disorder shows itself by some physical manifestation rather than in some overt disorder of the mind itself. The agency now to be considered is of especial importance where disorder of the mind is due to some mental injury which produces a condition of anxiety. Catharsis is the most important psycho-therapeutic agent in the process of confession, whether this form part of a religious rite or of a manifestly medical procedure. The process relieves a condition of mental tension produced by some trouble which gives cause for anxiety, grief, or other emotional state associated with an unpleasant feeling-tone. In cases where a person has nothing with which to reproach himself the relief produced by communication with others is well recognized. Where the grief due to pent-up trouble is combined with shame the relief is even greater, though the obstacles to the employment of this means of relief are greater.

The term 'catharsis' should properly be limited to the agency by which a pent-up grief, anxiety, or shame is relieved by the process of confession and that in which a mental conflict is resolved by measures which bring to manifest consciousness some element of suppressed experience.

(e) *Autognosis*.—Another most important element, both in confession and in the revival of forgotten experience, is that the subject learns the better to know himself. An important factor in the production of mental disorder, still more important in keeping it in being when it has already been produced, is that the patient fails to understand his condition. His whole disorder is enveloped by a sense of mystery which greatly accentuates the emotional state upon which his troubles primarily depend. The process by which the patient learns to understand the real state of his mind and the conditions by which this state

has been produced forms a very important therapeutic agency which may be called 'autognosis.'¹

Autognosis as a therapeutic agency includes a large number of processes. Owing to the ignorance of the elements of physiology and psychology which is general even in the most highly civilized communities, persons suffering from mental and functional nervous symptoms often wholly mis-understand, or vastly misrate the importance of any unusual mental or bodily experience. Thus the more or less normal hallucinations of the state between sleeping and waking (hypnagogic hallucinations) may give rise to apprehensions of approaching insanity, or normal physiological occurrences may be regarded as symptoms of serious disease—a misconception often greatly assisted by the teaching of quacks or ill-educated medical practitioners. In such cases the process of autognosis consists in imparting elementary knowledge for which the patient should not have waited until he has become the subject of some mental stress.

Another value of autognosis depends on the wholly mistaken estimate of the gravity of offences against morality which frequently accompany states of mental disorder. It is noteworthy that those who suffer in this way are not habitual offenders, who seem to pass as a rule through periods of mental stress without suffering. The persons whose neurasthenic or melancholic state centres in some old moral delinquency are usually persons of undue sensitiveness who may perhaps have only once lapsed from virtue, or may have been only innocent partners in, or even mere spectators of, some immoral act; sometimes they have offended only in thought and not in deed. It is in such cases that the process of autognosis is especially valuable, though to have a fair chance of success it should be employed in the early stages of the malady before the condition of anxiety has become habitual and some unnatural explanation has been systematized to form a delusion. Old injuries of this kind usually produce their effect after some strain and stress which lower vitality and produce disorder of various bodily processes. The awakening of the old mental injury only serves to aggravate and perpetuate this state, thus producing a vicious circle in which the trauma brought to the surface by a pathological condition accentuates the condition by which it has been produced. By the process of autognosis this vicious circle may be broken or weakened and an opportunity given for a movement towards recovery.

Of greater interest and of more importance is the process by which the patient is led to understand how his disorder has developed. Many mental disorders are only exaggerations of tendencies towards modes of feeling, thought, and action which go far back into the life-history of the sufferer. If he can be led to see where he has strayed from normal paths and can learn to know the factors to which this straying has been due, a long step will have been taken towards recovery. If the patient learns that his disease is only the expression of an exaggeration of a wide-spread trend of feeling, thought, or action, his condition will no longer appear mysterious, terrifying, or horrible, but will assume proportions which can be faced rationally and dispassionately.

The instances of autognosis just considered are examples in which mental conditions underlying pathological states are present in a manifest form. One of the leading problems of psycho-therapeutics at the present time is to discover how far the process of autognosis can be extended to include past experience which has wholly disappeared from the conscious mental life. It stands beyond

¹ The present writer owes this term to Dr. William Brown.

all doubt that past experience which has taken so little part in the conscious mental life of a person that it seems to be wholly forgotten may reappear in consciousness during the state of anxiety following some period of physical and mental strain. Moreover, this experience, supposed to have been forgotten, may come to dominate consciousness so as to dwarf all other mental content. All gradations occur between cases in which the memory of an unpleasant experience has never long been out of consciousness and experience which has been so nearly forgotten that the patient may not remember its coming to consciousness, perhaps for years before the period of stress which again brings it to the surface. The doubtful point is whether this series can be extended to include past experience which has so wholly passed from consciousness that it can be brought to the surface only by special means, such as hypnotism, or by the process called psycho-analysis.

(f) *Sublimation*.—Of the agencies common to the work of physician, priest, and teacher none is more important than that to which the name 'sublimation' has been given. The process of autognosis often shows the presence of some faulty trend of thought and action which is capable of being turned into a more healthy channel. Many nervous and mental disorders depend, at any rate in part, on tendencies which are altogether anti-social, or, while suitable to one kind of civilization, are out of place in the society into which the sufferer has been born. In such a case sublimation furnishes an alternative to satisfaction or repression.

One of the chief directions which may be taken by the process of sublimation is towards religion. The specific group of sentiments and emotions which make up the psychological basis of religion can often be substituted for those associated with the anti-social trend. Less frequently the sentiments and emotions associated with art can be utilized, or the morbid energy may be directed into some other channel of activity. The great importance of religion in the process of sublimation, and in the whole field of psycho-therapeutics, is that it is able to satisfy both emotional and practical needs, its specific emotions satisfying one kind of need while its many practical activities satisfy others. An additional value which attaches to religion as a means of sublimating morbid energies is due to the fact that in their historical development modern religious systems have brought religion and moral teaching into close relation with one another, so that a definite system of beliefs opposed to various anti-social trends serves to rationalize and fortify the process of sublimation. The relative failure of art, as compared with religion, in the process of sublimation is largely due to the absence of any such association between its specific emotion and moral teaching, most followers of art explicitly denying the connexion with morality which forms so definite a part of modern systems of religion.

(g) *Reason*.—One of the most difficult problems of psycho-therapeutics is to assign its proper place to reason as a therapeutic agency. It is a universal experience of those who have to deal with the insane that it is useless to attempt to reason a patient out of his delusions, and this holds good also to a large extent of the obsessions and hypochondriac fancies which are so frequent a feature of the broad borderland between sanity and insanity. By such reasoning the sufferer is often driven to adopt the rôle of an advocate, so that the only result may be the strengthening of his delusion or fancy. Where reasoning does good, it is often only through the influence of faith and suggestion, in which case the reasons given by the physician

or priest only reinforce processes of other kinds which act through emotional or instinctive channels. While reason is thus of little direct use, and may even be harmful, it forms a most important element in other psycho-therapeutic agencies, and especially in autognosis. Once the true emotional cause of a morbid state has been discovered and explained to the patient, the exercise of his own reason comes to form an essential element in his amendment or recovery. There is all the difference in the world between the use of reason by one who does not understand the real underlying conditions of the malady and reason exerted when these conditions have been discovered and are themselves the material from which the reasoning starts and upon which it acts. As with other therapeutic agencies reason is useless or harmful only when it is employed in ignorance of the real nature of the morbid state upon which the physician or priest is acting. Here, as in other branches of medicine, the proper use of the remedy depends on the exactness of the diagnosis.

(h) *Sympathy*.—The nature of the action of sympathy in psycho-therapeutics raises a problem of considerable difficulty. The sympathy of the physician is essential in gaining the confidence of his patient and is thus an important element in psycho-therapeutics, but, unless very judiciously expressed, sympathy will have a bad effect. It has long been recognized that removal from his or her ordinary surroundings is in most cases essential if a neurasthenic or hysterical patient is to have the best chance of recovery. One very important reason for this is the necessity of removal from the almost invariably injudicious sympathy of relatives and friends by which the attention of the patient towards his symptoms is accentuated. The physician himself should always be on his guard lest an excess of sympathy should increase the attitude of self-regard which is one of the main characteristics of many forms of neurosis. Cases are frequent in which at one stage or another it may be useful to act towards a patient in an apparently unsympathetic manner. In so far as sympathy can be regarded as a direct therapeutic agent, it is as capable of harm as of good. It is in paving the way towards the employment of other agencies that its importance in psycho-therapeutics is most definitely shown.

(i) *Occupation*.—In some systems of psycho-therapeutics work has been put in a foremost place. It has been held that the chief need in cases of neurosis is that the mind should be occupied in work of a kind which will direct the attention of the patient away from the morbid activities of his mind and body.

Since a prominent feature of many cases is abnormal preoccupation in some unhealthy trend of thought and feeling, such a course would seem at first sight to be sound, if not obvious. In practice, however, the will to work is present perhaps in excess among persons suffering from neurasthenia or other states which call for psychical treatment, while in a still larger number there is such a lack of interest or such bodily or mental weakness as to make the effort to work even harmful. In such cases it is necessary to restrain rather than encourage activity. In most cases, however, there comes a stage at which the patient is in danger of acquiring a habit of inactivity, and occupation then becomes a most important therapeutic agent. In other cases in which the process of autognosis shows the presence of sloth or mis-directed energy the regulation of occupation becomes of the utmost importance in psycho-therapeutics.

4. *Psycho-therapeutic measures*.—The lines of treatment adopted by one who practises psycho-

therapeutics will depend on his beliefs concerning the nature of the agencies by which disease is produced and cured. If he believes in the efficiency of superhuman agency, his treatment will consist of religious rites of prayer, sacrifice, and propitiation, together in many cases with other rites, such as those of purification, confession, penance, and atonement, designed to put both patient and priest in a proper relation towards the superhuman being whose help is being sought. By some Churches these various rites have been combined so as to form organized systems in which large numbers of the sick undertake pilgrimages to places believed to have miraculous efficacy in the cure of disease.

Similarly, if one believes in human agency as the cause of disease and the means for its removal, either he will adopt measures designed to propitiate the person by whom the disease is believed to have been produced or he will employ, or induce others to employ, measures designed to neutralize those of the sorcerer to whose actions the disease is ascribed.

If the physician believes in suggestion, he will employ this agency wittingly in one of its many forms. If he believes in the value of autognosis, his treatment will consist chiefly in measures designed to bring the patient to a sound knowledge of himself and of the conditions by which his disease has been produced and can be remedied. If he believes in occupation, he will set the patient to tasks designed to turn the morbidly directed energy into this channel.

The discussion of psycho-therapeutic agencies in the preceding section will have pointed the way to other modes of treatment, but a few measures may be more fully considered.

(a) *Hypnotism*.—It is now generally accepted that hypnotism as a therapeutic measure is only a mode of utilizing suggestion, the chief feature of the hypnotic state being a condition of heightened suggestibility. Closely allied to hypnotism is the condition, known as hypnoidal suggestion, in which a patient is placed under conditions especially designed to enhance his receptiveness for the influence of suggestion.

A prominent characteristic of hypnotism is the production of a state of dissociation, so that, on coming out of the state, the patient has no conscious recollection of any suggestions which may have been made or of any other events which have occurred during the hypnotic state. Nevertheless the suggestions will act in the manner intended by the hypnotizer, and other events may be recalled when the patient is again hypnotized or may revive in dreams or under other conditions. In the state of hypnoidal suggestion there may also be some degree of dissociation, but the patient, at any rate in its slighter degrees, is aware of the suggestions and other experience.

Perhaps the most debated question of psycho-therapeutics is how far it is legitimate to practise hypnotism and hypnoidal suggestion. The physician who recognizes that every word that he utters may carry a suggestion will naturally utilize this agency as much as possible. The question which is disputed is how far it is legitimate to accentuate the influence of suggestion by the production of the dissociation which characterizes the hypnotic state, or to give suggestions to the patient in such a way that he is led to believe that some force with an element of mystery is being employed. One of the points on which the question turns is how far hypnotism produces a harmful effect. It is generally acknowledged that a person who has once been hypnotized can be more easily hypnotized a second time, not only by the original hypnotizer, but also by others if a definite counter-suggestion has not been given. This definite

change in the character of a person can hardly be altogether for the good, to say the least. Moreover, it often happens that a definite craving to be hypnotized is set up, though it is claimed by advocates of hypnotism that this happens only when the agency is employed unskillfully. Since, however, we can be confident that, if hypnotism became a regular part of medical practice, it would often be employed unskillfully, a vista of possibilities is opened which it is not pleasant to contemplate.

These arguments are especially directed against the habitual employment of hypnotism as a remedy for minor ailments or for ailments which experience has shown to be amenable to other measures. There are certain conditions, however, long the despair of medicine, for which the success of hypnotism is undeniable. Such conditions include dipsomania, morphinomania, and other forms of drug-habit, as well as certain forms of sexual aberration. These states, being desperate, may require desperate remedies, and, when they have failed to react to other modes of treatment, it would be difficult for the most strenuous opponent of hypnotism to deny its use. A more doubtful category is that of cases of functional disease due to shock such as have been so frequent in the great European war. There is no question that symptoms can be removed, sometimes by a single hypnotic treatment. It may be argued, on the one hand, that experience has shown that these cases tend to recover quickly by other means. On the other hand, it may be argued that the cases, having been produced by a sudden shock quite foreign to the experience of everyday life, should be treated by some equally drastic remedy. We do not know enough at present of the history of such cases to allow any decisive answer concerning this problem. We must await the investigation of the after-history of the many cases in which hypnotism has been employed during the war.

The chief objection to the employment of hypnotism is not, however, its possible harmfulness or the dangers of unskillful application, but rests on the fact that the use of suggestion and hypnotism ignores a fundamental principle of medicine in that these agencies are directed towards the symptoms of disease and do not touch the morbid process to which the symptoms are ultimately due. The action of a physician who hypnotizes for headache and sleeplessness is to be classed with that of the practitioner who administers aspirin or morphia for these symptoms without inquiring into the conditions by which the headaches and sleeplessness are being produced. Both actions are examples of a slipshod and short-sighted employment of therapeutic agencies. The most recent systems of psycho-therapeutics hold that in the treatment of mental disorder, as in other branches of medicine, it is our duty to discover causes and to remove or amend symptoms by discovering and attacking the deeper and less obvious states upon which the symptoms depend. Hypnotism may be used to discover causes and may thus be an instrument in autognosis, but, as more usually employed, it merely touches the surface and ignores, or may even obstruct, inquiry by which the real nature of the malady may be revealed.

(b) *Psycho-analysis*.—This word has been very unfortunately chosen, for every physician who endeavours to discover the conditions which have produced an abnormal mental state must of necessity carry out a process of psychical analysis. The term is so widely used, however, for the system initiated by Freud that its use can hardly be avoided. By psycho-analysis is meant primarily the process by which the physician discovers the 'complex' or body of forgotten experience which

is believed to underlie abnormal mental states or abnormal bodily states ascribed to mental conditions. The word applies primarily to the method of diagnosis by which the conditions underlying a morbid mental condition are discovered. Since, according to the earlier ideas of the Freudian school, the diagnosis is itself sufficient to bring about a cure, its use included also a system of therapeutics. According to Freud, a complex cannot be discovered by the ordinary methods of introspection, but expresses itself in dreams, in such abnormalities of conduct as forgetting, slips of the tongue or pen, and apparently meaningless acts. The investigation of these processes forms one of the chief departments of psycho-analysis.

In addition to these more or less indirect means of analysis, two other methods have been widely employed. In one, known as the method of free association, the patient has to express freely every thought that comes into his mind in response to an idea suggested by his symptoms. In another method, which is due especially to Jung, the patient is given a number of words in succession and is asked to express as rapidly as possible the ideas that each word calls up in his mind. It is found that there is a delay, or even total failure to respond, if the given word arouses ideas in close relation with the complex; and, if a series of words is repeated, the responses on the second occasion will not agree with those of the first when the words have aroused the complex. In the method of free association the patient is put into as tranquil a state as possible and the experience succeeds the better the more the condition approaches a minor degree of the hypnotic state, in which thoughts aroused by immediate association are controlled as little as possible by volition.

The method of closed association with reaction-time has a far narrower scope and is chiefly useful in providing clues for other lines of analysis. If employed without full knowledge of its purpose on the part of the patient, it savours too much of the methods of the detective and may do harm by interfering with the state of confidence between physician and patient which is the first condition of success in psycho-therapeutics.

(c) *Re-education*.—This term is used for the body of measures which the physician employs as the result of the processes by which he has led his patient to a knowledge of himself and of the conditions which have produced his morbid state. In rare cases a patient may be so intelligent and balanced that the mere acquirement of such knowledge may itself be sufficient to enable him to shake off his morbid symptoms and set him on the path leading to a healthy mental life. This holds good, not only when the experience which he has come to understand belongs to his fully conscious mental life, but also, and perhaps still more conspicuously, in those cases in which the process of psycho-analysis has brought to light some long-forgotten experience. In most cases, however, the full therapeutic value of autognosis is brought out only through a process of re-education in which the patient is led to understand how his newly acquired knowledge of himself can be utilized. He has to be shown how to readjust his life in the light of his new knowledge and how to turn energy, hitherto morbidly directed, into more healthy channels.

The processes which have been considered in this article under the headings of autognosis and re-education are as applicable to moral defects as to those more usually held to lie within the sphere of medicine. Recent movements in psycho-therapeutics go far to bridge the gulf between medicine and moral teaching and will help us to co-ordinate and reduce to common principles the work of the

physician, the teacher, the social reformer, and the priest. It is the prospect that principles of action and modes of inquiry discovered by any one of these may be helpful to the others that makes these movements so full of promise. Some of the modern measures of the physician are little more than his adoption of modes of treatment which have long been familiar, in the form of confession, to the priest. While the physician may learn much from the long accumulated experience of the priest, the priest may in his turn be helped by such a study of the psychology of confession as his special knowledge and experience allow the physician to undertake. Moreover, the experience of both priest and physician may be utilized by those who have to do with mental and moral training or with the amendment of faulty moral tendencies which have led to the commission of crime. Using the term in the widest sense, psycho-therapeutics may furnish a body of organized knowledge which can be utilized by all those who are interested in the regulation and improvement of social conditions.

The great interest of modern trends in psycho-therapeutics is that at this late stage of social evolution they seem to be again bringing religion and medicine into that intimate relation to one another which existed in their early history. We have here a typical case of social evolution in which social processes once so closely combined as to be with difficulty distinguished from one another have followed widely divergent paths only to meet again as each has come to spread its branches widely over the whole field of social activity.

PUBERTY.—Puberty is the period of life at which reproductive power is attained. Its commencement is marked by certain external signs,¹ and it is characterized by certain changes, structural and organic, intellectual, emotional, and moral.² The age at which it is reached varies considerably in the case of both sexes;³ and these variations occur not only in different races but in different individuals of the same race.⁴

I. INITIATION AND PUBERTY.—It is a familiar feature of uncivilized societies that those of their members who are of the same sex, age, or occupa-

¹ Of these the most marked are, in females, enlargement of the breasts, the growth of hair on the pubes and axillae, and the menstrual flow; and, in males, the breaking of the voice, and the growth of hair on the axillae, pubes, and face.

² As to the changes and the disorders of mind and body to which puberty has special relation, see art. **ADOLESCENCE** and authorities therein cited. See also A. E. Crawley, *The Mystic Rose*, London, 1902, p. 198.

³ A. van Gennep, *Les Rites de passage*, p. 95 ff. These variations are due to many causes, among which may be reckoned race, climate, diet, housing, clothing, occupation, temperament, mode of life, and state of health (ff. Ploss and M. Bartels, *Das Weib in der Natur und Völkerkunde*¹⁰, I, 421 ff.).

⁴ Thus, in Egypt, the average age at which menstruation begins is, according to one authority, 9–10 years, according to another 10–13 years, while, among the Somali, it is 16 years. For 684 women of Tokyo the figures were: at 11 years, 2; at 12 years, 2; at 13 years, 26; at 14 years, 78; at 15 years, 224; at 16 years, 228; at 17 years, 68; at 18 years, 44; at 19 years, 10; at 20 years, 2 (Ploss and Bartels, I, 432 ff.; van Gennep, p. 95).

tion, or who have been participants in the same rite at the same time, or who are affected by interests common to all of them, tend to form themselves into subordinate social groups, membership of which confers special rights, imposes special duties, secures special privileges, and exposes to special supernatural influences. To attain egress from or entrance into such a group requires as its necessary *prius* the observance of certain customs or the performance of certain rites;¹ and we find, accordingly, that, in many instances, admission into the ranks of the mature is restricted to those who have undergone the appropriate preparation.² It is a common practice to give to the rites which mark separation from childhood and entrance upon manhood or womanhood the name of 'rites of puberty.'³ And yet it is only to certain of those rites that the name can be accurately applied; for admissibility to the ranks of mature persons is, in many instances, determined not by arrival at puberty, but by something having no necessary connexion with it, such as attainment of a certain age⁴ or possession of a certain capacity or quality.⁴ Objection upon these grounds to an indiscriminating use of the name has, we venture to think, been pushed too far by van Gennep.⁵ At the same time, he has done good service in insisting on the limits of its applicability; and, accordingly, we shall confine our employment of it to those rites whose celebration is determined in point of time by reference to puberty.

It is, however, to be kept in view that, in some instances, a rite which is undoubtedly a rite of puberty does not take place until full development of puberty is attained,⁶ while, in others, it is postponed for reasons of convenience or by force of circumstances.⁷ In cases in which initiation is spread over a long course of years it may be that none or some only of the rites are puberty rites;⁸

¹ Van Gennep, p. 35 f.; H. Schurtz, *Alterklassen und Männerbünde*, p. 52 f.; art. INITIATION.

² In Fiji uncircumcised youths were regarded as unclean (B. Thomson, *The Fijians*, London, 1908, p. 216); and among some of the hill tribes of Central India an uninitiated person was tabooed. Thus, a child who had not undergone the rites of hair-shaving or ear-piercing was treated as *bhūt*, or devil, not subject to tribal restrictions as to food, etc. (W. Crooke, 'The Hill Tribes of the Central Indian Hills,' *JAI* xxviii, [1898] 246). E. J. Eyre (*Journals of Expeditions into Central Australia*, London, 1845, ii. 201) says of a S. Australian black-fellow: 'He is a stupid idiotic sort of man so that the natives have not deemed him worthy of receiving the honours of their ceremonies, and still call him boy or youth, although he is an oldish man' (see A. W. Howitt, *The Native Tribes of S.E. Australia*, London, 1904, p. 630).

³ As in ancient Rome (see F. C. von Savigny, *System des heutigen römischen Rechts*, Berlin, 1840, ii. 66; E. W. Leist, *Græco-italische Rechtsgeschichte*, Jena, 1884, p. 65 ff.).

⁴ Such as ability to carry arms (J. Grimm, *Deutsche Rechtsalterthümer*, Göttingen, 1881, p. 413) or prowess in war or foray (van Gennep, p. 125).

⁵ P. 93 ff.

⁶ See the account of the ceremony of the Yuin tribe (below, II.), and W. E. Roth, *Ethnological Studies among the N.W. Central Queensland Aborigines*, Brisbane and London, 1897, p. 170 ff.

⁷ It is postponed sometimes until a sufficient number of candidates has been collected (L. Fison and A. W. Howitt, *Kamilaroi and Kurnai*, Melbourne, 1880, p. 192), and sometimes until sufficient food has been procured for the feast which forms part of the ceremony (M. Krieger, *Neu-Guinea*, Berlin, 1899, p. 167; W. S. and K. Routledge, *With a Prehistoric People: the Akkuyu of British E. Africa*, London, 1910, p. 151), or to pay the superintendent of the rite (B. T. Somerville, 'Notes on some Islands of the New Hebrides,' *JAI* xxii, [1898-99] 5), or until the chief's son is old enough (G. McCall Theal, *Hist. of S. Africa*, London, 1888-93, i. 205). In some instances the ceremony takes place only every four or five years (H. A. Junod, *The Life of a S. African Tribe*, London, 1912, i. 74; W. C. Willoughby, 'Notes on the Initiation Ceremony of the Betswana,' *JAI* xxxix, [1909] 229), while in others it is suspended owing to the occurrence of a calamity (Theal, *loc. cit.*), such as war, famine, or plague (L. Fison, 'The Nanga, or Sacred Stone Enclosure, of Wamumala, Fiji,' *JAI* xv, [1885] 19).

⁸ Spencer-Gillen⁹, p. 212 f. Among the A-kamba the children of both sexes are circumcised when about five or six years old, and a second ceremony is performed at puberty (O. W. Hobley, *The Ethnology of the A-kamba and other E. African Tribes*, Cambridge, 1910, p. 68). Similarly, among some of the northern

and sometimes a puberty rite loses its original significance by being merged in a rite of another kind.¹

II. DESCRIPTION OF PUBERTY RITES.—A rite of puberty is sometimes a simple rite, consisting merely of a dance,² a feast,³ or a procession through the street,⁴ and sometimes it is a complex rite, including within it or accompanied by subordinate ceremonies.

Thus the northern tribes of Central Australia celebrate two rites⁵—circumcision and subincision—which are obligatory on all males, and which always take place at puberty.⁶ In the Urabunna tribe the novice who has undergone both operations is shown some of the sacred totemic ceremonies, and receives instructions as to his conduct. He must give a present of food to the operators; and they, by touching his mouth with a piece of meat, release him from the ban of silence.⁷

In one of the northern central tribes—the Larakia—the novice is subjected, not to any mutilation, but to hard usage such as kicks and blows, and to tests of strength, endurance, and courage;⁸ and finally he is shown and given a sacred bull-roarer which he may not show to his younger brothers or any woman.⁹ Among the Yuin of S.E. Australia, who practise neither circumcision nor subincision, a tooth is knocked out¹⁰ by a medicine-man.¹¹ During the ceremonies the bull-roarer is frequently heard. Its sound represents the thunder, which is the voice of Darumulun.¹² The chief rite is followed by dances, pantomimic representations, and other solemnities, of which one of the most important is the mock burial and resurrection of a tribesman.¹³ The novices are subjected to certain food restrictions. Charcoal dust is the appropriate covering during the ceremonies; and, when they close, it is washed off as an indication that everything connected with them is done with. The youths are painted and invested with the belt of manhood, and retire into the bush, where the men who have had charge of them during the rite instruct them and give them their totem names. The novices do not take their place as men in the community until the medicine-men are satisfied of their fitness. Then they are permitted to marry.¹⁴

Among some of the Victorian tribes the chief rite consists of a fight between the novices of two tribes which are at feud,

tribes of Central Australia the throwing up ceremony precedes circumcision and subincision (see below, II.).

¹ See below, III. 1 (f) note, and J. Kohler, 'Das Recht der Papuas,' *ZVREW* xiv, [1900] 361 (Tami Islanders).

² See S. Passarge, *Die Buschmänner der Kalahari*, Berlin, 1907, p. 101 f.

³ E. Beadmore, 'The Natives of Mowat, Daudai, New Guinea,' *JAI* xix, [1890] 460; H. H. Bancroft, *NH*, London, 1876, i. 554 (Ciris and Tepocas). In the Marshall Islands the occurrence of first menstruation is celebrated by festivities, accompanied with singing and gifts of flowers (J. Kohler, 'Das Recht der Marshall-insulaner,' *ZVREW* xiv, 437).

⁴ B. Cruickshank, *Eighteen Years on the Gold Coast of Africa*, London, 1853, li. 193 f.

⁵ Among some tribes these rites are preceded by a ceremony in which the novice is thrown up in the air and caught in the arms of the men (Spencer-Gillen⁶, p. 337; cf. Spencer-Gillen⁶, pp. 214-218).

⁶ Spencer-Gillen⁶, p. 323 f. Among some of the tribes of N.W. Central Queensland (Roth, p. 170 f.) and S.E. Australia (Howitt, p. 530, note 2) the ceremonies are performed at full development of puberty, when the moustache and beard begin to show. In the case of the Narrinyeri the principal rite of admission to the ranks of men consists in plucking out the beard and moustache (ib. p. 674). In the Yerkia-mining tribe circumcision does not take place till about the eighteenth year (ib. p. 684), while among the Dieri it is performed at the age of nine or ten years, when the novice receives a new name, and it is followed some years afterwards by subincision, in virtue of which the youth becomes a 'thorough man' (ib. p. 656 f.). In the case of the Arunta and other tribes the rite of painting the boy and throwing him up takes place when he is ten or twelve years of age. He may be circumcised at any time after puberty (Spencer-Gillen⁶, pp. 214-218).

⁷ Spencer-Gillen⁶, p. 334 f. ⁸ *Ib.* p. 331 f. ⁹ *Ib.* p. 332.

¹⁰ Where the practice of knocking out teeth prevails among the northern central tribes, it has, at the present day at all events, nothing to do with initiation (ib. p. 329).

¹¹ In the case of the ceremony in which Howitt took part there were three novices, of whom two were fourteen or fifteen years of age, while the third was older and had an incipient moustache (Howitt, p. 631; cf. p. 530, note 2).

¹² Among some of the northern central tribes the women and children believe that the sound of the bull-roarer is the voice of a spirit who devours and subsequently restores the novice (Spencer-Gillen⁶, pp. 366, 501; cf. pp. 343, 490). Beliefs fundamentally the same are found in all Australian tribes (Spencer-Gillen⁶, p. 246, note 1; Howitt, pp. 538, 628, 631 ff.; cf. p. 506). See also Krieger, p. 167; J. Holmes, 'Initiation Ceremonies of the Natives of the Papuan Gulf,' *JAI* xxxii, [1902] 419 f.

¹³ 'The ceremonies are intended to impress and terrify the boy in such a manner that the lesson may be indelible, and may govern the whole of his future life. But the intention is also to amuse in the intervals of the serious rites' (Howitt, p. 532).

¹⁴ Howitt, pp. 556-561.

among others, of painting the novices and cutting their hair in a peculiar fashion, while, in some instances, plucking out the hair accompanies the rite of knocking out teeth.¹

Women, while usually taking part in the preliminaries to, and accompaniments of, the rite, are excluded from its actual performance.²

As to the initiation of girls, we may observe that the ceremony of rubbing the breasts with fat and ochre,³ and the operation of cutting open the vagina, followed by sexual intercourse with men who stand to them in certain relationships,⁴ appear to be the equivalents of the ceremonies of throwing up in the air and subincision. Among the Arunta and Ilpiria tribes, a girl, during her first menstruation, is secluded at a spot apart from the women's camp, unvisited by men,⁵ while at Upper Yarra she is, at the same period, tied with cords so tightly as to cause her acute pain. These are not removed until the flow has ceased.⁶ Among the Diet the practice of knocking out two of the lower middle front teeth is not confined to boys.⁷

III. CHARACTERISTIC FEATURES OF PUBERTY RITES.—In the preceding paragraph we have noted the main characteristics of a few of the puberty rites practised by some of the Australian tribes, and found that they included mutilations, the imposition and removal of tabus, tests of endurance, strength, skill, and courage, ceremonial painting, decorating, hair-cutting, and the like, dances and pantomimic representations, ablutions, naming anew, seclusion, instruction, investiture with a new dress, sexual intercourse, and certain other usages, which we shall now proceed to consider.

1. Mutilations.—(a) *Circumcision.*—This operation frequently serves as a rite of puberty either alone⁸ or in conjunction with other rites.⁹ It is employed sometimes in the case of males only¹⁰ and sometimes in the case of females as well.¹¹ It takes place sometimes on arrival at puberty,¹² or full puberty,¹³ and sometimes at stated intervals.¹⁴ Occasionally it is postponed owing to special circumstances.¹⁵

(b) *Knocking out teeth.*—Among the Murrumbidgee, Murray, and Goulburn tribes two of the incisor teeth of the lower jaw are knocked out in the case of boys on arrival at puberty;¹⁶ and among the Batoka there prevails the custom of knocking out upper front teeth of both girls and boys at the same period.¹⁷

¹⁵ Willoughby, *loc. cit.*; Routledge, p. 151; Theal, ii. 205.

¹⁶ Brough Smyth, i. 62-65.

¹⁷ Livingstone, p. 632 f. A somewhat similar usage is practised by the Seri in the case of girls before marriage.

(c) *Filing the teeth.*—In Makisar the teeth of both sexes are filed at puberty, and a five days' tabu in respect of certain foods is imposed.¹ It is said that among the Kedah Semang the teeth are filed at puberty irrespective of sex;² and a similar custom is practised by the Malays at or about the same time of life.³ The custom of pointing the teeth of the Thonga girls at puberty is dying out.⁴

(d) *Perforating the lips or ears.*—Puberty rites in the case of girls include the boring of the lower lip for the later insertion of an ornament among the Tlingits,⁵ and the piercing of the ears among the Tsimshians.⁶ The ears of the Thonga boys were pierced at puberty.⁷

(e) *Scarification, tatuing, etc.*—Among the Ba-Mbala scars are made on the face and body of both males and females at puberty.⁸ Part of the puberty rites to which the girls of the Abipones are subjected consists in pricking them with thorns, ashes mixed with the blood being rubbed into the punctures so as to render them indelible. The operation must be borne without wincing.⁹ Very similar accounts are given of the rites in the case of girls among the Charruas, Minuanes, and Payaguas,¹⁰ the Tupis,¹¹ and certain tribes of the Orinoco.¹² The Orinoco girls, when adult or nearly so, are tatued on the arms and back.¹³ In British New Guinea the completion of a girl's tatuing is a sign of her maturity;¹⁴ and in Rautaea, one of the Society Islands, it was considered a disgrace to be without the tatu marks of puberty.¹⁵ Among the Bushmen incisions were made on the forehead and between the shoulders, and charcoal was rubbed into them, as the final puberty rite in the case of boys;¹⁶ and among the Ba-Ronga women tatuing seems to have connexion with marriage or, at least, nubility.¹⁷

(f) *Dilatatio vaginae, artificial defloration.*—In the case of girls in Azimba Land, the vagina is enlarged on arrival at puberty;¹⁸ a similar practice prevails among the Wa-yao of British Central

Africa;¹ and in the Pelew Islands² the girls are frequently deflowered at or a little before puberty.³

2. The imposition of tabus.—(a) *Exclusion of women from rites, etc.*—Among the tribes of Central Australia women are excluded from the actual performance of circumcision and subincision to which the males are subjected.⁴ Among the Thonga the lodge (*sungi*) where the initiatory ceremonies take place is tabu to them;⁵ and, in many instances, the novice must avoid women during the rites.⁶ Among the Narrinyeri he may not taste of food belonging to a woman;⁷ and the Kurnai do not permit him to eat of a female animal.⁸

(b) *Exclusion of men from rites, etc.*—It may be regarded as a regulation of almost universal prevalence that, during a girl's ceremonial seclusion at her first menstruation, she is not permitted to see or be seen by men, or to hold any communication with them.⁹ Among the tribes of the Tanganyika Plateau an exception seems to be made in favour of a father of twins.¹⁰

(c) *In relation to food.*—The novices are in many instances subjected during the rites to certain food restrictions. In some cases a certain food is forbidden,¹¹ while in others a special food is prescribed.¹²

(d) *In relation to speech.*—We have seen that among some of the northern tribes of Central Australia the novices are under a ban of silence.¹³ A similar prohibition prevails at Tutu, Torres Straits,¹⁴ in the Elema District, Papuan Gulf,¹⁵ and among some of the Brazilian tribes.¹⁶ Sometimes

speech with certain persons only is permitted,¹ or it is confined to whispering.² In other cases archaic or foreign words are used during the ceremonies.³

(e) *Miscellaneous.*—Instances are to be found in which the novices are prohibited from feeding themselves,⁴ scratching themselves with their hands,⁵ touching the hair or face,⁶ touching the ground with their feet,⁷ looking upon the sun⁸ or fire,⁹ lighting the fire,¹⁰ looking back,¹¹ washing,¹² working,¹³ or sleeping.¹⁴

3. Tests of endurance, etc.—In many cases the novices are forced to practise a rigid fast.¹⁵ Thus, among the Musquakie Indians, the youth undergoes a prolonged fast at puberty, wandering alone until he dreams what his medicine is to be, and, sometimes, what his vocation is.¹⁶ Sometimes the novices are forced to remain in deep water,¹⁷ or to thrust their heads through collars of thorns,¹⁸ or are gashed¹⁹ or scathed²⁰ or beaten²¹ with supple wands²² or stinging nettles,²³ or are exposed to the bite of venomous ants,²⁴ or are deprived of sleep,²⁵ or are bound so tightly as to suffer great pain.²⁶ Among the Thonga they must suffer cold, thirst, and cruel punishments.²⁷ Sometimes they must show their prowess by killing a man,²⁸ or their intelligence by deciphering picture riddles;²⁹ while, in some instances, austerities in the case of women are designed to serve as remedies rather than as tests.³⁰

4. Ceremonial daubing, masking, painting, etc.; ceremonial dress.—We have seen that charcoal dust is the appropriate covering during some of the Australian ceremonies.¹ It is put to a similar use in Yam and Tutu.² The face, shoulders, and chest of the Indian youth seeking to find his medicine are blackened.³ So are those of the girls among the Kolushes,⁴ while, among the Sotho Negroes, they are smeared with ashes.⁵ The Kosa,⁶ the Wanyika,⁷ and other African tribes⁸ daub the boys with white clay. In some instances the novice is masked,⁹ while among some of the tribes of Central Australia he is painted with distinctive patterns.¹⁰ Among the Hupa,¹¹ the Tlingits,¹² the Bechuanas, and the Kafirs¹³ the girls—and, among the Kosa,¹⁴ the boys—wear a distinctive dress; in N.W. Central Queensland the novices are decorated with necklets and feathers.¹⁵

5. Dances and pantomimic representations.—Dances are sometimes the sole ceremony at puberty,¹⁶ and much more frequently form an important part of puberty rites.¹⁷ Elaborate pantomimic representations take place during the Central and S.E. Australian solemnities,¹⁸ one of the most important of which is that of mock burial and resurrection.¹⁹ Elsewhere we find mimic combats²⁰ and symbolic practices representing defloration²¹ and new birth.²²

6. Naming anew.—Among the Wa-yao a new name is given at circumcision, and the old name is discarded.²³ The Andamanese girl is given a flower name after the one of the sixteen selected trees which happens to be in bloom when she arrives at puberty.²⁴ On the occurrence of the same event the Inca girl received a name from her chief relative;²⁵ and among the Jakun of Johor²⁶ and some of the E. African tribes²⁷ names are changed at puberty. Among some of the Australian tribes an individual²⁸ or a sacred²⁹ name is given at initiation is regarded as a disease; and elsewhere as the result of connexion with the moon in the shape of a young man (Seligmann, p. 200, cf. J. Roscoe, 'Further Notes on the Manners and Customs of the Baganda,' *JAI* xxvii. 39). For other explanations see Crawley, pp. 10 f., 192, 196.

initiation; and instances of change of name at puberty might easily be multiplied.¹

7. Seclusion.—Among the Tlingits a girl at her first menstruation was shut up in an isolated hut of boughs for a year. She might not leave it except at night nor be visited by any but her nearest female relatives.² Similar practices prevail among many of the Indian tribes of N. America,³ among the Koniagas,⁴ the Malemut and Unalit,⁵ and the Aleuts,⁶ and in some of the islands of Torres Straits.⁷ Among the Caribs,⁸ the tribes of the Upper Amazon,⁹ the River Plate,¹⁰ and French Guiana,¹¹ and the Macusis the girl's hammock is slung close under the roof, where she is exposed to the smoke, which is increased as much as possible.¹² In New Britain girls are placed in cages at an early age, and kept there until marriageable.¹³ We find less rigorous forms of seclusion among the Hupa and Wintün,¹⁴ the Pend Oreilles,¹⁵ and the Tsimshian¹⁶ and Musquakie Indians,¹⁷ at Ceram in former times,¹⁸ and among many African tribes.¹⁹

Boys are secluded sometimes in the bush,²⁰ sometimes in isolated huts,²¹ and sometimes in a lodge constructed for the occasion.²²

8. Instructions.—The instructions given to novices differ in different cases in nature, scope, and value. Sometimes they are concerned with the sacred mysteries²³ or tribal legends;²⁴ sometimes they deal with the duties of a tribesman towards the women of the tribe, the aged, and the poor,²⁵ or towards the community²⁶—e.g., in time of war;²⁷ and sometimes they embrace politics and government,²⁸ economic regulations,²⁹ or matters such as tribal etiquette and decorum,³⁰ intercourse between the sexes,³¹ or domestic duties;³² or they inculcate such lessons as that pain must be endured,³³ and that selfishness³⁴ and greediness³⁵ must be avoided. Very frequently the duties of implicit obedience during the ceremonies and of never divulging what he sees or hears³⁶ are strongly impressed upon the novice.

9. The final ceremonies.—(a) *Investing with a new dress, ornaments, etc., ceremonial washing,*

hair-cutting.—The Tupi girls wore cotton strings round wrist and waist to show that they were marriageable,¹ and the girls of Jap² and among the Herero received a special dress at puberty.³ When an Orāon girl approaches maturity, she gathers up her hair in a knot,⁴ and among the Southern Slavs a girl at the same period winds her hair under her fez.⁵ Among the Musquakie Indians a girl is secluded at puberty, and at the close of her seclusion is washed and dressed in new clothes;⁶ and the practice of clothing, ornamenting, and decorating the girls at the conclusion of the ceremonies is widely prevalent.⁷ Sometimes the novice is marked on the forehead with a spot of blood,⁸ or with the symbol of the shaman's familiar spirit.⁹ In many instances the boys receive some badge of manhood on the completion of the rites, and are clothed in new garments, anointed, and decorated.¹⁰

In one case the novice must, after the completion of the ceremony, visit another tribe and is feasted on his return.¹¹

Bathing or washing frequently forms part of puberty ceremonies,¹² especially at the final stage. Thus, among some of the Victorian tribes, the novice is given over to the women, who wash off the clay and charcoal with which he has been daubed, paint him, and dance before him. He is now a man.¹³ Similar practices prevail in Kaiser Wilhelmsland,¹⁴ at Torres Straits,¹⁵ and among many African tribes.¹⁶ Among the Swahili the girl is symbolically cleansed by being rubbed with powdered sandal-wood.¹⁷

Ceremonial hair-cutting takes place sometimes at the commencement¹⁸ and sometimes at the close¹⁹ of the ceremonies. Among the Narrang-ga tribe the hair and beard of the novice are plucked out on three successive occasions.²⁰

(b) *Feasting, saturnalia*.—In many instances the end of the ceremonies is marked by feasting²¹ and

dancing,¹ and is frequently made the occasion of great licence.²

(c) *Disenchantment, religious service*.—Sometimes the final ceremony consists in purification³ or disenchantment⁴ by a medicine-man, or in performing a religious service over the novice.⁵

(d) *Sexual intercourse*.—In many instances sexual intercourse completes the rite.⁶

10. *Destruction of things used during the ceremonies*.—Among the Pitta-Pitta tribes of Queensland⁷ and the Thonga of E. Africa⁸ the enclosure used during the rites is burnt when they are ended; and the Macusis destroy everything that the novice has used during her seclusion.⁹ A similar practice prevails among some of the tribes of S. Africa.¹⁰

11. *Privileges secured by initiation*.—Among the most important of these are the rights to eat certain articles of food previously forbidden,¹¹ to join the young men's camp,¹² to take part in the sacred ceremonies¹³ and in the dances and deliberations of the men,¹⁴ to marry,¹⁵ and, in many instances, to assume the position of a full-grown man.¹⁶ Frequently initiation entitles the youth to wear a distinctive dress, ornaments, or other decoration.¹⁷

IV. *OBJECT OF THE RITES*.—We have seen that a rite of puberty may include or indeed consist of a ceremony which is not exclusively employed as such a rite. Circumcision, e.g., serves many other ends than to indicate an important epoch in the life of a member of a community. But, where it is practised as a rite of puberty, while it may and frequently does continue to serve those ends, it marks or operates a momentous change, by which the novice is severed from the things of childhood and enters upon the rights and duties of manhood or womanhood. It is easy to trace this conception in the symbolism of mock burial and resurrection, in the passing through a new gateway and along a new road, in festivities preceded by seclusion, in the washing off of a ceremonial covering of charcoal or clay, in the reception of a new name, in the investiture in new clothing or ornaments and the like. Such practices may be intended to effect purification or change of identity or purposes other than those of a rite of puberty. Still, when employed as such a rite, they express the notion of severance from the past and entrance upon a new life. In the tests of endurance, in

² Among the Sotho Negroes the girls wear men's clothing, carry aims, and indulge in mad pranks and lewd conduct (Endemann, p. 88). See also Roscoe, *loc. cit.*; Theal, *Kaffir Folk-Lore*, p. 218, *Hist. of S. Africa*, ii. 206; J. Macdonald, *JAI* xx. 117. In some instances the novices are permitted during the ceremonies to steal, provided that they are not caught (Theal, *Hist. of S. Africa*, ii. 205; Seligmann, p. 204); in others sexual licence prevails during the same period (Chinnery and Beaver, p. 77; J. Macdonald, *loc. cit.*). In some cases obscene language, not permissible at other times, is used during some of the ceremonies (Junod, i. 79).

PUBLICANI, or **Popelican** (a corrupted form of **Paulician**).—This is the designation under which the Cathari (see **ALBIGENSES**) are frequently referred to by both French and English writers in the 12th and 13th centuries. Schmidt considers that the name, in this form, was introduced by the Crusaders, in evidence of which he cites Tudebod (*Recueil des historiens des croisades*, iii. [1866] 26) and G. de Villehardouin (J. A. C. Buchon, *Collection des chroniques nationales françaises*, Paris, 1824-28, iii. 156).

J. BASS MULLINGER.

PUNISHMENT.—See **CRIMES AND PUNISHMENTS**, **REWARDS AND PUNISHMENTS**.

PUPPETS.—From the earliest times human effigies of a varying degree of realism have been fashioned by man which, from their character or their purpose, do not fall within the categories of idols, votive offerings, or purely artistic products. What may have been the object of the ivory and bone human figures of the palaeolithic age cannot be stated with any certainty, but it is not improbable that they had a magical intent. The physical peculiarities which they exhibit, dividing them into two groups, one of which shows marked steatopygia, indicate that the aim of the artist was a realistic reproduction of the human form. In this respect the figures of the palaeolithic period differ from many human effigies produced by primitive peoples which, whether from lack of skill or indifference, often show signs of little attention to accurate reproduction of form.

Among the ancient Egyptians models formed a regular feature in the sepulchral ceremonial of wealthy or important personages. These figures, representing men engaged in occupations of a menial type such as agriculture, domestic work, or baking, as well as the oarsmen of the model boat, were buried with the dead to serve as his ministers in the after life, while the *ushabti* figures were intended to take his place as labourers in the sacred fields of Osiris. They were a substitute for the slaves and other members of the household who, in accordance with primitive custom, were once sacrificed at the death of the master of the house. This substitution of a puppet or doll for human or animal sacrifice is not confined to Egypt. In the Malay Peninsula the sacrificial tray which is prepared on all ceremonial occasions for the propitiation of the spirits holds, among other offerings, coco-nut-leaf models of animals and dough models of human figures. Their intention is clearly indicated by the fact that the dough models of human beings are actually known by the name of 'substitutes' (*utakar ganti*) (W. W. Skeat, *Malay Magic*, London, 1900, pp. 72, 432). In India the Lushai Kuki clans, in a very solemn, but rare, form of sacrifice to the spirits of woods and streams in cases of sickness—a sacrifice of which use is made only when other means have failed—prepare two small clay figures representing a man and a woman, which are placed on a platform; they then sacrifice a pig and make the blood run over the platform. The flesh of this victim may not be eaten in a house (J. Shakespeare, *The Lushai Kuki Clans*, London, 1912, p. 74). On the Nile a doll is thrown into the river when the rise is delayed, and a similar ceremony took place on the Tiber, where a straw puppet was employed, in each case in substitution for a human being (*GB*³, pt. v., *Spirits of the Corn and of the Wild*, London, 1912, ii. 107).

The spiritual basis of the use of models as substitutes appears in other connexions.

In cases of serious illness in the Malay Peninsula the wandering soul is charmed into a dough figure as an intermediate step

to its restoration to the body;¹ or dough figures, animal as well as human, may be made the receptacle of 'mischiefs' resident in a human patient, a thread acting as the conductor under the influence of a charm (Skeat, pp. 432 f., 452 f.). Among the Achewa of Central Africa spirits of the dead wandering in the bush are supposed to annoy the living until they have been confined by the medicine-man in a receptacle consisting of a few short pieces of wood bound together with a scrap of calico in the semblance of a child's doll. Inside the figure is a box made of the handle of a gourd-cup which is the actual resting-place of the ancestral spirit (A. Weiner, *Natives of British Central Africa*, London, 1906, p. 69). It is possible that a curious custom followed by the Thonga chiefs may be connected with this belief. It was their practice to carry about with them wooden images called *angoza*, representing men, women, and animals. These were little more than sticks with heads carved at one end. They were lodged in the house of the chief wife and were displayed only on special occasions. When important cases were being discussed, they were planted in the ground at a little distance, and they also accompanied the chief on a journey (ib. p. 68 f.). It has been suggested that they were emblems of authority. Possibly, if this were the case, they are to be regarded as an embodiment of the chief's ancestral spirits.

The association of an ancestral spirit with a doll also appears in the shamanistic cults of N. Asia. In some tribes the shaman's powers were regarded as closely connected with his shamanistic ancestors and as originating at their call. The shaman's coat was an object of peculiar reverence; it was an essential concomitant of the vocation, and in use it was both a protection and a source of inspiration (see art. **SHAMANISM**). Potanin records that among the Uriankhai tribes a small doll was attached to the coat which represented the shaman's ancestor (M. A. Czaplicka, *Aboriginal Siberia: a Study in Social Anthropology*, Oxford, 1914, p. 217).

In European folk-custom the belief in the embodiment of a spirit in a puppet appears in the custom of fashioning a doll from the last sheaf at harvest-time—a belief which in various forms is wide-spread among primitive peoples (see art. **HARVEST**). Among the Akiktya a sun-dried clay figure is produced at the dance following the maize-harvest (W. S. and K. Routledge, *With a Prehistoric People*, London, 1910, p. 190 f.), which may with probability be regarded as the analogue of the corn-doll, the material abiding-place of the corn-spirit. This view of the custom, however, is a matter of inference, and the fact that the dancers appear to regard the figure with adoration when elevated before them would suggest that it is passing into the category of idols. On the other hand, the fetiches in human form of W. Africa owe their virtues to the medicines placed in or on them. A wooden fetish figure, e.g., of Bambara origin, now in the British Museum, is said to have no supernatural value unless plastered with the special magical clay (*British Museum Handbook of the Ethnographical Collection*, London, 1910, p. 286).

How far the belief in the endowment of a puppet with a personality may be carried appears in the customs connected with the female fetish Nantaba, an appanage of the king in Uganda, which has to be provided on his accession by his father's mother's clan.

This fetish consists of a gourd in which the wind is supposed to be caught at a ceremony in which a tree is cut down and a goat sacrificed. The man who carries the fetish back to the king conducts himself as, and imitates the appearance of, a woman who is *encevante*. The image is provided with a hut and a guardian—a wife of the king—whose duty it is to attend Nantaba and carry her into the sun when she desires it. The king's wives come and sit around her, hoping thus to gain favour and have children. At the death of the king the fetish is thrown away (J. Roscoe, 'Nantaba, the Female Fetish of the King of Uganda,' *Man*, viii. [1908], no. 74).

The relation of Nantaba and fertility can be paralleled by the use of puppets to promote fertility and well-being in other connexions, but especially in relation to the crops. One instance, that of the corn-doll and the corn-spirit, has been mentioned above.

In Liberia steatite figures are employed to promote the fertility of the farms. These figures are the relics of an earlier culture, but, when found in tumuli or elsewhere by the present natives, they are buried in their fields. Sometimes the image is placed on a platform, usually an old ant-hill, and the farmer and his household march round it, striking it with a whip and chanting an appeal for a good harvest (T. A. Joyce, 'Steatite Figures from W. Africa in the British Museum,' *Man*, v. [1905], no. 67). In S. India, when rain fails, a puppet of ashes from the potter's field figures in ceremonies performed by Kapu women; they model a small figure of a naked human being, which they carry from door to door, asking gifts and singing indecent songs. After this collection of alms, which may last for three or four days, the image, which is called Jokumara, the rain-god, is thrown away in a field. A cultivator may also make a figure himself and place it in the fields, after spreading

¹ For further instances elsewhere see *GB*³, pt. ii., *Taboo and the Perils of the Soul*, London, 1911, pp. 63 f., 62 f.

on them leaves, ashes, and flowers which he has received in return for alms from Bariké women (E. Thurston, *Omens and Superstitions of S. India*, London, 1912, p. 307).

In these cases the image is one element in a whole which forms the fertility charm. It may, however, also be employed purely for protective purposes.

In S. India the crops are protected against the supposed dangers of an eclipse by images made, as in the rain-chain, of ashes from a potter's field—a material apparently regarded as peculiarly efficacious. The figures are placed on four sides of the field (Thurston, p. 44). The parallel with the *terminalia* and other protectors of the fields in Roman religion is rendered closer by certain physical peculiarities in the effigies used for protective purposes in other connexions mentioned below.

Puppets are used to ward off evil influences of various kinds.

In Car Nicobar a wooden figure is used to scare evil spirits (*British Museum Handbook of the Ethnol. Collection*, p. 77). In the case of an epidemic among the Lushéi Kuki clans a village to which it is feared the disease will spread is protected by a gateway across the road on which are straw figures of men armed with daks and spears (Shakespeare, p. 78). The closest parallel to the Piapus figures, however, is found in S. India, where, at the Mangalore races, a figure of a man with enormous genitalia is carried in procession, or at the Canara races, where the procession is headed by figures of a man and woman *in cotu*, and in the indecent figures on the temple cars (Thurston, p. 114). In this district, again, the employment of puppets to avert misfortune is closely connected with the 'evil eye'. Dolls made of straw and covered with black cloth, splashed with white and black paint, sometimes representing a man and woman embracing, are hung on poles in gardens or fields near the road to scare away birds, but principally to avert the 'evil eye'. Figures of all kinds, but especially grotesque, indecent, or hideous human forms, are hung on houses or shops, particularly when in course of erection, to catch the eye of the passer-by, and distract it from the main structure (*ib.* p. 111 f.). It is hardly necessary to point to the Gothic gargoyle as an obvious European parallel to this form of the custom of averting the evil eye by some peculiarity or protective sign.

A familiar use of the doll in magic depends upon sympathetic action. The employment of the waxen image which was melted, pricked by pins, or otherwise injured was one of the commonest practices attributed to witches in European superstition. It is one of a number based on the belief in the possibility of harmful action on a human being at a distance.

In Japan nails are driven into a straw image, which is buried under the place on which the victim sleeps. In order to make a debtor pay his debts a broom, inverted, is made into a lay figure to represent him; it is then knocked down and belaboured. This will make the debtor dream of his delinquency and come to pay his debt. A wife punishes her husband for infidelity by nailing his effigy to a tree (W. L. Hildburgh, 'Notes on some Japanese Magical Methods for injuring Persons,' *Man*, xv. [1915], no. 65). Similarly, in S. India, when a Parivaram woman commits adultery with a man outside the caste, she is punished with excommunication and an image is made of her into the eyes of which thorns are driven before it is thrown away outside the village. As a protection against witches a wooden figure is made, into which nails are driven, a hole cut above the navel, into which a lead plate, with the name and star of the person and a charm written on it, is sometimes inserted, and it is cast into the sea. A favourite practice of the S. Indian magician, however, is to mould an image of a plastic material, such as dough or clay, which is buried at night in the Hindu cremation ground after thorns or nails have been driven into it, or is nailed on a tree. Sometimes the corpse of a child, which is dug up and reburied, is used instead of a figure (Thurston, pp. 245, 247, 254). The Lushéi Kuki clans use bamboo splinters to drive into the limbs of clay figures, and in the Malay Peninsula wax figures are buried while powerful charms are recited (Shakespeare, p. 109; Skeat, pp. 420, 569 f.).

The interest of the ceremonial and magical use of the doll has tended to divert the attention of observers from its use as a child's plaything. Not only is this use wide-spread, but it is also of great antiquity.

Among the objects which have been found in children's graves in Egypt are dolls both of animal and of human form which show some considerable degree of development; the limbs are movable and one of them apparently had an apparatus for emitting a squeak (*Guide to Egypt. Collection in British Museum*, London, 1909, p. 78). Children's dolls have also been found in the graves of the early inhabitants of Peru (G. A. Joyce, *S. American Archaeology*, London, 1912, p. 147), and it has been pointed out that some peoples, such as the *Aché* of N. America, give ceremonial dolls to their children as playthings when no longer required for ceremonial purposes (see E. Lovett, *The Child's Doll: its Origin, Legend, and Folklore*, London, 1915, p. 10).

It has been suggested that the child's doll is a derivative from the ceremonial doll. In some cases, it is held further, the form would support this view.

Among the Yao of Central Africa, e.g., the dolls show very little resemblance to the human form and may have been originally fetishes like the *angoza* of the Thonga chiefs already mentioned (Werner, p. 69).

On the other hand, it must be remembered that both the savage and the child indulge freely in make-believe, and indeed very few of the children's dolls show much resemblance to human beings.

In the Sūdān a piece of stick with lumps of clay for the head and the swell of the hips is dressed up in native costume (E. A. Gates, 'Soudanese Dolls,' *Man*, in. [1903], no. 22). On the Congo a piece of firewood or a manioc root serves the purpose, and these were even preferred to more realistic European dolls (J. H. Weeks, *Congo Life and Folklore*, London, 1911, p. 350). In Australia gum cement figures are sometimes modelled to resemble women, but just as commonly pieces of forked cane with joints manipulated to imitate the limbs are carried round the neck like real babies, while pieces of grass wrapped in bark are also used (N. W. Thomas, *Natives of Australia*, London, 1906, p. 132 f.).

Even granting that the use of dolls in ceremonial may have originated the use of the doll as a child's toy, imitation and the almost instinctive desire to train for the business of life which appears in a large number of children's games is probably almost equally responsible.

On the Lower Congo a doll made of a piece of firewood or a root is washed in an old saucapan and hung out in the sun to dry by the little girls just as they themselves have been treated by their mothers. They dress them in strings of beads, hang a few charms around them, and tie them on their backs as babies are carried (Weeks, p. 350). The Boloko girls, in fact, call their dolls *bana*, 'babies' (Weeks, *Among Congo Cannibals*, London, 1913, p. 149), while the Yao name for a kind of wooden doll with the rounded end covered with scarlet seeds, fitted on like a wig, is *mwali*, 'girl' (Werner, p. 113). The Bathonga children imitate their mothers in playing with dolls made of a banana-stem or a hollowed spheroidal fruit fitted on a stick and with knotted string for hair (H. A. Junod, *Life of a S. African Tribe*, Neuchâtel, 1912-13, i. 17.).

In Tunis among the Hausa the use of a doll as plaything is carried further. The offerings in the medicine-house to the younger *bori*, 'the children of spots,' which cause rashes and sore eyes, consist of nuts, sugar, toys, and sweets, covered with a white cloth, to which are attached two dolls, 'the playthings of Mai-Nassara.' These *bori* in all probability are spirits of dead children (A. J. N. Tremearne, *The Ban of the Bori*, London, 1914, pp. 269, 275).

Puppet-plays resembling the *fantoccini* and *Punchinello* are not uncommon among primitive peoples. In the Indonesian area they are a constant entertainment. Leather figures are used for shadow-plays which represent historical dramas (*Brit. Mus. Handbook Ethnol. Collection*, p. 101). The *dubbo dubbo* of W. Africa is almost an exact parallel to the Punch and Judy show, presenting a number of scenes in which Kachella Danibulla, like Punch, when called upon to meet his obligations, evades payment and maltreats his creditors (D. Alexander, 'Dubbo Dubbo; or Notes on Punch and Judy as seen in Bornu,' *Man*, x. [1910], no. 85).

LITERATURE.—See the works cited throughout.

E. N. FALLAIZE.

PURĀNAS.—I. Introduction.—The *Purānas* form a class of books written in Sanskrit, expounding ancient Indian theogony, cosmogony, genealogies, and accounts of kings and *ṛsis*,¹ religious belief, worship, observances, and philosophy, personal, social, and political ordinances, and opinions about all kinds of miscellaneous matters—the whole illustrated and enforced by tales, legends, old songs, anecdotes, and fables. They present the general or popular exposition of those subjects, while the Vedic literature contains the strictly Brāhmanic thought and teaching in religious matters. The *Purānas* are always reckoned as eighteen in number. No *Purāna*

¹ The word *ṛsi* denotes in the *Purānas* a holy and ascetic sage, sometimes semi-divine but, when human, generally a Brāhman. *Muni* means much the same, but is always human, and often of lower rank than *ṛsi*.

treats of all those subjects, though some are very wide indeed in their scope, while others confine themselves to narrow limits; but, taken collectively, they may be described as a popular encyclopaedia of ancient and mediæval Hinduism, religious, philosophical, historical, personal, social, and political.

The word *purāṇa* is Sanskrit and means 'ancient'; and the title *Purāṇa* signifies 'Ancient Lore,' indicating that these books profess to declare ancient lore as handed down for the most part by tradition. Its fuller form is *Purāṇa-saṁhitā*, 'Collection of Ancient Lore.' The eighteen *Purāṇas*, according to the list which occurs most often, are these—the *Brahma*, *Padma*, *Viṣṇu*, *Śiva*, *Bhāgavata*, *Nārada*, *Mārkaṇḍeya*, *Agni*, *Bhaviṣya*, *Brahmavaivarta*, *Linga*, *Varāha*, *Skanda*, *Vāmana*, *Kūrma*, *Matsya*, *Garuda*, and *Brahmāṇḍa*. This list omits the well-known *Vāyu*, but there can be little doubt that the *Vāyu* and *Brahmāṇḍa* were one originally and have become differentiated; for they agree, almost word for word, in the great bulk of their contents. The name *Brahmāṇḍa* then in that list must be taken to include its twin, the *Vāyu*, and the *Kūrma* calls it by both names, the *Vāyaviya Brahmāṇḍa*. The *Matsya*, *Garuda*, and *Vāyu* treat them as distinct, and, in order to preserve the total eighteen, omit one of the others, the *Śiva* or the *Vāmana*. Altogether, then, there are really nineteen. The *Matsya* (lii. 11-53) declares the number of verses in each *Purāṇa*, and so also the *Vāyu* (civ. 2-11), but not quite completely. They agree, or nearly agree, as regards most of them, but differ widely about the *Brahma*; and the *Matsya* alone gives the length of the *Viṣṇu*, *Agni*, and *Linga*; both omit the *Śiva*. These figures, however, do not altogether agree with the dimensions of the present *Purāṇas*, being generally excessive, and are merely round totals mostly reckoned in thousands. Each *Purāṇa* is constructed as a discourse delivered by some person of authority to one or more hearers; the subjects are expounded, often in the form of question and answer, and not always methodically; and into the narration are woven stories and discourses uttered by other persons—with the result that the whole often appears involved, defective in consistency, and marred by anachronisms. They are mainly in verse, which is generally the common *śloka* or *anuṣṭubh*, but passages sometimes occur in prose.

2. **Origin and development.**—An account of how the *Purāṇas* came into existence is given by the *Brahmāṇḍa* (ii. xxiv. f.), *Vāyu* (ix. f.), and *Viṣṇu* (iii. iv., vi.); that in the *Bhāgavata* (xii. vii. 4-7) is late and untrustworthy. The great ṛṣi Kṛṣṇa Dvāpāyana divided the single Veda into four Vedas and arranged them. Hence he obtained the name Vyāsa, 'the arranger,' by which he is generally known. He lived and did that about the end of the Dvāpara age, about the time of the great Bhārata battle. He then entrusted them to his four Brāhman disciples, one to each, and thus Paila became the teacher of the *Rigveda*, Vaiśampāyana of the *Yajurveda*, Jaimini of the *Sāmaveda*, and Sumantu of the *Atharvaveda*. Then with tales, anecdotes, songs, and lore concerning the ages he compiled a *Purāṇa-saṁhitā*, and taught it to his fifth disciple, the *sūta*, or 'bard,' Romaharṣana or Lomaharṣana (the two names are the same). After completing that work he composed the great epic, the *Mahābhārata*, and made Romaharṣana his disciple in both the *Itihāsa* (by which is generally understood the epic) and the *Purāṇa*. Statements occur sometimes that he taught a particular *Purāṇa* to his Brāhman disciples, but these appear to be late assertions. The *sūta* Romaharṣana divided that *Purāṇa* into six parts

or versions and taught them to his six disciples, Sumati Ātreya, Agnivarchas Bhāradvāja, Mitrāyū Vāsistha, Akṛtavraṇa Kāśyapa, Sāvarni Saumadatti, and Susarman Sāmsapāyana. The last three made each a further *saṁhitā*, or collection. The *sūta*'s sixfold *Purāṇa* was called the *Romaharṣanika* collection (*saṁhitā*), and those of his three disciples were named after them, the *Kāśyapika*, *Sāvarnika*, and *Sāmsapāyanika* collections. Vyāsa's original *Purāṇa* is not further mentioned and may have been merged in the *Romaharṣanika*. The collections made by the *sūta* and his three disciples were regarded as the four original collections, the 'root-*saṁhitās*' as they were called. They were all to the same effect, but differed in their diction. Sāvarni's version was noted for the correctness of its expressions, and Sāmsapāyana's for its stirring style. All were divided into four parts, and all except Sāmsapāyana's contained 4000 verses. None of them is now in existence, but several of the disciples appear in some of the present *Purāṇas*. The *sūta* had a son called Ugraśivas and *sauti* Raumaharṣani, 'son of the *sūta* Romaharṣana,' and taught him also the *Purāṇa*. Such is the account given, and it is not improbable. The *sūta* was a bard, and the origin of the *sūtas* is placed in remote antiquity, for the first *sūta* is fabled to have come into existence at the sacrifice of a primeval king, Pṛthu, son of Vena (e.g. *Vāyu*, lxii. 137-148), whose stories are often narrated. The antiquity is, of course, genuine, because bards have existed from the earliest times. The term *sūta* was afterwards applied to denote the offspring of a father of the Kṣatriya, or military caste, and a Brāhman mother, but he had nothing to do with the original *sūtas*. It was their duty, as the *Vāyu* (i. 31 f.) and *Padma* (v. i. 27 f.) explain, to preserve the genealogies of the gods, ṛṣis, great kings, and famous men. These were matters of ancient tradition, for which the *Purāṇa* and *Itihāsa* would be the appropriate receptacles, and thus these works would be naturally entrusted to the *sūta* Romaharṣana. His descendants had the right of reciting the *Purāṇa* for their livelihood, but the account states that the *Purāṇa* passed into the hands of his disciples, of whom five at least were Brāhmins, and was multiplied by them.

The foregoing account does not say how the present eighteen *Purāṇas* were developed, and their origin is explained by another and inconsistent statement, that there was originally one *Purāṇa*, and Vyāsa himself divided it into eighteen (e.g., *Matsya*, liii. 9 f.). This is certainly spurious, and the reason for it seems to have been rivalry between the advocates of the Vedas and those of the *Purāṇas*, the eighteen *Purāṇas* being thus made coeval with the four Vedas. Every *Purāṇa*, in fact, says that it is 'of equal measure with the Veda,' thus placing itself in the same rank as the Vedas, and indeed the *Purāṇa* is sometimes called the fifth Veda (*Vāyu*, i. 18). In the *Purāṇas* teaching of all kinds is often put into the mouth of the chief gods, so placing it beyond cavil; indeed, the *Vāyu* (i. 200) and *Śiva* (v. i. 35) aver that a Brāhman was not really wise if he did not know the *Purāṇa*. Further, the Brāhmins put forward a claim to primeval antiquity for the Vedas, and the *Purāṇas*, while acknowledging that, answered it with a claim on their own behalf to equal or prior antiquity. Thus the *Mārkaṇḍeya* (xiv. 20 f.) says that in the very beginning it and the Vedas issued from Brahmā's mouths; and the *Brahmāṇḍa* (i. i. 40), *Vāyu*, (i. 60 f.), *Matsya* (liii. 3), *Padma*, and *Śiva* assert that he remembered the *Purāṇa* then, the first of all the scriptures, before the Vedas issued from his mouths. Moreover, the Brāhmins claimed the monopoly of religious revelation and worship, and the *Purāṇas* outbid that

by declaring that to recite or even listen to them delivered a man from all sin, the *Mārkaṇḍeya* proclaiming that by acquiring it a man attains to a benefit superior to all the Vedas. There was thus a clear rivalry between the *Purāṇas* and the Vedas, and, in asserting priority for the *purāṇa*, or ancient, tradition over the Vedas, the *Purāṇas* were right to this extent that ancient tradition unquestionably existed before the Vedas, for the Vedic hymns allude to bygone persons and events (mentioned also in the *Purāṇas*), which could have been remembered only through tradition. Tradition has always existed from the remotest antiquity, as far back as man preserved any memories of his ancestors. This is a platitude, yet it must not be overlooked when examining the *Purāṇas*, though what value the present *Purāṇas* have in that respect is a different question (see below, § 13).

In accordance with such exalted claims, all the *Purāṇas* except three, the *Līṅga*, *Nāradya*, and *Vāmana*, assert that they were originally declared by some god in primeval time. Those three say that they were first declared by some great *ṛṣi*. Accordingly, each *Purāṇa* had to provide a succession of persons through whom it was handed down. Most of them form the chain perfunctorily of a few links, but the *Brahmāṇḍa* (rv. iv. 58-66) and *Vāyu* (ciii. 58-66) give a long list of 29 names, which occur, partly at least, in chronological order. Apart from fabulous occasions, nearly every *Purāṇa* particularizes the occasion when professedly it was actually recited. The *Vāyu* gives this circumstantial account:

After the great Bhārata battle the Pāṇḍavas were succeeded on the throne of the Pauravas at Hastināpura (on the Ganges, north-east of Delhi) by Arjuna's grandson Parikṣit, and he by his son Janamejaya, to whom the *Mahābhārata* was professedly recited. The *Vāyu* says that the *ṛṣis* dwelling in Naimiṣa forest on the river Gomati (the modern Gomti in Oudh) offered a long sacrifice on the bank of the river Drśadvatī (the modern Chitang approximately) in Kuruksetra (the country 70 miles north-west of Delhi), and the *sūta* Romaharṣaṇa went there and at their request recited it to them, during the reign of Janamejaya's great-grandson Adhishimakṛṣṇa—i.e. a century or rather more after the great battle (l. 12-23, xcix. 258 f.).

The *Matsya* says almost the same of itself, and the *Brahmāṇḍa* suggests much the same. The other *Purāṇas* fall off from this account, and the measure of their falling off agrees in a way with their probable posteriority. Most of the others lay the scene in Naimiṣa forest, and the late *Bhāgavata* makes the sacrifice last 1000 years. The *Nāradya* removes the scene to Siddhāśrama on the Ganges, and the *Varāha* gives no particulars. Four *Purāṇas* drop that account altogether. The *Viṣṇu*, *Mārkaṇḍeya*, and *Vāmana* say that they were declared by the *ṛṣis* Parāśara, Mārkaṇḍeya, and Pulastya respectively, and the *Bhaviṣya* says that it was recited by Vyāsa's Brāhman disciple Sumantu to Janamejaya's son, King Satānika.

3. The five original subjects.—Most of the *Purāṇas* declare that a *Purāṇa* should treat of five subjects: original creation (*sarga*), dissolution and re-creation (*pratisarga*), the periods of the Manus (*manvantara*), ancient genealogies (*vaṁśa*), and accounts of persons mentioned in the genealogies (*vaṁśyānūcharita*). These appear to have been the original subjects of the *Purāṇas*, and were so specially their province that the epithet 'having five characteristic subjects' was an old synonym of the title *Purāṇa*; hence religious instruction apart from these subjects was not one of their primary aims, nor do they appear to have been composed for sectarian purposes originally. Sectarian designs seem rather to have been an after-modification, except in the latest *Purāṇas*, which are frankly sectarian.

The first three of these subjects are closely connected and may be considered together. The

teaching is neither uniform nor consistent, but seems to combine different schemes. Its general purport may be stated thus:

It postulates the primordial essence called *prakṛti* and *pradhāna*, spirit called *puruṣa*, and the god Brahmā (or Brahman), with whom both *prakṛti* and *puruṣa* are sometimes identified. *Prakṛti* contained the three qualities, goodness (*sattva*), passion (*rajas*), and darkness (*tamas*), in equilibrium. It first evolved the great intellectual principle (*mahat*) as the first stage. From this was evolved the principle of individuality (*ahankāra*), and from this the five subtle elements (*tan-mūṛta*), sound, touch, form, taste, and smell, which became manifest respectively as the five elements (*bhūta*), ether, air, light, water, and solid matter. This was the second stage, the elemental creation (*bhūta-sarga*). In the third stage the ten organs of sense and action and the mind proceeded from the intellectual principle. These three stages were the creation from *prakṛti* (*prakṛti-sarga*). All these principles and elements, through the influence of spirit, combined and formed an egg, the egg of Brahmā, wherein he, assuming the quality of passion, became active. He brought the world into existence as the fourth stage, and through meditation originated, fifthly, the animal kingdom, sixthly, the gods, seventhly, mankind, eighthly, the intellectual notions called *anugraha*, and, ninthly, Saṁskumāra and other semi-divine mind-born sons who remained celibate, whence this creation is called *kaumāra*. In all these the three qualities existed in different states of predominance.

In the main this account follows the ideas of the Sāṅkhya philosophy, but other accounts are added which seem more primitive.

Brahmā assumed four different forms in succession and from them were produced the demons, the gods, the forefathers (*pitṛs*), and mankind; and, afterwards assuming another form, he produced from his limbs all other living beings, creatures, and vegetation. But those beings did not multiply, and he created from his mind sons, whose number is variously given as seven, nine, ten, or eleven, Bhṛgu, Marichi, Dakṣa, etc., all known as *ṛṣis*, and also the deities called Rudras. Seven of these sons were specially known as 'the seven *ṛṣis* (*saptarṣi*)', who hold a unique and permanent position in cosmogony. The Rudras are generally identified with Siva. Next Brahmā created the first Manu Svāyambhuva and a woman Satarūpā. These two had two sons, Priyavrata and Uttānapāda, and a daughter Dakṣa married her and had 24 daughters, of whom 13 were married to Dharma (righteousness) and bore Love and other personified feelings; 10 were married to the other mind-born sons and Agni (fire) and the forefathers, and one named Sati became Siva's wife. But this account is complicated by a further story that Dakṣa was re-born in Uttānapāda's lineage as Dakṣa Prīhetasa, and then created movable and immovable things, bipeds and quadrupeds, and also begot 60 daughters, of whom 10 were married to Dharma, 13 to Marichi's son, Kaśyapa, 27 to the moon, and 10 to others. Then Kaśyapa by his wives begot the gods, good and evil beings, animals, birds, and trees; and thenceforward living creatures were engendered sexually.

Creation naturally involves the question of the ages.

Time is divided into various great periods. A human year is a day and night of the gods, and the divine year consists of 360 human years. Of divine years 12,000, i.e. 4,320,000 human years, constitute a 'four-age' period (*chaturyuga*), in which the four ages (*yuga*) are, first, the Kṛta of 1,440,000 human years, then the Tretā of 1,080,000 years, the Dvāpara of 720,000, and lastly the Kali of 360,000; and each of these ages is preceded by a twilight (*sandhyā*) containing as many hundreds of years as the age has thousands, and is followed by a twilight (*sandhyāṁśa*) of like duration. This 'four-age' period repeated a thousand times is a day of the god Brahmā and is called a *kalpa*. Creation takes place and lasts during his day, and at its close the three worlds are dissolved for the same length of time, which constitutes his night. His year consists of 360 such days and nights, and 100 such years is the length of his life, which is called a *para*. Further, a day of Brahmā comprises the periods of 14 Manus (*manvantara*), a Manu being a mythical regent of his period and progenitor of life therein. Each *manvantara* thus comprises 71 'four-age' periods, with a surplus, which is due to the impossibility of dividing 1000 'four-ages' exactly by 14, and is sometimes accounted for by assigning it to the intervals between the *manvantaras*. This is the reckoning generally set out, but variations are sometimes introduced incidentally, and the terms *yuga* and *kalpa* are sometimes used loosely. While most *Purāṇas* agree about Brahmā's duration and hold that Viṣṇu and Siva outlive him greatly, they differ as to which of these two endures longer according to their view whether Viṣṇu or Siva is the greater.

One 'four-age' period succeeds to another. When a *manvantara* closes, an interval occurs during which life ceases in the world, and the Manus, minor gods (all save Brahmā, Viṣṇu, and Siva), the seven *ṛṣis*, and the forefathers depart upwards to a high celestial sphere, and remain there for the duration of a Kṛta age in order to preserve life. Then they resume their activities as new persons under new names, and introduce the next *manvantara*, restoring all life in the world. So the *manvantaras* succeed one another, and at the end of the fourteenth, when Brahmā's day closes, occurs the great dissolution, called *naumitika pratisarga*. The three worlds are burnt

up by fire, and a deluge of rain dissolves everything into one vast ocean; life is reabsorbed into the god who sleeps on that ocean, and the three qualities become inactive in equilibrium; yet the seven great *ṛṣis* are said to persist in certain celestial worlds through his nights, watching him as he sleeps. Such is the close of the *kalpa*. When his night ends, he awakes and begins to create again. That dissolution does not involve the elementary principles evolved during the first three stages of creation, and as regards them a further dissolution is spoken of, called the *prakṛta pralaya*, wherein everything evolved from *prakṛti* disappears. Half of Brahmā's life has expired, and the second half has begun in its first *kalpa* called the *varāha*, in which six Manus have passed away, namely Svāyambhuva, Svārochisa, Auttama, Tāmāsa, Rāivata, and Chākṣuṣa; and Vaivasvata is the present Manu. The theory of the succession of the *kalpas*, *manvantaras*, and ages developed into the doctrine that succession implied repetition, that everything repeated itself in essentials in the *manvantaras* and in the 'four-age' periods. Brahmā, Viṣṇu, and Śiva outlived the dissolutions, and their existence was so vast that they were regarded as practically eternal; but Indra and the other gods were subordinate and temporary, holding their deity for a *manvantara* only. Each *manvantara* thus has its own subordinate gods and its own Manu, great *ṛṣis* and kings, who all come into existence at its beginning and pass away at its end. This scheme is carried out into such detail that their names are set out, not only for the present *manvantara*, but also for the past six and the seven that are yet future.

Since the Vedas were arranged and the *Purāṇa* compiled at the end of the Dvāpara age, this theory required that the same had been done in every Dvāpara age of the 'four-age' periods, and that a Vyāsa had appeared for that purpose. Hence it was necessary to propound a list of those Vyāsas. The list (mentioned above) of the 29 persons who handed down the *Brahmaṇḍa* and *Vāyu*, reduced to 28 by combining two names at one stage, seems to have suggested the idea that 28 Dvāparas had occurred. Certainly, however, that list (e.g., *Vāyu*, xxiii. 114 ff.), with a few variations, agrees with the names of the 28 Vyāsas; and consequently 27 'four-age' periods have elapsed in the Vaivasvata *manvantara*, and we are now living near the end of the Kali, or last age of the 28th period.

Manu Svāyambhuva's son Priyavrata, mentioned above, had seven sons, who became sovereigns of the seven continents (*dvīpas*) of which the earth consists, and their progeny peopled them. Thus the subject of geography is introduced. It is not always treated fully, but the general scheme stands thus:

The earth consists of a central circular continent named Jambudvīpa, around which the other continents form a series of concentric rings, namely, Plakṣa, Sālmala, Kuśa, Krauñcha, Śikha, and Puṣkara, the outermost; and these continents are separated by a similar series of six circular oceans alternating with them, namely, of salt water, sugarcane-juice, wine, clarified butter (*ghṛta*), curdled milk, and milk respectively. Each continent and each ocean is twice the size of that which it encircles. The central continent Jambū is alone subject to the law of the four ages. It was assigned to Priyavrata's son, Agnidhṛa, and has nine countries which were named after his nine sons. Ilāvṛta is in the middle, and is flanked on the west by Ketumāla and on the east by Bhadrāśva. Along the north of these lie Rāmyaka, the Northern Kurus, and Hiranmaya; and along the south lie Harivarṣa, Nābhī, and Kimpuruṣa. In the middle of Ilāvṛta is the immense fabulous mountain Meru, on which are the gods' abodes, with Brahmā's in the centre. Various mountains, forests, and lakes are mentioned in those countries. The Ganges flows down Meru and divides into four great streams, which flow away, the Sitā east, the Alaknandā south, the Varuṇa west, and the Somā, or Bhadrā, north. Nābhī's country was named Bhārata after his grandson Bharata, but this is a mere fancy. Bhārata again has nine divisions named Indradvīpa, Kāserumant, Tāmravarṣa, Gabhastimant, Nāgadvīpa, Saumya, Gāndharva, Vārūna, and another which appears to be India proper and is more strictly called Bhārata. The accounts then deal with India itself, its dimensions, mountains, rivers, and peoples, which some *Purāṇas* set out in copious lists. The subject of cosmogony leads, on the one side, to a notice of the nether regions with sometimes a description of the hells, and, on the other, to a description mainly mythological of the sun, moon, planets, stars, and the celestial worlds.

The remaining two of the five special subjects of the *Purāṇas* are ancient genealogies and accounts of persons mentioned therein. They profess to give ancient history as handed down by tradition, and they certainly give the only approach to connected ancient history that is to be found in Sanskrit books. They are full of interest, but lie rather outside the scope of this article, and can

therefore only be touched briefly. They begin with the progeny of the great *ṛṣis*, which is mythical, and pass on to the genealogies of the chief dynasties of kings who reigned for centuries in N. India and lists of the great Brāhman families. That the genealogies are not spurious but have some historical value is proved by the fact that they (and they alone in Sanskrit books) furnish an account of how the result that is known as the Aryan occupation of India took place through the growth and conquests of a distinct race, which they call Aila, and which they suggest entered India from the north.

Of the five subjects proper to *Purāṇas* the first three concern early religion and mythology, and the other two deal with traditional history—subject, of course, to later co-ordination, restatement, and amplification in both groups. The former were the general product of speculative thought, but the latter were based on actual history, though both are now open to the doubt how far tradition has preserved early beliefs and historical facts faithfully and correctly. The former were naturally shaped out and transmitted by religious teachers for general instruction; the latter were composed by royal bards and ballad-makers, *i.e.* *sūtas*, and were handed down by them. The distinction is important. The *Purāṇas* thus drew their subject-matter from two sources. These old subjects (*paurāṇikī kathā*) provided general instruction and pleasure, and it is often said that princes and *munis* entertained themselves with their recital. The traditions found in the *Purāṇas* were not primarily borrowed from the *Mahābhārata*, for they contain old tales and genealogies which are not to be found in that epic, and the stories which appear in both are not always narrated in the same way. Both are based on the same body of ancient tradition, and the *Purāṇas* incorporated old matters independently, though probably later additions to the *Purāṇas* have been borrowed from the epic, and possibly also *vice versa*. Of the stories told about ancient kings and *ṛṣis* some appear to be ancient, but others are certainly either later fabrications or at best genuine tradition seriously corrupted. They may generally be broadly divided into two classes: those that appear to be Kṣatriya stories, *i.e.* stories narrating occurrences from the point of view of the royal and military class (which often appear to be ancient), and those that are Brāhmanical, the difference between them being similar to the distinction between tales of chivalry and legends of the saints. References to the heroes of the epic are not infrequent, but its story is not narrated except in the few cases where an abstract of it is given, as in the *Agni*, *Padma*, and *Garuḍa*, which also summarize the *Harivaṃśa*.

4. Additions, interpolations, and losses.—The *Purāṇas*, like the epic, have grown by continual additions and interpolations, as abundant evidence shows, both direct and indirect. The *Linga* (II. 1v. 36 f.), *e.g.*, says that it contains 108 chapters in its first part and 46 in its second; this is correct as regards the former, but the latter now contains 55 chapters. Again, the *Bhaviṣya* (I. i. 103-105) says that it contained 12,000 verses and was augmented by various stories to 50,000, just as the *Skanda* was amplified. The indirect evidence is of various kinds. (a) Many *Purāṇas* mention the eighteen *Purāṇas*, which they could not all do unless the enumeration were an addition made after all the eighteen had become established. In the *Padma*, which professes to have been recited by the *sūta*, pt. vi. continues pt. iv., ignoring pt. v., which begins as a separate *Purāṇa* recited by the *sūta*'s son. (b) The same matter is sometimes told more than once; thus the story of the sun is told twice in the *Mārkaṇ-*

deya and that of Jalandhara is told twice in pt. vi. of the *Padma*. (c) Some of the stories are manifestly late, such as the portion of the *Brahma* which dilates on the sanctity of Puruṣottamakṣetra in Orissa. (d) There are differences in language in some *Purāṇas*, certain passages being marked by irregularities in grammar and metre not found in the remainder of the same work. (e) Different and sometimes inconsistent doctrines occur in various places even in one and the same *Purāṇa*, as is noticeable in the two parts of the *Kūrma*. Addition and interpolation have been practised continually; thus the *Garuda* quotes from the *Mārkaṇḍeya* and Yājñavalkya's law-book; and, since the *Bhaviṣya* professes to deal with the future, the edition published lately in Bombay has boldly brought its prophetic account down to the 19th cent., besides incorporating a summary of the Biblical account from Adam to Abraham. It often happens that the same passage is found in several *Purāṇas*, so that they either borrowed from one another or borrowed from a common original. Indeed, it almost seems from many peculiarities, such, e.g., as that noticed above in the case of the *Padma* and the triple structure of the *Vāmana*, as if there had been different *Purāṇas* bearing the same name, or as if a particular *Purāṇa* existed with different versions, and that they were brought together and formed into a whole. On the other hand, there have been losses, as much evidence shows. In the *Padma*, e.g., pt. v. says that the *Padma* which it introduces consisted of five sections, but that part contains only the first section called the *Paṇṣkaraparvan*, and the other four appear to be missing, while the entire *Padma* has six parts. Again, a comparison of *Brahmāṇḍa*, III. lxxiv. 103 f., with the corresponding passage in the *Vāyu* (xcix. 101-291) shows that about 190 verses have been lost in the former. The arrangement of the contents of the *Purāṇas* accords with these conclusions, for in several there is no logical scheme, and matters are expounded piecemeal as if by additions. On the other hand, some *Purāṇas* deal with their subject-matter on a consistent plan, such as the *Viṣṇu*, *Agni*, and *Bhāgavata*, betraying apparently a late stage, when the matter had been co-ordinated and systematized. The *Viṣṇu* is one of the best arranged, yet it hardly professes to be early, for it declares that it was compiled out of the four 'root-*Purāṇas*' mentioned above.

5. Additional subjects.—The *Purāṇas* claim to expound, besides the five characteristic subjects, the four subjects which comprise all human endeavour—righteousness (*dharma*), wealth (*artha*), love (*kāma*), and final emancipation from existence (*mokṣa*). These, with the copious religious teaching now found in the *Purāṇas*, are Brāhmanical additions to the original five subjects. Of the four ages the *Kṛta* was the golden age when righteousness was perfect, but it deteriorated through the *Tretā* and *Dvāpara*, until it has well-nigh perished in this evil *Kali* age. This is figuratively expressed in the adage that *dharma* had four legs for its support in the *Kṛta* age, three in the *Tretā*, two in the *Dvāpara*, and has only one in the *Kali* age.

6. Theology.—The theology taught is heterogeneous, and most deities that enjoyed a certain amount of popular acceptance can be found praised in the *Purāṇas*. Of the Vedic gods, Indra and Agni retain a prominent position, and Indra is the chief of the gods, i.e. generally of the subordinate gods, those other than Brahṁā, Viṣṇu, and Śiva. Varuna is the god of the ocean and appears at times, but Mitra has disappeared. The sun (*Sūrya*) holds an important position, and the names Vivasvant, Savitr, Aditya, and Pūṣan are freely given to him. He is highly extolled in the *Brahma*, *Mārkaṇḍeya*, *Agni*, *Padma*, and *Garuda*, but his

worship is most fully inculcated in the *Bhaviṣya* (I. xlviii. ff.), which says that it was introduced with the sun's priests from Śākadvīpa into the Panjāb by Kṛṣṇa's son, Sāmba, who suffered from leprosy and was cured by worshipping the sun. It calls the sun's priests *magas* and *bhojakas*. The sun's children were Manu Vairasvata, Yama, and the Āśvins, who are celestial physicians. Yama is the god of the dead, especially of the wicked dead, and holds a dread position as the punisher of sinners in his hells. Vāyu, also called Mātariśvan, is a god of some note. Soma is the moon. Bhaspati is the divine priest. The *gandharvas* are celestial musicians, and the *apsarasas* are celestial nymphs and courtesans, who often play the part of beguiling *ṛsis*, whose austerities (*tapas*) awakened fear in the gods. On the evil side were the *asuras*, who were demons. *Daiṭyas*, *dānavas*, and *rākṣasas* meant in the earlier traditions hostile races, sometimes uncivilized and always hated and dreaded; hence these names took on the meaning of 'demons,' especially in passages that appear to be late, where they and also *asura* are treated sometimes as interchangeable. Midway was Kubera Vairavāna, the god of riches, whose attendants were the *yakṣas* and *gṛhyakṣas*. In late *Purāṇas* or passages local cults are commended, such as the worship of Manasā, the goddess of snakes, and the *tulasī*-plant, the holy basil; and the veneration of the cow is noticed in the *Padma* (v. xlv. 122-190).

The three chief gods are Brahṁā, Viṣṇu, and Śiva. Brahṁā is the creator of the world, Viṣṇu its preserver, and Śiva its destroyer. Brahṁā is sometimes extolled as the highest, as in the *Mārkaṇḍeya* (xlv. f.), but is generally held to be inferior to Viṣṇu and Śiva, and the relative supremacy of these two is the higher theology taught. The *Purāṇas* are sometimes classified according to their teaching on this subject and the three qualities, goodness, passion, and darkness. The *Matsya* (liii. 68 f.) says that the *Purāṇas* which extol Viṣṇu as supreme are called *sāttvikā*, 'characterized by goodness'; those that extol Śiva and Agni are *tāmāsā*, 'characterized by darkness'; and those that extol Brahṁā are *rājasā*, 'characterized by passion'; but these distinctions are purely fanciful. It adds a fourth class, those which extol the goddess Sarasvatī and the forefathers (*pitṛs*) and which it calls *saṅkīrṇā*, 'mixed'; but no *Purāṇas* display this character, though Sarasvatī is praised here and there and a high position is assigned sometimes to the forefathers (see below, (c)). The *Padma* (vi. cclxiv. 81-84) says much the same, and distributes the *Purāṇas* in sixes thus—as *sāttvikā*, the *Viṣṇu*, *Nāradya*, *Bhāgavata*, *Garuda*, *Padma*, and *Varāha*; as *tāmāsā*, the *Matsya*, *Kūrma*, *Linga*, *Śiva*, *Agni*, and *Skanda*; and, as *rājasā*, the *Brahmāṇḍa*, *Brahmavivarta*, *Mārkaṇḍeya*, *Brahma*, *Vāmana*, and *Bhaviṣya*. The *Vāyu* must be understood to be included in the *Brahmāṇḍa*. But this division is only roughly true, because the *Agni*, e.g., gives instruction about the worship of both Viṣṇu and Śiva. The *Padma* (loc. cit. 85) further declares that the *sāttvikā* lead one to final emancipation from existence, the *rājasā* to heaven, and the *tāmāsā* to hell; but this estimate is merely Vaiṣṇavite, for the *Śiva* (ii. ii. 63), which is classed lowest as *tāmāsā*, declares that a man who reads it completely and respectfully attains final emancipation even while he is alive, and that the gods attain thereto only by attaching themselves to Śiva. The Sāivite *Purāṇas* show a difference from the Vaiṣṇavite in that, though they make Śiva supreme, yet they also extol Viṣṇu highly; and they almost suggest that the exaltation of Śiva was a later doctrine imposed on that of Viṣṇu's supremacy, as appears indeed to be implied in the *Śiva Purāṇa* (I. ii. 5-11).

The rival advocacy of Viṣṇu and Śiva was carried to the farthest length, and the partisan *Purāṇas* sometimes introduce these gods themselves, each as explicitly declaring the other's supremacy. The rivalry thus reached an impasse, from which the only escape was to affirm that both were one and the same god, in different persons. This is often taught and, with the corollary that Brahmā also was one with them, constituted the highest theology inculcated—the triple manifestation (*tri-mūrti*). Thus the three were one, yet it was open to a partisan to maintain that Viṣṇu or Śiva was the true and chief person, of whom the other was a manifestation; and so a *Purāṇa* is able to extol one or the other as supreme, while affirming their unity. This monotheistic conclusion carried the teaching to the Vedānta standpoint, that God alone really exists, eternal, immutable, that He is everything, and that everything animate and inanimate is but a portion of Him. This doctrine is elaborated and enforced most in Vaiṣṇavite *Purāṇas*, and is stated fully and clearly in the *Viṣṇu*. It is essentially the same as that expounded in the *Bhagavad-Gītā*, except that it does not go so far in enunciating that the whole world is *māyā*, 'illusion'—a view which is mentioned in places, but is stigmatized as Buddhist and bad by the *Padma* (vi. cclxiii. 70). The highest religious philosophy is therefore monotheistic and pantheistic; its popular presentment is polytheistic. The doctrine of transmigration is involved in it and is thoroughly inculcated, both as a consequence entailed on all human beings by their actions (*karma*), often with elaborate and fanciful apportionments of particular evil conditions to particular sins, and as an explanation of misfortunes, serving to solve or justify distressing situations and perplexing problems.

(a) *Viṣṇu*.—Viṣṇu is said to have ten incarnations. The lists have some variations, chiefly as regards Buddha; but the following list is a general one. In it the first five incarnations are mythological, the next four have a historical basis, and the tenth is still future:

(1) As a fish (*matsya*), when he saved Manu Vaivasvata amid the deluge; and when the *Matsya* says it was declared by him to Manu; (2) as a tortoise (*kūṁṁ*), when he supported the mountain Mandara at the churning of the ocean, and Lakṣmī, divine nectar, and other things were produced; the *Kūrma* says that in that form he declared it; (3) as a boar (*varāha*), when he raised up on his tusk the earth that had sunk to the bottom of the universal ocean; and when the *Varāha* says he declared it to the earth; (4) as the man-lion (*nara-siṁha*), when he delivered the gods from Hiraṇyakaśipu and other demons who had vanquished them; (5) as a dwarf (*vāmana*), when he delivered the gods from the demon king Bali, and accomplished his purpose by obtaining from Bali the boon of having as much space as he could cover in three steps, (6) as the Brahman Rāma, son of Jamsadagni (sometimes called Paraśu-Rāma, 'Rāma with the axe'), who destroyed all the Kṣatriyas off the earth twenty-one times, in revenge for the murder of his father by the sons of Arjuna Kārtavīrya, king of the Mahāyāsa; (7) as Rāma, son of Daśaratha, king of Oudh (sometimes called Rāmachandra), whose wife was Sītā, and whose story is the subject of the great epic, the *Rāmāyaṇa*; (8) as Kṛṣṇa, who reigned at Dvārakā in Gujarāt over the Pāṇḍavas, the friend of the Pāṇḍavas and one of the chief figures in the *Mahābhārata*; (9) as Buddha, who founded Buddhism; (10) as a warrior, Kalki or Kalkin, who will appear at the close of this Kali age, overthrow all adversaries, and re-establish pure Hinduism.

All these incarnations are often mentioned, and sometimes described at great length. The sixth often appears in the Hāhaya genealogy. The seventh is narrated in the *Agni* and *Padma* as a condensation of the epic, and the *Padma* (iv. cxii.) relates what it calls the ancient *Rāmāyaṇa*. The ninth is least often mentioned. The eighth, the story of Kṛṣṇa, is a favourite topic; his life, doings, and youthful frolics are often described at very great length; and his favourite shepherdess, Rādhā, is deified in the *Brahmavai-varta* and the *Padma*. Kṛṣṇa is completely identified with Viṣṇu—so much so that his name, his patronymic

Vāsudeva, and others of his epithets are habitually used as synonyms of Viṣṇu in his purely divine character. These are the well established incarnations, but others less acknowledged are also mentioned—indeed, the *Garuda* and *Bhāgavata* mention 22, and add that his incarnations were really innumerable. The superlative work attributed to Vyāsa naturally created the belief that he was no ordinary *ṛṣi*, but a divine incarnation; consequently he is often called an incarnation of Viṣṇu, and so also all the other Vyāsas mentioned above; while the *Kūrma* in its second part (xi. 136 f.) makes him an incarnation of Śiva also.

(b) *Śiva*.—The position of Śiva differs markedly from that of Viṣṇu. Viṣṇu is celestial and takes no immediate part in terrestrial affairs except when incarnated, but Śiva is largely a terrestrial god. He is often spoken of as dwelling human-wise on the Himalayas or in Benares, and as practising human asceticism. Similarly with their wives. Viṣṇu's wife, Lakṣmī, is a beautiful abstraction, but Śiva's wife, Umā or Pārvatī, is very realistic. She was Satī re-born as the daughter of the Himalaya range. Śiva's wooing and wedding of Pārvatī and their conjugal life and conversation are often introduced and sometimes narrated at length, yet always in wholly human fashion. They had two sons, Skanda or Kārtikeya, and Gaṇeśa, the god of wisdom. Śiva takes part in terrestrial affairs and especially in contests between the gods and the demons, who are always terrestrial, even when the nether world is their special abode. Śiva and Rudra are synonymous. Pārvatī, especially in her terrible forms, and Skanda also join in the battles. Stories of this kind are often narrated, such as the destruction of Tripura and of the demons Andhaka, Śumbha, Niśumbha, Mahiṣa, and Jalandhara. Her victory over the demons is the theme of the *Devīmāhātmya* in the *Mārkaṇḍeya Purāṇa*—a gruesome story much esteemed by the worshippers of Kālī, who is identified with her; and the worship of her as Durgā is inculcated in the *Padma*, *Brahmavai-varta*, and *Garuda*. Śiva was worshipped as Paśupati, 'the lord of cattle,' beneath whom all the gods and all creatures ranked as mere cattle; and this Paśupati cult is commended in Saivite *Purāṇas*, but reprobated in others. Śiva had thus no genuine incarnations, yet his worshippers propounded that he had 28 incarnations contemporary with the 28 Vyāsas, and their names are mentioned in the *Vāyu* (xxiii. 114 ff.), *Linga*, and *Śiva*, but they were merely *ṛṣis* who expounded *yoga*, 'ascetic devotion.' Śiva's *linga*, the phallus, is often mentioned and extolled, and its worship is well established in *Purāṇas* that appear to be late, and especially in the *Linga* (ii. xlv. 13-21), which exalts Śiva in this form as above all gods and as containing everything. Instructions are given about its construction, establishment, and worship. The female counterpart, the *yonī*, is not noticed much, and then only in late *Purāṇas*. The *Vāmana* identifies it with Pārvatī, but the *Padma* with Sītā. The *śaktis*, 'female energies,' are not often mentioned and then generally as somewhat abstract conceptions. They proceed from Brahmā, Viṣṇu, and Śiva in the *Varāha* (xc. ff.) and *Mārkaṇḍeya* (lxxxviii.); they are identified with, or related closely to, Pārvatī in the *Kūrma*. The worship of the *śaktis*, however, existed, for the *Kūrma* (i. xxx. 25) reprobates the Vāmāchārin, or obscene left-hand votaries.

(c) *Pitṛs*.—As already mentioned, the forefathers (*pitṛ*, 'father') are accorded high dignity sometimes. This term means a man's dead ancestors, but in this connexion denotes a class, comprising seven groups, of abstract forefathers, divine yet hardly personal, for they are always spoken of

collectively. The *Brahmāṇḍa* (II. xxi., III. ix.-xii.) and *Vāyu* (I. lvi., lxxi.-lxxvi.) especially magnify them, and similar references occur in the *Matsya* (xiii., xv.), *Mārkaṇḍeya* (xcvi. f.), *Padma*, and *Garuda*. They are ranked with the gods and even called the earliest gods; they and the gods stand to each other in reciprocal relationship as fathers, and they are also the gods' gods, to whom the gods offer sacrifice. They and the gods come into existence with each *manvantara*, and pass upward to a high celestial world at its close, but apparently do not perish till the universal dissolution. They perpetuate in some undefined way the existence of mankind through the ages. They have a path in the sky between the sun's southern course and the star Canopus, and Yama is their king. They are particularly connected with the *śrāddha*—the sacrifice offered in honour of and for the benefit of one's dead ancestors—and thereby confer blessings on their worshippers. This teaching appears to be ancient, and is not found in the latest *Purāṇas*. See ANCESTOR-WORSHIP (Indian).

(d) *Heresy*.—Heretics and heretical teaching are often alluded to. Such teaching is always sharply and contemptuously reprobated, especially in the form of Jainism and more particularly Buddhism, though often without being named; and the distinction between them is not always made or observed. Books that teach heretical doctrines are called *moha-śāstras*, 'scriptures of delusion,' and are accounted for as the work of Viṣṇu or Śiva or both, or Pārvatī, intended to beguile haters of the gods and Vedas to destruction. The longest notice of such teaching occurs in the *Viṣṇu* (III. xvii. f.), but is largely fanciful, for it makes both Jainism and Buddhism originate in the Narbada valley. The *Garuda* (i. 32) says that Viṣṇu became incarnate as a Jina's son named Buddha in Behār; and the *Agni* (xvi. 1-3) says, as Suddhodana's son who beguiled *daityas*, 'demons,' to become Buddhists. The *Kūrma* (I. xvi. 117) denounces also the Pañcharātras (who are followers of Viṣṇu) and more particularly the Śaivite sects, Kāpālas, Bhairavas, Pāsupatas, and Yāmālas. The *Brahmāṇḍa* (III. xiv. 39-42) and *Vāyu* (lxxviii. 30-33) class contemptuously among 'the naked and such like' both Buddhist and Jain orders, also Brāhmins who pretentiously wore matted locks or shaved their heads, and those, too, who pretentiously observed religious exercises or uttered prayers.

7. *Dharma*.—Under the head of *dharma*, 'righteousness,' the *Purāṇas* provide a great deal of religious teaching, both popular and what is more strictly Brāhmanical. All deeds, both good and evil, produce necessary consequences, which a man must undergo. Good deeds may raise a man after death to *svarga*, 'heaven'; evil deeds certainly entail punishment. The doctrine of sin and its punishment is clearly laid down. At times lists of sins are set out, together with the penances by which they may be expiated and the specific punishments provided for them in the various hells. Also, and sometimes in this connexion, a description of the hells is given with more or less fullness and ingenuity. As regards the popular teaching, the most striking features are catholicity and the provident care to make religious practice and the acquisition of blessings easy for all. It deals with sacred places (*tīrthas*) and pilgrimages to them, religious exercises, gifts, prayers, and spells, and miscellaneous observances; many of the provisions are expressly declared to be available to women and the lowest classes, thus disregarding mere caste and personal limitations.

8. *Tīrthas*, etc.—The subject of *tīrthas* and the benefits which they confer on pilgrims occupies a very large space, being a favourite subject, for it

offered absolutions and indulgences to the people and brought profit to the Brāhmins. Sometimes itineraries are set out, instructing the pilgrim what he should do at each place and what benefits he would gain thereby; and at other times these matters are woven into a discourse on some point of belief or conduct as edifying illustrations. Some *Purāṇas* deal with *tīrthas* comprehensively, while others advocate the merits of particular spots; and in connexion with each important *tīrtha* is generally narrated the tale which explained its fame and merits. The sacred places in N. India receive most attention and praise; Benares, Allahābād, and Gaya were the chief centres, while the Ganges is often pronounced supreme. But the doctrine of *tīrthas* was firmly established in the Deccan also, and many places there are extolled. The rivers Narbada and Godāvarī attained a sanctity hardly inferior to that of the Ganges, and were crowded with *tīrthas*. The merits of the Narbada are expounded in the *Matsya* (clxxxvi.-cxci.), *Agni* (cxiii.), *Padma*, and *Kūrma* (II. xxxix.-xli.), and those of the Godāvarī in the *Brahma* (lxx.-clxxv.) especially. The explanatory tales are sometimes simple, with possibly a real basis, but generally are mythological or fanciful; and all the resources of Hindu mythology with its myriads of divine and semi-divine beings, together with accretions from Dravidian beliefs such as the reverence towards the monkey Hanumān, were available either for the new localization of some old legend or for the fabrication of pious fables, in order to furnish a *tīrtha* with a title to sanctity. Pilgrimages were open to every one; and, though the toil and expense may have been burdensome sometimes, yet these were far outweighed by the benefit-promised. Some places conferred heavenly joys hereafter, others delivered the pilgrim from the evil of being born again, and others bestowed plenary absolution from all sin; and many shrines proclaimed their power to free even from the deadly sin of brahmanicide. Gifts also procured blessings for the donors and were lucrative to the Brāhmins. The making of gifts is warmly commended and sometimes expounded with great detail, as in the *Bhaviṣya* and *Matsya*, as regards both their manifold varieties, from the most costly munificence to simple almsgiving, and also the occasions when and the procedure with which they should be made. Further, various religious exercises (*vrata*) are lauded as procuring benefits, especially those prescribed for certain auspicious days and months, and this subject is sometimes expounded minutely, as in the *Matsya*, *Agni*, *Garuda*, *Padma*, and *Bhaviṣya*. Even occult practices to effect both good and harm are commended and explained, such as mystical formulæ, magical spells, and prophylactic verses, in the later *Purāṇas* such as the *Agni*, *Brahmavaivarta*, and *Garuda*.

The readiness displayed in all these ways to provide relief from sin and enable every one to acquire substantial future blessings was carried so far that in the *Matsya* (lxix. 2) and *Padma* (III. i. 5) the question how a man could gain final emancipation from existence with the least amount of asceticism is naively asked and soberly answered. It may well be surmised that these features of popular religion were not haphazard. Brāhmanism evidently found it expedient to smooth the path of religion for the people, and this suggests that it was outbidding other claims to popular favour. But, whether deliberately provided or not, these easy ways of practising religion and reaping blessings must have presented strong attractions, compared with the self-regimen that Buddhism required of its adherents in this life and the dreary

future existences that it announced for the ordinary man. It is probable, therefore, that all this popular teaching contained in the *Purāṇas* materially helped the Brāhmins to stem the spread of Buddhism and finally to oust it from general acceptance.

9. Caste and ritual.—The more special Brāhmanical instruction lays down the rules governing the castes. Ordinarily the castes are taken as four—the ancient theoretical number—viz. the Brāhmins, the Kṣatriyas, or military body, the Vaiśyas, or trading classes, and the Śūdras, who comprised all the lowest strata; yet the existence of other castes, whose origin is theoretically explained as the intermixture of those four castes, is noticed at times, though only in a general way. For the most part it is the Brāhman's life that is considered worthy of description, and the duties of the other castes are summed up briefly. The Brāhman's four stages, as the religious student, the married householder, the forest recluse, and the ascetic mendicant, are explained, often at much length. Directions are often given about sacrifices, purifications, sacred texts, and various rites and ceremonies, especially the *śrāddha*. Information is offered about images and their worship in the *Matsya*, *Bhaviṣya*, and *Varāha*. Elaborate instruction is sometimes set out about 'virtuous custom,' or correct behaviour in all matters, religious, social, and personal. All these subjects appear to be later additions, and are generally expounded in the encyclopædic *Agni*.

10. Kāma.—Next may be mentioned the subject of *kāma*, 'love,' in so far as it is noticed in the *Purāṇas*. It may be regarded as illustrated by many stories. Such treatment as it receives deals mainly with women. Rules are laid down about marriage, and personal characteristics are sometimes described. The care that a wife should show towards her husband and relatives is explained in the *Bhaviṣya*; and as examples of perfect wifehood are often cited Sītā, the much-tried wife of Rāma, and Sāvitrī, who saved her husband Satyavānt by her devotion. The practice of *sati*—a widow's immolating herself on her husband's funeral pyre—is alluded to sometimes, but ordinarily the subject of widowhood is left untouched, as if it needed no particular notice. Lastly, rules are laid down even for courtesans, which it is said were originally given to Kṛṣṇa's wives after his death.

11. Artha, etc.—The subject of *artha*, 'wealth,' is not itself discussed in the *Purāṇas*, but the welfare of a king and his subjects falls partly under this title and partly under *dharma*, and is the subject of works called *artha-śāstras*. This is dealt with under the title of *rāja-dharma*, 'the righteous functions of kings,' and is expounded with regard to a king's personal and religious duties, civil, criminal, fiscal, and military administration, the conduct of war and peace, and the safeguarding of his realm from calamities. The *Matsya* treats the subject fully, and so also the *Agni*, as expounded by Puṣkara; while the *Garuda* lays down wise maxims, both generally and with special reference to kings. Here may be also noticed various other subjects that are sometimes expounded. The *Agni* and *Garuda* treat of medicine and veterinary science, architecture (which is also in the *Matsya*), the scrutiny of gems, astrology, and grammar. The *Agni* further treats of archery, poetry, metre, the drama, and dancing. Many *Purāṇas* (e.g., *Vāyu*, lxxxvii.) discourse on music, generally in connexion with the fabled visit of an ancient king of Gujārāt to Brahṁa's court, where the *gandharvas* were the musicians.

12. Mokṣa.—The fourth additional subject is

mokṣa (q.v.), 'final emancipation from existence.' Transmigration was believed in unquestioningly, and every man had to experience and so consume the consequences of his actions in subsequent lives. Some shrines promised deliverance from existence, but generally religious rites and observances, pilgrimages, and such like conduced merely to amelioration of future existence. That was as much as the ordinary man was capable of, but did not satisfy earnest souls who desired to be rid of re-birth and obtain absorption into the Supreme Soul. To attain to this was the highest aim of philosophical religion, and two ways to this end were taught, namely, *yoga*, 'complete ascetic mediation on and devotion to the Supreme Soul,' and *bhakti*, 'loving faith.' Pure ascetic self-mortification (*tapas*) could enable a man to acquire and exercise superhuman knowledge, faculties, and powers; and that is often described and held up to admiration in the marvellous stories of the ancient *ṛsis*; but there its fruit is treated rather as an object in itself, for the doctrine of final emancipation was not the highest aim of human aspiration in ancient times as it became established later. The *yoga* that achieved final emancipation was twofold: (1) *jñāna-yoga*, 'the *yoga* of spiritual knowledge,' which was exclusive, ascetic, and contemplative devotion, rejecting all works; and (2) *karma-yoga*, 'the *yoga* of works,' which consisted in the full and single-minded performance of all one's earthly duties, and was also called *Sāṅkhya-yoga*. Both kinds are taught and are contrasted sometimes, but on the whole the *yoga* of spiritual knowledge is more highly commended. The *Vāyu*, *Brahma*, *Viṣṇu*, and *Līṅga* give instruction about *yoga*, especially the *yoga* of spiritual knowledge, and the *Viṣṇu* extols it highly. On the other hand, the *Matsya* (li.) lauds the *yoga* of works as far superior to that of spiritual knowledge, and declares that it is the *yoga* of works that produces such knowledge and the *yoga* of such knowledge, and that there can be no spiritual knowledge without it. The *Kārmā* (i. iii. 21-27), however, commends a middle course in a combination of both, because works lead on to spiritual knowledge. The other path, *bhakti*, is connected indeed with Śiva, but more especially with Viṣṇu and Kṛṣṇa, who are completely identified. Faith in Śiva is alluded to incidentally in various *Purāṇas*, and is inculcated in the *Līṅga* (i. viii.) and in the *Śiva* (vi. viii.), which bases it on knowledge. Faith in Viṣṇu is not only alluded to often, but is enjoined in the *Brahma*, *Brahmavaivarta*, and *Garuda*, is expounded in its various forms in the *Padma* (iv. lxxxv.), and is the special theme of the *Bhāgavata*. The *Brahma* (ccxxviii. 8-13) says that one rises through faith in Agni, the sun, and Śiva successively to faith in Viṣṇu, that men of even the very lowest classes can possess it, and that man fails to reach it because of Viṣṇu's *māyā*, 'illusion.' The teaching of the *Bhāgavad-Gītā* on these subjects is summarized in the *Agni* (ccclxxx.), *Garuda* (ccxix), and *Padma* (vi. clxxi. ff.). Faith in Brahṁa also is expounded in the *Padma* (v. xv. 163-192) similarly to faith in Viṣṇu; and faith in the sun is inculcated in the *Bhaviṣya* (i. xlvi. ff.). The *Padma*, moreover, in a late allegory personifying *bhakti* as a woman, says:

Bhakti was born in Drāvida, grew up in Karpātaka, became worn out in Mahārāṣṭra and Gujārā, sought refuge with her two sons, Jñāna (spiritual knowledge) and Vairāgya (passionlessness), in Vṛndāvana, and regained her vigour there (vi. clxxix. 51-60); and it concludes, 'Enough of vrātas, tīrthas, yogas, sacrifices and discourses about knowledge, faith alone indeed bestows final emancipation' (vi. cxc. 22).

13. Age of the *Purāṇas*.—The age of the *Purāṇas* is a question much disputed and quite unsettled. In a general way it is not difficult to perceive differences of age in the *Purāṇas* collec-

tively and in the component parts of a single *Purāṇa*; but the *Purāṇas* (except the latest), as they exist now, can hardly be assigned to any definite age, because additions and modifications have been made, as shown above, and they now present the combined results of many centuries. While, then, it is required that the different strata in their contents should be distinguished as far as possible, the important question is, not so much What date do the latest additions prove for any *Purāṇa*? as What dates do its earliest features indicate? Tradition says, as already mentioned, that Vyāsa, who was alive at the time of the great Bhārata battle, and his disciple, the *sūta*, compiled the first *Purāṇa*. That a collection of ancient traditions was made not long after that period receives strong confirmation from two patent facts: (1) that the royal genealogies (which are given in most *Purāṇas*) terminate at that stage, the three chief lines only being continued later in a few *Purāṇas* and then professedly as a prophetic addition; and (2) that stories of the kings mentioned in the genealogies stop short at that stage except as regards the next two Paurava kings, Parīkṣit and Janamejaya. These two facts suggest strongly that the period following the great battle was the time which determined the lower limit of ancient tradition, i.e. when ancient tradition was collected regarding genealogies and stories about kings—the two out of the five subjects characteristic of *Purāṇas* that admit of chronological scrutiny. Hence it is probable that the first *Purāṇa* was compiled about that time, and the four 'root-*Purāṇas*' soon afterwards. Those original *Purāṇas* do not exist now as such; the present *Purāṇas* have been developed out of them, as the *Viṣṇu* expressly asserts about itself; yet portions of those *Purāṇas* may survive embedded in existing *Purāṇas*, and there is no good reason to doubt that the royal genealogies and their incidental notices of kings mentioned therein are really ancient matter. *Purāṇas* are cited as authorities, and a *Bhaviṣyat* in particular, in the *Āpastamba Dharma-sūtra*, which is not later than the 3rd cent. B.C. and may be nearly two centuries older. Moreover, epigraphic evidence, in the shape of verses quoted in land-grants which are dated, shows that even *Purāṇas* which do not appear to be early must have been in existence in the 4th cent. A.D. at the latest. On the other hand, some *Purāṇas* are no doubt later still, and the *Bhāgavata* (probably

not before 8th cent. A.D.) is the most striking instance of such. Further, whatever the age of any *Purāṇa* may be substantially, it has undoubtedly been augmented and modified later than the 4th century. Various points which touch the relative age of the *Purāṇas* have been noticed in the course of this article, but, until the *Purāṇas* have been studied far more carefully than they hitherto have been (and they deserve such study), it is impossible to affirm anything positive about their ages. A preliminary estimate of the older matter, however, may be offered thus. The oldest appear to be the *Brahmaṇḍa* and *Vāyu*, and the *Matsya* also, though it has large later additions. The latest seem to be the *Brahmavaiivarta*, *Siva*, *Vāmana*, and *Bhāgavata*, the last of which may be called 'the Bible of the worshippers of Viṣṇu.' The others appear to be intermediate, and among them an early place may probably be assigned to the *Mārkaṇḍeya* and *Brahma*, the last often styled the *Ādipurāṇa*, 'original *Purāṇa*,' though a large part of its contents is certainly not ancient. The *Padma* has old matter in so far as it has affinities with the *Matsya*, but the bulk of it is late, and some of its tales show a stage of transition to the moral fables of the *Pañchatantra* and *Hito-paleśa*.

14. *Upapurāṇas*.—Besides the *Purāṇas* proper there is a class of similar but later and inferior works called *Upapurāṇas*, 'minor *Purāṇas*.' They also are said to be eighteen in number, and their names are given thus in the *Kūrma* (I. i.), *Garuda* (ccxv.), and *Padma Purāṇa* (IV. cxi.) *Sanatkumāra*, *Narasimha*, *Skanda*, *Sivauharma*, *Durvāsas*, *Nāradya*, *Kāpila*, *Vāmana*, *Uśanas*, *Brahmaṇḍa*, *Vāruṇa*, *Kālikā*, *Māheśvara*, *Sāmba*, *Suura*, *Parāśara*, *Mārīcha*, and *Bhārgava*. The *Kūrma* and *Garuda* say that these were declared by the *mūnis*, but the *Padma* attributes them to Manu to give them spurious antiquity. Some of them have been published, but they have not been studied.

LITERATURE.—Mainly the *Purāṇas* themselves. See also H. H. Wilson's tr. of the *Viṣṇu Purāṇa*, ed. Fitzedward Hall, 6 vols., London, 1864-70, preface; *Le Bhāgavata Purāṇa*, ed. E. PURIFICATION (Introductory and Primitive).—I. Introductory remarks.—Among the more prominent factors both in the regulation of primitive life and in the determination of the character of religious ritual are the conception of the state of purity and the attendant ceremonies requisite for the preservation of that state, and for its recovery should it be impaired. It must be noted, however, that purity as conceived by the primitive mind has a wider significance than is usually attached to the modern use of the term among civilized peoples, in which emphasis is laid on the positive side of its meaning, purity

being almost regarded as the equivalent of continence or chastity. The difference is sometimes expressed by applying to the primitive idea the epithet 'ceremonial,' and further by pointing out the non-ethical character of ceremonial purity or 'ceremonial uncleanness.' But, apart from the question whether it is correct to deny the term 'ethical' to any body of rules governing conduct, it would be more correct to describe ceremonial purity as pre-ethical in that, as will appear, in certain respects it provides the basis for higher moral codes.

Owing to the emphasis on the negative and

inhibitory aspect, which is generally characteristic in primitive rules of conduct, it is as a negative state rather than a positive ideal that purity governs primitive action, while purificatory ceremonies have as their object protection from harmful influence rather than the attainment of righteousness even of a ceremonial kind. The state of purity would be defined by the primitive savage as one which resulted from such a course of action that defilement, whether by intentional or by inadvertent act, had been avoided.

Ceremonial purity is closely bound up with the class of ideas and rules of conduct described by the generalized term 'tabu.' Infringement of tabu, whether voluntary or involuntary, renders the individual subject to spiritual influence or, to use the Melanesian term, an adverse *mana*. As such he not only is a danger to himself, but may transmit the danger to others, and may affect the whole community. Hence certain restrictions are imposed upon him: he is isolated, his actions are regulated that they may not affect the well-being of the community—e.g., in such a matter as the food supply—until such time as he has been freed from danger by a purificatory ceremony or, in a case in which defilement is so great that the interests of the community are paramount, the adverse influence has been removed by his outlawry or death.

2. Loss of purity by defilement.—(a) *Death*.—Ceremonial defilement is closely connected with the occasions of crisis in human life, both social and natural, such as birth, initiation, puberty, marriage, and death. The ceremonies which accompany these crises are to a great degree both directly and indirectly purificatory in intent.

Death to the primitive mind is the greatest pollution of all—so much so that it commonly puts an end for a time to all activity over a social circle of varying extent. As the Bathonga say, 'the uncleanness of death kills if it is not properly treated.' Not only the corpse, but the possessions of the deceased, are regarded as infected with danger, which must be averted by ceremonial treatment. Many customs testify to the peril which is supposed to attach to contact with a dead body. There is a reluctance to handle it.

Among the Lillooets of N. America the last offices of preparing the body for the grave are performed by the shaman, whose innate magical qualities are regarded as in themselves sufficient to secure his immunity from harm. Among other Indian tribes of the north-west the duty of disposing of the body is performed by grave-diggers, who themselves become unclean and must for some days observe certain restrictions with regard to food, relations with their wives, and the like.¹ Among the Bathonga the grave-diggers, who are employed because of the great danger involved should relatives handle the body, plug their nostrils with the leaves of a strongly-scented plant as a protection against the dangerous influences of the corpse. They must undergo a rite of ablution and, with their wives, they are subjected to vapour baths. They also suffer from disabilities such as those mentioned in the case of the N. American Indians. They eat with special spoons, and for five days must not take food from the common plate.²

The wide-spread custom of placing implements, weapons, etc., in the grave for the use of the spirit is also no doubt to some extent an outcome of an idea that they are 'unlucky,' while the custom, almost equally wide-spread, of avoiding the use of the name of the deceased is based on a disinclination to afford an opportunity for an adverse influence to make itself felt by the use of a word which is associated with the 'unclean.' Such possessions as are not devoted to the spirit of the dead are frequently destroyed.

The Loucheux crush and break the dead man's beads. Among the Thompson Indians the *tepees* in which a man died is burned, or, if death took place in the more permanent hut, it is

washed with water in which juniper or tobacco has been steeped. In the lodge no one sleeps in the dead man's place for a considerable period.³ In Uganda the hut in which the queen, the king's mother, or one of his wives had died was destroyed. When a man dies, the main post of his house is taken down by his sister's son and is partially burned in the fire.⁴ Among the southern clans of the Bathonga the crown of leaves which tops the hut is taken down and used to block the doorway, where it remains for some time until the hut is ceremonially cleansed. The food and the gardens belonging to the dead man must also be purified.⁵

In these instances, which could be multiplied indefinitely, it is clear that material things which have been in intimate contact with the deceased are dangerous to those who handle them. The same danger attaches with added intensity to human beings, first those in his immediate circle—his wives, who are especially impure, and his relatives—and ultimately the whole community. Each is a centre of danger to others until a purificatory ceremony has removed the defilement. Hence the restrictions which surround any one who has become polluted aim at segregating him or her from the remainder of the community. Certain mourning customs, signs of grief and bereavement, such as allowing the hair and nails to grow and the wearing of special clothes, mark the mourners as a class apart;⁶ the resumption of their ordinary appearance and attire marks their return to a state of purity.

In addition to the custom of segregation, general among primitive peoples, special regulations, varying according to the locality and people, may have to be followed.

Among the various tribes of the Déné and Salish the segregation period extends in the case of mourners to a period of two moons, but in the case of widows for twelve months. The possibility that they may affect the food supply adversely by their action is recognized, and precautions against such a contingency are taken. They must observe a period of fast, varying from four days to four months, during which no fresh meat or hot food must be eaten, food must not be handled or cut, but must be torn by the teeth, and a special birch-bark cup, which is thrown away after four days, must be used for drinking. Not only must a widower refrain from eating venison, flesh of any kind, or fresh fish, and from smoking, but, should he touch another man's net or fish from his place, the net and the station become useless for the season. Both widows and widowers are regarded as specially unclean, the former may retire to the woods for a period of one year, performing purificatory ceremonies, bathing in streams, and taking sweat-baths, while the latter must in some cases watch the place where the corpse was buried for a like period, eating no fresh meat in that time.⁷

Among the Bathonga widows form a secret society. Until the great mourning the chief widow lives in a special hut in front of the mortuary hut, and the period of mourning of all the widows lasts for one year. Before another husband could be taken, the ceremony of 'throwing away the malediction of death' had to be performed, in which a stranger, ignorant of the circumstances, was deceived by the woman, and, by a ceremonial sexual act in the bush which was not completed, took upon himself the pollution and had to be purified in turn. Pollution by death is sufficiently strong to attack the members of the family who are absent even so far away as Johannesburg. A relative who returned home even months after the death could not enter the village or eat any food in it until purified. This people in fact recognize grades of impurity following on death, in which the degrees are first the widows, then the grave-diggers, thirdly the community, and lastly relatives and wife's relatives in other villages. At the death of the headman the village was abandoned, and, although the pollution in the case of an ordinary death was not sufficiently grave to require such an extreme measure, the community was affected in a certain degree. No sexual relations were allowed, and the warriors were unable to go out to battle until they, holding their assegais, had taken part in a purification ceremony in which the whole of the community was aspersed by the medicine-man. No fire could be kept burning in the village except that which had been kindled in the open by the medicine-man with fire from the mortuary hut. This was used by the whole village for its requirements until the fifth day, when it was put out by the medicine-man and a new fire kindled, from which the people lighted their fires. This was a part of the ceremonial purification of the village.⁸

Among the Greenland Eskimo the restrictions which followed death were very distinctly of a protective character. Not only was the corpse buried as quickly as possible, but the relatives were secluded for five days, and every one avoided crossing the tracks of those who had dragged the corpse to its burial-place. No man who was in a state of pollution by death was allowed to disentangle the dog traces; a boy accompanied every expedition to perform this office. During the five days' seclusion there was no hunting or fishing, and no work was done; but, if any sewing was necessary, the eyebrows were blackened.¹

Among the Todas, owing to the peculiar ritual importance of the dairy and the susceptibility of the cattle and the milk to ceremonial defilement, great stringency prevails in the regulations to be observed after a death. A special hut is provided for the corpse, or (among the Tatharol division of this people) a special dairy with three rooms is set aside for mortuary purposes. All who are near the corpse are impure, while the whole family of any one who comes to the village in which the relics of the deceased—a lock of hair and a piece of skull—are kept, in the period between the first and the second funerals, are polluted. All who attend the funeral, unless they take up their position at a distance, are affected in like manner, while the *oursol* (dairyman-priest) who attends to kill the sacred buffalo loses his office. The *pep*—the ceremonial portion of the dairy product which preserves ritual continuity from day to day—is thrown away, and new *pep* is prepared. Relatives of the deceased remain in a state of impurity until the moon after the second funeral.²

The break in continuity brought about by death, which is marked among the Todas by the casting away of the *pep* and the preparation of new *pep*, frequently finds expression in a cessation of all normal activities. Action is rendered unlucky or useless by the defilement. All work done by the Basutos on the day on which a chief dies is defiled.³

The pollution of death is intensified if it be due to violence, even though the killing may be justifiable or accidental.

In the Cameroons an accidental death must be followed by a purificatory ceremony,⁴ while among the Akikuyu, although the death of a member of another tribe entails no disabilities, the killing of a fellow-tribesman requires atonement by a ceremony in which the slayer eats with the brother of the slain, and the ghost, in the shape of a wild cat, partakes of part of the food placed for it at the foot of a tree.⁵ Even warriors are not immune from the consequences of their act. As the Bathonga say, 'they are black, the black must be removed.' Consequently, Bathonga warriors, on their return from an expedition, must remain at the capital for some days, wear old clothes, eat from old or broken vessels, and have special food, partaking of no hot meals until they have been purified.⁶ The Awemba warrior must not sleep in the hut until he has washed in a stream and been smeared with medicine,⁷ while the Basuto must be purified by his chief.⁸ On the Wangela river, British New Guinea, the man who is guilty of blood sits apart on the 'logs of sacrificial staging.' He is then placed apart in a special hut in charge of two or three boys, and is re-admitted to the community only after a hunt in which a kangaroo is killed, with the spleen and liver of which he is smeared.⁹ The Chinook murderer is strictly quarantined; no one eats with him, nor is he allowed to see any one eat until he has been purified.¹⁰ The Pima Indian who has slain an Apache is not allowed to look at a blazing fire during the whole of the sixteen days in which he is undergoing purification.¹¹

Contact with the murderer may transfer his unclean state to others.

Among the Akikuyu, if a homicide sleeps and eats in a village, those who entertain him are polluted to such a degree that they must have recourse to the medicine-man.¹²

Some form of penalty may be imposed, whether the killing is regarded as sin or not.

In Rajmahal, if two men quarrel and one wounds the other, the guilty man is fined a hog or a fowl, but the intention is purificatory as well as penal; the blood of the fine is sprinkled over the wounded man to prevent him from being possessed by a devil.¹³

It has sometimes been thought that the disabilities which follow murder are an expression of horror at the intentional spilling of that precious substance, blood. Now, while it is undoubtedly true that blood is highly tabu, and while the importance attached to it in various purificatory ceremonies shows its sacred character and ceremonial value, yet the explanation of the ceremonies and disabilities given by natives themselves appears to minimize the importance of the spilling of blood in death by violence, while emphasizing the fact that those who are guilty of the death of a human being are subject to attacks from the spirits of those whom they have slain, and that through them the danger may be transmitted to the whole community. The penalty, *e.g.*, which follows omission of the purificatory ceremony is usually madness caused by the spirit of the dead.

The Bathonga warriors are pursued by their slain enemies, who would drive them mad if the proper precautions were not taken. The Basuto warriors are anointed with the gall of a sacrificial ox, this preventing the ghost from pursuing them.¹

On the other hand, there is a connexion between the ghost and blood in the explanation given by the Kai of German New Guinea.

They say that the souls of the slain follow the returning warriors to recover those parts of the souls which cling to the blood clots on the clubs.²

Not only is it the souls of those slain in battle that are feared; the soul of the murdered man pursues his murderer.

Among the Eskimo of N. Greenland the victim's soul drives the murderer mad, or it may tear him to pieces, should he venture far on the ice.³

It would be possible to multiply instances to show that that which renders the man unclean—unfit to re-enter on the life of the community—is not the fact that there is blood upon him, that he is physiologically unclean, but the fact that he is the storm-centre of a dangerous force which, unless appeased or sterilized, will prove harmful to himself and to all with whom he comes into contact. When these conditions may arise after any death for which an individual is responsible, it is clear that intention, which constitutes the murder, is, from a ceremonial point of view, of little importance. Such a conception belongs to a different code, and only gradually rises into prominence in the development of moral ideas.

This view of the primitive theory of the consequences of murder is supported by the ideas which prevail about the killing of animals.

The Hottentots, *e.g.*, purify themselves after slaying animals. The character of the beliefs held by the Bathonga makes it clear that the source of the danger is the spirit of the animal. Purificatory ceremonies, closely resembling those to which returning warriors must be submitted, must follow the killing of certain animals, under penalty of persecution by the soul of the animal which has been killed. Some animals are more dangerous than others. Unless the medicine-man performs a purificatory ceremony after the killing of an eland, madness follows, while, if the man is accompanied by his wife, she shares his impurity; a bracelet of the skin must be made for her, or they cannot eat together, and on the following day the couple must repair to an anthill and there set fire to the bracelet.⁴

Cf. also art. DEATH (Introductory and Primitive).

(b) *Childbirth*.—Childbirth is another of the important crises of human life; it is marked by its intimate and peculiar character and by experience as requiring special measures for the protection of the mother and child, sometimes of the father, and of the other members of the community.

In the Malay Peninsula it is believed that mother and child are the special objects of attack of certain spirits of an extremely virulent and dangerous character, themselves women who have died in childbirth or have lost their children at birth. The belief in the danger of attack by these and other spirits is probably to be regarded as the explanation of the peculiar custom which requires the Malay mother for the whole period of impurity, lasting for 44 days after labour, to mount daily (and sometimes two or three times a day) a platform upon

which she is subjected to intense heat from a fire for a considerable period and, after returning to bed, to have a heated stone from the furnace applied to her stomach.¹

That expectant mothers are regarded as impure and a source of defilement to others is indicated by the period of seclusion imposed upon them by the customs of many peoples.

Among the Kota of the Nilgiri Hills the wife dwells in three different huts in the first three months of pregnancy, staying for one month in each, then for a time in the house of a relative, while the husband purifies himself with water and smoke.² A period of segregation also follows after birth. In N. India husband and wife are separated, and the mother is unclean for a period of five weeks.³ The Basuto father is separated from his wife for four days, when the medicine-man performs a ceremony in which the woman, sitting on the *lepheko* (a log four or six feet long), and the man, sitting opposite with his legs touching her legs, are anointed with a preparation of roots and fat, and drink healing water.⁴ Among the Bulgars birth is followed by a rigorous tabu period of 40 days. At the end of this period the woman goes to church with the child. On her return she visits three houses, where the people make gifts to her and sprinkle the child with flour. On the next day the relatives visit the mother's home, and she sprinkles with holy water all the places in the house and courtyard where she has been during her 40 days seclusion.⁵ Segregation among the Todas takes place in the fifth month of pregnancy, the mother retires from the village, the distance being determined by the degree of sanctity of the village. A special hut is built for her, where she is visited by the relatives, who, however, may not come near her. When she enters into seclusion, her wrist is burned ceremonially after the erection of an artificial dairy, and then, when she has stayed in the hut for a month, a second ceremony called 'to the village buttermilk we pour' is performed, after which she returns to her ordinary hut. For the next 50 days she lives on a diet of buttermilk and food cooked in buttermilk. After the birth mother and child go to the seclusion-hut again. On her way the mother steps over a leaf on which are some threads from the garment of the dairymaid known as *vorsoi*, and water from an artificial dairy erected for the ceremony is poured over a calf and given her to drink, while a few drops are sprinkled over the child. In the procession to the hut of seclusion the woman holds up a leaf umbrella, does not look at the sun, and avoids looking at the star or other body called Kert, which is believed to be near the sun. The ceremony is intended to avoid and avert the evil of Kent. Among the Tavali division of the Todas the husband assists his wife in her journey, and thereby himself becomes unclean and must remain with her at the hut.⁶ The intention of some of these Toda customs is obscure, but the ceremonial of stepping over a leaf and part of the garment of the holy man appears to be a case of transference of evil, the wrist-burning is purificatory, while the 'buttermilk ceremony' is a ceremonial re-introduction of a person in a transitory state to a sacred substance. The use of an umbrella by the Toda woman to keep off the rays of the sun is connected with a wide-spread belief, which also appears in connexion with female puberty, that neither the mother nor her offspring must see the sun. In Korea the rays of the sun are excluded for 21 or 100 days after birth, according to the rank of the family.⁷ New Guinea tribes confine the mother to the house for a month; when she leaves it, unless she covers her head with a mat, a male relative will die.⁸

The object of the Eskimo customs is less obscure. Here too there is segregation. The expectant mother must leave the house which she inhabits with her husband. Her conduct may affect the well-being of the community, especially in the most important item of food. Therefore on the day of birth she must eat only meat fried in fat on a flat stone. After the first night following the birth she must make herself new clothes, as her old clothes must be thrown away, and immediately after the birth she must wash from head to foot. Women who have fewer than five children may not eat young rough seals, eggs, entrails, heart, lungs, or liver.⁹

The impurity of the mother extends to the child. For ceremonies admitting the child and re-admitting the parents to society see art. BIRTH (Introduction).

(c) *Puberty*.—In the ceremonies which mark the introduction of the individual to full sexual and tribal life, at puberty or at initiation, purificatory rites in some form or another are usually a prominent feature. These rites, which present certain general resemblances, by such observances

as a period of seclusion, a special diet, frequent ablutions, the use of pigment for the body, and bodily mutilation such as circumcision or the loss of a tooth, emphasize or, as the primitive mind would regard it, bring about the separation from a former status and the entry on a new phase of life.

In some cases among the tribes of Australia the novices are regarded as having died. Among the American tribes (e.g., the Shawanese) not only did the initiates observe a special dietary, but they also took an emetic at regular intervals—an obvious and common method of purification.¹ In the Kurnai initiation mothers and sons sprinkled one another with water to mark the separation.² Further, it was a common custom to take a new name at initiation. In the Fijian *nanya* rites, at the close of the ceremonies, all the initiates went to the river bank and washed off the black paint with which they had been smeared.³

As in the case of mothers after childbirth, pubescent girls during their period of impurity were rigorously secluded from the rays of the sun, and frequently were not allowed to touch the earth with their bare bodies. This was the case in Loango.⁴ Girls of the Zulu and kindred tribes, should they perceive that they have attained puberty while away from home in the fields, were required to hide in the reeds lest they should be seen by a man, and to cover their heads lest the sun should shrivel them up. At nightfall they ran home, avoiding the paths, and were secluded for a fortnight, during which time they and the girls who waited on them were not allowed to drink any milk, lest the cattle should die.⁵ In New Ireland pubescent girls were confined for four or five years in cages, in which they were kept in the dark, and were not allowed to set foot on the ground.⁶

In the Bathonga nubile customs followed in the case of girls among the northern clans a period of seclusion took place at the appearance of the menses. Three or four girls who ran away to an adoptive mother lived in association; each morning they were covered with a cloth and led to a pool in which they were immersed to the neck. On their return from the pool they were imprisoned in a hut, where they received instruction. Any man who saw them during this period was smitten with blindness.⁷ In the case of boys, on leaving the village for their period of seclusion, they leapt over a fire of scented wood which had been made in the road; every morning while they were in the school they were smeared with white paint as a mark that they had abandoned the darkness of childhood. Before the end of the school the medicine of purification was administered to them in a mouthful of beer, and on the last day their forekins were burnt and made into a powder which was smeared on the pole which stood in the place of seclusion. Finally, all the paraphernalia of the school were destroyed by burning—an act in which 'all the filth and ignorance of childhood was burnt.' The boys were then led to a stream, where they washed off the white clay, cut their hair, anointed themselves with ochre, and put on new clothes.⁸

Circumcision, like other forms of initiation, being a ceremony introducing the novice to a new status in life, is usually found to be accompanied by some period of seclusion or withdrawal, in itself a purification, but it also as a rule included some element of a more obvious kind, such as the taking of emetics, washing, plastering with clay, the individual being thus prepared to face the new spiritual influences with which he or she was to be brought into contact. The position of the uncircumcised in Fiji was indicated by the fact that they were regarded as unclean and not allowed to carry food for the chief.⁹

(d) *Marriage*.—The ritualistic observances which precede, accompany, and follow the marriage ceremony are of such a character as to indicate that, when this important stage in the individual life is reached, the parties immediately concerned are particularly liable to spiritual influences. Although some of the practices are more obviously of a purificatory character than others, as a whole they are intended to minimize the danger (1) of contact between the individuals, and (2) of the entry into a new set of conditions and a new phase of life. On both grounds marriage is brought

within the category of the crises in human life which require the observance of purificatory rites.

The measures taken to guard against the first-named danger usually take the form of seclusion. It is almost invariably the case among primitive peoples that, from the time of betrothal until the actual ceremony, bride and bridegroom do not meet, repeating in the individual the segregation which takes place between the sexes as a whole at puberty or initiation.

In New Guinea betrothed persons may not see one another.¹ The Menangkabauers allow no communication before marriage,² while the Malay *fiancées* makes every endeavour to avoid her future husband.³ The Wa-taveta bride is 'sealed' to the bridegroom by the payment of the first ox of the bride-price, and until the price is complete must see no man.⁴

Measures may be taken to prepare for contact between the parties, just as initiation prepares for sexual maturity.

Loanda girls, *e.g.*, are excised eight days before marriage by the medicine-man, while the ceremony performed on girls at puberty among Central Australian tribes is actually the marriage rite and initiation ceremony.⁵

It is significant that re-marriage of a widow or widower requires less elaborate ceremony.⁶ This, especially if taken in conjunction with the fact that intercourse with a medicine-man or other person of essentially magical quality, such as a chief, is sometimes exacted from a virgin, and precedes marriage, suggests that the ritual precedent on marriage is a preparation for the entry on a new state. It is also no doubt the result in some degree of the conception that the sexual act involves uncleanness.

The ceremonies which accompany the marriage rite indicate that those who are in contact with the bride are also involved in the danger. It is usual to take some measure of precaution to avert the influence of the spirits during the marriage procession.

In Nizhegotod the 'best man' walks three times round the party, against the sun, holding a holy picture. He then scratches the ground with a knife, cursing evil spirits and evilly-disposed persons.⁷ Guns are fired during the progress to or from the church—a custom at one time followed in the north of England.⁸ In Manchuria the bridal procession is preceded by two men, each of them holding a red cloth to ward off evil, the arrival of the bride's sedan-chair at the groom's house is signalled by firing crackers, and the chair itself is afterwards purified with incense.⁹

A common preliminary is lustration.

In S. Celebes the bridegroom bathes in holy water, and the bride is fumigated.¹⁰ The Matabele bride pours water over the man on arriving at his house,¹¹ while among the Malays lustration continues for three days after the ceremony; at the actual wedding the first operation is the fumigation of the bride and groom with incense and the smearing with the neutralizing 'rice paste,' which forms such an important element as a purificatory or protective agent in all the magico-religious observances of Malay life.¹² In all Muhammadan countries purification by water in the bath and painting with henna are among the more important of the preliminaries to the wedding rite. The bath usually takes place a day or two before the departure for the groom's house. In Egypt the bride goes in state through the streets in a procession as elaborate as means allow, accompanied by her friends.¹³

The custom of cutting the hair or of wearing old clothes, which in other connexions marks an occasion for, or forms part of, a purificatory rite, also occurs in connexion with marriage.

Among the Muhammadan tribes of N.W. India both bride and bridegroom wear old clothes for some days before marriage.¹ The head of the Kafir bride is shaved, while the Fijian bride cuts off a long lock of hair or shaves her head.²

Notwithstanding the great variety of marriage rites and ceremonies, they agree to a great extent in the same manner as the preliminary rites in having as their object the prevention of the transmission of harmful influence from one individual to another and the aversion of the influence of malicious spirits. The ceremonies may be supplementary to those preliminary rites, marking especially the separation from the former life with all its circumstances and magical influences. Of such, lustration, cutting the hair, and the abandonment of old clothes are significant instances. Or they may be protective, as the use of the veil and of fire-arms, or the custom of Muhammadan countries, where one of the most important days of the wedding ceremony is that on which the smearing of hands and feet with henna, antimony, etc., takes place.³ Another form of protective rite at marriage occurs in Morocco in the tapping of the bride with a sword on the wedding night by the bridegroom to drive away evil spirits.⁴

Finally, the wedding observances may be purificatory in neutralizing or preparing the individual for the new existence upon which he or she is about to enter. In this category would fall such customs as the ceremonial intercourse by men of the tribe, as in Australia, or by the chief or the medicine-man, as in America,⁵ sometimes by friends of the groom, as among the Wa-taveta.⁶ The customs of substituting a bride, which occurs, *e.g.*, among the Beni Amer, and of marriage to a tree preceding the actual marriage, such as occurs among the Mundas,⁷ have the same protective and preparatory object.

After the ceremony bridegroom or bride or both may still continue to be regarded as impure and a danger to others. It is not uncommon for a further period of seclusion to follow marriage.

Among the Arabs of Mount Sinai the bride must remain in her hut for a fortnight.⁸ In the Aru Islands and Ceramaut the pair are shut up for some days,⁹ and among some of the Iktawin the wife may not leave the house or touch any work for three years.¹⁰

(c) *Sexual relations*.—Notwithstanding the pre- or post-nuptial looseness of sexual relations found among many peoples, among others irregularities, and in particular incest in the wider sense in which it includes all the rules of exogamy, are regarded as a great pollution especially to be avoided on account of its effect not merely upon the individual but upon the life of the community. The infecting influence is removed by death, segregation, casting out from the community, or other purificatory process, such as sacrifice, smearing with the blood of the victim, lustration, etc. This class of crime is closely connected with the well-being of the crops. At certain periods of the crops' growth married couples live apart.

In ancient Greece the olive was planted by virgins or pure boys, and, in default of such workers, the crop was gathered by men who had taken oaths of their marital fidelity.¹ The Karens believed that illicit love blighted the crop, the guilty man in his prayer in the course of the ceremony of purification accused himself of having destroyed the productiveness of the country, and went on to say: 'Now I repair the mountains, now I heal the hills and the streams and the lands. May there be no failure of crops.'² In Rajmahal the adulterer furnished a hog to avert plague and the ravages of tigers.³

In some cases incest was regarded as the cause of barrenness.

This was the case among the Dinkas and Bathonga, while among the latter people as well as among the Akikuyu marriage of cousins, being within the forbidden degrees, required a special ceremony which purged the uncleanness and loosed the bond of relationship.⁴ In Borneo first cousins could marry only after the ceremony of *bergaput*.⁵ The Sulka of New Britain considered the pollution of pre-nuptial unchastity so great that not only was it fatal to the parties unless they were purified, but their mere presence was sufficient to tarnish the instruments of the sacred dance,⁶ while among some Dayak tribes the family was made responsible for any death by drowning which happened a month before the atonement.⁷

The frequency with which death by drowning or the use of substitutes, either sacrificial animals or personal possessions, follows sexual crime, and especially incest, is due to the fact that the degree of defilement is so great that even shedding the blood of the guilty is avoided in order that the earth may not be polluted. Consequently among the Torajas of Celebes adultery was expiated by the sword, but incest by clubbing or throttling.⁸

The importance of sexual purity is further indicated by the numerous occasions upon which it is emphasized as a condition of a certain course of action or its absence is regarded as a deterrent.

In Morocco no man who is not clean in regard to sexual matters may enter a granary or vegetable-garden.⁹ No sexual act may be committed in a holy place, nor must a person so polluted present himself in a holy place until he has washed; otherwise he will go blind, become lame, or go mad, he or his family will die, or he will lose some of his animals or his crop. A person sexually unclean may not pray. An act usually considered sacred will lose its magical efficacy if performed by a sexually unclean person.¹⁰ Among the Romans a cook or butler might not handle food or butter while unclean. Reference has already been made to the cultivation of the olive in Greece and the incense tree in Arabia. During the Cherokee New Year Feast¹¹ sexual relations were forbidden, and the same regulation is found in the Bathonga community after the death of a headman and when a village is removed.¹² Among the Todas the relations of the dairymen-priests were regulated according to the degree of sanctity of their grade of office. The number of nights they might sleep in their village huts varied according to their grade, but the highest grades, the *pohkarpol* and the *palol*, were required to avoid women altogether while holding office.¹³

(f) *Relations of the sexes.*—The regulations governing the relations of individuals and of the sexes are based upon the idea of the transmission of evil either maliciously or inadvertently from one person to another. The danger may be permanently present, but in any case is considered to be peculiarly acute at particular times, such as the performance of natural functions, eating, drinking, etc., or at natural crises. The penalty for the infringement of the tabus which regulate action and intercourse is of such a character, or the consequences are averted by such means, as to indicate that disregard of the tabu entails pollution. A widely-recognized danger lies in contact with

the inferior female sex. Violation of the rules governing the relations of the sexes usually requires some ritual act of expiation. Although in some cases such violations may be regarded only as breaches of correct social behaviour, the observances and the ritual are such as to appear to be derived originally from a tabu connected with danger, and especially with danger arising out of impurity.

A typical attitude finds its expression in Morocco, where women, because of their uncleanness, are subject to many tabus. They are forbidden to enter the threshing-floor or granary for fear of destroying the virtue of the corn; some tribes do not allow them to work in a vegetable-garden or to ride beasts of burden, and they are injurious to bees and must not handle them. In some places, should they enter a shop, its prosperity will be destroyed, and they are not allowed to visit certain holy places or to attend the feasts of the saints who died fighting Christians.¹

In Nukahiva, if a woman sat on or passed near an object which had become tabu by contact with a man, it could not be used again, and she was put to death.² Among the people of Rajmahal, if a man detects a woman sitting on his cot, he kills a fowl furnished by the woman and sprinkles the blood on his bed. For the converse the man pays a fine of four fowls to the woman.³ Among the Samoyeds and Ostyaks a wife may not tread in any part of the tent except her own corner, and, after erecting the tent, she must fumigate it.⁴ The club-houses which form a feature of social life in the Pacific are sometimes tabu to persons of the opposite sex. In the Marquesas, should a woman pollute the men's house by her presence, the penalty is death.⁵

The differentiation which extends to occupation is also in many cases enforced by consequences which are explicitly stated to involve either a condition of impurity or something analogous to such a condition.

Pastoral and cattle-keeping peoples, especially in Africa, frequently debar their women from tending the flocks and herds. The Todas, with their rigorous exclusion of women from the work of the dairy, and the tabu which keeps them and their characteristic domestic implements apart from contact with the cattle and the dairymen and even forbids their use of the cattle paths, are a case in point.⁶ Among the Bantus of S. Africa women are not allowed to touch the cattle.⁷ As already stated, pubescent Bantu girls and their attendants were not allowed to touch milk. Some of the pastoral tribes of the Sūdān and E. Africa forbade women, especially at certain times, and those sexually impure to come into contact with the milk, and among the Dinkas even old men were not allowed to milk the cows, this duty devolving on boys and girls who had not yet attained the age of puberty.⁸ The same applies to men in the case of women's occupations—*Tapa*-making, e.g., is tabu to men, while the use of canoes is forbidden to women.⁹ In the case of man's most important occupations—hunting and fighting—a certain precaution must be observed in relation with the other sex; continence for a varying period is often a necessary preparation. In certain S. African tribes the warriors must abstain from women.¹⁰ Among the Nutka Indians a preparatory abstinence of some weeks is required.¹¹ In New Guinea warriors are not allowed to see or approach a woman.¹²

In both hunting and war success depends upon the observance of these regulations. The purificatory ritual underlying these disabilities and exclusions is still more clearly indicated when it appears that women are debarred from participation in religious ceremonies.

In the Sandwich Islands women were not allowed to share in religious worship because their touch polluted the offerings; while, if a Hindu widow touched an image, its divinity was

destroyed and it had to be thrown away.¹ Australian women were not allowed to see a *bora* under pain of death, and in Fiji they could not enter any temple.²

Reference to the customs attendant on the attainment of puberty, to initiation ceremonies—rites in themselves largely of a purificatory nature—will show the importance attached to the protection of one sex from the evil of the other, even when conveyed by such a means as the sight.

Among the Basutos, *e.g.*, no woman may come near the boys at their initiation.³ The practice alluded to above of confining pubescent girls in seclusion both protects them from harm—barrenness appears to be the consequence most generally feared—and at the same time prevents defilement being conveyed to others. In New Ireland girls are kept in cages from puberty to marriage; during this period they must be seen by no males except their relatives;⁴ and in Ceram no male must come near girls at the puberty ceremonies.⁵

The aim of preserving purity is, however, most clearly marked in the case of sexual crises such as menstruation, when both segregation and a subsequent ceremony are almost invariably practised.

Among the Pueblo Indians a man will fall ill if he touch a woman during menstruation or pregnancy.⁶ In the Island of Yap there are special houses for menstruous women.⁷ Among the Bathonga the woman separates from her husband, wears old clothes, which she brought from her home at her marriage for the purpose, and at the termination of the period purifies her hut.⁸

(g) *Contact of sacred and profane.*—Apart from the impurity which is the result of some specific act or contact, there is also an impurity which attaches normally to the individual, and becomes especially pronounced when he is brought into relation with things or persons of a tabu or 'sacred' character. This belief is responsible for such regulations as those which govern the relations of castes in India and for the secrecy surrounding the practice of the rites of the mystic religions of Greece, which found expression in a warning cry addressed to non-initiates, such as the 'Procul este, profani' of the Sihyl.⁹ Instances of such beliefs are of frequent occurrence among primitive races.

Among the Polynesians the tabu character of a chief is violated by the touch of an inferior, although in this case the danger falls upon the inferior. On the other hand, in Efate the 'sacred man' who comes into contact with *namim* (ceremonial uncleanness) destroys his sacredness.¹⁰ In Uganda, before building a temple, the men were given four days in which to purify themselves.¹¹ On the other hand, the chief and his belongings are very often regarded as sacred and therefore as dangerous to others of an inferior rank. In Tonga Island any one who touched a chief contracted tabu; it was removed by touching the sole of the foot of a superior chief.¹² The sacred quality of the chief in the Malay Peninsula also resided in the royal regalia, and any one touching it was visited with serious illness or death.¹³

Even the ordinary individual may in some degree possess this quality.

In New Zealand any one who touched the head of another received 'sacredness' from the contact.¹⁴

The impurity of the ordinary individual is responsible for the purificatory element in a number of ceremonies.

In the case of the ceremony of pouring drugs on the roof of the hut practised by the Thonga hunter the purification takes on a protective character. In the Mambura ceremony which precedes the circumcision of Kikuyu youths in the Masai fashion those who were present purified themselves by hoking

a little of the diatomaceous earth used in their purification ceremonies and then smearing themselves on throat and navel. The candidates themselves were purified by an elder with his principal wife, two sisters, and another elder; after smearing them with the white earth, he sprayed honey-beer upon them from his mouth. This purified them and at the same time protected them from any *thahu* which might otherwise pass from spectator to candidate.¹

A most striking example of the influence of the relation of a sacred substance and profane society is to be found among the Todas, the whole of whose elaborate ritual and (it would not be too much to say) the whole basis of whose social organization are directed towards securing the ceremonial purity of the sacred herds, the sacred dairy, the vessels, and the milk, and of those whose duty it is to minister, the strictness and elaboration of the rules and methods to attain this object varying according to the degree of sacredness of each dairy. In the *ti* dairy, *e.g.*, the sacred vessels are always kept in a separate room, and the milk reaches them only by transfer to and from an intermediate vessel kept in another room. The priests or dairymen, of whom there are four grades, are admitted to office only after an elaborate ordination, which in effect is a purification, removing them from the ranks of ordinary men to a state of fitness for sacred office, while their conduct is governed by regulations such as those which permit only certain grades of priest to sleep in the village and only at certain times, or that which entails that a priest who attends a funeral should cease from that time from his sacred function. On the other hand, the milk, a sacred substance, is to be used by the profane, and in the migration ceremonies, when the dairies are moved from one village to another, the sacred vessels are open to profane view. It has therefore been conjectured that the aim of much of the ritual is to avert the dangers of profanation and prepare or neutralize the sacred substance for consumption by those who are themselves unclean.²

(h) *Contact of old and new; strangers; strange countries.*—It is a familiar dogma of primitive thought that anything new or doing anything for the first time entails peculiar dangers. Reference has already been made to this belief in connexion with other matters above. Its importance lies in the fact that it involves an endeavour to protect the agent by a purificatory ceremony in which the pollution of the former state is cast off. This is especially the case in seasonal festivals such as harvest, when it is held desirable to avoid all contact between the new crops and the old, or the influences connected with the old, in order that the former may not lose their virtue or harm those who consume them.

The peculiar *nanga* rites of the Fijians appear to have been in part an initiation and in part a firstfruit ceremony. In certain elements they were purificatory.³ The firstfruit ceremonies of the Cherokee were accompanied by the clearing out and purification of the whole village, the taking of emetics, the throwing away of old and the wearing of new clothes, and other measures. The devil-driving ceremonies at harvest or at the end of the old year or beginning of the new year were sometimes a similar protection and sometimes a remedy for indifferent crops.

On the other hand, it is not only necessary to observe certain precautions to safeguard the virtues of the new crop; it is almost equally important that it should be neutralized or prepared for consumption by a purificatory process. This is the object of many of the firstfruit ceremonies which are observed.

The Bathonga regard it as dangerous for the subjects of the king to eat certain foods before they have undergone the *luma*, or purificatory process, in which they are mixed with royal drugs. The most important of these rites is the *luma* of Kafir corn, the staple crop.⁴

Another instance in which entry upon a new state requires special preparation is on the removal of a village from one site to another, when each dwelling and the community as a whole must be purified.⁵

A related idea, which, however, in its application is the converse of these practices, governs the precaution that must be taken in entering new ground or a new country. Here it is not a case of the new being protected from the profanation of the old, but those who are passing into it must be protected from its dangers. It is therefore customary for a purificatory ceremony to be performed before

crossing the borders from the known to the unknown. That that which is outside or strange is powerful for evil unless neutralized is a familiar belief.

Among the Bathonga it is believed that those who travel outside their own country are peculiarly open to danger from foreign spiritual influence, and in particular from demoniac possession.¹ Strangers are tabu because, worshipping strange gods, they bring strange influences with them. They are, therefore, fumigated or purified in some other way.² In the Dieri and neighbouring tribes even a member of the tribe returning home after a journey was treated as a stranger, and no notice was taken of him until he sat down.

In the same manner those entering a house from the outside world should perform some ceremony, even if it were only to remove their shoes, which would purify the incomer from the evil with which otherwise he might contaminate those within, while the threshold, door-posts, and lintel—important as points of contact with the outer world—are smeared with blood or sprinkled with water when any member of the household or of the community has become a source of pollution, or a horseshoe is suspended over the door to keep out evil and bring good luck.

The danger of entering a new country is as great as that which attaches to those who come thence.

In Australia, when one tribe approaches another, the members carry lighted sticks to purify the air,³ just as the Spartan kings in making war had sacred fires from the altar carried before them to the frontier, where they sacrificed. This attitude towards a foreign country and those who belong to it is perhaps best expressed in that passage in the Vedas which is the basis of the rule that higher castes lose caste if they cross the sea or sojourn beyond the recognized borders of their land. Manu⁴ says: 'That land on which the black antelope naturally grazes is held fit for the performance of sacrifices, but the land of foreigners is beyond it. . . . Let the three first classes [Brāhmanas, Kṣatriyas, and Vaiśyas] invariably dwell in the above-named countries; but a Śādra may sojourn wherever he chooses.' In the *Brāhmaṇas* it is said that Agni, the fire-god, flashed with fire over five rivers and as far as he burnt the Aryas could live.⁵

(i) *Illness*.—Illness, frequently attributed to the influence of spirits or to violation of the regulations of ceremonial purity, may itself be regarded as a source of defilement for others.

In Borneo the Kayans hang leaves of *long* (a species of caladium) and a large sun-hat on the door of a sick-room to signify that it is tabu. In returning thanks for recovery from a long illness an altar consisting of a bamboo is set up; the upper part is split and a fresh fowl's egg inserted.⁶

While the use of the egg suggests a propitiatory offering to the *toh*, or spirits, upon whom rests the responsibility for punishing the infringement of any tabu, the use of the split bamboo may be compared with the split bamboo through which the mourners step in a funeral ceremony (see below), and further with the custom of passing through a fissure in a tree as a charm in the case of deformity or illness.⁷ The purificatory intention of the ceremony in which propitiatory offerings of eggs and fowls are made to the *toh* when a tabu is infringed is indicated by the sprinkling of the culprits with the blood of young fowls or pigs, which is performed by the chief.⁸ As a rule, however, the purificatory element in observances connected with illness, whether directed against the dangers of contact or intended for the benefit of the sufferer, can be readily distinguished.

The Beni Amer cure their sick by bathing them in the blood of a girl or some animal; or the blood of a goat is poured over the man's head or body.⁹ Changing the name, a method of putting away the past at a critical moment, was one means

employed by the Dayak to rid himself of dangerous influences after a serious illness.¹ In Fiji disease was often introduced by foreigners, and strangers were therefore quarantined and sometimes killed. In the Marquesas on one occasion the natives of Kau Atolls disinfected or disenchanted the crew of a European vessel at the end of a conference held at sea; one man in each Marquesan canoe held a handful of ashes wrapped in leaves, which he scattered in the air at the close of the interview. In Normanby Island, in the D'Entrecasteaux group, the natives would not hold parley with an exploring party until an old man had chewed a scented bark and spat it over the visitors and his own party.² The use of the sweat-house in America as a cure for disease is largely, though not entirely, magical, its use in ceremonial purification is frequent. The vapour bath also appears in African ceremonial. Among the Bathonga it is employed both as a cure for certain complaints, especially when a ritual defilement is feared, and after a death. Further, among the same people an obligatory ceremonial purification, in which the patient, sitting on a mat, rubs himself with *psanyu* (the half-liquid contents of a goat's stomach) mixed with drugs, follows a successful treatment of a serious disease 'to disperse the bloods which have made him sick so that they cannot return to him violently.' This ceremony is also obligatory after weaning. The drugs themselves of the medicine-man are subjected to an annual ceremony in which they are purified and renewed by the addition of new material (part of which is dried and part roasted, the whole village assembling to inhale the smoke); a goat is sacrificed, and *psanyu* squeezed on the burning drugs to put them out. The ceremony of renewing the drugs cast away the evils and misfortunes of the old year and prepared the community for the year to come, in the words of the medicine-man, 'that it may not be too heavy for us.'³

3. Results following from ceremonial impurity. —The consequences which are thought to follow upon an act involving loss of purity or upon failure to remove pollution when incurred help to throw light upon the nature of the conception as it exists among primitive peoples. Not only is the ceremonial character of these beliefs clear, but at the same time it is apparent that any attempt to ward off these consequences is frequently undertaken as much in the interest of the community as in that of the individual.

Sometimes the consequences of impurity are conceived only in a vague way: ill-luck or danger follows transgression. At other times the form which the danger will take is precisely defined.

One form of evil which frequently follows loss of purity, especially after contact with a corpse, is illness and death. The danger may be general, affecting the whole community, or it may attack the individual and spread from him to others, or it may be confined to the one person contaminated.

An instance in the first category occurs in Rajmahal, where incest is followed by plague or the ravages of ugers.⁴ The same offence among the Khasis, in this case in the form of contravention of the laws of exogamy, leads to great disasters, people being killed by lightning and women dying in childbirth.⁵ On the other hand, such an individual misfortune as barrenness may be the consequence. The Dinkas and the Bathonga regard incest as the cause of barrenness,⁶ while among the Sults of New Britain the death of both guilty parties ensues as a result of the fatal pollution that they have contracted.⁷ Barrenness is frequently regarded as a consequence of the infringement of regulations governing conduct at puberty. It is necessary that a baganda girl should immediately inform her parents of her condition, that her father may perform the ceremonial act of jumping over her mother at the end of the period; otherwise barrenness followed. The Akanba hold that a like result follows from disregard of the prohibition of the use of public paths to girls at their first menstruation. This comes about if they should leave a spot of blood on the path and a man have connexion with a woman after stepping over it.⁸ Among the Thompson Indians, again, should any of the purificatory ceremonies and prohibitions which should follow a death be omitted or neglected, it is believed that the culprits will suffer from sore throat, loss of voice, or loss of sight.⁹ An Akikuyu who is under the ban of *thaku* must be relieved, or he will suffer from boils and probably die.¹⁰ In New Zealand the breaking of a tabu entailed punishment by the *atua*, or spirits; this took the form of deadly sickness or disease.¹¹ A Thonga hunter who failed to perform the requisite rites after killing an eland ran the risk of losing his head and of being unable to find the way home, while a similar neglect, if his wife were travelling with him at

the time, brought misfortune on their child, which became weak, miserable, and emaciated. Ritual defilement was also held by this people to be the cause of many forms of disease, but in particular of swelling of the hands, feet, and joints, and of pains in the bones.¹ Among the Basuto, if the medicine-man did not perform the purificatory ceremony which should follow childbirth, the father swelled up and died.²

Insanity not infrequently followed as a consequence of a death by violence unless atonement by purification were made.

Among the Awemba the slayer of a man was believed to go mad.³ In Fiji, should any of the uninitiated see those who are being initiated in the *nanga* rites, they become insane.⁴

This form of penalty is not uncommonly associated with the idea that vengeance for the violation of the tabu is the work of the spirits of the dead.

Thonga warriors, until purified, are in great danger from the spirits and run the risk of becoming insane, and for the same reason after a death all members of the community cut their hair to a degree of shortness determined by their connexion with the deceased.⁵ Among the Greenland Eskimo the spirit of a murdered man will torment his murderer until it frightens him to death, or, if he goes on the ice after neglect of the rites and regulations following death, may tear him to pieces.⁶

That the fear of ghosts or spirits lay at the root of the purificatory ceremony and that those who were ceremonially impure were peculiarly susceptible to their attacks is in many cases either expressly stated or implied. In addition to the cases already mentioned in which insanity, disease, or death caused by spirits is to be feared, attention may be called to the ceremonial as a whole of those Indian tribes of N. America to which reference has already been made. In some matters it is directly stated that the danger apprehended comes from the ghost; in others the character of the belief is such as to justify the same explanation.

The guests at the funeral feasts, *e.g.*, would not eat, drink, or smoke in the open air after sunset, nor did they sleep for four days for fear of ghosts. Widows underwent a ceremonial purification in order that they might be long-lived and innocuous to their second husbands, while among some tribes a protective breech-cloth was worn for some days. The sleeping-place of a dead man in the hut was not occupied for a considerable period, and then first by an adult male for four nights in succession.⁷ In Africa—*e.g.*, in Uganda, among the Basutos, and among other peoples—the purificatory ceremonial is intended to lay the ghost and prevent its troubling those upon whom lies the responsibility of causing death.⁸

That fear for the community rather than for the individual is the more potent influence is suggested by the number of prohibitions connected with food and the precautions taken to preserve the food-supply from contamination. Food should on no account come into contact with impure persons.

No Basuto who is unclean should handle the corn when it is exposed to view.⁹ Reference has been made above to the precautions taken in Morocco to protect the corn from the adverse influence of women and those polluted by sexual intercourse. After a death the Bathonga perform a ceremony purifying the food which belonged to the dead man.¹⁰

Everywhere, in eating and drinking, the impure must avoid touching food with their hands or follow certain rules which mitigate the danger.

Among the American Indian tribes those who take part in a burial or who are nearly related to the deceased must refrain from fresh meat for a period, their food should be cold and not cut with a knife, but torn with the teeth; they must be fed by others or eat with the help of a twig, and must drink from a special vessel which they carry with them.¹¹ In Samoa relatives of the deceased must be fed by others. The Bathonga require those who are unclean—*e.g.*, widows, those who have helped to bury the corpse, or those suffering from a disease which is the result of defilement—to eat with spoons and drink from their own cups, while victorious warriors who have killed eat with special spoons from special plates or broken pots and take their food cold, lest, being hot themselves, they swell internally.¹² Among the Thompson Indians, if an unpurified widow gathered berries, the whole crop would fall off the bushes or wither up if a widower transferred a trout from one lake to another, he

had to remove the pollution of his touch by chewing deer-fat and spitting some of it on the fish before he let it go, bidding it farewell and telling it to propagate its kind.¹

The implication in these cases is that contact with pollution would endanger a whole species or class.

It is, however, particularly in connexion with sexual impurity that the prosperity of the crops is involved. Illicit love is held to blight the crops, while at certain seasons legitimate relations must be suspended.

In Arabia those who tended the incense-trees were required to be free from the pollution of sexual relation and of death. Ceremonial purity increased the crop.² Among the Karens bad crops were the consequence of adultery.³ If the Battak found an unmarried woman with child, she was married at once; otherwise the crops failed.⁴ The purificatory ceremony of Celebes in which the blood of the sacrificial goat or buffalo, substituted for the human victims guilty of incest, was poured on the field was intended to preserve or restore their fertility.⁵ Among the Dayaks incest and bigamy, and among the Torajas of Central Celebes unnatural unions, were believed to be the cause of incessant rainfall.⁶

Laxity in sexual matters or acts in contravention of sexual tabus involved other penalties, in particular through sympathetic ties. The belief that the conduct of the wife affected the success or safety of the husband while he was absent at war or on the chase is of frequent occurrence.

The Dayaks believed that, if the wife was unfaithful, the husband would lose his life.⁷ A somewhat similar example, in which the consequence by sympathy falls upon another as well as the guilty party, occurs among the northern Bathonga. When a community moves its village to a new site, sexual relations are forbidden until renewed ritually as part of the purification of the community in its new quarters. Any violation of this tabu is followed by the illness or paralysis of the headman, while the woman herself becomes barren, and the work of removal must begin again.⁸

4. The purification ceremony.—(a) *Water*.—One of the mediums most frequently employed to dispel impurity, as well as one of the simplest, is water either in aspersion or in ablution.

On the fifth day after handling a corpse the Samoan, who between that day and the time of the pollution was not allowed to handle food but was fed by others, bathed his face and hands with hot water.⁹ After an interment on the Gold Coast those who have touched the corpse go to the nearest brook and sprinkle themselves with water.¹⁰

Water is frequently used as a purifying agent in other cases in which also the idea of its cleansing properties is prominent, as, *e.g.*, after childbirth, when both mother and child are thoroughly washed.

One of the duties of the Eskimo mother is to wash herself completely after the birth.¹¹ The Malays purify mother and child by washing them in warm water, and this is repeated every morning and evening for some time.¹² The first act of the Ugandan mother, on leaving the hut after seclusion, is to wash herself; the sponge which she uses is sent to her husband, and with it he washes the private parts of his body.

Bathing at the public bath has already been mentioned above as one of the most important items in the ceremonial preceding marriage in Muhammadan countries. In Morocco at Fez the bride is purified with water and heina. On the fifth, fourth, and third days before the wedding she goes to the hot bath, and on the last occasion seven buckets of lukewarm water are poured on her by seven women, 'so that she shall have no quarrel with her husband.'¹³ In S. Celebes the bridegroom bathes in holy water, while the bride is fumigated.¹⁴ In Abyssinia for several days before the marriage the bride performs ablutions and restricts her diet,¹⁵ while the Matabele bride, on arriving at the bridegroom's hut, pours water over him.¹⁶

The physical contact in such cases probably both suggests the remedy and is responsible for its

¹² Junod, i. 145, ii. 434, 453.

simplicity. On the other hand, simple lustration may be employed where the idea of superficial contact has given way to one of ingrained and essential impurity.

In Ireland, according to the legend, in the kingdom of Munster, the crops were blighted by the incest of the king and his sister. The nobles demanded their offspring in order that they might be burned and their ashes cast into the stream. One of the princes was saved by being sent out of the kingdom to a Druid, who purified him daily by placing him on a white cow with red ears and pouring water over him.¹

Water may be used, possibly to some extent in a symbolical sense, as the final mark of separation from a previous state at a critical stage in the life-history of the individual. As has already been stated, initiation ceremonies usually include, as part of their ceremonial, some form of purificatory operation.

The Kurnai initiation ceremony, in which the boys and their mothers sprinkle one another with water, signifies, it is said, that the boys are no longer under their mothers' control.² The Hausas of Tunis practise a ceremonial purification of half-a-dozen boys and girls before the harvest. They are shut up in a large house for a period during which they are stuffed with food to make them strong, and taught the Bori dances as well as their duty to totem and clan. At the end of the period the medicine-man washes the boys and the medicine-woman washes the girls in the forest. In both cases the washing is medicinal.³

The last instance presents two features which commonly occur: (1) the fortification of the purificatory agent by medicine, and (2) the intervention of the medicine-man, the expert in these sacred matters. Both these elements tend to become more prominent as greater attention is paid to the spiritual or magical side, the manifestation of which, however, is still conceived as material and to be treated on material lines.

At a Boloki funeral a trench about 20 ft. long is dug, and the mourners take up their position on the side nearer the grave. The medicine-man's assistant pours water into one end of the trench, and the medicine-man then helps the mourners over the trench as the water runs down.⁴

In this ceremony the idea of the cleansing power of water has given way to that of the magical efficacy of running water as a barrier which the noxious influence of the ghosts is unable to pass. On the other hand, the two ideas combine in the Thonga cure for childlessness in which the medicine-man pours water over a married couple who have no children.⁵ The class of regular or professional hunters also fortified with drugs the water used in the purificatory ceremony performed before they set out on a journey.

A pot of drugs was cooked, in the froth of which the hunter washed himself. He then poured the contents of the pot on the roof and allowed the water to drip on him as he entered the hut. The medicine-man at the same time uttered a prayer and incantation: 'Go and be happy. Though the rain will fall on you, though the dew make you wet, when you sleep you will be everywhere as in a hut,' and so forth, making it clear that the object of the ceremony was to protect him from the dangers of the bush.⁶

That this ceremony is purificatory rather than protective, as might be thought from the character of the prayer, is indicated by the further condition which must be observed to secure not merely success but also safety in hunting. Sometimes a fowl is sacrificed, but only children may eat it; the hunter must not partake, must not touch salt, and must abstain from sexual relations; i.e., he must in all respects be pure.

Water is used in various ways in a number of ceremonies connected with special seasons of the year. In many places, e.g., a water fight follows the bringing in of the harvest or the last sheaf, or an individual may be attacked with water, usually by women. As a general rule these practices

must be regarded as rain charms. Sometimes, however, they have a purificatory intention.

In Burma, at the end of the solar year in April, when a great feast lasting several days took place, in order to wash away the impurities of the past and commence the new year free from stain, it was the custom on the last day for the women to throw water over every man they met, and for the men to retort. A visitor, on entering the house of a dignitary, was met by the family and presented with a bottle of rose-water, a little of which was poured into the hand of the host, who sprinkled it over himself. The mistress of the house poured a little rose-water over the host, and then over each of the guests, after which a water fight began.¹

(b) *Other detergents.*—In the use of water as a purifying agent it would be reasonable to assume an obvious connexion in idea with its effect in cleansing physical impurity. The same idea may be at the root of the use of other materials.

In the Kai Islands the warriors smear themselves with the juice of a disinfecting plant. The Aikuyu remove *thahu* by a process of lustration which in the more serious cases is performed by the medicine-man or the native council. The slaughter of a sheep accompanies the ceremony, and they smear themselves or are smeared by the medicine-man with the contents of the stomach and with a white diatomaceous earth.² Such a custom as the complete smearing of a Kafir woman with green and red clay after childbirth³ is perhaps connected with the custom of donning new clothes at the end of mourning or after a period of seclusion due to ceremonial impurity. In New Britain men guilty of unchastity may rid themselves of the taint by drinking sea-water in which coconut and ginger have been shredded. They are then thrown into the sea and, on emergence, throw away their dripping clothes.⁴

(c) *Changing clothes, cutting hair, nails, etc.*—

The Eskimo mother after childbirth begins to make herself a new suit of clothes.⁵ The Thonga woman is rigorously secluded from her husband at the regular periods, sleeps on a special mat, and wears special clothes which she brought with her at her marriage. At the end of the period she puts on her ordinary clothes once more. A woman who loses an infant is deeply defiled, and after a period of impurity of some two or three months' duration she undergoes purification in a ceremonial sexual act by her husband, and then buys new clothes.⁶

New clothes, however, are rather a sign of the termination of a period of uncleanness than a purification. In mourning they mark the close of the period of danger to others—the final putting off of the pollution of death.

At the end of the Thonga purification of the warriors everything that they had used during the tabu period was tied in a bundle with their clothes and hung on a tree at some distance from the village, and left to rot.⁷ Among the Kayans, after the termination of the mourning in a ceremony for which a freshly-taken human head was required and in which every one had been sprinkled with the blood of a sacrifice of pigs and fowls, mourning garb was laid aside and new clothes put on.⁸

The complete severance with the old and impure life which is brought about by the purification ceremony is further marked in some cases by changes or modifications of the toilet.

On the death of a relative the eyebrows or head may be shaved, as in the case of the Baganda warriors mentioned above, whose heads are shaved on their return from battle; or, on the contrary, the hair and finger- and toe-nails may be allowed to grow. The Bathonga cut their hair completely for the death of a near relative, the operation being performed by a doctor or some one who knows the correct method.⁹ The father and mother of twins among the Baganda allow their hair and nails to grow until the purification ceremony, when they are cut and wrapped in bark cloths. They are kept until the men go to war. At the end of the period of mourning for the king all shaved their heads, cut their nails, and put on new clothes.¹⁰ The Lilloets on the fifth day after a burial—a period spent in fasting and ceremonial abstinence—had their hair cut by the mortuary shaman who prepared the corpse for burial. They then returned to their homes and painted their faces, while the hair which had been cut was rolled up into a ball, taken into the forest, and fastened to a tree.¹¹

(d) *Artificial stimulation of natural processes.*—Other methods, based in an equal degree on getting

rid of all influence of the past, depend upon an artificial stimulation of natural processes.

Before the new season's corn can be eaten, an emetic must be taken.¹ In Fiji one of the first acts after a birth is to give the infant an emetic.² Pastoral and cow-keeping tribes in Africa, such as the Masai or the Nandi, require a certain period of time to elapse between the eating, in some cases, of meat, in others, of vegetables, and the drinking of milk.³ The Shawanese boys during the period of their preparation for initiation took an emetic at regular intervals. The Seminoles took 'black drink,' which was supposed to efface from their minds all wrongs that they had committed and to endure them with courage.⁴ The Lilloet widower induced vomiting by means of a stick thrust down the throat.⁵

(e) *The sweat-bath.*—Among N. American Indians the employment of the sweat-bath is almost universal as a means of removing physical impurities. It also serves by analogy to remove spiritual influences, to cure illness, and to remove ceremonial impurity. A widower during the period of seclusion is required to bathe frequently in a special sweat-house erected near a stream.⁶

(f) *Beating and other forms of expulsion of material evils.*—A method which showed a combination of the belief in the material and spiritual character of defilement was followed in Car Nicobar.

A man possessed of devils was rubbed all over with a pig's blood and beaten with leaves, the idea being that the devils were swept off by the leaves, which were then folded up and tied tightly with string. Before daybreak all the packets of devils were thrown into the sea.⁷

The purificatory ceremony of driving out the devils is sometimes practised on an extensive scale, especially at critical seasons of the year such as before or after a harvest.

The Iroquois practised an annual expulsion of evils, while at the Cherokee New Year festival all old clothes were burnt and pots, pans, and utensils were broken, all cabins swept clean, provisions destroyed, and all fires extinguished. The warriors took medicine and fasted for three days, abstaining from sexual intercourse, while all malefactors were pardoned. On the festival day new clothes were donned, new fires lighted, and the new corn cooked and eaten.⁸ On the other hand, the Nicobarese method of dealing with the physical side of the belief finds its analogy in the Navaho custom of scraping the body with a bundle of stuff and blowing away the evil from the bundle through the smoke-hole of the dwelling;⁹ or the New Hebrides custom of sprinkling or pouring water from a coco-nut or of drawing a forked branch of a particular plant over the body.¹⁰ The tribes of N.W. Canada—e.g., the Thompson Indians—after a death passed through rose-bushes, the object no doubt being to leave the impurity behind them as the thorns entangled their flesh or garments. The rose-branches that formed part of the beds on which they slept during the period of impurity were in like manner doubtless intended to entangle the ghosts whose attacks they feared. They also cleaned themselves with fresh fir-twigs morning and evening for a period of one year.¹¹

(g) *The use of blood.*—Blood, being of extreme importance in ritual, not unnaturally figures prominently in many purificatory acts, both as a cleansing agent and as a symbol.

The Caribs washed the new-born infant in some of the blood of the father.¹² But the blood with which the ceremony is performed is more commonly that of the victim offered by the guilty or unclear in part as an expiation of their offence. In cases of adultery—e.g., that in Rajmahal cited above—both parties are sprinkled with the blood of the hog furnished by the lover. Among the Dayaks the incessant rain caused by sexual irregularity is stayed by the use of the blood of a pig to purify the earth and atone for the moral guilt.¹³ The pollution may attach more particularly to the dwelling. The Batang Lupar Dayaks, in cases of a daughter's frailty, sacrifice a pig and sprinkle blood on the doorway to wash away the sin.¹⁴ For

incest the tribes of Borneo purify the household with the blood of pigs and fowls, the property of the offenders.¹ While in Ceram every house in the village is smeared with blood.²

Blood is also used as a medium of purification in other cases than sexual impurity—e.g., death from other than natural causes, when the blood of a sacrificial animal may be used.

In the Cameroons an accidental death is expiated by the sacrifice of an animal, with the blood of which the relatives of both slayer and slain and all present are smeared.³

Blood is also used in the interesting ceremony called 'the purifying' which forms a part of the complicated Toda funeral rites.

At the second funeral, which takes place some time after the first and simpler ceremony, the blood of a buffalo is mixed in a cup with powdered *tudr-bark*. A Tevial man, dressed in the mantle of the deceased and many ornaments, accompanied by a *uvusol* (dairyman-priest), walks to a female buffalo-calf under one year old, the *uvusol* throwing the blood from the cup as he goes before and behind him. On reaching the calf, the Tevial man hangs a bell on its neck, and the *uvusol* touches the remains three times with bow and arrow. The calf is driven away, and all fall down touching the earth with their foreheads. The skull and hair of the deceased are then rubbed with the blood and *tudr-bark*. The object of the ceremony is apparently that any one who in his lifetime has not been purified by the sacred *tudr-bark*, which is used in the ordination of the dairyman-priest, should be so purified after death.⁴

(h) *Death or excommunication of offender.*—The use of blood in purification ceremonies appears to be due to one of two distinct trains of thought. In some cases, such as those already cited, the use of blood seems to be dictated largely, if not entirely, by a belief in its purificatory qualities. If, however, these instances are examined more closely and especially in relation to the general character of the belief in purification, it will appear that this belief in all probability is a growth from the desire to rid the community of an individual whose conduct has endangered himself and the community in which he lives. As this usually involves in serious cases the death or exile of the offender, what is objectively a purification of the community becomes subjectively a punishment. This connexion between punishment and purification is particularly apparent in the case of sexual crime. While the purificatory ceremony involves the use of sacrificial blood, the animal to be sacrificed must be furnished by the offenders. This may in itself be regarded as a punishment by fine.

In Rajmahal, as stated, the pig required by the ceremonial is furnished by the adulterer. Among the Nias of Sumatra, who regard rain as the tears of the god weeping at adultery or fornication, the culprits are buried in a narrow grave with their heads projecting and are then stabbed in the throat with knives; then the grave is filled up, or they may be buried alive.⁵ Among the pagan tribes of Sarawak a bamboo is driven through the hearts of the offenders into the ground, where it is left to take root. But it is said that this is rarely done, because it is difficult to get any one to assume the responsibility of taking life. Therefore a commoner method is to put the offenders in a cage and throw them into a river.

(i) *Substitution of expiatory victim.*—Among the Torajas of the Celebes adultery is punished by the spear, but incest by throttling. This aversion from shedding the blood of the incestuous is not infrequent and is, it is to be presumed, to be attributed to a fear that the blood of a person already infected is noxious in an enhanced degree—so much so that sometimes a goat or buffalo is sacrificed and the blood mixed with water is poured on the fields to appease the spirits and restore fertility.⁶ This doctrine of substitution is frequently encountered in connexion with sexual crimes. It is clear that it is a case of substitution arising out of a disinclination to spill the blood of the guilty, and not primarily a propitiatory offering.

⁵ H. Sundermann, *Die Insel Nias*, Barmen, 1905, p. 34.

⁶ Hissink, quoted in Frazer, *Psyche's Task*, p. 63 f.

In the Dayak ceremony of *bergapit*, preparatory to the marriage of first cousins,¹ the couple go to the river and fill a small pitcher with personal belongings and sink it in the river. They also fling a plate and chopper into the water. A pig is sacrificed on the bank, and the carcass, when drained of blood, is thrown into the water. The pair themselves are then pushed into the water and made to bathe together. Finally a joint of a bamboo is filled with blood, and the couple parade the country sprinkling blood as they go.² In another case, among the Kayans, in a closely analogous practice, the idea of substitution or mitigation is still more clearly indicated. The property of the pair is smeared with blood, eggs are sent floating down stream, and the pair, as they come out of the water, are attacked with grass blades representing spears.³ A still more significant case is that of the Tomori expiatory (purificatory) ceremony for the marriage of uncle and niece—again a case of incest—in which a garment of each is laid on an open vessel, the blood of a sacrificed animal is allowed to drip on to them, and the vessel with its contents is set to float down the river.⁴

(j) *Parts of victim other than blood.*—An act of purification may be performed with parts of the sacrificial animal other than the blood.

After the bathing of the returned Basuto warriors in the stream it is sometimes the custom of the chief to complete the ceremony by the sacrifice of an ox in the presence of the army, with the gall of which the warriors are smeared.⁵

On the Wangela river in British New Guinea a man who has taken life is unclean and is segregated from the community until he has undergone certain ceremonies. As part of the ceremony he hunts and kills a kangaroo, which is cut open and whose spleen and liver are rubbed over his back. He then goes to the nearest water and washes himself straddle-legged, while the young warriors of the village swim between his legs.⁶

A custom of interest in connexion with the reverence for grass which exists among pastoral peoples is found among the peoples of the eastern side of the African continent, extending from the Dinkas in the north to the Bathonga in the south. This is the use in nearly all the purification ceremonies of the half-digested grass found in the stomachs of goats, bullocks, or sheep, when killed, with which the person undergoing the ceremony is smeared. In cases of incest among the Dinkas, the abdomen of the guilty man or woman is smeared with the contents of the large intestine of a bullock. Among the Bathonga cousins who marry are purified and saved from the consequence of their sin by a ceremony in which they are smeared with *psanyi*. A hole is cut in the goat-skin, in which the heads of the pair are inserted. The medicine-man's assistants take *psanyi* and place it on the head of the bride, saying, 'Go and bear children.'⁷ The use of cow-dung—e.g., by the Kavirondo in the purification of warriors returning from war in which they have killed, when they are smeared with this substance by their friends and then heads shaved, or among the Wa-wanga when the warrior must smear with dung the cheeks of his wives and children as he enters the hut—not improbably must be traced to the same idea as inspires the use of *psanyi*.⁸

The custom of clothing the subject in the skin of the goat or sheep or making an anklet or wristlet of the skin is also frequent among these tribes. The Thonga hunter made one for his wife if he killed an eland while bringing her home.⁹ Among some of the Indians of N. America it is also customary to wear a circlet of willow withies round the waist or a thong of buck-skin round the wrist, ankle, neck, or knee.¹⁰

(k) *Fire and fumigation.*—Fire, or the concomitant smoke, and incense are other means which are held to be efficacious in dealing with defilement.

The less serious *thaku* are removed by means of smoke among the Alikuyu.¹¹ In the Kakadu tribe of Australia after a death a circle of grass is made, in the middle of which is placed the bark in which the corpse was wrapped when it was carried to the grave. All the possessions of the camp, but especially the dilly bags of the women, are then purified by smoke from the fired grass, while the men of the tribe pour water over one another and rub themselves with charcoal.¹² Jumping across a fire in preparation for a journey was at one time practised in Persia,¹³ and the custom has already been noted above in connexion with the boys' seclusion among the Bathonga. The great fire festivals of the European peasantry, as well as the fire-walking ceremony, appear in like manner to have for their object the general freeing of the community in the districts

from evil influences and evil spirits, and therefore, like the devil-driving or devil-clearing ceremonies, may be regarded in a broad sense as purificatory in intention.¹

(l) *Transference of impurity; the scapegoat.*—The principle of the transmissibility of impurity was sometimes called into play in order to remove the defilement. It was transferred to some one who was already tabu.

In New Zealand, if any one touched the head of another, the head being a peculiarly 'sacred' part of the body, he became tabu. He purified himself by rubbing his hands on fern-root, which was then eaten by the head of the family in the female line.² In Tonga, if a man ate tabued food, he saved himself from the evil consequences by placing the foot of a chief on his stomach.³

The idea of transmission also appears in the custom of the scapegoat.

In Fiji a tabued person wiped his hands on a pig, which became sacred to the chief,⁴ while in Uganda at the end of the period of mourning for a king a 'scapegoat,' along with a cow, a goat, a dog, a fowl, and the dust and fire from the king's house, was conveyed to the Bunyoro frontier, and there the animals were maimed and left to die. This practice was held to remove all uncleanness from king and queen.⁵

The same idea underlies the practice of sin-eating (q.v.), by which the sins of the dead are assumed by any stranger who may eat of a cake and other food prepared for the purpose.⁶

PURIFICATION (Babylonian).—Purification may be considered as including any ceremony or ritual observance undertaken with a view to purging or cleansing a person, place, or thing from the ritual consequences of impurity. Impurity was a bar to communion with the deity, often to social intercourse, and was sometimes a real danger to the health and well-being of the person or community. Most writers who refer to purification among the Babylonians and Assyrians are influenced by the OT views on the subject, for which see PURIFICATION (Hebrew). Consequently, some chiefly seek for parallels to the Hebrew treatment of clean and unclean. Others take a wider view and compare the usages connected with purification in all the religions and civilizations where they can be recognized. The subject of rites, exorcisms, and other ritual ceremonies is already dealt with in art. BABYLONIANS AND ASSYRIANS, vol. ii. especially pp. 316-318. For the Babylonian attitude to offences against chastity the art. CHASTITY (Semit.-Egyptian), vol. iii. p. 498, § 3 should be compared with CHASTITY (Introductory). For the Babylonian conception of sin and the need to be purified from it compare CONFESSION (Assyro-Babylonian), vol. iii. pp. 825-827. The way in which disease was regarded may be gathered from art. DISEASE AND MEDICINE (Assyro-Babylonian), vol. iv. pp. 741-747. The connexion of expiation and atonement with purification is brought out in art. EXPIATION AND ATONEMENT (Babylonian), vol. v. pp. 637-640. HOLINESS (Semitic), vol. vi. pp. 751-759, illuminates the ideas of cleanness and purity, and their opposites.

No formal treatise on the subject has come down to us amid the mass of cuneiform literature, mostly fragmentary, which, however, supplies instruction

and formulæ for many cases presumably involving the need for purification. From this mass of exorcisms, medical receipts, prayers, hymns, spells, and magic ceremonies we have to deduce what was the Babylonian view of impurity and what was the method of cleansing or removal of that impurity.

This is a long and by no means easy task—long because of the enormous amount of material to be considered, difficult because so much of it is merely implicit and admits of so many different estimates of its implications. We have rarely much security that we estimate rightly the intention of the ceremony, which may really have been directed to a completely different aim.

The sufferer may have been the victim of some affliction and quite mistaken as to its origin and cause; indeed, it is likely after all to have been purely imaginary. If the supposed or implied cause of his distress was really what he suspected, we may fairly charge the ancient Babylonian with being very nervous about himself. But we may well believe that the Babylonian ministers of religion exercised their ingenuity in inventing many cases of conscience and providing remedies for them to an extent far beyond the demands of those who came to them for help and comfort. To judge from what we already know, every abnormal experience must have given the Babylonian uneasiness, as to his health of body or soul. Certainly the belief in demons and their power to plague humanity, the suspicion of having offended the gods, or broken tabu, must have added many terrors to the natural feelings of discomfort and apprehension, the prickings of conscience or despondency. To the average layman it was by no means easy to say wherein he had offended, nor against whom, and his good intentions were but a slight solace to a man who believed that he might be called to suffer not only for unwitting misdeeds but also from the malice of devils or men. So he hastened to the priest or soothsayer, the magician or astrologer, to discover for him his offence or the evil influence that was upon him. He may have gone in turn to all and certainly was called upon to suffer many things of them.

Whatever their diagnosis of his evil case, it seems probable that purification was the first requisite. But that was not all. When the thing to be removed from the man had been recognized as sin, disease, anger of the gods, possession by devils, or the spell of some witch, a further treatment appropriate to the case awaited the victim. An obstinate case might have to undergo all the treatments in turn. But none was likely to take effect if he had not been purified.

In itself purification might be a washing with pure water. This requirement was strongly insisted upon. Pure water must be procured from the Tigris or the Euphrates or, even better, from the mouth of the rivers, where their waters met and where were the Isles of the Blessed. The water must have been kept in a pure place 'preserved faithfully in the abyss.' The abyss, *apsu*, was properly the cosmic sea which underlay the whole earth, on whose bosom the earth rode, to which the kings boasted that they had dug down their palace foundations, the fresh water sea from which arose the springs and rivers. But in every great temple stood the 'great sea'—the laver, also called *apsu*, like Solomon's brazen sea. Doubtless, it is this temple abyss which held the pure water referred to. It is called the water of Eridu, 'the sweet or good city.' But, in default of such holy water, the water of wells was allowed, if only it were consecrated by a correct incantation.

Pure water was often modified by the addition of herbs or aromatic woods. What these were is

difficult to ascertain from their names, such as *binu*, 'herb of Dilbat' (perhaps the place of Venus-Ishtar), a date-stone, straw, *gatstsu*, *unqu aban nisiktu* (perhaps a ring, set with precious stones, possibly as fee to the priest), *GAM-GAM* scent, *burashu* (possibly cypress). The *binu* plant is thought to be 'tamarisk.' It is probable that such additions had magical efficacy. The washing of the hands was repeated often, accompanied by different incantations, usually cited by their first lines, of which we often know no more, but which we may hope gradually to know completely. But to follow out in detail the various accompaniments of the hand-washing would demand a treatise.

It does not seem in any case to have been necessary to bathe the whole person; usually the hands sufficed, though the head or forehead is sometimes ordered. Special cases demanded a cleansing of the mouth, and the water was sometimes drunk. Sprinkling sufficed occasionally. A proper time had to be determined, which was the object of divination and the subject of omens. The literature of these fit times is extensive and usually obscure. Often it is prescribed that the ceremony shall be performed in a clean place; the open country or the desert would do. But for perfect security a *bit rimqi* was built. This was a 'washing-house,' or lustration-chamber, and was often attached to a house in the city, possibly to a priest's house or for the convenience of any who could pay for its use. There was a distinct ritual for the *bit rimqi*, whither the polluted should be taken. The ceremony was performed in special vestments of a sable hue, worn both by the suppliant and by the minister.

Apparently the motive of the washing was the symbolical removal of the contamination and often its symbolical transfer by the water to some object, rendered by incantation a representation of the supposed author of the trouble—e.g., a clay or wax image of the witch. This image could then be buried, burned, or otherwise destroyed, and the sufferer freed from his uncleanness. But in this case also the methods are most varied, and no exhaustive treatment is possible here.

It is not clear just how much of the treatment was merely purification. A sick person had to be purified before he could be cured, for without purity he could not expect the cure to work at all. But the full cure may be regarded in his case as a purification. Hence the word has been used to cover all the process by which a man who believed that his distress came under the head of uncleanness was relieved of his ailment. As he did not confine the idea of uncleanness to any very simple category, it is hard to say what cleansed him of it, and the whole of the above-named articles must be read to exhaust the already recognized ideas of purification. It is dangerous to attempt classification of the kinds of uncleanness. But analogy suggests some classes.

Sexual impurity is very hard to define. On the one hand, all sexual intercourse involved the necessity for purification. But, on the other hand, the Babylonians seem to have allowed even homosexuality. It is difficult, therefore, to state wherein consisted the impurity of irregular intercourse. Possibly excess, leading to the reaction of lassitude, was productive of the suspicion that the patient was under a spell or a demon. This may have been extended by fear to all cases of indulgence. But we must know more before we can fairly generalize, and our material, with all its fullness, has many omissions, which may or may not be significant.

Fear of consequences, when there was so much to fear, hard to distinguish from consciousness of wrong-doing, was evidently the motive to declare

oneself unclean and seek purification. The spiritual director would move the penitent to confession and quite honestly prescribe a treatment deemed likely to be effective.

LITERATURE.—The literature quoted in art. BABYLONIANS AND ASSYRIANS and the relevant sections of art. CHASTITY, CONFESSION, DISEASE AND MEDICINE, EXPIATION AND ATONEMENT, etc., is ample for a preliminary treatment of the subject. Much further research is needed before a clear and consistent view can be set out, if that can ever be attained now. Distinction will have to be made between the usages of different periods, and changes of view may be detected.

C. H. W. JOHNS.

PURIFICATION (Buddhist).—The religious movement which is known as early Buddhism did not take as its central doctrine an ideal of purity to be aimed at by a system of ritual purification. Its own keynotes are those of individual enlightenment, of release, of spiritual vision, and of movement to a goal discerned thereby. But early Buddhism largely made itself felt as a protest and reaction against a system, or systems, of elaborate rites and practices cultivated for the express purpose of obtaining absolution and purification from the impurities inherent in this fleshly mechanism and in the deeds wrought by it. As formulated doctrine, a religion was referred to as *dhamma*, but, as end gained by ritual works, it was referred to as *suddhi* (or *visuddhi*, 'purity', 'purifying', 'cleansing'). Buddhism laid down its own *dhamma* as insight into truth, and as path or means of attainment. But we see it turning aside from these to take account of the prevailing notion of ritual purification. It condemned the methods in practice; it substituted 'inward spiritual grace' for external symbols, and upheld its own 'vision' and 'way' as the true *kāṭhāras*.

Salvation envisaged as (*vi*)-*suddhi*, when Buddhism arose, appears in many of the early Pali documents, as the belief or 'view' of Brāhman and recluses:

'The views of recluses and brahmins, not of us, who deem that *suddhi* is by moral conduct, that *suddhi* is by ritual, or by both' (*Dhamma-saṅgaṇi*, § 1005).¹

'With us alone is *suddhi*, so they declare; not in other norms (*dhammas*) is *Visuddhi*' (*Sutta-Nipāta*, 824).²

'Not so
Were pure (religions) to be reached'
(*Psalm of the Brethren*, 893).³

'The celebrant in many a sacrifice,
I fostered sacred fire, oblations made;
"These be the pure and holy rites!" methought'
(ib. 341).

'Some recluses and brahmins hold that purity is by dieting . . . by transmigration . . . by rebirths . . . by sphere of being . . . by oblations . . . by tending a (perpetual) fire' (*Majjhima-Nikāya*, i. 80 f.).

'Lo! ye who blindly worship constellations of heaven,
Ye who fostering fire in cool grove wait upon Agni,
Deeming ye thus might find purification (*suddhi*)'. . .
(*Psalm of the Sisters*, 143).

The rites and practices to gain *suddhi*—otherwise referred to as release (*mokṣa* [*g.v.*]) from demerit—most frequently condemned in Buddhist scriptures are of three kinds: (1) asceticism, (2) fire-ritual, (3) baptism, or frequent immersion in any convenient (usually) running water. Thus the 'dieting' alluded to above consisted in reducing the daily food to a minimum vegetable diet, even to a single bean. There was, again, the *tapas* ('austerity') of the five fires (one on each side and the sun overhead), and all the petty acts of self-thwarting and self-denial enumerated in *Digha-Nikāya*, i. 165 f. (*Dialogues of the Buddha*, i. 226 f.), and elsewhere. They were less characteristic of Brāhman than of recluses generally, whether these were Brāh-

mans or not. Nevertheless in the anthologies a Brāhman is made to say:

'Painful the penances I wrought for heaven,
All ignorant of purity's true path'
(*Psalm of the Brethren*, 219).

Protest against the belief that such practices made for real purity finds expression in a *sutta* describing the Buddha resting in the sense of enlightenment and of deliverance from his own self-torturing exercises that had brought him no light. The tempter assails him by suggesting doubt:

'His penitential tasks abandoning,
Whereby the sons of men are purified,
The impure fancieth that he is pure,
When he hath strayed from path of purity.

(*The Buddha* :)

Full well I understood how any rites
Austere, aimed at the overthrow of death,
Belong to matters useless for our good.
Yea, nothing good they bring along with them,
Like oar and rudder in a ship on land.
But morals, concentration and insight—
The Path to Enlightenment—these were my tasks;
That Path creating and developing,
Have I attained the purity supreme'
(*Saṃyutta*, i. 103).

A more typical Brāhman view, however, is that of the Bhāradvāja referred to as *Suddhika* ('purity-man', 'puritan'):

'Though he be virtuous and penance work,
There is in all the world no brahmin found
Thus rendered pure
In Veda-lore expert and in the course
His class lays down :—thus is he purified,
Unique 'mong men' (ib. i. 166).

This expertness in the latter field (*charaṇa*, explained by the commentary as *gotā-charaṇa*, the practice of the clan or *gens*—in Sanskrit, *chāraṇa*) includes (a) all religious observances peculiar to the Brāhman, and (b) all 'colour' or class regulations. The specific differences marking off the four social classes of early India one from another are called 'colour-purity' (*chatu-varṇī suddhi*) in *Majjhima*, ii. 132. The Brāhman claimed priority in class 'on account of his pre-eminence, of the superiority of his origin (Brahmā), of his observance of restrictive rules, and of his particular sanctification' (*Laws of Manu*, x. 2 [SBE xxv. (1886) 402]). The Buddha, as against such a claim, affirmed that social worth depended solely on character and quality of work. There was no 'colour' bar to purity, social or religious:

'And be he noble, brahmin, commoner,
Or labouring man, or of a pariah class :—
Who stirs up effort, puts forth all his strength,
Advances with an ever-vigorous stride,
He may attain the purity supreme'
(*Saṃyutta*, i. 166).

Of religious observances, which every Brāhman house-father was qualified to celebrate (see art. BRAHMAN), none appeared to incur the protestant disapproval of early Buddhism so often as those of oblations to fire and of ceremonial bathing. Both are denounced as merely external, and therefore misdirected and futile. Let the *suttas* speak for themselves:

(*The Buddha* :)

'Nay, brahmin, deem not that by mere wood-laying
Comes purity. Such things are all external.
To him who thus purification seeketh
By things without, none is made pure, the wise say.

I lay no wood, brahmin, for fires on altars.
Only within burneth the fire I kindle.
Ever my fire burns, ever tense and ardent,
I, Arahan, work out the life that's holy'
(*Saṃyutta*, i. 169).

Again, to a matron who was making her regular food-offering to Brahmā, while her son, a saintly *bhikkhu*, stayed without on his round for alms, the Buddha says:

'Far hence, O brahminee, is Brahmā's world, . . .
And Brahmā feedeth not on food like that . . .

¹ Ed. PTS, London, 1885; *Dhamma-Saṅgaṇi: a Buddhist Manual of Psychological Ethics*, ed. C. A. F. Rhys Davids, London, 1900.

² Ed. PTS, London, 1913.

³ PTS, ed. C. A. F. Rhys Davids, London, 1913.

⁴ Ilt. 'this is *suddhi*.' ⁵ Cf. *Jātaka*, iv. (tr.) 117.

Lo here! this Brahmadeva, son of thine,
A man who past the gods hath won his way, . . .
. . . hath come up to thy house for alms . . .
Meet for oblations from both gods and men, . . .
By evil undefiled, grown calm and cool, . . .
His heart at utter peace, all vices purged . . .
Let him enjoy the choice meats thou hast served'¹

(ib. i. 141).

Another of the ritualistic Bhāradvāja clan invites the Buddha to go bathing in the Bāhukā river.

The Buddha asks: 'What of the river, brahmin, what can it do?' The reply is: 'Many consider it as a means of deliverance and of merit; many people let it bear away their evil deeds (karma).'

[The Buddha:]

'What boots the Bāhukā, or the Gayā? . . .¹
For ever and a day his foot may plunge
Therein, yet are his smutty deeds not cleansed.
They will not purge the man of passions vile.
To him that's pure, ever 'tis Phalgu-time,
To him that's pure, ever 'tis Sabbath-day,
To him that's pure and in his actions clean,
Ever his practices effectual prove.
Here, brahmin, is 't that thou shouldst bathing go:—
Become a haven sure for all that breathes;
Speak thou no lies, harm thou no living thing,
Steal nought, have faith, in nothing be thou mean.
So living, what are river-rites to thee?'

(*Majjhima-Nikāya*, i. 39).

To another Brāhman who confesses to belief in the moral cleansing power of water, the rebuke takes this form:

'The Norm's a lake, its strand for bathing virtue,
Clear, undefiled, praised by the good to good men,
Wherein in sooth masters of lore come bathing.
So, clean of limb, to the beyond pass over'

(*Samyutta*, i. 183).

In the anthologies Sister Puṇṇā pours ridicule on a Brāhman seeking a shivering purity in the water, in which he must inevitably be excelled by any animal having its habitat in that element (*Psalms of the Sisters*, lxv.).

The quoted passages throw some light on the advocacy by Buddhism of ethical purity unaided by ritual symbols. Some further testimony will assist in bodying out their ideas of purity, and their application of it to their own specific doctrines.

We find the purification idea applied to the possibility of melioration in all rational beings. The Buddha maintains, against a current sceptical doctrine, that beings either deteriorated ('became defiled') or advanced ('became purified') through a sufficient cause. This was the hedonically mixed nature of the factors of life. In other words, our experience is sufficiently pleasant to make the things of this world seductive, and sufficiently painful to make us long for something better (*Samyutta*, iii. 69 f.). This is called the 'twofold doctrine hard to penetrate' (*Digha*, iii. 274).

How did Buddhism conceive the nature of defilement (*saṅkilesa*, *upakilesa*) and its opposite? Consciousness, or heart (*chitta*), was not considered as intrinsically impure. Though 'formless' or immaterial, it was likened to a radiant or flashing clarity, infinitely swift and plastic in procedure, but liable to defilement by adventitious influences (*Anguttara*, i. 5–11). These made their advent on occasion of sense. In reacting to sense-impressions, a number of mental adjuncts were held to come into play, such as feeling, volition, emotions, etc. Prominent among these were the three radical conditions ('roots') of immoral activity—appetite or lust, enmity, dullness or unintelligence. The corresponding three opposites might come into play instead—disinterestedness, love, intelligence or insight. The *karma* from previous lives would decide this in the first instance; nurture and training would modify the adjuncts during life. But defilement consisted in the three immoral conditions exerting themselves in response to the calls of sense. That defilement is fully described, e.g., in the *Amagandha Sutta* (*Sutta-Nipāta*, *SBE*

¹ The typical ceremonial bathing was in the Gayā, at the spring-festival of Phalgu (*Psalms of the Brethren*, p. 181).

x. [1881] 40 f.), as consisting in violence and injustice, sensuality, covetousness, and deceit, obstinacy and conceit, etc. Again, sixteen forms of *chitta*-defilement are given in the *Vatthūpama-Sutta* (*Majjhima*, i. 36 f.).

Purification from all these spiritual defilements consisted, as the latter *sutta* shows, in a mental awakening (1) to new ideals, (2) to the nature of defilement as such; and in an emotional upheaval and subsequent tranquillization, the defiling tendencies having been ejected. The process of course took time, and was held to be perfected only by progress along the 'Four Paths,' i.e. stages of the path, to saintship. It is illustrated (ib.) negatively and positively by a well-cleansed cloth taking on a fine dye, or again by refining in fire:

'Little by little, one by one, as pass
The moments, gradually let the wise,
Like smith the blemishes of silver, blow
The specks that mar his purity away'

(*Dhammapada*, 239).

Another favourite purity simile is that of moon or sun getting free from cloud, resplendent in a clear sky:

'Passionless, purified, undefiled as the moon when clear of blotting (cloud)' (*Sutta-Nipāta*, 636).

We have seen Buddhism using purity ritual as metaphor to emphasize the inwardness of its ideal. More appropriate is the figure borrowed from that craft on which its central doctrine was modelled, to wit, medicine. The possible cure of certain ailments for which the physician prescribes purging and cathartics (*vamana*, *virechana*) are compared (*Anguttara*, v. 218 f.), with the sure remedy for all suffering in the 'Ariyan Eightfold Path' of the perfect life. The convalescent is described, not as purified, but as emancipated or released—a more characteristic Buddhist ideal, as has been stated above, than that of purification.

Once annexed, the ideal of purity was applied to every kind of proficiency of heart and head. The acme of purity (*koti-parisuddha*) in conduct was to exercise self-reference—not to do unto others what would be disagreeable if done to one's self (*Samyutta*, v. 252 f.). The inward purifying fire referred to by the Buddha (see above) is explained as his insight. Vision and insight have to be 'cleansed,' but different temperaments are stated to attain this ideal in different ways (ib. iv. 191–195). Mystical or supernormal sight and hearing are also defined as purified or clarified (*visodhita*) as well as 'divine' (*divba*, 'godlike,' or 'angelic').¹ Achievements of this kind are attributed, in varying degrees, to recluses graduating in saintship. But none of the emphasis of Christian mysticism on the purity or clarity as such is to be found in the Buddhist canon.

Finally, three special applications of the purity ideal may be noted, namely, to morals, to the work of teaching, and to the *summa bonum*.

Thus observance of the five sets of rules for the order are technically called 'the five purities' (*Vinaya*, v. 132; cf. *Vinaya Texts* [*SBE* xiii. (1881)], i. 15, 55, etc.).

'Perfectly pure teaching' is such as is undertaken because of the excellence of the doctrine's ideal and method, and out of love and compassion felt by the teacher (*Samyutta*, ii. 199).

'Purity' is again annexed as one of the 44 synonyms for salvation or *nibbāna* (ib. iv. 372), and this is at times referred to as 'the purity supreme.' Thus envisaged, the sovereign means of attaining it was that of the exercises in self-knowledge known as the 'Four Applications of Mindfulness' (*Dialogues*, ii. XXII.):

'the path that leads only to the purification of beings . . . to the realization of Nibbāna.' (The translation 'one and only path' in that work (*ekayano*) is not correct.)

¹ See, e.g., *Dialogues*, i. 89, 91.

Insight into impermanence, suffering, and non-existence of soul are called no less 'the path to purity' (*Dhammapada*, 277-279; *Psalms of the Brethren*, 676-678)—a phrase that became immortalized for all Buddhists of the Theravāda teaching down to the present day as the title of Buddhaghosa's classic work, the *Visuddhi-Magga*.

LITERATURE.—All the texts and translations quoted are named in the text, and all, except those in *SBE* and in *SBB*, are among the Pali Text Society's publications.

C. A. F. RHYDS DAVIDS.

PURIFICATION (Chinese).—The technical term usually employed by the Chinese to denote the rites connected with ceremonial purity is a word which in modern Pekingese is pronounced *chai*. The word is used, especially among Buddhists, to denote the practice of abstinence from animal food; but it implies much more than this. The written character for *chai* is a modification of another character *ch'i* (radical 210); indeed, in classical literature *ch'i* is used where modern writers would use *chai*; and this fact provides us with an unmistakable clue to the original ideas which the term was intended to convey. *Ch'i* means 'to regulate,' 'to arrange in order,' 'to make even,' 'to equalize,' 'to establish uniformity'; and, when used in an ethical sense, it implies the due regulation or adjustment of the whole personality—physical, intellectual, and moral. The process of adjustment (*chai*) was regarded as an essential preliminary to the exercise of priestly or sacrificial functions, and it implied fasting, self-control, and an inward purity of which physical cleanliness and spotless raiment were outward and visible signs.¹

1. **The State ritual.**—The principal authority for sacrificial and other religious rites in ancient China is the *Li Chi* (*SBE* xxvii. and xxviii. [1885]). In that Chou dynasty classic we find the greatest stress laid on the necessity for gravity, sincerity, and reverence in all who take part in such rites. We are told that sacrifice is not 'a thing coming to a man from without; it issues from within him, and has its birth in his heart.' Religious ceremonial is not merely an external show, nor should it be carried out for selfish reasons or in expectation of reward; it is the outward expression of inward feelings, and, unless those feelings are of a pure and disinterested character, the ritual in which they find expression will necessarily lack dignity and impressiveness. Hence it is only men of exalted virtue who should presume to officiate at sacrifices (*SBE* xxvii. 61 f., xxviii. 236 f.). But even men of the noblest character must not occupy themselves with sacred things without scrupulous self-preparation; hence, 'when the time came for offering a sacrifice, the man wisely gave himself to the work of purification' (*SBE* xxviii. 239). To effect this purification, he had to guard himself against all noxious and unclean things and to keep his desires under strict control. He shunned music, because music would cause mental distraction and excitement. He kept all wayward thoughts out of his mind, and concentrated his attention on the way of rectitude. He refrained from unnecessary movements of his hands and feet. He strove to bring his intellect and his moral sentiments to the highest degree of clarity and refinement. When he had succeeded in conducting himself in this manner for the required number of days, he was in a fit condition to enter into communion with spiritual beings (*ib.* 239 f.).

Of this purificatory process there were two stages. The lower stage, known as *san chai*, 'lax purification,' lasted for seven days; the higher, known as *chih chai*, 'strict purification,' occupied the three days immediately preceding the performance of the

sacrificial ceremony. The process involved bathing (*mu yü*), the wearing of clean raiment, restriction to the simplest food, and abstinence from sexual relations. The person undergoing 'strict' *chai* separated himself from his family, and lived by himself in apartments other than those which he usually occupied. He wore unadorned garments of a black colour, because these were regarded as consonant with, or symbolical of, the solemn nature of his thoughts, which should be concentrated on the unseen world (*SBE* xxvii. 448; see also J. Legge, *The Chinese Classics*², i., Oxford, 1893, p. 248). Great stress was laid on the inutility of attending merely to the external aspects of the purificatory rites. Mencius implies that a well-regulated mind was far more important than outward comeliness and correctness, when he tells us that even a leper (or a person of external repulsiveness) may sacrifice to God, provided he carried out the rules of *chai* in the proper spirit.³

The sacrificial rites for which purification was and still is considered necessary are mainly those connected with the cult of ancestors, and purification is therefore theoretically binding upon all heads of families and others whose business it is to lay sacrificial offerings before the family tombs or the spirit-tablets in the ancestral temple. But the rule applies with equal force to the stately ceremonies which are or were conducted by the emperor or his deputies in connexion with the cult of canonized sages and heroes such as Confucius, Kuan-Ti, and Yo-Fei; the worship of the Supreme Deity and the divinities of earth, mountains, rivers, and other nature-spirits; and the propitiation of the spiritual beings whose function it is to distribute the rainfall, to ward off pestilences and other calamities, to promote the growth of crops, and to regulate the seasonal changes. The impressive ceremony of the worship of Shang-ti (the Supreme Being) at the winter solstice took place at the marble Altar of Heaven, which is situated in the midst of a wooded park in the southern section of the city of Peking. The theoretical sanctity of the emperor's person did not exempt him from the duty of undergoing *chai* before he was qualified to act as high-priest for myriad-peopled China.

Three days before the ceremony his majesty moved into a building called the *chai kung*, 'purification palace,' situated within the 'forbidden city.' Here, in cloistral stillness, he was expected to remain two days and nights. On the third day he proceeded to the sacred enclosure of the Altar of Heaven, and was conducted to another *chai kung*, where he kept solitary vigil during the last of the three nights of 'strict purification.' Similar purificatory rites were in ancient times performed by the emperor at the beginning of the four seasons.

Three days before the festival of Li-Ch'un ('Beginning of Spring') the Grand Recorder informed the emperor that 'on such and such a day the spring will begin.' Thereupon 'the son of Heaven devotes himself to self-purification, and on the day he leads in person the three ducal ministers, his nine high ministers, the feudal princes (who are at court), and his Great officers, to meet the spring in the eastern suburb.'²

The emperor's duties and prerogatives in connexion with these State rituals were to some extent shared by his consort, though the imperial pair were separated from one another during the period of purification.³ In the third month of spring a ceremony took place in which the empress acted alone.

'In this month orders are given to the foresters throughout the country not to allow the cutting down of the mulberry trees and silk-worm oaks. . . . The trays and baskets with the

¹ J. Legge, *The Chinese Classics*², ii., Oxford, 1895, p. 830. For the translation of 'leper,' which is doubtful, see H. A. Giles, *Confucianism and its Rituals*, London, 1915, p. 63. Legge's tr., 'wicked,' is unsupported by the commentators and is inappropriate.

² *SBE* xxvii. 253. For similar observances at the other seasons see *ib.* pp. 269, 284, 297. For a reference to the emperor's restricted diet when undergoing purification see E. Biot, *Le Tcheou-Li*, Paris, 1851, i. 72 f.

³ See, e.g., *SBE* xxviii. 433; cf. Biot, *ib.* 15, 18 f.

¹ Cf. art. *FASTING*, vol. v. p. 761, § 4.

stands (for the worms and cocoons) are got ready. The queen, after vigil and fasting, goes in person to the eastern fields to work on the mulberry trees' (*SBE* xxvii. 265; cf. xxviii. 223 f.). This was done in order that the women of China might be encouraged to feel that, when they laboured at one of the great national industries—the production of silk—they were following the example and carrying out the precepts of the first lady in the land. Similar recognition was accorded by the emperor to the industry of agriculture; for the custom was that in the first month of spring the emperor prayed to heaven for bountiful harvests, and then, with his own hand on the plough, turned up three furrows (*SBE* xxvii. 254 f.). This rite has been kept up till our own day.

2. Purification in Confucianism. — A modern writer has hazarded the statement that in Confucianism fasting is perhaps 'wholly unrecognized' (*EB*,¹¹ x. 193). This remark is by no means accurate, for ritual fasting is an essential part of the rites of purification referred to in the *Li Chi*, and the *Li Chi* ranks as a Confucian classic. In bk. xxix. we find the following remark attributed to Confucius himself:

'Vigil and fasting are required (as a preparation) for serving the spirits (in sacrifice); the day and month in which to appear before the ruler are chosen beforehand;—these observances were appointed lest the people should look on these things without reverence' (*SBE* xxvii. 331).

From other sources also we have ample evidence that Confucius by no means ignored these ritual observances. In a classical passage we are told that there were three things which Confucius took very seriously and in regard to which he showed the greatest reverence and circumspection. These were purification (*chai*), warfare, and disease (Legge, i. 198). The selection is not so whimsical and arbitrary as may be supposed. The third, it will be observed, concerns the individual human life, which it mars or cuts short; the second affects the welfare of society and the rise and fall of states; while the first is associated with the solemn rites that are believed to open a channel of communication between living men and the spiritual world. From another passage we learn that Confucius 'purified himself with water' before going to court to announce the murder of a feudal prince. Legge rightly points out in connexion with this passage that the Chinese phrase (*mu yü*) represented by these words 'implies all the fasting and all the solemn preparation as for a sacrifice or other great occasion' (i. 234). In the same classic (the *Lun Yü*) we read that Confucius, when undergoing *chai*, arrayed himself in clean linen cloth, changed his diet, and sat elsewhere than in his usual seat (Legge, i. 232). In the classic usually known to Europeans as *The Doctrine of the Mean* Confucius is represented as having uttered the following words:

'How actively do the spiritual beings manifest their powers! They are beyond the ability of eyes to see or ears to hear, yet they are immanent in all things. It is for them that men purify themselves and don rich array and establish the rites of sacrifice and worship.'

Not only was purification known to and practised by Confucius and his disciples and contemporaries; it also forms part of the ritual of the cult of which Confucius himself is the central figure. The chief seat of this cult is the imposing temple at Ch'ü-fou in Shantung. The temple stands near the enclosure which contains the sage's tomb, and adjoins the palace of the ennobled representative of the Confucian family—the Yen Shêng Kung, 'duke of extended sagehood.' As the rites of the Confucian cult throughout the empire are modelled on those practised at Ch'ü-fou, special interest is attached to a book called the *Shêng Mên Li Yo Chih*, 'Records of the Ritual and Music of the Holy Temple,' which is in two small volumes printed from wooden blocks preserved in the temple pre-

cincts. The latest edition of this work was published in 1887 under the editorial supervision of a committee composed wholly of the sage's reputed descendants. From this handbook we may gather authoritative information concerning the place occupied by purificatory rites in the Confucian ceremonial.

Fifteen days before the date fixed for the sacrificial ceremony the duke (as hereditary custodian and superintendent of the temple and its rituals) carries out a rite technically known as *ta shêng*, 'the purification of the sacrificial animals' (ox, sheep, pig, etc.). The duke and his assistants, arrayed in their robes of office, go to the park in which the animals are kept (the *hsi-shêng-so*) and select unblemished and well-conditioned victims for the forthcoming sacrifice.¹ These animals are then ceremonially washed with warm water; and every day thereafter, until the time comes for the sacrifice, this cleansing rite is repeated. On the same day a proclamation is issued at one of the temple-gates, called the Yang-kao-mên, 'the gate of gazing upwards,' whereby the temple officials and all whose duty it is to take part in the ceremonies are called upon to prepare themselves for the rites of purification, which in their 'lax' form begun on the tenth day before the sacrifice. From the tenth day onwards the temple-officers go daily to the temple and carry out a thorough cleansing of it. The courtyards are weeded, and all dust and rubbish are carefully removed. This process is technically known as *sa sao*. On the third day before the ceremony the ministrants enter upon the period of 'strict' *chai*. At noon on this day there is a solemn procession of robed officials, headed by the duke himself, to one of the temple-gates known as the Tung-wên-mên, where they stand in order of precedence. The persons who are to officiate at the ceremony, and who are therefore about to enter upon three days' *chai*, then perform the treble obeisance (*kotow*), while a herald (*hsüan-tu-shêng*) reads aloud the *chieh-tz'ü* and *shih-tz'ü*, i.e. the vows (*shah*) by which the ministrants bind themselves to a faithful observance of the rules of abstinence (*chieh*).² After this ceremony the candidates for purification proceed to the special pavilions set apart for their use—buildings known as *chai-su-so*, 'purification lodgings.' Between the hours of 3 and 5 on the same day they must bathe and array themselves in clean garments made of plain black cotton. They then walk to the Hall of Poetry and Rites (one of the main temple-buildings), salute each other decorously, and carry out certain duties connected with the arrangement of the sacrificial vessels. Their nights have to be spent in the 'purification lodgings,' where they are under the supervision of officials who after dark go their rounds with lamp in hand to see that there is no unseemly breach of rules.

Into the details of the sacrificial ceremony itself we need not enter. The culminating moment arrives when the sacrificial articles are solemnly placed in front of the 'spirit-tablets' of Confucius and his canonized associates. This can be done only by persons in a state of ceremonial purity, and the privilege falls therefore to those who have just completed their three days' strict *chai*. Even they, however, are not allowed to approach the altars with the sacrificial meats and fruits until a final ceremony of purification has duly taken place. From a richly-garnished vessel (*chin lei*) a ministrant takes a ladleful of clean water and transfers it to a smaller vessel (*kuan-p'ên*), which is simply an ordinary washing basin placed on a four-legged wooden stand. The officer (*chéng-hsien-kuan*) who is to take the offerings up to the altars then goes through the form of washing his hands. One of the ministrants takes a long narrow strip of fringed cloth from a bamboo basket (*ssü*), kneels down, and passes the cloth to the *chéng-hsien-kuan*, who uses it to dry his hands.³ The latter then proceeds to wash seven goblets (*chio*) which are to hold the sacrificial wine. The *chio* is a three-legged cup with two ears and a projecting lip. Three of the seven are intended for the altar of Confucius; the other four are destined for the altars of the four subordinate sages who are associated with Confucius in the sacrificial rites. These are Yen Hui (the favourite disciple), Tsêng Tzû, Mêng Tzû (Mencius), and Tzû-ssü.

There are various rules of discipline which have to be observed by all persons who occupy permanent posts in connexion with the Confucian rites. Among the offences which entail dismissal from office two are of interest as bearing on our present subject. One is the offence of *ju miao pu chai*, entering the temple (to perform duties connected therewith) without having undergone purification. The other is the offence of *ni sang ju miao*, entering the temple while in a state of mourning, and concealing the fact. The temple-ministrant

¹ For references to similar functions carried out in ancient times by the monarch see *SBE* xxvii. 223 f.; cf. Biot, i. 455 f.

² For a similar custom in ancient times see Biot, ii. 107 f.

³ For further references to hand-washing as a ritual act in China see Biot, i. 466 f., ii. 230. It will be seen that there were occasions on which the ablution had to be performed by the emperor himself. For observations on the religious significance of the rite, and its use in other parts of the world, see art. HAND, vol. vi. p. 498 f.

who is in mourning is expected to notify the fact without delay to his official superiors, in order that arrangements may be made to have his duties temporarily delegated to some one else.

There are several references in ancient Chinese religious literature to a curious belief that, when the rites of strict purification had been scrupulously fulfilled, the purified worshipper would see the spirits to whom his sacrifice was to be offered and on whom his thoughts had been concentrated (see, e.g., *SBE* xxvii. 448, xxviii. 211). This rather startling statement should not be taken as the expression of a literal belief that the spirits would present themselves before the worshipper's bodily eyes. It is not impossible, indeed, that statements of this kind indicate the survival of pre-historic beliefs similar to those which existed down to our own time among the Eskimo or the American Indians, who believed that the fastings and other austerities which a youth underwent at puberty would enable him to see his guardian-spirit.¹ It is also possible that among the ancient Chinese, as among many sects known to Christendom, fasting and other ascetic practices were the cause of psychical disturbances which resulted in 'visions.'² An interesting parallel to our Chinese text is to be found in the 'oracle' of the Montanist prophetess Priscilla, which declared that 'purity unites (with the Spirit), and they (the pure) see visions, and bowing their faces downward, they hear distinct words spoken.'³ The Chinese, however, under the sober influences of Confucianism, have shown little inclination to carry their religious austerities to morbid extremes; indeed, worshippers are told that they should not emaciate themselves till the bones appear, nor should they let their seeing and hearing become affected by their austerities.⁴ Confucian Chinese, therefore, prefer to interpret the classical references to the visibility of spirits in a sense similar to that in which the term *t'ien yen* ('heavenly eye') is understood by Buddhist mystics. This 'heavenly eye' is much the same thing as Plato's 'eye of the soul' when it is turned towards reality, or the 'mind's eye' and 'heart's eye' of Gregory of Nyssa and St. Augustine. When our Chou dynasty enthusiast expressed his belief that the spirits would become visible to their faithful and purified devotee, he probably meant exactly what was in the mind of the 15th cent. Christian mystic who said:

'Si tu esses intus bonus et purus, tunc omnia sine impedimento videres et bene caperes. Cor purum penetrat caelum et infernum' (*de Imat. Christi*, i. 4).

3. Purification in ancestor-cult.—Strict purity has always been enjoined on those who officiate at the sacrifices to the dead.

'When a filial son is about to sacrifice, he is anxious that all preparations should be made beforehand. . . . The temple and its apartments having been repaired . . . the husband and wife, after vigil and fasting, bathe their heads and persons and array themselves in full dress.'⁵

Purity is indicated by the very name of the great spring festival of Ch'ing-ming, at which the family graves are visited, repaired if necessary, and swept clean; for *ch'ing ming* means 'pure and bright.' This phrase contains an allusion to the

³ Quoted by Rufus M. Jones, *Studies in Mystical Religion*, London, 1909, p. 52.

⁴ *SBE* xxvii. 87. We may refer to the book of Mencius, however, for a curious case in which fasting and purification were carried to a morbid extreme (see Legge, ii. 284 f.).

⁵ *SBE* xxvii. 214; cf. 292 and see xxvii. 87. For observations on the ritual washing of the head see art. *HEAD*, vol. vi. p. 538 (§ 7 (b)). The Chinese phrase here used is *mu-yü*, which is the term ordinarily employed to denote ritual ablutions and includes washing of the head (see Legge, i. 284).

belief that on this day all nature achieves a general purification and renewal. This was symbolized by the lighting of 'new fires' to take the place of the old fires which, in accordance with ancient custom, had been extinguished on or before the preceding day. The term *han shih* ('cold eating') was applied to the day (or to the three days) preceding the Ch'ing-ming festival because, as the old fires had been put out and the new ones were not yet lighted, it was impossible to do any cooking.¹ The ceremony of lighting new fires is almost forgotten now, but there is ample evidence that it once took place and that it was regarded partly as a purificatory rite by which evil was extinguished and the old life transformed into something new and clean.² Both 'pure water' and 'pure fire' occupied a place in the ritual offerings of ancient China.³ Frazer, referring to a certain fire-ceremony still celebrated in the province of Fuhkien, records the significant fact that 'the chief performers in the ceremony . . . refrain from women for seven days, and fast for three days before the festival.'⁴ The well-known custom of letting off fire-crackers, which is intended to exorcize evil spirits and effect a general purification, is still well known throughout China. 'Disembodied spirits,' as de Groot says, 'are afraid of fire.'⁵ The original meaning of the Ch'ing-ming festival has been obscured in China by the fact that the day came to be regarded as the appropriate occasion for the performance of the spring ceremonies in honour of deceased ancestors; and the importance of the ancestral cult naturally caused the other associations of the festival to recede into the background. But the idea of purity is associated with the performance of the ancestral rites no less closely than with the renewal of nature's activities, though, as we shall see below, pollution of a distinctive kind was believed to be inseparable from the mere fact of being in mourning or of having come in contact with death. The ancient customs forbade any approach to the tombs or the spirit-tablets by any member of the family who had sullied the honour of his house by committing a crime, or who had brought disgrace upon himself or his ancestors.⁶ This is interesting as showing that something better than mere 'ritual purity' was expected of those who paid religious honours to the dead.

4. Popular purificatory rites.—Apart from the State rituals and the national cults of Confucius and of ancestors, there are many occasions on which ceremonial purification in some form or other was formerly practised by the people, though in modern times most of these rites have tended to become obsolete. At an ancient triennial drinking festival described in the *Li Chi* there was a ceremonial washing of hands and rinsing of cups (*SBE* xxvii. 56, xxviii. 435 f.). In the Confucian *Analects* there is an interesting passage which, according to the commentators, contains a reference to an old custom of 'washing the hands and clothes at some stream in the third month, to put away evil influences' (Legge, i. 249). Purification ceremonies, whereby

¹ See R. F. Johnston, *Lion and Dragon in Northern China*, London, 1910, pp. 185-187. There is a well-known Chinese legend which professes to trace the Han Shih festival to an episode attributed to the 7th cent. a.c., but it was probably invented to explain a ritual of which the original meaning had been lost. See L. Wieger, *Moral Tenets and Customs in China*, Ho-Kien-fu, 1913, p. 427 f.; and H. A. Giles, *A Chinese Biographical Dictionary*, London, 1898, no. 353.

⁵ J. J. M. de Groot, *The Religious System of China*, Leyden, 1892-1910, bk. i. p. 355; see also bk. ii. pp. 941-952.

⁶ For an early Chinese discussion and criticism of this custom see Wang Chung's *Lun Hêng*, tr. A. Forke, Berlin, 1911, pt. ii. p. 379.

disease and other things of ill omen were expelled from the house or locality, were regularly practised in the Chou dynasty, as we know from the *Chou Lu* (Biot, ii. 225); and in various forms similar rites are still performed on New Year's Eve and other great occasions, and at some of the village festivals.¹ Purification and fasting formerly took place when marriages were announced to the spirits of the ancestors (*SBE* xxvii. 78). Before marriage the bridegroom went through 'fast and vigil,' and wore a dark-coloured cap to signify the solemnity of his thoughts (*ib.* p. 441). At one time it appears to have been the custom for a father to fast on the occasion of the birth of a child.² Purification was resorted to in cases of extreme illness.

'All about the establishment was swept clean, inside and out. . . . Males and females changed their dress' (*SBE* xxviii. 173).

The patient himself, if recovery was deemed hopeless, was clothed in new raiment.

In China, as in many other parts of the world, contact with death has been supposed to cause pollution. We have already seen that a person in mourning is forbidden to take part in the rituals of the Confucian worship, and that, if he conceals the fact that he is in mourning, he is liable to the punishment of dismissal. Purification is sometimes undergone by those who have merely paid visits of condolence to a bereaved household, though purification of this kind is probably carried out as a matter of local custom only, and in a perfunctory manner.

'Some condolers,' says de Groot, 'hide a few garlic roots under their garments, convinced that the strong smell will prevent the influences of death from clutching to their bodies; on leaving the house they throw the roots away in the street. Others, on re-entering their dwelling, purify themselves by stepping over a fire, or over some burning incense powder of a kind considered especially suitable for this and similar ends and therefore styled *ts'ing huang*, "purification incense"'.³ The same writer mentions cases where pollution caused by contact with a corpse is removed 'by passing through a small fire of straw kindled on the pavement.'⁴

It seems not improbable that the well-known custom of Government officials, after the death of a parent, vacating their posts and retiring into private life until the period of mourning is over (three years in theory, 27 months in practice) was based not merely on the traditional doctrines of filial piety but also on a belief that the interests of the State would suffer if persons who were in mourning, and therefore ceremonially impure, were allowed to take part in public affairs.

5. Buddhist rites.—Buddhism has various purificatory rites of its own, and the rituals of all the sects make provision for ceremonial ablutions and other cleansing rites; but, as these do not materially differ from the ceremonies already described, it is unnecessary to mention them in detail. Reference has been made to the fact that *chai* is used by Buddhists to denote abstinence from animal food. Pilgrims to sacred hills and famous shrines are known in some places (*e.g.*, the Wutang mountain in Hupei) as *chai kung*, a term which indicates that such pilgrims have undertaken to confine themselves to a vegetarian diet until their pilgrimage is over. To certain bands of rebels and revolutionaries the curious name *chai fet*, 'fasting robbers,' has been applied. The term is derived from the fact that the illicit societies which were responsible for some of the anti-dynastic movements of modern times often assumed the guise of quasi-

Buddhist sects, or borrowed certain Buddhist usages and formulas for the purpose of throwing an air of religious mystery over their secret rites. Such was the White Lotus Society, which was the cause of an immense amount of bloodshed in the reign of Ch'ien-Lung.

6. Taoist view of purity.—In the Taoist system purity and purification are regarded from a point of view which differs very considerably from that of Confucianism. *Chai hsin*, 'the fasting (or purified) heart,' is strongly contrasted with the *chi ssü chih chai*, the ceremonial purification, which may be merely external and fictitious. But, when Chuang Tzu and other Taoist writers speak of the 'fasting heart,' they do not mean exactly what the Confucian means when he insists, as we have seen, that true purification must be internal as well as external. For the Taoist the only thing worth fastings and purifications is the attainment of *Tao*, and for the single-minded seeker after *Tao* all ceremonies are superfluous and meaningless. The 'fasting heart' is a negative state in which the individual shuts himself off from sense-contact with the outer world, and, by discarding everything that is treasured by ordinary mankind, fits himself for the reception of the only thing that endures and is incorruptible—the transcendental *Tao*.¹ 'The height of self-discipline,' says the Taoist, 'is to ignore self.'² But the orthodox Confucian cannot ignore self (so the Taoist would argue) so long as he lays stress on outward observances and attributes importance to the correct fulfilment of 'rites.' Moreover, ceremonies imply activity—and activity of a kind which, from the Taoist point of view, is useless. Man's function is to be rather than to do. The true sage 'does nothing, and therefore there is nothing that he does not do.'³ He is one who has cleared away all the impurities that dimmed the lustre of his true self and who knows that he has transcended the limitations of his phenomenal Ego. His perfectly purified nature is in complete conformity with the ineffable *Tao*, which is never so fully possessed as when it eludes all observation and makes no outward manifestation of its presence. At the outset of his search for *Tao* the sage usually retires to the lonely hills, where he makes himself a romantic hermitage among the rocks and woods and lives on wild herbs and the pure water of the mountain streams. The beauty and wonder of his surroundings gradually enter into his soul and teach him that all the most glorious manifestations of external nature are but signs and symbols of spiritual glories that lie far beyond the range of unpurified vision. As he grows in spiritual stature, he catches fugitive glimpses of that loveliness, and after a long upward struggle he learns at last 'to ride upon the glory of the sky, where his form can no longer be discerned.'⁴ He is now a *hsien-jên*—a Chinese term which etymologically means nothing more than 'a man of the mountains,' but which in Taoist lore means one who has attained the immortality and the spiritual graces which *Tao* alone can confer. One of the highest grades of this transcendent state is that of the *chên-jên*, the 'true man,' one who 'fulfils his destiny. He acts in accordance with his nature. He is one with God and man.'

He is a being 'whose flesh is like ice or snow, whose demeanour is that of a virgin, who eats no fruit of the earth, but lives on air and dew, and who, riding on clouds with flying dragons for his team, roams beyond the limits of mortality.'⁵

Such is the language in which the old Taoist mystics strove to express the inexpressible—language

² *SBE* xxvii. 471; for instances of this in other countries see art. FASTING, vol. v. p. 759 f.

³ De Groot, bk. i. p. 32; see also pp. 162, 209 f., 231, 640 f.; cf. *SBE* xxviii. 151 f.

⁴ De Groot, bk. i. p. 137. The steps taken to purify a house in which a death has occurred are described by the same writer (bk. i. pp. 107-110), but the description does not apply to all parts of China. Purging the grave with incense and by means of various rites and incantations (described by de Groot, bk. i. p. 209 f.) is practised in some localities (cf. *PC* ii. 436 f.).

which led in later ages to pitiful misunderstandings, and which fostered the growth of that degraded modern Taoism which is a hotch-potch of magic, ritualism, priestly mummeries, and demonology. The priests of the cult are, for the most part, comparatively harmless members of society—if, indeed, it is possible for uselessness and harmlessness to co-exist. But they are ignorant, unenterprising, and superstitious; and, though they may know a good deal about the mysteries of talismans and exorcisms, it must be confessed that they show very little knowledge of, or interest in, the 'mystic way' of philosophic Taoism.

See also CHASTITY (Chinese), vol. iii. p. 490.

LITERATURE.—This has been indicated in the article.

R. FLEMING JOHNSTON.

PURIFICATION (Christian).—Purification of course implies defilement. It is the act or operation of cleansing, and may be spoken of in regard to things physical or things spiritual.

The sense of sin, which has from very remote times oppressed man's understanding, has led to a general consciousness of unworthiness in relation to the Deity; and this consciousness is developed in proportion to the increasing realization of the holiness of God.¹ The purer the religion, the stronger the conviction of separation—far-offness—from the Deity, through personal defilement. In Christianity, therefore, we may expect to find this sense-impression at its highest.

1. NT modification of Jewish teaching.—Formerly, when religion itself was regarded more or less as an external thing, external purification was considered essential and adequate. Rites of purification—ceremonial cleansing—are common to all ancient religions. The Jewish religion had many elaborate rites of this nature. The references to ceremonial purification which are found in the NT are purely Jewish, and therefore do not call for consideration here.² It is, however, quite otherwise as regards the teaching. Examination of our subject from a specifically Christian standpoint must start from the controversy about purifying between Christ and the Pharisees, of which a record is preserved in Mk 7 (cf. Mt 15). The teaching of Christ here, as always, is concerned with the inward rather than the outward. It is true that this was not 'a new teaching' (cf., e.g., Is 11-17), yet so far had the Jewish teachers of the time departed from the higher ideals of their own prophets that it might well seem so to the majority of people who heard it. We take Mk 7, then, as the *locus classicus* for the Christian principle of purification.

The ceremonial rites of Judaism, though not formally abolished, are here relegated to their proper subordinate position.

It cannot be too carefully noticed that no condemnation is passed upon these rites of purification in themselves. Had the Pharisees recognised their symbolism and deep moral significance: had Jesus been certain that when they washed their hands they thought of or prayed for purity of heart and life, He would have been the last person to rebuke them, however much they multiplied external forms and ceremonies. These are useful as stepping-stones to higher things; but the moment they begin to satisfy in themselves they become snares, and lead to superstition.³

Henceforth there can be no ceremonial, but only moral, defilement. It is sin alone that defiles a man and renders him impure. It is from sin, therefore, that purification must be sought and obtained. Unless ceremonial purification is truly

symbolic of that which is much higher, much holier than itself, it is indeed a vain thing.

Thus purification becomes entirely symbolic for Christians.¹ St. Paul's treatment of the question of circumcision illustrates his attitude towards purification and shows that he had grasped the principle of Christ's teaching in this matter.

2. The sacraments.—The primary significance of baptism seems to have been that of cleansing, and usually, though not always, it was understood in a more than material sense. The Pauline Epistles throughout regard baptism as a cleansing from sin. It has been said that the idea of purification attains its highest form in the Christian rite of baptism; certainly it is on the spiritual purification that the emphasis is now laid.

As 'baptism had in Judaism come to mean *purificatory consecration*, with a twofold reference—from an old state and to a new—so was it in Christianity.'²

The gift of the Holy Spirit does not seem at first to have been associated with the baptismal ceremony (cf. Ac 8¹⁶). The rite seems to have been regarded by the primitive Church simply as a cleansing from sin, bringing about the renewal of a former undefiled state. The convert must be purified in the laver of regeneration,³ as a preparation for the reception of that which is to follow.⁴ So effective is the purification here that it can be regarded as 'a death unto sin, and a new birth unto righteousness'—not a generation, but a regeneration. This conception is maintained in the Baptismal Office of the Church of England in the prayer for the sanctification of the water to the mystical washing away of sin and in the vow of renunciation.⁵

'Since the middle of the second century the notions of baptism in the Church have not essentially altered. The result of baptism was universally considered to be forgiveness of sins, and this pardon was supposed to effect an actual sinlessness which now required to be maintained.'⁶

This maintenance was supplied by the second great sacrament, which, offering the means of communion with God, through outward and visible signs, became the recognized channel for the conveyance of grace and strength to the soul, purified already in baptism, and a guarantee of the continuance of that purification. Yet it was soon realized that the flesh still remained weak and continued to act as an instrument of defilement to the spirit. Thus, just as it was necessary that the purification of baptism should cleanse from sin and so prepare for the gift of the Holy Spirit, so it became necessary that a formal purification should precede, cleanse, and prepare for the gift received in Holy Communion. Hence the further sacrament of penance (*q.v.*) and absolution, which was entirely a rite of purification in its conception and effect.⁷

The original position was that baptism alone was the cure for sin; it was in itself sufficient for the needs of the believer. Experience, however, showed the difficulty of this position; it became more and more clear that Christians were not immune from the attacks of sin, and if sinlessness were really required from them as a condition of salvation few indeed would be saved. Sin after baptism thus became a practical problem; a

¹ Cf. esp. Tit 1¹⁵, Ro 14^{14, 20}, 1 Co 6¹¹, 2 Co 7¹, 1 Jn 3³, 1 P 1²², Ac 15⁹, Eph 5²⁶, He 13⁸, Ac 10¹⁴.

² *ERE* ii. 377b, art. BAPTISM (New Testament); cf. also Chrysostom's *οἱ αἰρετικοὶ βάπτισμα ἔχουσιν, οὐ φώτισμα*, ap. Sueret, *Theodorus*, Amsterdam, 1728, s.v. φώτισμα.

³ At a much later period Cyprian speaks of 'lavacrum regenerationis et sanctificationis' (cf. Cyprian, *Ep.* lxxiv. 7, 6, *de Bono Patientie*, 6; also Tertullian, *de Res. Carnis*, 47; for other references in Cyprian to purification in baptism see *de Hab. Virg.* 2, 23, *Ep.* lxxviii. 15, lxxiii. 18).

⁴ Cf. 1 Co 6¹¹, He 10²².

⁵ Note also the prayer, 'We call upon thee for this infant, that he, coming to thy holy Baptism, may receive remission of his sins by spiritual regeneration.'

⁶ A. Harnack, *Hist. of Dogma*, Eng. tr., London, 1894-99, ii. 140.

⁷ Note the comprehensiveness of the words of absolution: 'by his authority committed to me, I absolve thee from *all* thy sins.'

¹ Only the greatest saint can realize that he is the greatest sinner.

² *E.g.*, Jn 20 23, Lk 22, Mk 14 78, Lk 514, Ac 2124. 28, etc.

³ H. M. Luckock, *Footprints of the Son of Man as traced by Mark*, ed. London, 1902, p. 149 f., on Mk 7. Not only does Christ not condemn, but, on occasion, He orders the observance of rites of purification (cf. Mk 144). Yet it should be remembered that He did not always Himself observe the traditions in this respect (Lk 1138), nor did His disciples (Mk 72).

second baptism, suggested by some, was regarded as impossible, but nevertheless analogous rites—in so far as they were looked upon as sacraments—were established. Penitence (or Penance, to use the more customary word) and the Mass came to be used as the sacramental means whereby Christians could be cleansed from the stains of post-baptismal sin, and the ministry of the Church developed into a great system for their administration, in order to heal and comfort souls stricken with sin and calling for the care of a physician.¹

The Roman Church to this day insists upon this formal purification for the individual before allowing access to the second great sacrament. It is impossible not to recognize in the provision for frequent and continual purification of a formal kind, even apart from any particular material ceremony, a dangerous resemblance to the older and pre-Christian usages.² The Church of England has never insisted upon this pre-communion purification, yet has rightly recognized the essential idea in the collect at the opening of the Communion Office: 'Cleanse the thoughts of our hearts . . .', and in the confession and absolution which must precede the reception of the sacrament. It is on these lines that purification is treated in the other offices and prayers of this Church.³

3. Purification and the contemplative life.—The idea that underlies purification has always appealed most strongly, as we have already hinted, to the more earnest and sincere Christian. It has been the initial cause of many great movements, both within and without the orthodox body; the Novatian and the Montanist movements, e.g., were attempts to realize this idea. But it is above all in mysticism (q.v.), with its passionate desire for communion with God, that we find the greatest stress laid upon purification. It is an essential part of the system. It is the earliest path—'the purgative way'—which alone can lead to 'illumination.' To those who follow it will come indeed many a 'dark night of the soul,' until the end is reached and the achievement of purification brings light. The process is a gradual advancement, step by step, at each of which something is left behind. As the runner strips himself of one garment after another in order to attain the goal that is set before him, so the mystic must disencumber himself of all material or spiritual hindrances, as he strives after purification.

¹ Now be assured that no one can be enlightened unless he be first cleansed or purified and stripped. . . . Thus there are three stages: first, the purification; . . . The purification concerneth those who are beginning or repenting, and is brought to pass in a threefold wise; by contrition and sorrow for sin, by full confession, by hearty amendment.⁴

This notion of purification as an absolutely essential element in the religious life was the immediate cause of monasticism (q.v.). It was in order to escape the defilement which, it was thought, was almost necessarily incurred in living the ordinary life of men that the extraordinary life was adopted. There were fewer enemies to contend with in the seclusion of the cell or the monastery, and against these the most severe measures were taken—fastings, self-mortifications, and constant prayer. Only a state of purification could bring about that condition of holiness which is the passport to eternity.⁵ The practice and exaltation of celibacy most probably find here their root motive. Thus the two greatest developments of the contemplative life—mysticism and monasti-

¹ Kirsopp Lake, *The Stewardship of Faith*, London, 1915, p. 116.

² Cf., e.g., Eur. *Ion*, 96,

. . . καθάρσις δὲ δρόσιος
ἀφύπναιον οὐκ ὀρεῖται ναυός.

³ Cf., e.g., the Collect for the Sixth Sunday after Epiphany: 'Grant us, we beseech thee, that, having this hope, we may purify ourselves, even as he is pure'; see also Clem. Rom. xix. 1, and many references in *The Shepherd of Hermas*.

⁴ *Theologia Germanica*, tr. S. Winkworth, London, 1854, ch. xiv.

⁵ Cf. Mt 5:8: 'Blessed are the pure in heart: for they shall see God.'

cism—may fairly be said to be developments of the Christian idea of purification.¹

4. Purification through suffering.—No article on Christian purification would be complete without consideration of the purificatory influence inherent in suffering. Perhaps the best illustration of this to be found in literature is contained in the beautiful poem of Mrs Hamilton King, *Ugo Bassi's Sermon in the Hospital*.² It is not given to many to attain purification in this way, though opportunity is rarely lacking.

'It is only those who are already far in the path of spiritual growth who are purified by suffering, even as the Captain of our Salvation was thus made perfect.'³

Those, however, who do through suffering win the peace of God which passeth all understanding reach a level of purification which is higher and more perfect than that which can be attained in any other manner.

The suffering which comes to us through the fault of another would seem to possess a very high capacity for purification. This kind of purification embraces the idea that lies at the root of atonement. It is exemplified in its most perfect form in the life of Christ Himself,⁴ and it is on these lines only that it is possible for men to become pure even as He is pure and, in so scaling the rugged heights of true Christian purification, to win for themselves the beatific vision of the promised land which lies beyond—'the glory that shall be revealed.'

5. Cleansing of the conscience.—When it has been once realized that it is no longer purification of the body but purification of the conscience and character that is the really essential thing,⁵ it will be seen that the need for purification may exist even when the act which would render the person obviously impure has not been committed. This is indeed definitely taught by Christ Himself in the Sermon on the Mount.⁶ Many other nations besides the Jews have required a ceremonial purification of the body after deeds of lust and bloodshed. Christianity, if it is to follow the conception of its Founder, requires the purification of the conscience after the 'will' to commit such deeds, even when the opportunity of actually doing them has been lacking. Again, non-Christian ceremonial purification can be and sometimes has been refused, but Christian purification can never be refused to the true penitent who seeks for it.

6. Ceremonies of purification still observed in Christianity.—The Feast of the Purification of the Blessed Virgin Mary is still observed by the Church. But the ceremony which it commemorates was a purely Jewish rite, though it has been taken over by Christianity in the Office for the Churching of Women after childbirth. The notion of legal uncleanness, which prevented the Jewish mother from appearing in public until after the ceremonial purification had been performed, has been dropped.⁷ The many women who still insist very strongly on going to this service before going elsewhere do so from the notion of thanksgiving rather than from that of purification. They have no idea of being legally unclean. The offering of the lamb, pigeon, or turtle-dove which was connected with the purification idea has given place to a money-offering, which, though forming

⁶ Innocent III., in the canon law (*Cap. unico de Purif. post partum*): 'If women after child-bearing desire immediately to enter the Church, they commit no sin by so doing, nor are they to be hindered.'

an actual part of the service, again emphasizes the thanksgiving motive.

7. Purification of churches after suicide, sacrilege, etc.—Ceremonies of purification are still observed in many churches for reasons of this nature. The idea is that of restoration to the former state of holiness conveyed by consecration.

8. Purification of the sacred person.—The Church of Rome has many elaborate directions for the purification of the individual priest after accidental or unconscious defilement.

LITERATURE.—See the works mentioned in the article.

H. C. TOWNSEND.

PURIFICATION (Egyptian).—I. **INTRODUCTORY OBSERVATIONS.**—Owing to the prevailing climatic and geographical conditions the entire water-supply of Egypt is derived from the river Nile. When the weather is hot, the modern Egyptian bathes at least once a day either in a bath in his house or else in the river or a canal. The heat and dust combined make washing essential for health and comfort. Washing, therefore, must have been one of the common acts of daily life in ancient no less than in modern Egypt.

The ground that the Nile cannot reach by irrigation, inundation, or percolation is to all appearances dead—a barren and dusty tract of crumbling clods. But, when once this ground is inundated or irrigated, it soon begins to show signs of life and grows green with vegetation in a remarkably short space of time.

Thus the same Nile waters both cleansed and vivified—a phenomenon that seems to have profoundly influenced the ancient Egyptians' ideas about purification (see below, esp. V. 1, 3).

II. **MATERIALS AND VESSELS EMPLOYED FOR PURIFICATION.**—1. **Materials.**—Water was the most usual as well as the most natural purificatory medium. Natron, i.e. native carbonate of soda¹ (variously named *hsmn*, *smn*, *smn*, *ntr*, *bd*),² was often dissolved in the water to enhance its cleansing properties.³ Natron was also used dry (see below, V. 2 (d), 7 (a)); a box of this substance is included among the requirements of the dead in certain Middle Kingdom funerary prayers.⁴ Incense was used for fumigation, but was apparently also employed like the dry natron (see below, V. 2 (e) (ii.)). Sand was likewise regarded as purificatory (see below, VI. 4), and so, in a secondary sense, were food and drink (see below, V. 1 (d)).

2. **Vessels.**—Two varieties of metal ewer and a basin were used for washing the hands.⁵

The tall thin ewer was named *snb-t*,⁶ the squat one, apparently, *pr-t*⁷ or *hsmny*; the basin was named *h-w*⁸ or *t-wty*.¹⁰ The same kind of basin was used for feet-ablutions,¹¹ but the ewer employed for this purpose was of a very curious shape.¹²

All these vessels could be made of gold or silver, but were more usually of copper.¹³ For bathing or

sprinkling purposes, earthenware pitchers were employed; also a metal vase named *hs-t*, or a *snb-t*-ewer.¹

The pitchers, variously designated *nms-t*,² *dsr-t*,³ and *'b-t*,⁴ were sometimes of gold.⁵ The *hs-t*-vase was usually copper, but sometimes gold or silver.⁶ *Piankhi Stèle*, line 112, mentions 'all the vessels for the purification of a king, of gold and every precious stone.' The stone vessels would perhaps be those originally made of pottery. For fuller details and a number of useful references see Kees, *Der Opfertanz des ägyptischen Königs*, Leipzig, 1912, pp. 54 ff., and 212-214.

III. **SECULAR WASHING, SANITATION, AND SANITARY OBSERVANCES.**—In an Old Kingdom palace the toilet-rooms were designated 'House of the Morning' (*pr-dw:t*), in a noble's house of the Middle Kingdom 'Cabinet of the Morning' (*hwtwyt* *dw:t*). They would have comprised from quite early times a privy⁷ and a bathroom,⁸ of which excellent examples (XVIIIth dynasty) have been unearthed at El-Amarna.⁹ The 'House' or 'Cabinet of the Morning' was probably so named because, as in modern Egypt, ablutions were performed immediately upon rising.

Morning ablutions were so much a matter of course that a 'wash' (*'w*) is not an uncommon term for a light morning repast—a *petit déjeuner* doubtless being served directly the morning toilet had been completed.¹⁰

The compound *pr-dw:t*, 'House of the Morning,' obsolete after the Old Kingdom, survived right down into Ptolemaic times as the name of the temple vestry.¹¹

1. **Bathing.**—A Pharaoh or noble, when he took a bath, seems to have squatted or stood in a tank, or upon a stone slab or pedestal, while servants poured water over him;¹² the water often contained natron.¹³ Two attendants rubbed him dry,¹⁴ after which he was sometimes fumigated with incense.¹⁵

2. **Purification of the mouth.**—The mouth was ceremonially purified by chewing natron (see below, V. 2 (e) (ii.)), 7 (a)); but this was doubtless also a secular practice. Incense was apparently put to a similar use. The mouth, one would imagine, was afterwards swilled out with water. The natron was certainly spat out.¹⁶

After the mouth had been cleansed with natron, it was said to be like the mouth of a sucking calf on the day it was born.¹⁷ A light repast, consisting of a loaf of bread and a jar of drink, was called *'w-r*, 'a mouth-wash.'¹⁸ Perhaps the word *'w*, 'breakfast,' mentioned above, is an abbreviation of *'w-r*. If so, the official in charge of 'all the places of the king's mouth-ablution'¹⁹ was not a courier who assisted at the royal toilet, but, as Sethe supposes,²⁰ the person responsible for the proper serving of the Pharaoh's breakfast.

3. **Washing of the feet.**—The feet would have been frequently washed, as in the modern East;²¹ there was a special ewer for feet-ablutions (see above, II. 2).

¹³ Lacau, 28024, nos. 25, 26, 28128, nos. 41, 42; *Book of the Dead*, loc. cit.

4. Cleaning of nails.—Care was taken to keep the finger- and toe-nails clean.¹

5. Shaving.—(a) *The face*.—From the time of the early Old Kingdom² and onwards the custom was to shave off all facial hair, a false beard being assumed on special occasions.³ The moustache is very rare.⁴

(b) *The head*.—From early Old Kingdom times the hair of the head was either closely cropped or shaved off entirely, wigs being worn by the upper and well-to-do classes.⁵

For cooks and personal servants with their heads close shaven for the sake of cleanliness see Blackman, *Rock Tombs of Mer*, ii. pl. xviii 16, iii. p. 81, pls. xxii 1, xxv, xxvi.; Newberry, Griffith, *El-Bersheh*, i. pl. xii.; P. Virey, *Le Tombeau de Rekhmara*, Paris, 1889, pl. xlii.; W. Wreszinski, *Atlas zur altägypt. Kulturgeschichte*, Leipzig, 1914, pl. 7a. For representations of barbers shaving men's heads see Newberry, *Beni Hasan*, ii. pls. iv, xii. Razors (?) formed part of the burial equipment in the IIIrd dynasty.⁶

6. Depilation.—There is evidence for thinking that depilation was practised by the upper classes and priests in the Old and Middle Kingdom, as it certainly was by the priests in later times (see below, V. 7 (f)).

There is a passage in *Sinuhe* (line 291f.) which suggests that part of that exile's toilet upon his return to civilization consisted in the removal of body-hair.⁷ It should be noted, too, that the modern Egyptian peasants of both sexes shave off their pubic hair.

7. Purification before a meal.—The Egyptians, in ancient as in modern times, purified themselves before partaking of food; indeed, as Griffith points out,⁸ 'purify oneself' is equivalent to 'take a meal.' This purification would usually have consisted merely in the washing of the hands.

'Thy hands are washed . . . thy ka washes himself, thy ka sits down, he eats bread with thee.'⁹ Even before drinking a cup of beer, a man would have his hands washed by his wife.¹⁰ The washing of the hands was often followed by fumigation with incense.

In the list of requisites for a banquet¹¹ 'water for washing the hands' is immediately followed by 'incense.' Davies¹² shows two servants, one of whom pours water from a ewer into a basin, while the other holds a brazier of burning incense.¹³ Table servants were required to have clean hands.¹⁴

IV. SOCIAL PURITY AND PURIFICATION.—By this is meant the avoidance or removal of impurities which impair man's relations with the community.

1. Circumcision.—See art. CIRCUMCISION (Egyptian), vol. iii. p. 670 ff.

2. Purification at birth.—A child was washed immediately after birth.¹⁵ The cutting of the umbilical cord seems to have been associated with purification and is given a religious signification in *Book of the Dead*, xvii. 19.¹⁶

3. Purification after sexual intercourse.—The modern Egyptian men of the peasant class are very scrupulous about purifying themselves after sexual intercourse or after a nocturnal emission, sometimes having a bath, and always washing the genital organs.

¹ *Pyr.* 1368a, 2015d; cf. below, V. a (d), 7 (e); for a pedicurist attending to a man's toe-nails see Newberry, *Beni Hasan*, London, 1898-1900, ii. pl. iv. reg. 2, left end.

¹⁶ See Grapow, *Germ. tr.*, p. 10, n. 1.

Perhaps this explains why the citizen (*nds*) regularly bathed in the pool after spending the day with the wife of Ubaöner in the pavilion.¹

4. Purification of women.—(a) *During menstruation*.—The Egyptian women washed themselves with water containing natron during their periods.²

The Egypt. for 'menstruate' is *ir hsan*, 'make a purification with natron' (for *hsan* as an active verb, 'purify', see H. Brugsch, *Hieroglyph-demonstr. Wörterbuch*, Leipzig, 1867-82, p. 996, *RT* xvi. [1897] 56 f.).

The women evidently performed these particular ablutions in a special part of the house.³ This, and the women's quarters in general, seem, as in a modern Egyptian house, to have been upstairs.⁴

(b) *After childbirth*.—Women purified themselves for fourteen days after childbirth. When this purification was accomplished, they could resume their household duties.⁵ The purification consisted in washing and in fumigation with incense,⁶ also perhaps in eating a special kind of cake.⁷ The *pr-mst*, 'birth-house,' also called *ht-bw*, 'house of purification,' attached to Ptolemaic temples of goddesses, suggests that a woman remained secluded in a special apartment during her *accouchement* and subsequent purification.⁸ Chassinat believes that this seclusion extended also over the whole period of pregnancy.

V. RELIGIOUS PURITY AND PURIFICATION.—By this is meant the avoidance or removal of impurities which impair man's relations with the gods.

1. Purification of the living Pharaoh.—Many ceremonies and beliefs which originally were connected with the king alone obtained, during the feudal period, a general use and application; unless this is recognized, their true significance is often obscured.

(a) *In infancy*.—The Pharaoh was apparently fitted for the kingship by a purification undergone in early childhood. The officiants, according to the XVIIIth dynasty accounts, were supposed to be the gods Atum and Month, or Re-Harakhte and Amün.⁹ The ceremony, which consisted in sprinkling the child with water, was not merely purificatory; it endowed the prospective ruler with vital force and certain divine qualities.¹⁰ It is possible that in early times royal children were washed at birth in the sacred pool of the State god.¹¹

(b) *Before coronation*.—Piankhi, on his way to Heliopolis, 'was purified in the midst of the Cool Pool,' and 'his face was washed in the water of Nun in which the sun-god washes his face.'¹² By this act Piankhi was brought into close association with the sun-god, who was about to be asked to recognize him as his son. Like the pilgrimage to Heliopolis itself, it probably formed part of a procedure followed by every Pharaoh.¹³ It was with a view to his being affiliated to the sun-god that the deceased Pharaoh, apparently reborn, is said to bathe, or be washed by Atum, in the sacred Heliopolitan waters.¹⁴

¹⁴ *Pyr.* 211 f.; cf. also *Book of the Dead*, clxix. 19 f., and see above, (a)

(c) *At coronation.*—The coronation purification was a renewal of that undergone in infancy. It was performed before the diadems were placed upon the Pharaoh's head,¹ by a priest impersonating the god Yahes (*I;hs*).

The god thus addresses the king: 'I purify thee with the water of all life and good fortune, all stability, all health and happiness.' The Pharaoh, therefore, was not only purified, but endowed with the qualities which fitted him for his new position, and which he possessed, *qua* Pharaoh, in common with the sun-god.² Perhaps this ceremony and that of (d) above have some connexion with the primitive ideas about kingship and fertility. In both scenes³ the water issues from the vessels as strings of

symbols of life, .

(d) *Before officiating in a temple.*—Before he could enter a temple to participate in any ceremony, the Pharaoh had to be purified by two priests impersonating Horus and Thôth⁴ or Horus and Seth.⁵ Cf. 'Horus and Thôth hold out their hands to receive thee when purifying thy body.'⁶ This purification, which took place in the House of the Morning,⁷ consisted, when the full procedure was carried out, in sprinkling the king with water, which sometimes contained natron,⁸ fumigating him with incense, and presenting him with natron to chew⁹ and thereby cleanse his mouth (see below, V. 2 (d) (e)); he was also offered food and drink.¹⁰

The water, called the 'water of life and good fortune,'¹¹ and 'that which renews life,'¹² was brought from the sacred pool with which every temple seems to have been provided.¹³ The purification, therefore, besides cleansing the Pharaoh, imbued him with divine qualities; it also reconstituted him, as is shown by other formulae pronounced during the ceremony, which are like those accompanying the funerary purifications. Food and drink were also purificatory in this secondary sense, for they possessed similar virtue to that of water and incense.¹⁴ Probably on ordinary occasions the king merely washed his hands,¹⁵ after, perhaps, being lightly sprinkled with water by the two priests. It is unlikely that the fumigation with incense was ever omitted.

The king is described as 'pure of hands when performing the ceremonies.'¹⁶ For a realistic representation of the king washing his hands in the House of the Morning see Lepsius, iv. pl. 4a. In the sun-temple of Nusserrê some or all of the ablutions were probably performed in the two basins which are sunk in the pavement just outside the door of the vestry, one on either side of it.¹⁷

(e) *At a Sed-festival.*—At this festival special importance seems to have been attached to the washing of the king's feet¹⁸ and hands.¹⁹

In the mutilated scene from the sun-temple part of the special can for feet-ablutions is still recognizable.²⁰

2. Purity and purification after death.—Many of the funerary texts found in general use during and after the feudal period treat of what was once considered the destiny of the royal dead only (see above, under 1).

As the Pharaoh during his lifetime had to be purified before entering a temple, so after death he had to be purified before he could enter the solar, or Osirian, kingdom, the inhabitants of which, and all things connected with them, were pure.

Examples are the abodes of the sun-god,¹ those who sail in the boat of Osiris,² the lotus-flower which the sun-god holds to his nose,³ and the deceased's throne in heaven or his seat in the sun-god's bark, either of which he can occupy only if he himself is pure.⁴

Purity was therefore the only passport to posthumous happiness.

Accordingly, the dead Pharaoh's ascent to heaven did not take place until his purity was assured. 'Thou art pure, thou ascendest unto Re.'⁵ 'Piôpi is pure . . . this Piôpi ascends to heaven.'⁶ The guardians of the gates of the under world allow the deceased to cross their thresholds because he is pure.⁷ This purity as originally conceived was to a large extent physical.

Before Thôth and the sun-god can draw the dead king up to heaven, it must be said of him 'The mouth of N. is pure, the Great Ennead have censured N., and the tongue which is within his mouth is pure. What N. abhors is dung, N. puts urine far from him. N. abhors this. N. eats not this abomination.'⁸

The purity demanded by the gods of the dead Pharaoh, according to the Pyramid Texts, was not incompatible with gross sensuality or flagrant immorality.⁹ It is, however, occasionally stated that something more than physical cleanliness was expected of him.¹⁰ From the time of the Vth dynasty onwards¹¹ the claims made by the dead to moral integrity and purity become more and more prominent; they find, perhaps, fullest expression in the *Book of the Dead*.

In ch. cxxv., the 'Assertion of Sinlessness,' among the many sins which the deceased claims to be innocent of are formation, masturbation ('Introduction,' line 15), and adultery ('Confession,' line 20).

In their conceptions of moral purity and righteousness the Egyptians very rarely, at any stage of their religious development, lost sight of the sanitary observances in which they had their origin.

'Let me pass,' says the deceased to certain gods who block his way, 'I have purified myself upon this great *u-r-t*, I have put away my evil, I have banished wrong, I have driven to the earth the evil appertaining to my flesh.'¹²

There were several ways of attaining that purity upon which the welfare of the dead so entirely depended.

(a) *Ceremonial acts performed by the deceased in his lifetime.*—These acts, which had associated, or identified, him with certain divinities and so rendered him pure, are (i.) bathing in sacred waters or pools (see V. 1 and 8 (b)); (ii.) participation in the Osiris mysteries (see V. 8 (c)).

(b) *Spells*, asserting (i.) that those acts had been performed;¹³ (ii.) that all impurities had been avoided.¹⁴ By means of these potent formulae the things alleged, however untrue they might be, became actualities.¹⁵

(c) *Ablutions performed after death by the deceased himself* (i.) on earth: in the 'water of

¹⁴ E.g., the 'Assertion of Sinlessness,' *Book of the Dead*, ch. cxxv.

¹⁵ Cf. Gardiner's remarks about the ceremonial voyage to Abydos (Davies-Gardiner, *Tomb of Amenemhêt*, p. 47 f.); cf. also Pyr. 921, which describes the followers of Horus not only as washing the dead king, but as reciting spells whereby he was rendered righteous and so might ascend to life and happiness (Breasted, *Religion and Thought*, p. 171 f.).

Khereha,¹ the two pools at Herakleopolis Magna;² (ii.) in the other world: he might, like the sun-god, cleanse himself in the Field or Pool of Earu,³ or squat on a stone (cf. below, V. 7 (b)) beside the Pool of the God and wash his feet.⁴

(d) *Ceremonies performed for him by the gods* (i.) on earth: the deceased might be washed by Satis in the waters of the First Cataract—the source of the Nile, according to tradition,⁵ and therefore especially pure and sacred⁶—or by Atum at Heliopolis;⁷ (ii.) in the other world: in the Field of Life, the birth-place of the sun-god, Kebhōwet, daughter of Anubis, might empty her four pitchers of water over the deceased and then fumigate him with incense.⁸ He might bathe with the sun-god in the Pool of Earu and then be rubbed dry by Horus and Thōth,⁹ or wash his feet in the sun-god's own silver basin which had been fashioned by Sokar.¹⁰ He is described as sitting upon the lap of Mekhentirti while his mouth is purified with natron (see below, (e) (ii.)) and the gods clean the nails of his fingers and toes.¹¹ Again, he is shaved by Duawer,¹² and his face is washed by that god and massaged by Sokar.¹³

(e) *Ceremonies performed by the living*.—Purificatory rites figured prominently in the funerary ceremonies, in which the deceased (originally the dead Pharaoh) was identified with Osiris¹⁴—the officiants impersonating Anubis, Horus, and other divinities.¹⁵ Doubtless it was believed that the purifications supposed to be performed by the gods in the other world actually were performed if they were faithfully mimicked on earth and the proper formulae recited.¹⁶ One of the funerary libation formulae describes the washing of the dead Pharaoh by Horus.¹⁷

(i.) In the *w'b-t*, 'Place of Purification,' i.e. the embalmer's workshop,¹⁸ the corpse was washed with water in which various kinds of natron had been dissolved,¹⁹ and with wine, milk, and beer.²⁰

(ii.) At the 'Opening of the Mouth' in the 'House of Gold,' i.e. the sculptor's studio,²¹ and at the burial and periodical services in the tomb-chapel, various purification ceremonies were performed on behalf of the deceased. These consisted in sprinkling the mummy, or its substitute, the statue, with water, fumigating it with incense, offering libations, and holding up to its mouth (see III. 2, V. 2 (d), 7 (a)) balls of natron and incense.²²

3. The significance of the posthumous purifications.—As Junker has clearly shown in his *Götterdekret über das Abaton* (Vienna, 1913), the object of the ceremonies performed on behalf of Osiris was to furnish the god with never-failing supplies

of vital force and so keep him perpetually rejuvenated, thereby securing a high Nile and a fruitful season. Since every person (originally only the Pharaoh) became at death an Osiris, the same ceremonies were performed for the dead as for the god.

The funerary washings, sprinklings, fumigations, etc., possessed, therefore, a secondary, what we might term sacramental, significance; they both helped to reconstitute the deceased and, together with the food- and drink-offerings, supplied him with nutriment which enabled him to continue his existence and to maintain unimpaired all his reconstituted faculties and powers.

(i.) The water with which the corpse or statue was washed or sprinkled not merely cleansed the deceased from his impurities but brought together the head and bones and made the body complete (*tm*) in every particular.¹ Accordingly either stream of water that flows about the figure of the dead User² termin-

ates in a large symbol of life,  (see above, V. x). With the

offering of libation-water to the deceased is associated the giving to him of his spirit (*ʿb*) and his power (*šbm*), and at the same time he is bidden to stand upon his feet and to gather together his bones.³

(ii.) Incense-smoke had the same effect, cleansing the dead 'from all the evil appertaining to him,' and making him 'strong and powerful above all gods.'⁴

(iii.) For the mysterious virtue of the food- and drink-offerings see Breasted, *Religion and Thought*, p. 60.

(iv.) The deceased was also, of course, supposed to be similarly reconstituted by the purifications that he underwent in the other world. After ablutions in the Field of Earu he received 'his bones of metal' (*b4*) and 'stretched out his indestructible limbs which are in the womb of the sky-goddess'⁵ By the washings of Horus and Thōth and other divinities the dead was cleansed from all impurities, moral and physical, his body came together again or was entirely refashioned, and he was fit to enter heaven or the Tē, i.e. under world.⁶

4. Purification of divinities in the temple ritual.—Owing to the influence of the Osiris myth, and to the fact that the Pharaoh was Horus and every god was conceived of as his father, the ceremonies performed in the temple and tomb-chapel were in many respects identical. Every divinity, for cult purposes, was treated as an Osiris, and his or her statue was purified like that of a dead person—and for the same reasons.

When his statue was sprinkled,⁷ Amūn was acclaimed not merely as pure but as reconstituted: 'Unite unto thee thy head, unite unto thee thy bones, make fast for thee thy head unto thy bones . . . what appertains unto thee is complete; pure, pure is Amūn, Lord of Karnak!'⁸ The libation-water also is 'life-renewing.'⁹ The incense both purifies the god¹⁰ and imbues him with life and vigour.¹¹

5. Purity and purification of offerings to gods and dead.—(a) *Purity*.—All offerings made to the gods and dead, and everything used in their service, had to be pure.

The door-posts of temples often bear the following, or a similar, inscription: 'The offerings and all that enters the temple of such-and-such a divinity—it is pure.'¹² The living pray that the mortuary equipment of the dead may consist of 'every good and pure thing.'¹³

Maspero, *La Table d'offrandes des tombeaux égyptiens*, Paris, 1897, pp. 4-12.

Herodotus¹ describes the measures taken to ensure the ceremonial purity of victims offered to the gods, and in Græco-Roman times this was reckoned a matter of supreme importance.² The testing of at least funerary victims was customary as far back as the Old Kingdom.³

In A.D. 122-123 a regulation was introduced forbidding the officiating priest to offer a victim until he had received a written certificate of its purity.⁴ For an extant example of such a certificate see L. Mitteis and U. Wilcken, *Grundz. und Chrestomathie der Papyrskunde*, Leipzig, 1912, i. ii. 'Chrestomathie,' p. 118, no. 89.

(b) *Purification*.—Offerings were purified by pouring libations over them and by fumigating them with incense.⁵

Virey (pl. xxv) shows a lector pouring water over the carcass of a victim which a butcher has begun to dismember. Offerings presented to the dead could be washed or sprinkled with water containing natron, the purifying qualities of which were thus transmitted to the dead.⁶

The purification of the offerings possessed the same significance as the other purificatory rites.

As already seen (V. 3), the water used in libations and libations, incense-smoke, and food- and drink-offerings were endowed with mysterious reconstructive powers. The soaking in the liquid, therefore, and the fumigation added to the already existing virtue of the food, and, when the formula of presentation was recited, the combined qualities were imparted simultaneously to the god's (or dead person's) soul (b').⁷

The table or altar upon which the offerings were placed had first to be purified with water and incense.⁸

The following formula shows that the water might contain natron: 'It is pure. Purified is the offering-stand (wāhu) with natron, with cool water (bbhu), with incense . . . for the ka of the Osiris N.'⁹

6. *Purification of temples and of buildings used for religious ceremonies*.—(a) *Consecration of a new temple or shrine*.—A new temple was solemnly purified before it was handed over to its divine owner.¹⁰

The two chapels or booths of Upper and Lower Egypt that figure in the funerary ceremonies appear to have been purified by having water sprinkled over them.¹¹

(b) *Renewal of purification*.—It was sometimes thought advisable to purify a temple afresh.

A certain Sebekhotep informs us that he was sent by Sesostrius II. to purify the temples in the Theban nome 'for the sake of the pure celebration' of the monthly festival and the clean observance of the half-monthly festival.¹²

Purification would naturally be necessary after the profanation of a temple or sacred city.

The day after Plankhi had taken Memphis by assault 'he sent men into it to protect the temples of the god, hallowed (?) the sanctuaries of the gods, offered to the community of gods (d;d;t) of Hetkephah, purified Memphis with natron and incense.'¹³ So also Mentemhet 'purified all the temples in the nomes of all Patoris, according as one should purify violated temples,' after the Assyrian invasion in 667 B.C.¹⁴

7. *Purity and purification of the priests*.—The characteristic mark of the priest, from the earliest down to the latest period, was his purity. This

appears in the ordinary word for priest, wē'eb, 'pure one,' Coptic ⲙⲉⲃⲃⲃ.

The retention of the word by the Christian Egyptians suggests that even with them it was still his purity, rather than his sacrificial and intercessory functions, that separated the priest from the layman.

A number of measures were taken by the priests to ensure their absolute purity.

(a) In the Græco-Roman period a priest had to purify himself for several days before entering upon his course¹—a practice that is evidently very ancient.²

Pap. Turin, pl. 57, line 9 ff. (temp. Rameses IV.-V.) shows that this prefatory purification comprised drinking natron for a specified number of days; until they were accomplished, the priest could not enter certain parts of the temple precincts nor carry the image of the god.³ The wailing women who lamented Osiris had to purify themselves four times before they could stand within the 'door of the Broad Hall',⁴ they also washed their mouths and chewed natron (see V. 2 (d), (e)), and fumigated themselves with incense, in order that both they and the lamentations with which they 'spiritualized' the dead Osiris might be pure.⁵ A passage in Gardiner, *Admonitions of an Egyptian Sage* (p. 76), suggests that the bread eaten by a priest during his prefatory purification and his course must be white bread (t'ha).

(b) Priests and priestesses had always to wash or sprinkle themselves before entering a temple or engaging in a religious ceremony; every temple seems to have possessed a tank or pool set apart for this purpose (cf. V. 1 (d)).

A priest pronounced a special formula when entering the temple 'after making his purification in the pure pool.'⁶ During the service he continually refers to his purity.⁷ G. Legrain and E. Naville (*L'Aile nord du pylône d'Aménophis III.*, Paris, 1902, pl. xi. B) reproduce a mutilated relief depicting priests and priestesses purifying themselves before entering the temple. They seem to be standing in two shallow pools or tanks, while water is poured over them.⁸ The descriptive text reads: 'Going down to wash by the prophets, the god's wife, the god's hand (d-r ntr), in the Cool Pool, (and then) entering into the temple.' According to Herodotus,⁹ the priests washed in cold water twice every day and twice every night.

Legrain found at Karnak an alabaster pedestal—bearing a dedicatory inscription of Tethmose III.—on which the priests stood while they purified themselves.¹⁰ Cf. the stone beside the Pool of the God on which the deceased washed his feet.¹¹

(c) The priests also perhaps fumigated themselves with incense before officiating in the daily service (see (a) and V. 1 (d)).

Before taking hold of the brazier, which was to contain the burning incense, the priest said: 'Hail brazier . . . I am cleansed by the Eye of Horus.'¹² 'Eye of Horus' in this context must surely mean incense.

(d) Great emphasis is laid upon the purity of the priest's hands.

Ikhernofret says of himself: 'I was pure handed in adorning the god, a sem-priest with clean fingers.'¹³ 'Pure of fingers' is the oft-recurring epithet of priests.¹⁴

(e) *Paring the nails*.—The priests cut their nails short so as not to harbour dirt which would render them ceremonially unclean.¹⁵

lector,¹ possibly depict the cutting and cleaning of priests' finger- and toe-nails, and not, as has been suggested, surgical operations.

(f) *Depilation*.—Herodotus² states that the priests in his day shaved their whole body every third day to ensure ceremonial purity.

Depilation seems to be an ancient practice (see above III. 6). The depilation of a priest is perhaps depicted in the *mastaba* of 'Enkh-me-hôr:³ the man's leg is being rubbed to remove hair. The adjacent scene possibly represents a priest having his back scrubbed to render it ceremonially clean. It is said of the women who impersonated Isis and bewailed Osiris: 'Their body is pure . . . the hair of their body has been removed.'⁴

(g) *Shaving*.—The clean-shaven head does not appear to have become the distinguishing mark of the priestly caste⁵ till towards the end of the XVIIIth dynasty.⁶ In the Græco-Roman period the regulations about the priests shaving their heads were very strict.⁷

(h) *Dress*.—From the time of the New Kingdom onwards the priests seem to have been very punctilious in the matter of dress.⁸ As early as the IXth to Xth dynasties we learn that a priest during his period of service had to wear white sandals.⁹

(i) *Circumcision*.—See art. CIRCUMCISION (Egyptian), vol. iii. p. 670 ff.

8. Purity and purification of the laity.—(a) *Purification before entering a temple or sacred place*.—Until the Græco-Roman period we know practically nothing about the purification of the lay people before entering a temple,¹⁰ but we may be certain that ablutions of some sort were deemed necessary. There is possibly a reference to this practice in an inscription dating from the reign of King Teti of the VIth dynasty.¹¹ In the Old Kingdom it also appears to have been reckoned impious for those who had eaten an impure thing, *but*,¹² or who were still purifying themselves, *m bw-sn*,¹³ to approach the portrait-statue in a tomb-chapel, or indeed enter the building (cf. below, VI. 1). Ch. lxiv. of the *Book of the Dead*, line 46, speaks of a worshipper's hands as pure when praising the god. Herodotus¹⁴ says that a man had to discard his woollen cloak before entering a temple.

Hero of Alexandria (fl. c. 250 B.C.) says that 'stoups (περιπαρτήρια) for the sprinkling of those who enter' stood at the entrances to Egyptian temples.¹⁵

Perhaps we have examples of the περιπαρτήρια of Hero in certain large stone vessels of the Ptolemaic age, which, as the inscriptions show, came from temples, and which, apparently, were meant to hold water. Some of them are decorated on the inside with the symbols , 'good fortune, life, stability,' which are associated (see above, V. 1) with religious ablutions.¹⁶

Hero also speaks of bronze wheels, which were apparently fixed to the doors of temples, and were

turned by those entering 'because it is thought that bronze cleanses.'¹⁷

This is quite an un-Egyptian device, and was probably imported from the East.¹⁸ Von Bissing describes what may be an actual example of one of these wheels and gives a drawing of it.¹⁹

An inscription of the Ptolemaic period²⁰ states that people who had become impure through sexual intercourse,²¹ birth, miscarriage, menstruation, etc., had to pay dues before being admitted into the temple of Asklepios at Ptolemais. These were apparently paid into a money-box (θησαυρός) at the entrance to the temple.²²

A bronze wheel was sometimes, it seems, associated with the money-box; thus a person paid his or her dues and then was purified by turning the wheel. Hero²³ proposes to make a combined money-box and wheel; the former is to be surmounted by a bird which will sing when the wheel is turned.²⁴ We also learn from Hero²⁵ that bronze wheels were set up near the water-stoups. He therefore proposes to make a 'contrivance of such a kind that when the wheel is turned the water runs out of it for the sprinkling.'²⁶ For further particulars as to these two contrivances, the former of which was a penny-in-the-slot machine worked by 5-drachma pieces, the latter an ingenious swivel tap, see Rochas, *Annales du Service des Antiquités*, xl. [1911] 95 ff.

(b) *Purification in sacred waters and pools*.—(i.) Near Khoreha (the Græco-Roman Babylon) there was a pool connected with the Heliopolitan sun-cult. In its waters the sun-god washed his face, and it was of advantage to mortal men to do the same.²⁷

(ii.) At Herakleopolis Magna there were two great pools in the precincts of the temple of Harshet, called the 'Pool of Natron' and the 'Pool of Mē't'.²⁸ The worshippers of the god washed in these pools and so were cleansed from their sins; their offerings were washed in them also.²⁹

An official of the Saite period records that he built a wall 'behind the Pool of Mē't'.³⁰

(iii.) The water at the First Cataract, the traditional source of the Nile,³¹ was believed to be endowed with special cleansing properties, and therefore was used (or supposed to be used) for all the libations and libations offered to the gods and the dead.³² The fact that the dead go there to be bathed by the goddess Satis³³ suggests that the living also performed ablutions there.³⁴

(c) *The Osirian mysteries*.—Participation in the Osirian mysteries³⁵ was productive of religious purity. This is suggested by certain statements in the *Book of the Dead*.

E.g., the deceased thus addresses the gods in the other world: 'I am pure of mouth, pure of hands, one to whom is said "Welcome, welcome" by those who see him; for I have heard those words which the ass spake with the cat' (ccxv. ['Conclusion'] 13 f.). Again he says to his ka who stands in his way: 'Let me pass, for I am pure. I have made Osiris triumph against his foes' (cv. 8); see also i. 3, 8-10, 13 f., clxxxi. 13 ff.

9. Purification before going into battle.—Apparently the only reference to this custom in Egyptian writings is *Pyr.* 2190a-2191b,³⁶ which says:

'Horus comes forth from Khemmis. Buto Town arises for Horus, and he purifies himself there. Horus comes pure that he may avenge his father.'

VI. PURITY AND PURIFICATION IN MAGIC.—

1. The reciter of a spell and a magician must be pure. He who would recite ch. cxxv. of the *Book of the Dead* must be pure (*w'd*) and clean (*twr*), must be clothed in the finest linen and shod with white sandals (cf. above, V. 7 (*h*)), have his eyes painted with stibium, and be anointed with the finest unguent.

The purity demanded of the reciter could be obtained by washing with water containing natron¹ or by washing and fumigation in the sunlight.² Impure food, such as venison and fish, and sexual intercourse are to be avoided.³ In the case of one spell the reciter, and his servants also, are directed to purify themselves for nine days.⁴

To be successful in 'spirit-gathering' the magician must be pure.⁵

In vessel-divination by the moon the magician, if a medium is not used, must be 'pure for three days.'⁶ In divination by a lamp without a medium the magician, who must be 'pure from a woman,' is directed to lie down on green, i.e. fresh, reeds.⁷

2. Purity of the medium.—In 'spirit-gathering' the medium must be a 'boy, pure, before he has gone with a woman.'⁸

3. Purity and purification of the objects used.—The papyrus upon which a spell is written must be pure.⁹ The table used in 'spirit-gathering' is to be 'of olive-wood, having four feet, upon which no man on earth has ever sat.'¹⁰

In lamp-divination the lamp must be a white one 'in which no minium or gum-water has been put, its wick being clean'; it is to be filled with clean genuine Oasis oil, and is then to be set upon a new brick.¹¹ The *Book of the Dead*, ch. cxxv., rubric, directs that the representation of the Hall of the Two Truths be drawn upon a pure tile of porcelain fashioned of earth upon which no pigs or small cattle have trodden. The canopy (?) placed over the model of a boat used in a magical ceremony is to be purified with natron and incense.¹² In Griffith-Thompson, xxviii 4, we learn that the bronze vessel used in divination is to be washed with water of natron.

4. Purity and purification of the place where the ceremony was performed.—The place where the magic rite was to be performed must be clean.¹³ Sometimes it had to be both 'clean' and 'dark without light,'¹⁴ and in addition must be purified with natron water¹⁵ or sprinkled with 'clean sand' brought from the great river.¹⁷ Furthermore, it is laid down that there is to be no cellar underneath it.¹⁸

VII. PURITY OF THOSE WHO WISHED TO HAVE AUDIENCE OF THE PHARAOH.—In the *Piankhi Stele*, lines 147-153, we are informed that of the four princes who came to the Pharaoh to pay homage three, being fish-eaters, were not admitted to the royal presence. Perhaps this scrupulosity on the part of Piankhi was due to the fact that he had just been affiliated to the sun-god (see above, V. 1 (*h*)), to whom fish was evidently supposed to be an abomination.¹⁹

LITERATURE.—This has been sufficiently indicated in the article.

PURIFICATION (Greek).—All the lower religions and most of the higher are concerned with the ritual of purification in its manifold forms; the higher are also deeply interested in purity as a spiritual ideal. The history of Greek religion falls into line with the general history of religions in both these respects. Its 'cathartic,' or purificatory, ritual agrees in essential respects with that of the other communities noted in the various sections of this article; it agrees also with the history of the higher religions in that a spiritual ideal, appealing to the more exalted or more sensitive minds, emerged from that ritual. Nevertheless, the phenomena of Greek purification, the ideas and the value attaching to it, bear the impress of the unique temperament of the people, and especially illustrate the pliancy with which the Greek communities could adapt the traditions of ritual to serve the purposes of legal and ethical development.

The student of this department of Greek religion is at once confronted by a chronological question that is also a question of origins: At what period and from what source did the cathartic system arise in Greece? It has been maintained that the whole of it was post-Homeric, and that in origin it was non-Hellenic, being derived from some Oriental or Anatolian source—e.g., from Lydia.¹ This view rests mainly on Homer's supposed silence concerning it, and his silence is explained by his ignorance of any such ritual, which therefore could not have existed in the period when the poems were composed. But we have now learned that Homer's 'silence' has to be carefully and critically judged and interpreted before it can be accepted as certain evidence that what he is silent about did not exist in his time. Also the statement that the Homeric poems are wholly silent concerning any ritual of purification from stain ignores the plain or the probable significance of certain texts. We read that Odysseus purifies his hall with fire and sulphur after the slaughter of the suitors;² we may suspect a religious sense of impurity as a motive, though we cannot prove it. But Hektor's words, 'It is not meet for a man stained with blood and grime to offer prayers to God,'³ cannot but be interpreted in relation to a contemporary simple rule of ceremonial purity—the same religious rule that compels Achilles to wash his hands in lustral water before raising them in prayer to Zeus,⁴ or Telemachos to wash his hands in sea-water before praying to Athene.⁵ Also, we find the *χερσες*, or lustral water, the purificatory value of which cannot be doubted, a constant concomitant of the Homeric sacrifice and libation.⁶

Again, we should consider the purification of the Achæan camp, ordered by Agamemnon as a method of expelling the plague, as by no means a merely sanitary or hygienic act, but as inspired by dæmonic or divine fear and therefore as a religious act of purgation; for it is the immediate preliminary to a sacrifice to Apollo, and the Achæans throw the *λύματα*, the articles with which they had purified themselves and their tents, into the sea; and this is a formal act suggesting that these things are tainted with a curse or religious contagion or the *μασσα* of evil spirits.⁷

Therefore the evidence of the Homeric poems does not allow us, still less compel us, to suppose that the Greeks of the Homeric period were wholly destitute of purificatory ceremonies; had they been so, we should have to regard them, in the light of

¹ G. Grote, *Hist. of Greece*, 10 vols., London, 1888, i. 22; P. Stengel, *Die griechischen Alterthümer*, p. 114.

² *Od.* xxii. 481 f.

⁶ e.g., *Il.* i. 449, xxiv. 305; *Od.* iii. 440.

⁷ *Il.* i. 314; cf. the throwing into the sea of the slaughtered boar upon which the oath-curse had been laid (*Il.* xix. 287 f.).

modern anthropology, as in this important respect distinguished from all the other races of the world. Doubtless the invaders from the north, whose blending with the southerners, the people of the Minoan culture, generated the Hellas of history, brought with them their own cathartic ideas and practices; and the evidence of legends and accounts of festivals recorded by the later Greek writers suggests that they found on the soil of Greece and in Crete a more elaborate system of the same significance and of immemorial antiquity.

But there is indeed a marked difference between Homeric society, so far as that is mirrored in the Homeric poems, and the succeeding periods of Greek life; and this difference should be noted at the outset before we proceed to the details of the subject. If we call the people to whom those poems were originally addressed the Achæans, we may venture to say that the Achæan conscience took its cathartic duties, such as they were, very easily and lightly; on the other hand, the later Hellenic conscience became anxious and at times even sombre in regard to such matters, and was often haunted by terrors of the ghostly world and by the feeling that certain acts, especially homicide, might arouse the wrath of unseen spirit-powers or ghosts, and that such dangers could be averted only by an elaborate prophylactic ritual of purification. There is a wide cleavage between the Achæan and the later Attic religious consciousness in this vital respect, as wide as that between the genius of Homer and the genius of Æschylus. The Homeric ghost is impotent and piteous, of no power in the social-religious world, no shadow on the brightness of that early epoch.¹ And nothing more vividly illustrates the moral light-heartedness of the Homeric world, so splendidly endowed in most respects, than its normal indifference concerning ordinary homicide. Man-slaying was regarded in certain cases as a sin and might at times concern the whole community; but nowhere in the poems is there any hint of the need of purification from the stain of bloodshed, which in later Attic law was prescribed even for the accidental slaying of a slave. Telemachos, who has committed the sin of shedding kindred blood, has merely to flee from the wrath of his kinsmen;² the suppliant who has fled from his home for having killed a man is at once admitted by Telemachos at the moment of a religious service.³

Now, much that appears post-Homeric, merely because the first record of it belongs to the later period, may be an ancient inheritance of the pre-Hellenic stock that was submerged temporarily by the wave of northern invasion but rose to the surface again and re-asserted its traditions. So the later prevalence of a cathartic system, especially elaborated in regard to bloodshed, may only be another example of revival.

Such a revival would receive strong stimulus from the diffusion from Thrace through Greece of the religion of Dionysos, a religious phenomenon of great import for the spiritual history of the race. The cult had begun its Hellenic career already in the earlier 'Homeric' period, but had finally established itself in most parts of the Greek-speaking world, and especially at Thebes, Delphi, and Athens, at the close of the later migratory and colonizing movement. The god was aboriginally associated with the ghostly world and some part of his ritual was 'cathartic'; and this aspect and function of his cult were strongly proclaimed by the brotherhoods of 'Orpheus,' who were propagating doctrines and establishing their

influence in Greece perhaps as early as the 7th cent. and with marked success in the 6th and 5th. And the religious-philosophic system known as Pythagoreanism, maintained by the Pythagorean brotherhoods which played a prominent part in the religious and political world of those two centuries, bore the closest affinity to Orphism, agreeing with it on the whole in its views as to the destiny of the soul and the need of an elaborate ritual of purification and a careful rule of purity.¹ Fortunately the Orphic-Pythagorean mission did not succeed in capturing the Greek democracies or the chief centres of the national worship; but it undoubtedly helped to render the general religious consciousness more sensitively anxious concerning purity and impurity; and Aristophanes warmly acknowledges, in terms that are doubtless too sweeping, the deep indebtedness of his countrymen to 'Orpheus' for much of their spiritual life.²

We may now review briefly the details of Greek *κάθαρσις* and consider the ideas attaching thereto; our records are mainly late, the literature from the 5th cent. onwards and certain later inscriptions; but we must always bear in mind that a fact is not necessarily 'late' because the earliest record of it is.

The technical inquiry is concerned always with two questions: (a) What are the acts, states, objects, agencies, seen or unseen, that are supposed to leave a stain on the soul or body of a person, which unfits him for intercourse with man or deity because he is spiritually, not merely physically, unclean and is liable to infect others and render nugatory any divine service by his *μιασμα*? (b) What are the cleansing, purgative, or cathartic processes, material or spiritual, by which he can rid himself of that stain?

The Greek evidence on these two questions, which is very multifarious and scattered, may be briefly summarized thus. (a) The causes of impurity were bloodshed, the presence of ghosts and contact with death, sexual intercourse, child-birth, the evacuations of the body, the eating of certain food such as pea-soup, cheese, and garlic, the intrusion of unauthorized persons into holy places, and, in certain circumstances, foul speech and quarrelling. (b) The purgative means, usually called *κάθαρσις* by the Greeks, were lustral water, sulphur, onions, fumigation and fire, incense, certain boughs and other vegetative growths, pitch, wool, certain stones and amulets, bright things like sunlight and gold, sacrificed animals, especially the pig, and of these especially the blood and the skin; finally, certain festivals and festival rites, especially the ritual of cursing and the scapegoat (*q.v.*). More exceptional methods might be cutting off the hair of the polluted person, or sacrificial communion with the deity. To philosophize on these bizarre phenomena belongs to the more general exposition of the theme; and little study is needed to convince us that they concern in the first instance the sphere of primitive psychology rather than ethics; but, if we look more carefully into their history, we shall find how closely they are interlinked with the higher moral and religious life of the people and states.

1. The causes of impurity.—The deepest impurity was that caused by the shedding of human blood in certain circumstances; and the growing sensitiveness of conscience in this matter was a vital force in the development of society. We have noted the weakness of the sentiment in the Homeric world, and that world was still barbaric in its rules regarding homicide. The first record

of a change in feeling is the citation of an incident in the *Anthropia*, an epic poem by Arktinos of Miletos, composed probably near the close of the 8th century B.C. Achilles, provoked by the gibes of Thersites, slew him and was thereupon obliged to quit the army for a time and to retire to Lesbos, where he was purified by Apollo and Artemis.¹ It is very doubtful if the poet of the *Iliad* or *Odyssey* would have comprehended this. Thersites was no kinsman to Achilles, and at most only a degraded member of the same Achæan stock. Yet the Milesian poet feels that his homicide, however justifiable, deeply concerns the whole army and is a stain upon Achilles, who must be purged by a religious ritual at some distant place before he can safely resume fellowship with his compatriots. The legend represents, no doubt, the contemporary State law of Miletos, and exhibits that State as having advanced soon after its foundation beyond the stage of culture wherein homicide is only a matter of the blood-feud and the *wergild* to the higher religious thought that the slaying of any member of the community brought a stain on the slayer and a danger on the whole society against which it must protect itself. We are still very far from the establishment of advanced secular law; the various stages of progress in later Greece and the ideas that inspired and assisted it are obscure and difficult to trace. On one point we may form a probable hypothesis. As ideas of purity and impurity are closely related to natural sensations of horror and aversion, and in Greece as elsewhere these feelings were most strongly excited by the shedding of kindred blood, it is probable that this type of homicide was the first occasion for the institution of an elaborate ritual of purification. Some of the few legends concerning its origin and vogue convey this impression. Ixion, who slew his father-in-law treacherously, figures in Greek mythology as the first murderer, and he is also the first suppliant who is pitied and purified by Zeus 'Ικέτιος, the god who hears the prayer of the suppliant and outcast. Bellerophon was purified by King Proitos for the accidental slaying of his own brother; Theseus, who slew the robber Sinis most justifiably, had to be purified from the stain, as Sinis happened to be his cousin; and the typical exemplar of the divine law of purification is the matricide Orestes.² But, if the law was in origin limited to this special kind of homicide, it had already enlarged its scope at some indefinitely early period. The law of Miletos, as illustrated by the passage referred to above in the poem of Arktinos, attests such an enlargement for the 8th cent.; and the legends that Athens purified Herakles from the blood that he had copiously shed,³ and that Apollo himself, the pure god, had to be purified in Crete from the blood of Pytho,⁴ bear the same significance, and may have arisen in the same early period. To explain this extension of the ritual we might suppose that the sphere of kinship, in which it originated *ex hypothesi*, was enlarged when the city-State was built up and included various kins within its union, until the slaying of any member of the political community came to be regarded as a stain similar to that of kindred-slaughter. But this would not explain the belief, which some of the legends cited attest, that the same impurity might be contracted by the slaying of an alien enemy, unless we are to attribute to the Greeks of an early period the advanced conceptions of the kinship of the whole human race and the sacredness of all human life. But no one would hazard such a theory to explain

any evolution of the early post-Homeric epoch; and we may seek a more probable explanation in the increasing terror of the ghost-world; for we have the evidence of the later funeral laws and ritual, confirmed by many legends, to suggest that this was more potent in the post-Homeric than in the Homeric and Mycenaean periods. Given an intensified belief in the dangerous power of the ghost, and the conviction that purification from bloodshed was the only safeguard both to the individual and to the community against the wrathful spirit of the slain, we can well understand the wide extension of the law, until it covered the slaying of a slave; for even the ghost of a slave might be dangerous.¹ The miasma emanating from a ghost was supposed to attach also to inanimate objects that had caused the death of a man; the civilized Attic law required that the axe which had slain the sacrificial ox of Zeus Ποσειδῶν should be formally tried and cast into the sea—a means of purging and purifying the land;² solemn purification ceremonies were performed over the head of the bronze ox at Olympia that fell upon a boy and killed him.³

This sensitiveness to bloodshed and death may become extravagant and morbid, and has at times evoked such strange vagaries of the ritual law of purity as may half-paralyze the life of a community; but the Greek was saved from this by his moderation and a certain secular common sense, which protected him from the extreme logic of the view that all bloodshed was impure. We are not sure that any purification was imposed by Greek State law or social custom upon a man who had slain an alien in foreign lands; that would depend on his own sensitiveness or on his desire to be initiated at any of the great mysteries, which would demand a *κάθαρσις* from such a stain. Nor have we any record proving or suggesting any rule, such as prevailed with stringency among the Hebrews or still more and with detrimental results among the Indian tribes of N. America, requiring the purification of the army returning from battle;⁴ the Greek soldier was probably content with an ordinary washing, sufficient for the purposes of refinement. Nor, again, was the ordinary Greek troubled by over-sensitiveness in regard to the blood of animals shed for sport, for food, or for sacrifice; there is no hint that the butcher or, as a general rule, the sacrificer incurred impurity.⁵ At least, the only evidence that can be quoted of some such feeling is isolated and peculiar; the priest who slew the sacred ox in the Attic Bouphonia had to go for a time into exile; but this ox was a mystic, 'theanthropic' animal, charged with the divine spirit of the altar, and the priest had shed divine blood;⁶ there is no reason to believe that at any time the Attic people regarded the slaughter of an ordinary ox as a heinous impurity. We may note also the fact that a certain altar of Apollo in Delos was specially called ἄγρος, 'the pure,' because the offerings and ritual were bloodless, no animal-sacrifice being allowed;⁷ this is no proof of ordinary Greek feeling, but suggests rather some peculiar sacerdotal development of thought concerning blood.

Not bloodshed alone, but any contact with death and the ghost-world was a strong source of im-

purity or *plasma*. The household to which the corpse belonged was impure; even the friends and others who attended the funeral were impure. In the tolerant Greek world this did not mean that they were severely boycotted, but only that they were unfit to approach the altars and to take part in divine service with others, also that it might be unlucky for them to carry on any serious business while in that state; Hesiod is our first witness to a superstition which descends from a far older period, that it was unlucky for a man returning from a funeral to try to beget a child.¹ The inscriptions and other evidence show that the period of impurity varied in the different states; at Lindos in Rhodes (in the time of Hadrian) it lasted for forty,² at Eresos in Lesbos for twenty days.³ Those who merely attended the funeral were under the tabu for three days at Eresos, but at Pergamon they could recover purity on the same day by means of lustration.⁴ The fear of the ghost-world, implying a shrinking of vitality in the living and a general sense of bad luck abroad, explains much of the funeral ceremonies of the Greeks, which show indeed the desire to please the ghost and to assure it of the family affection, but at the same time the determination to keep it at a distance and especially to prevent it following the mourners back to the house; one day of the Attic Anthesteria was devoted to an All Souls' celebration, when the spirits of the dead kindred were formally invited to an entertainment within the houses, but great care was taken to purify the dwellings at the end and to effect a complete riddance of them;⁵ meantime the whole day was *μυαρά*, impure and unlucky. The same feeling explains the elaborate ritual to which the *δευρεπότομος* must submit, the person who had been reported to be dead and had had funeral ceremonies performed over him and was then found to be alive and desirous of returning; society was afraid of such a person, for, though he had not really been in the ghost-world, yet the unnecessary funeral ceremonies had put that contagion upon him, which must first be washed off before he could be received back.⁶ Such was the condition of Alkestis, when Herakles had rescued her from Death and was placing her in the hands of Admetos. Even those who performed the rites known as *ἀπορρόπαια*, rites for 'turning away' evil spirits, including ghosts, were constrained to wash their persons and garments before returning to their homes.⁷

There were certain occasions when the whole community performed cathartic ceremonies to purge itself of such evil influences of the unseen world. Such occasions were either periodic and regular or exceptional owing to a crisis that had arisen. In spring, when the new vegetation was beginning, or when the early harvest was ripe for gathering and the firstfruits ready for consecration, the feeling that this was the proper time to cleanse the whole city of the evil influences that had accumulated throughout the old year inspired such festivals as the Thargelia⁸ in May and probably the Dionysia in February-March, the former certainly, the latter probably, possessing a cathartic value. It inspired also the frequent practice at the end of the old year and the beginning of the new of the extinction and rekindling of fires, especially the fire on the city's hearth,⁹ and the washing of the statues of the tutelary divinities. The Attic Plynteria, held in May, is the best

known example of the last ceremony, when the vestments and probably the idol of Athene were solemnly washed, and its day was *μυαρά*, the air being temporarily dangerous when contagion was being expelled.¹ Resort was had to the same sort of ritual at some momentous crisis or emergency. The Persian invasion had polluted the Greek temples with the presence of the stranger,² itself a source of defilement to the national deities apart from any outrage committed against them; therefore the first care of the Greeks after the victory of Plataea was the purification of the holy places.³ The presence of the matricide Orestes was supposed to pollute the Tauric image of Artemis, which therefore needed washing in the sea.⁴ Another momentous crisis was the foundation of a new city, and we have some indication that the ground was first carefully purified so that the settlement might start under good auspices purged from evil demonic agencies.⁵

The gravest crisis of all was one that was only too frequent in the life of the Greek states—the outbreak of civic massacre, when kindred blood was shed, the sense of guilt weighed on the citizens, and the atmosphere was charged with the miasma of wrathful ghosts. This was the condition of things at Athens in the 6th cent. B.C., when Kylon and his adherents had been sacrilegiously slain, and the people appealed to the aid of the Cretan prophet Epimenides, who came over and purified the whole city, the fields, and the homesteads; the recollection of this historic event lingered late in Attic tradition and gave rise to the erroneous belief that it was this prophet who first taught the Athenians the ritual of purification and its value.⁶

As regards sexual intercourse, we have evidence that the Greeks, like other primitive and advanced peoples, regarded the act as an occasional source of impurity and held the belief that abstinence had a certain value and efficacy for some religious or magical ritual. A deeper and more interesting question arises when we consider purity in the abstract and the Greek view of chastity as a religious duty and ideal. The law of purification in this matter was very simple and easy; such an act was supposed to render the person unclean in the religious sense, but the uncleanness could be immediately removed by washing and anointing, and some temple codes might allow the person to approach the altar on the same day, others might impose a tabu of one day or even more; for the catechumens of the mysteries and for certain lengthy ceremonials such as the Thesmophoria a longer abstinence might be required. In the later inscriptional records we are interested to mark the glimmer of an ethical idea; for the impurity is regarded as greater and the period of tabu imposed longer in the case of irregular and lawless indulgence;⁷ and by Attic law the adulteress was permanently excluded from temple worship.⁸ But, on the whole, the temple rules in regard to this act are concerned not directly with morality, but with a superstition arising from a primeval feeling that has evolved our modern social laws of decency; and the non-ethical standpoint is sufficiently revealed in some of the special rules and some of the phrasing of the temple-inscriptions: in the inscription from Eresos a longer tabu is imposed in cases

of loss of virginity than in other sex-indulgence,¹ and in the rules of *ἀγνεία*, or 'purity,' demanded of the visitants to the altar of Zeus *Κύβητος* and Artemis *Κυβέτη* at Delos the prescription of temporary chastity was put on the same footing with abstinence from salt-fish and meat.² The priest was concerned, not with society in general, but with safeguarding the purity of the temple. Therefore the sexual act, by which a stain was incurred that must be washed off before the person could safely approach the altar, became immeasurably more heinous if committed within the precincts of the temple; in the Greek legends that relate such exceptional incidents the whole community suffers divine punishment until expiation is made.³

The same feeling prescribed the law, which is practically universal, against the defilement of the temple or the temple-precincts with the evacuations of the human body; and some of the sacred codes carefully proscribed the entrance of cattle into the *temenos* for the same reason.⁴ It may also explain the rule prevailing in some of the Greek temples against the wearing of sandals in the holy place, the rule which is universal in Muslim communities;⁵ the source of it may be sought in the fact that the sandals are made of the skins of dead animals and that therefore they bring the impurity of death into the shrine.⁶

From the same prompting of primeval feeling, child-birth has been generally regarded as a strong source of impurity to both the woman and the man of the house,⁷ not because it is the result of the sexual act, but because of its concomitants and the awe attaching to it; nor did the civilized Hellenic societies differ in this respect from the savage, though their tabu and rules of purification were much milder and easier. Such an event was not likely to happen within the temple itself; but we are familiar with the law that required the removal from Delos of any woman who was approaching her time, lest the island of the pure god should be polluted. The ordinary temple codes would be concerned only to prescribe the period during which the woman should be in tabu after travail;⁸ it is noteworthy that in one example we find the abnormally long period of forty days imposed in the case of miscarriage, the more unnatural event producing the greater sense of strangeness and awe to which the idea of religious uncleanness is so closely linked. In the *τεποὶ νόμοι* of the Greek temples we might have expected to find under this head some rule of tabu concerning menstruous women, about whom the code of Leviticus is anxiously severe; but no direct evidence touching this matter has yet been found,⁹ and probably none will be; for the Greek religious mind was more easy and tolerant than the Hebrew, and the vast number of Greek priestesses would make the application of any such rule very difficult.

As regards impure food, the Greek world was happily free from the severe scrupulousness of some

⁵ *Id.* no. 560.

⁶ This is supported by the rule at Eresos that neither shoes nor any other leather garment were to be brought into the temple, and by the regulation of the mysteries at Andania that women should wear sandals and garments of wool (Dittenberger, no. 653, 22).

⁷ Cf. insc. from Eresos (*CIR* xvi. 290); Eur. *Iph. Taur.* 382; Theoph. *Char.* xvi. 9, Porph. *de Abst.* iv. 18.

⁸ At Eresos this seems to have been ten days; Censorinus, *de Die Nat.* ii. § 7, in a doubtful passage speaks as if the Greek rule excluded the woman eighty days, forty before child-birth and forty after.

⁹ The only Greek inscription known to the present writer dealing with these cases refers to the cult of the Phrygian god Men (Dittenberger, no. 653).

other religions, nor was the distinction between clean and unclean animals natural to the Greek mind; the Greek inscriptions that preserve certain temple laws only indicate that it was desirable, in order to attain the *ἀγνεία* necessary for participation in religious service, to abstain for a short time beforehand from certain foods. What these were the various codes probably did not agree in determining, and it would be hard to find a common principle explaining all. In some we seem to detect the natural feeling that foods which left an unpleasant odour attaching to the person ought to be avoided before worship; hence would arise a tabu on pea-soup, salt-fish, cheese, and garlic;¹ for evil smells have much to do with the sense of uncleanness and with the belief in the presence of evil spirits. Again, the rule sometimes enjoined abstinence from certain animals because they were specially dear to the divinity, and the question of the origin of such rules involves a discussion of totemism (*q.v.*).

As speech suggests action, it was natural that the same law should apply to foul speech as to impure act, and that evil words should be considered to mar the purity of the divine service; hence the universal Greek rule that before the sacrifice began the command for *εὐφημία* should be proclaimed to the people; this word, at first meaning 'auspicious speech,' became indirectly a synonym for 'silence'; for, as it was difficult for each member in a vast concourse to be sure what word was auspicious and what not, it was best for general silence to prevail.²

In accordance with the same idea, the purity of the ritual would be disturbed if any quarrelling or altercation arose, for quarrelling suggests bloodshed. Hence during festivals of exceptional solemnity, such as the Eleusinia, by Attic religious law no legal action could be taken, no creditor could distrain, even a person aggrieved by the State might not lay a suppliant-bough on the altar; for all this implied strife.³

2. The means of purification.—The means of purification are of two kinds, (a) mechanical, and (b) religious or quasi-religious; and the two may be used together. Among the former we find in Greece, as elsewhere, such natural purgative media as water, fire, sunlight. To the examples already noted of the first may be added the Attic custom of purifying the bride with water from the sacred spring before the marriage ceremony.⁴ It is not clear that there was any ceremonial purification of the new-born infant with water equivalent to our baptism. The need was fulfilled some days after birth by an interesting ceremony called *ἀμφιδρόμια*, 'the running around,' in which the new-born infant was carried at a running pace round the fire of the domestic hearth;⁵ and with this we may compare the Eleusinian legend that the goddess Demeter tried to purge away by fire the impure and mortal parts of her fosterling Demophon.⁶ The use of fire in certain Greek rituals, such as that of the Mænads who sprang through the fields with torches, may be supposed to have the cathartic effect of driving away evil influences or spirits,

¹ Dittenberger, nos. 564 (insc. from Delos, wine tabued), 567 (Lindos, pea-soup, goats' flesh, cheese), 633 (Sunium, Men Tyrannus, garlic and pork, 'Oriental influence'), Prot-Ziehen, ii. 1, no. 91 (Delos, temple of Zeus *Κύβητος* and Athene *Κυβέτη*, all flesh forbidden), no. 92 (Delos, shrine of Artemis, salt-fish). The rules of *ἀγνεία* in the mysteries were much severer than in ordinary cult—*e.g.*, Porph. *de Abst.* iv. 14; Libanius, *Orat. Corinth.* iv. 356 (Reiske).

though other explanations are possible, and we are told that the torch was used in the purification of cities.¹ The idea of the purity of fire is strikingly illustrated by the annual rite practised by some of the Greek states of renewing the purity of their hearth-fires, both public and private, by bringing new fire from some specially pure source, such as the altar of Apollo at Delos or of Hephaistos in the Academy at Athens.²

The use of incense at the sacrifice, as a mode of purifying the air by fumigation, which Greece adopted from Assyria in the 8th cent. B.C., had in the East a strong cathartic power against demons, who are generally supposed to be attracted by evil smells and banished by good; and, though its pleasing odour would cause it to be maintained merely as an attractive concomitant of worship, we may believe that at least the earlier Greeks were aware of its original significance.³ Fumigation by sulphur had an obvious purificatory value; for, though its odour is not pleasant in itself, its pungency is such as to overpower other smells which might be dangerous; hence Homer calls it *κακῶν ἄκος*, 'a healing of evils.'⁴

The boughs of certain trees, probably on account of their smell or colour, possessed a cathartic value, such as the laurel at Delphi, which Apollo was supposed to have brought back from Tempe after his purification there from the blood of the Python,⁵ the withy-bough, or *λύγος*, which the Attic women used as a purifying medium in the Thesmophoria,⁶ and especially the squill, or *σκόλλη*, which was used in the general purification of cities and for beating the scapegoat in the Thargelia,⁷ a ritual of purification or expulsion of evil; therefore the Arcadian rite in which the image of Pan was beaten by boys with squills must be interpreted as cathartic.⁸ When the Athenians on one day in the Anthesteria stuck branches of buckthorn at the entrances of their houses, this was a mechanical means of purification, its object being to keep out ghosts;⁹ for its thorns would naturally embarrass the ghost, as would the sticky pitch with which the citizens at the same time smeared their doorposts.

Thunder-stones in certain religious circles had a recognized cathartic value, which their mysterious origin and perhaps their connexion with fire would naturally attach to them.¹⁰ Perhaps it was a stone of this kind that, according to a Boeotian legend, Athene dashed at Herakles to cleanse him of his madness after he had slain his children.¹¹ There is also an Arcadian story about the sacred stone called Zeus *Καππώτας*, evidently from its name meteoric, by sitting on which Orestes was healed from his madness.¹²

There is some evidence that gold, the pure and bright metal, was regarded as purificatory;¹³ also among the mechanical cathartic media we must include amulets, which were as much in vogue in the later periods of classical antiquity for keeping ghosts and evil spirits at a distance as they were in Christendom; some of the Greek types, such as the *φαλλός* and the pointed finger have no connexion with religion; others might be carved in the form of divinities, but their working was mechanical magic.

The other type of purificatory methods consists

of those that may with more right be called religious, as connected directly and indirectly with the worship of the divinities or with their influence. The use of certain animals—their blood or skin or whole carcass—was perhaps the most common method of purification from bloodshed and other taints. The fleece of the ram offered to Zeus *Μελίχιος*, the god who had specially to be appeased when kindred blood had been shed, was used for the purification of the catechumens at Eleusis, upon whom the stain of blood rested and who knelt on the 'fleece of God,' the *Διὸς κάδιον*—as it was called—while the purgation ceremony was performed over them.¹ In the mysteries of Andania we hear of the 'ram of goodly colour' used for the purification of the initiates.² Plague might be averted from a city by a priest carrying round its walls the ram of Hermes.³ But the most usual animal employed for purification was the pig, of special potency in the Eleusinian mysteries. The Athenian assembly was purified before its meeting by a ceremonial procession of little pigs;⁴ and no other purgation was of such avail for the homicide as pig's blood. Hence on one vase representation we see Apollo himself purifying Orestes by holding over his head a pig dripping blood.⁵

Now, we have strong evidence that in the magic rites of purification practised by many modern savage societies the blood of animals—the goat, the bullock, or swine—has an intrinsic mysterious potency in itself, wholly unconnected with sacrifice or divine worship; and this primitive feeling may have survived here and there in historic Greece. But that this is in general a sufficient explanation of the Greek ceremonies is not credible. The ram's fleece and the pig's blood in Hellenic purifications were suggested by their intimate sacrificial association with the high god and the great goddesses and powers of the lower world; just as the *aiyls*, or goat-skin, of Athene, wherewith her priestess at Athens visited the newly-married couples for cathartic or fertilizing purposes, derived its efficacy from its contact with Athene.⁶ In Hellas the pig was the sacred animal of Demeter and Kore, the powers of the world of spirits; the pig's blood was charged with a portion of their divinity, and therefore the homicide who had offended those powers could recover grace by its contact, in fact by a sort of communion with them.⁷

A different type of communion, serving a cathartic purpose, is suggested by a record of Plutarch that at Argos the period of mourning for a death in the family lasted thirty days, and that at the end of that time the mourners regained their original status by a sacrifice to Apollo; we may interpret this to mean that by communion with the pure god they finally wiped off their impurity.⁸

It has been observed that cathartic features, often overlaid and obscured by other accretions, attached to some of the complex Greek festivals; the Thargelia at Athens and elsewhere is an example of this, as the driving out of the scapegoat, which was its central act, effected a *κάθαρσις* of the whole community from sin and other evil.⁹ Another curious but not unique accompaniment of certain Hellenic ritual and festivals was the employment of curses, ribaldry, satire, and abuse:

in the solemn procession along the sacred way to Eleusis the aspirants to the mysteries were ceremonially abused and ridiculed by the crowd at one point;¹ in the Thesmophoria the men abused the women and the women the men;² and that such badinage had a cathartic purpose—the averting of *vémours* or of evil spirits—is a reasonable theory confirmed by a text in Suidas that the people of Alexandria in old days purged the city of ghosts by going round in waggons to the doors of the houses and proclaiming the sins and misdoings of the individuals within.³ This humorous procedure may be regarded as a kind of vicarious confession; the cathartic character of confession has been long recognized, but confession in our sense, a private and personal revelation of one's sins to a priest, was alien to the old religious system of Greece.⁴ The purgative value of personal satire may have been one motive for its dramatic development in the Dionysiac festivals.

The religious aspect of the Greek system of purification was further emphasized by its close association with certain high divinities, especially Zeus Meilichios and Apollo of Delphi. The former deity belongs to the older stratum of Greek religion, but retained his function of granting or withholding purification from kindred and civic bloodshed throughout the later centuries.⁵ The Delphic-Apolline *kathaporia* has been a subject of much dissertation and cannot be even summarized here.⁶ But it may be noted that it was the claim of the Apolline priesthood to deal with the question of purification from bloodshed that led to the establishment of one of the most important law-courts in Athens to deal with the plea of justifiable homicide, whereby the civilized Athenian State approached the level of modern equitable law.⁷ But, though power was thus taken out of the hands of the priesthood, the secular court at Athens that dealt with homicide remained strikingly religious in their procedure; and it is mainly their strong infusion of cathartic ideas concerning the miasma of blood that differentiates them from the modern tribunal.

A side question that may be glanced at under this section is whether Greek feeling about impurity was always associated with a belief in ghosts and evil demons as its cause. The question is important because an overstrong susceptibility to the terrors of the demon world can vitally affect the religious and scientific development of a race. We have seen that the sense of the impurity of bloodshed in Greece was connected with the fear of the ghost and that ghosts made a household impure; but we have no reason to believe that this fear or any clear belief in evil demons accounted to the Greek of the 'classical' period for the other sources of impurity. It is true that Porphyry declares that the chief motive for the various *ávyela*, or methods for obtaining purity, was to drive away the evil spirits which cling to certain kinds of food.⁸ But Porphyry is no true witness for the earlier Greek thought, as he represents the later demonology that swept over the Mediterranean world from the East and found expression in Neo-Platonism and the Hermetic literature. But in the earlier Hellenic spiritual world there was no true dualism of good and evil spirits; nor was the average Hellene of the earlier centuries ghost-ridden or demon-ridden or much dependent on the exorcist for his peace of mind;

and this is one of the most salient differences between Greece and Babylon.¹

3. The idea of purity.—It remains to consider briefly certain religious and moral aspects of the idea of purity. This was expressed by the Greek *ávyela*, meaning originally a state of the body and the person that fitted an individual for communion with the deity, and this state could be obtained by certain ceremonies and abstinences. It was required with peculiar insistence of the Greek priesthood and as a condition of participation in the greater mysteries, which offered to the initiated the promise of posthumous happiness. Hence the idea could gain ground that a state of purity, as it qualified a person in this world for divine fellowship, might also be a potent means of grace and salvation in the next. It was the Orphic sects that developed this view with the greatest zeal in Greece. They preached and practised a specially stringent code of abstinences, and based on this their claim to happiness in the next world. *Ἐρχομαι ἐκ καθαρῶν* was the Orphic password in the portals of Hades—'I come from the pure.'² But most of our ancient evidence concerning Orphism suggests a ceremonial and Pharisaic 'purity,' rather than an ethical, and an exclusive sect-prejudice which demanded even a separate burying-ground for the votaries. And we cannot allege that it was wholly or mainly from their influence that the ideal of purity of soul permeated at last the higher mind of Greece. Its earliest testimony is in the 5th cent. B.C., a phrase of Epicharmos, 'If thy mind is pure, thou art pure in all thy body';³ and the elevated ethical thought that purity of soul was of more avail than all lustration and mere washing of hands was proclaimed later by the Delphic oracle and the Pythagorean literature near the beginning of our era;⁴ and even some of the later codes of temple ritual adopted it in their formulæ.⁵ This 'purity of heart' connoted to the Greek the absence of any stain on the conscience and of evil purpose or thought; it is important to note that the idea of sexual purity, which is often the sole significance of our English word, was not the dominant idea in the Greek *ávyela*. The Greek philosophers and ethical teachers, who preached *σωφροσύνη*, or self-restraint, the Greek priesthood, who required occasional chastity under special circumstances, never preached chastity in general as an ideal of life. The Greek priest and priestess were usually married; chastity was enforced very rarely upon the priest, still rarely though more frequently upon the priestess, who was probably in this case considered the bride of a jealous god, and whose position was only temporary. The Greek priest had to be of unblemished body, and led the normal life of a citizen; the eunuch played no part in Greek religion, which was saved by its sanity from the morbid anti-sexual excesses of the Phrygian. Even the worship of Artemis, apart from its mythology, could not and did not attempt to establish among the Hellenic people any conception of the chaste life as spiritually more perfect and dearer to God.

LITERATURE.—Besides the works cited throughout, see G. F. Schoemann, *Griechische Alterthümer*,² Berlin, 1861-63, ii. 337-354; P. Stengel, *Die griechischen Kultusaltertümer* (=I. Müller, *Handbuch der klassischen Altertumswissenschaft*, v. iii), Munich, 1890, pp. 106-114; E. Fehrle, *Die kultische Keuschheit im Alterthum*, Giessen, 1910; art. CHASTITY (Greek).

PURIFICATION (Hebrew).—The term 'purification' is applied to those ritual observances by means of which an Israelite was absolved from the taint of uncleanness. This article deals exclusively with the Jewish laws and customs relating to purification; to estimate the methods by which the Israelite probably reached his conception of it, it will be necessary to refer to the other articles in this series.

W. Robertson Smith (*The Religion of the Semites*², London, 1894, p. 425 f.) points out that, 'primarily, purification means the application to the person of some medium which removes a taboo, and enables the person purified to mingle freely in the ordinary life of his fellows'; he shows that the normal life of the holy people was a holy life, and therefore 'the main use of purificatory rites is not to tone down, to the level of ordinary life, the excessive holiness conveyed by contact with sacrosanct things, but rather to impart to one who has lost it the measure of sanctity that puts him on the level of ordinary social life.' Speaking of blood as being one of the media of purification, he says (p. 427): 'In the most primitive form of the sacrificial idea the blood of the sacrifice is not employed to wash away an impurity, but to convey to the worshipper a particle of holy life. The conception of peculiar media as purificatory, however, involves the notion that the holy medium not only adds something to the worshipper's life, and refreshes its sanctity, but expels from him something that is impure.'

We must first consider in what ways the uncleanness was produced or contracted, and then the observances by which purification was effected. And we shall see that there were ritual ordinances in regard both to persons and things and to a land defiled.

1. Uncleanness and its penalties.—Uncleanness was contracted in various ways.

(a) *Sexual uncleanness*, in the functions of reproduction (e.g., Lv 18^{20, 28f.}, Nu 5^{12a,c}), by issues in both sexes (Lv 15^{1ff.}), in menstruation.
